The echo of many terminological possibilities resonates in J.S. Bach's nomenclature (see §7): *Aria variata all[a] man[iera] italiana*, *Partite diverse* on chorale melodies, the unfinished *Variationen* of the *Clavierbüchlein* for Anna Magdalena Bach, the *doubles* in the suites, *Aria mit verschiedenen Veränderungen* (the Goldberg Variations) and *Einige canonische Veränderungen über das Weynacht-Lied: Vom Himmel hoch da komm ich her*. Whether the abandonment of 'variation' in favour of 'Veränderung' reflects a change in contemporary practice or in Bach's own sense of the relative valuation of his works is debatable. Certainly Brahms felt that Beethoven's use of that term for his Diabelli Variations reflected more intrinsic worth and greater 'strictness' (see §9). J.A.P. Schulz's rank-ordered list of variation types might lead to the same conclusion. In his article on variations for Sulzer's *Allgemeine Theorie der schönen Künste*, he placed the suite movements by Couperin and Bach lowest on the scale, then sonatas with varied reprises by C.P.E. Bach (not technically speaking variation form at all, although representing a type of 'fully varied melody'), and finally, as 'incontestably the highest type', the contrapuntal variations with imitations and canons, as in Bach's Goldberg and *Vom Himmel hoch* sets. (Schulz also included Bach's *Art of Fugue*, fugues by D'Anglebert and even 'the *folie d'Espagne* by the celebrated Corelli' in this last category.)

Individual variations may or may not be labelled. Sweelinck's organ variations on Psalm cxl, as transmitted in the Fitzwilliam Virginal Book, have been identified as the earliest source to use the rubric 'variatio' for the heading of each segment (Weber, 1986). As with many other keyboard sets on sacred or secular themes (e.g. Sweelinck's *Mein junges Leben hat ein End'*), the first segment is not headed 'theme' but rather 'Prima variatio', showing that it already reflects a varied version of a familiar melody. Individual chorale variations were sometimes headed 'versus' (Scheidt's *Tablatura nova*, 1624) or 'Verset' (Titelouze, *Hymnes de l'église*, 1623) to distinguish them from secular variations, although this usage was not consistent and applied primarily to the first half of the 17th century. Many works of the late 16th century and the 17th use no title for the variations, merely numbers, while in variation movements from the 18th and 19th centuries composers often dispense altogether with any identifying title, number or other designator, especially in variation movements. In the 20th century, numbers make a comeback.

During the later 18th century, written discussion continued to treat variation as a technique, whether improvised or composed, and gave the first clear assessments of variation as a musical form (see §8). Writers rarely drew terminological distinctions between technique and form; Momigny was unusual in differentiating between 'broderies', varied repetitions of phrases and melodies in any form, and 'variations', or the 'broderie' of an 'entire Air' (*Cours complet d'harmonie et de composition*, ii, 1806, p.614). The latter type is more concerned with creating an overall 'dessein', and only in an Adagio variation do the frequently changing 'broderie'-type figurations appear. After the term 'theme and variations' made its appearance (in Koch's *Versuch einer Anleitung zur Composition*, iii, 1793), all the earlier synonyms for variations except *Veränderungen* fell by the wayside; new terms were subsequently developed during

the 19th century to create new hierarchies of value in variation (e.g. 'formal' versus 'character' variations; 'decorative' versus 'contrapuntal' versus 'fantasy' variations: see §9). In the 20th century, the term was applied to different sorts of processes in addition to variation forms though with a tangential connection to the latter: Schoenberg's term 'developing variation' refers to the 'endless reshaping of a basic shape' by thematic regeneration; Fred Lerdahl's 'expanding variation' elaborates a simple model into cycles of increasing length and complexity, with stable events acting as points of departure for new growth (e.g. First String Quartet, 1978; Second String Quartet, 1982; *Waves*, 1988). And sometimes the term has been avoided entirely as composers seek to create different 'views' of a theme, as in Ruth Crawford Seeger's early work *Kaleidoscopic Changes on an Original Theme ending with a Fugue* (1924).

3. VARIATION TYPES. Every set of variations retains elements of the theme while altering or replacing others, and 20th-century typologies of variations (e.g. Nelson, 1948; von Fischer, 1956) developed terms that refer to the constant elements in a set, particularly constructive elements such as bass, melody, harmony and structure. While such terms have historical meaning primarily when all or most of the individual variations in a set meet that condition, variation sets also commonly mix variation types, especially after the 18th century. The nature of the theme, or given material – whether it is a melody (e.g. a song or hymn), a bass line, a harmonic progression (or 'harmonic-metric scheme', Esses, 1992) or a structural complex – exerts a certain predictive force on the type of variations to follow.

(a) Ostinato variations. Built upon a short pattern of notes, usually in the bass register, which functions as an OSTINATO, §2 or GROUND bass, this type includes continuous variations of late 16th- and 17th-century dance frameworks (e.g. CHACONNE, PASSACAGLIA), English grounds and their later progeny. It has two subgroups, 'tonic-providing' and 'tonic-requiring', depending on whether the pattern includes its own final cadence with a return to the tonic pitch at the end. The tonic-requiring type (e.g. Pachelbel's Canon in D major, on an expanded chaconne progression) creates a continuously regenerating series while tonic-providing ostinato variations (e.g. Bach's Passacaglia in C minor) may sound somewhat more sectional, although the presence of an upbeat generates continuity. Sometimes the bass line disappears or is submerged in the harmonies it generates, and sometimes it is transposed.

(b) Constant-melody or cantus firmus variations. The former is the broader category of which the latter is a historical instance. A melody, usually widely known, appears intact or with only slight embellishments in every variation, moving from voice to voice in the texture. Chorale variations by Sweelinck are perhaps the earliest instances (but see §4 for a discussion of the *Western Wind* masses). Composers as late as Weber (Variations on *Schöne Minka* op.40, variations 4 and 7) used the term 'canto fermo' to identify the melody when it appears in another voice. Until the mid-18th century, the cantus firmus is often set off from the other voices by its slower rhythmic values; after that time, when composers hardly ever used it for an entire set (Haydn's string quartets op.76 no.3, second movement, on *Gott erhalte Franz den Kaiser*, and op.76 no.6, first movement, are exceptions), it might appear in one or two variations, as in the introductory variations on the bass of the theme in Beethoven's op.35 and 'Eroica' Symphony finale.

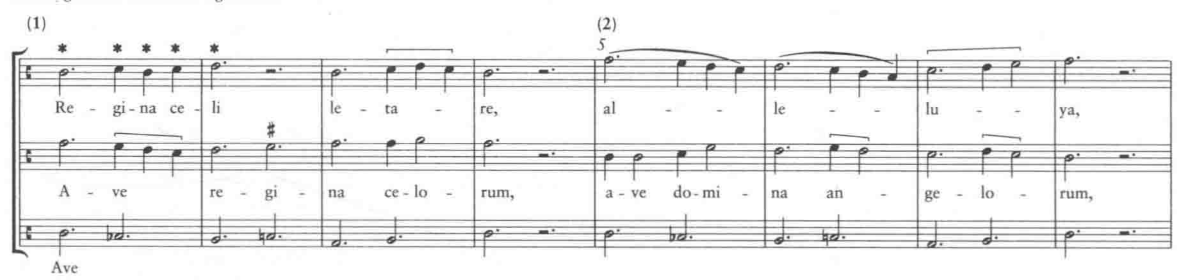
(c) Constant-harmony variations. This broad category includes many variation sets of the 16th, 17th and 18th centuries in which the harmonic progression takes precedence in retentive power over the melody. The more sectional harmonic-metric schemes of Italian and Spanish dance frameworks, such as the FOLIA and the ROMANESCA, may be included here, as well as such topical, expressive and contrapuntal Baroque variation sets as Buxtehude's *La capricciosa* and Bach's Goldberg Variations. During the middle decades of the 18th century, a more restrictive subcategory of constant-harmony was popular: these constant-bass variations on a two-reprise (sectional) theme repeated the bass line of the theme in every variation, sometimes writing it out only once with 'Repetetur [x] volte'. This subcategory may also include the variation suite, in which two or three suite movements (rarely an entire suite) maintain the same series of harmonies, generated from the same figured bass line, despite differences in metre, character and melody. F.E. Niedt's *Handleitung zur Variation* (1706) shows how to generate an entire suite from a single bass line, and von Fischer (1957, p.118) cites a suite notated only by a figured bass (*I-Fn* XIX, 110).

(d) Melodic-outline variations. The theme's melody, or at least the 'outline' of its main notes, is recognizable despite figuration, simplification (unfigured variation) or rhythmic recasting. This much-maligned category ('mere decoration': Tovey correctly warns against 'despising the embroidery variation on principle') includes variations whose harmonies remain more or less unchanged (typical of the later 18th century) and those whose harmonies may change from variation to variation (more common in the first half of the 19th). It also favours periodic reiteration of the theme's melody more or less intact (melodic reprise) with figurations in another line. Types of figuration may be pleonastic (the addition of 'superfluous' notes within the melody or as a countermelody) or periphrastic (the original notes replaced by a more ornate line, though with sufficient resemblance to the original, especially at cadences). Many variation sets of the 18th and 19th centuries mix this type with constant-harmony variations.

(e) Formal-outline variations. Aspects of the theme's form and phrase structure are the only features to remain constant in this predominantly 19th-century type. Phrase lengths may expand or contract within the general outline, with harmonies usually referring to the theme at the beginning and end of a variation. Resemblance to the theme may be striking, subtle or 'found only with the eyes' (a criticism voiced by Brahms). Sets of this type may contain a mixture of types *(b)* to *(f)*, and include Beethoven's Diabelli Variations op.120 and Brahms's Handel Variations op.24.

(f) Characteristic variations. Individual numbers take on the character of different dance pieces, national styles or programmatic associations. Within such a set, types *(c)*, *(d)* and *(e)* may be used, just as characteristic styles and topics may form individual variations within sets of those types. The historical staying power of this type is revealed in such examples as Poglietti, *Rossignolo* (1677); Herz, *Variations caractéristiques sur un thème arabe* op.137; Strauss, *Don Quixote* (1898; see also *(g)* below);

Britten, Variations on a Theme of Frank Bridge op.10 (1937); and Ginastera, *Variaciones concertantes* (1953). By 'characteristic' is not meant the broad and by-now meaningless term 'character variation'; from 18th-century discussions of character in variations, character emerges as a concomitant of figuration, metre and tempo, and is always present.



(g) Fantasy variations. In this 19th- and 20th-century type, occasionally used as a title, the variations allude to or develop elements of the theme, especially its melodic motifs, often departing from any clear structural similarity with it. Such pieces may also have a programmatic or characteristic element and may have either individual numbers (Elgar, 'Enigma' Variations) or a more continuous texture (Strauss calls his symphonic poem *Don Quixote* 'fantastic variations on a theme of knightly character'). Indeed, while this type is on the one hand sometimes hard to distinguish from formal-outline variations, it has on the other hand even been called 'free' variation because of its melodic or motivic allusiveness and structural looseness. (Free variations were derided by Tovey because they violated his sole criterion of value, that the composer 'know his theme'.) 20th-century fantasy variations have been written by Howard Hanson, George Perle, Donald Martino and others.

(h) Serial variations. Modification of a serial theme (a 12-note row or some slightly longer or shorter configuration) in which figuration and accompaniment are derived from the row. The structure of the theme usually remains constant. Because of this structural component, serial variations differ from other serial pieces in which the row itself, not the theme, is manipulated and varied. Examples include Schoenberg, Serenade op.24, third movement, and Webern, Symphony op.21, second movement.

Identifying variation types and even variation form itself is a much less straightforward matter than it might appear, because in both technique and overall shape variations are defined by boundaries and limits that are not always clear. Types *(b)* to *(g)* above may be mixed within a set, the vexed nature of melodic resemblance may complicate some determinations of identity, and varied repetition sometimes appears to be a surprisingly fragile principle such that a greatly contrasting segment may upset the whole. Writers as early as Vogler were aware that 'free' variations might be inserted within a set (*Betrachtungen der Mannheimer Tonschule*, ii, 1779–80, pp.118–19; Momigny, *Cours complet d'harmonie et de composition*, ii, 1806, p.613). When variation forms take on elements of recurrence and return in addition to or perhaps instead of repetition, the resulting hybrid type raises questions: is it a rondo or a variation? a ternary form or a variation movement with freely varied *minore*? Then there are anomalous pieces with some strophic features – a structural unit that recurs, perhaps in different keys, perhaps with connective passages – to conjure a fantasy-like resemblance to variations, such as the slow movements of Mozart's Piano Concerto K449, Haydn's String Quartet op.76 no.6 (marked 'Fantasia') and Brahms's String Quintet op.111. Finally there are strophic vocal works with alterations in each stanza, whether to the accompaniment (as in Beethoven's *Sehnsucht* WoO146 and *An die ferne Geliebte* op.98 or Brahms's *Agnes* op.59 no.5) or to the voice(s). A potent example is the quartet from Beethoven's *Fidelio* ('Mir ist so wunderbar'), long erroneously referred to only as a canon when the form is actually strophic constant-melody variation with each new voice entering with the original melody while the other voices continue with new counterpoints. Finally, a variation principle may also act as a structuring device in sonata form. Haydn favoured a paratactic organization of material that offsets the periodic (hypotactic) nature of the functional areas of sonata form (first group, bridge, second group, closing). In the first movement of the C major Sonata H XVI:50, figural, textural, registral and harmonic variations of the opening theme come to dominate the exposition and development. Varied repetitions dominate the first movements of Symphonies nos.85 and 87, but most paratactic is the first movement of Symphony no.88, in which each of the four areas in the exposition first presents a version of the opening quaver theme (bars 16, 44, 61, 77) and then accompanies that theme with a counterfigure in semiquavers (bars 24, 51, 71, 85). Each segment sounds like a melodic, rhythmic and structural variant and intensification of the one before. A different kind of intensification occurs when progressive diminution affects every functional area, as in the first movement of Mozart's D minor String Quartet K421/417*b*. The limits of variation, the points at which it spills over into development, transformation and fantasy, are not clearly drawn. Indeed, the structural integrity of the 'given material' can be violated even in works clearly identified as variations by their composers; the presence of paratactic and strophic structuring within fantasies and sonata-like forms suggests the power of the variation model.

4. Origins. Variation is a sufficiently broad procedure that finding the earliest instance of its systematic application, before the publication of Narváez's *diferencias* in 1538, has proved impossible. Those pieces that stand out as instances of varying in both secular and sacred vocal music are hard to categorize. In an anonymous 14th-century madrigal, *E con chaval* (PMFC, viii, 28), the cantus sets each line of text in its three-line strophe to a varied version of the first line (aa^1a^2), possibly reflecting vocal improvisation. Another madrigal from the same volume, *Quando i oselli canta* (p.81), shows a similarly unusual variation principle in that the third line not only ornaments the first but repeats its text. Unfigured variation is found in a Gloria by Excetre from the Old Hall Manuscript, which paraphrases a Sarum chant in the upper voice ten times; the two phrases of every statement end on C, nearly every time with C in the lowest voice as well, lending a strikingly sectional air to the movement. The paraphrases differ in length and rhythm, but despite the occasional added notes do not resemble what later writers would term 'diminutions'. If the original chant consists of a repeated melody, then the result may be a few 'variations', as in Olyver's Agnus Dei setting in the Old Hall Manuscript. Isorhythmic motets with 'isomelic' tendencies, in which the tenor melody is taken up by the upper voices especially at the beginnings of sections, might be considered a distant harbinger of such later genre variations as variation canzona or ricercare, but hardly of variations *per se*. Dalglish's categories 'variation motet', 'hocket variation' and 'ostinato motet' incorporate some techniques of variation, but only the last has some claim to embodying actual variations, and only when the upper voices dovetail with the ostinato, as in the eight 'variations' of *Regina celi letare/Ave regina/Ave* (ex.1: *F-Pa* 135, transcribed in H. Besseler, 'Studien zur Musik

Ex.1 *Regina celi letare/Ave regina/Ave*

des Mittelalters II', *AMw*, viii, 1927, p.243) and the 28 'variations' of *Thomas gemma canturiae* (transcribed in K. Levy, 'New Material on the Early Motet in England', *JAMS*, iv, 1951, pp.234–9). Certainly such celebrated ostinato-based pieces as the *Sumer* canon and Du Fay's *Gloria 'ad modum tubae'* are not variations. Successive polyphonic settings of the same plainchant, including most cantus firmus masses and even *Magnificat* cycles of the 16th century that go through all eight tones, thus do not necessarily refer to variations in any but the most general rhetorical sense.

Methods of organizing multi-sectional or multi-movement Renaissance works – masses and motets, for example – may include sophisticated repetition patterns, in which each statement of a cantus firmus changes one or more features of the original statement or accompanies other changes. Normally the continuity of the polyphonic web and the lack of an initially discrete structural entity work against both the intentional and perceptible nature of such works as variations. Josquin's three masses based on solmization syllables deserve mention, however, because of their ostinato treatment of these short and memorable formulae, though whether the result is variation is highly debatable. In some of the movements of his *Missa 'La sol fa re mi'* the five-note subject, which in some movements (especially beautifully in the Agnus) saturates the texture, is also heard in structural 'units': in the first Kyrie it occurs twice consecutively in each entering voice (STB) to form regular four-bar segments; in the Sanctus it announces a three-bar pattern with cadence, then the tenor turns it into an uninterrupted ostinato, just as it does on two different pitch levels in the Osanna. In the Benedictus the cantus firmus makes a six-bar segment successively in three voices (TSB) while the two-bar countersubject moves from voice to voice during the first two statements of the cantus firmus. The Osanna of the *Missa 'Faisant regretz'* turns its four-note subject (*fa–re–mi–re*) into a two-bar canon between tenor and bass, while the Benedictus turns it into a six-bar pattern similarly alternating between tenor and bass, with upper-voice imitation as well; each statement begins on a different pitch. In the Osanna of the *Missa 'Hercules Dux Ferrariae'*, the threefold repetition of the cantus firmus is then repeated in a faster rhythm, suggesting the process of progressive diminution later to be a common feature in variations; the Benedictus offers three statements of the cantus firmus at different pitches paired with an ornate contrapuntal voice.

An exception to these strictures about cantus firmus masses are the *Western Wind* masses by Taverner, Tye and Sheppard, an unusual group of works constituting the first English masses based on a secular song and possibly the earliest English variations as well (*c*1535–42). The Taverner setting, usually considered the earliest of these, presents the melody 36 times, nine times in each of the four movements (21 treble, ten tenor, five bass statements), differing each time in texture, number of voice parts and metre, with occasional ornamental notes but without intervening material between statements. The requisite 'entity' concept is thus clear. Moreover, the arresting upward leaps of 5th and octave at the beginnings of the first and second phrases respectively and the meandering descents, largely in conjunct motion, make the tune instantly recognizable in whatever texture it is placed, although it is of course most evident in the treble. Tye puts the melody into the single voice not set by Taverner, the alto (mean), in 29 varied statements. Sheppard's total is 24, of which 13 omit the final phrase of the melody, and all are in the treble but no.10, the third phrase of 21, and 23, which are in the tenor. The *Western Wind* melody is neither more ornate than, nor moves at a different speed from, the other voices and thus differs appreciably from the melodies of other cantus firmus masses in its relationship to the texture of the mass as a whole. It makes sense to call these three works variation masses. (*See* WESTERN WIND, exx.1 and 2.)

In the realm of instrumental music, the most promising models are in dance music, especially (*a*) the possibility that short pieces for dancing were repeated with improvised variations rather than literally, and (*b*) the pairing of gliding and leaping dances, often with a proportional relationship in which the second, faster dance – the Nachtanz, Proportz or Tripla – would offer a varied version of the first. A variation principle informs even the

original dance-pairs of the 14th century in *GB-Lbl* Add.29987, *La Manfredina* and *Lamento di Tristano*, each with its own Nachtanz called *La Rotta*, a quicker, compressed and somewhat ornamented version of the first dance. But varied dance pairs such as pavan–galliard and passamezzo–saltarello suggest that they were the forerunners not of sets of variations but rather of the varied allemande–courante pairs in longer sequences of dances in the early 17th century. That dance pieces were repeated, in part or as a whole, is clear not only from the length of the choreographic pattern compared to the notated music but also to explicit directions like 'Questa Sonata farassi due volte' ('play this piece twice', in the balletto *Laura suave*) and 'Si torna â fare di nuovo detta Sciolta in Saltarello â quattro Tempi' ('Play the sciolta to this piece as a saltarello four more times', in *Furioso alla Spagnuola*; Fabritio Caroso, *Nobiltà di dame*, 1600, Eng. trans., 1986, pp.10–11). It seems plausible to suggest that such repetitions were varied. *Laura suave* is itself a kind of variation suite, consisting of an opening pavan-like piece (including repetitions), the piece played as a galliard, then in triple proportion as a saltarello and finally as a canary (ex.2). As Thoinot Arbeau wrote in 1588 (*Orchésographie*, 1589, Eng. trans., 1967), 'you can amplify this music to suit your pleasure and fancy' (p.43) and 'some dancers divide up the *double* that follows the two *simples*, and instead of the *double* comprising only four bars with four semi-breves, they introduce eight minims or sixteen crotchets, resulting in a great number of steps, passages and embellishments, all of which fit into the time and cadence of the music' (p.66). This connects the variations of steps performed by dancers – called *mutanze* by Caroso as early as 1581, in *Il ballarino* – with musical variations, as does Antonio Valente's use of the term *mutanze* for sets of variations on dance themes such as the romanesca and the gagliarda napolitana (Naples, 1576). But the lateness of these sources, even if one were to speculate

Ex.2 Caroso: *Celese Giglio*

Canary

that they codify long-term existing practice, does not offer an actual precedent.

Another direction such improvisations might take – the varied tone colours and figurations of different instruments – does come from a much earlier source, emerging from this advice in Guglielmo Ebreo's dancing tutor *De pratica seu arte tripudii* (appendix to the second edition, written within 12 years of the original 1463 edition, by which time he had converted and become Giovanni Ambrosio):

> Get four or five kinds of instruments to play, such as shawms, organs, lute, harp, pipe and tabor, or whatever other instrument there is. Have them play one by one, and have them play a ballo, and [get] each one to play that [same] ballo, each one playing by itself. The [dancer] must dance to that air that the instruments play. For even though they are playing one [and the same] ballo, each one will play with his own air. [And] although they are playing the same ballo, the shawms will play in one air, the organ in one air, the harp in another air, the [pipe and tabor] in another air, but all will play one and the same ballo. Remember that the dancer must dance with that air and with that measure and with that rhythm that the said players are playing; that is, dancing each one on its own. And if the dancer always dances with one air, even though he dances with measure and in time but does not follow the air of the said players, his dancing will be imperfect and show little skill. (*On the Practice or Art of Dancing*, Eng. trans., 1993, p.235)

Although the meaning of 'air' is obscure, it plausibly refers to a kind of characteristic expressive style that may be related to tone quality or kind of figuration, especially since it has to affect the dancer's movements. What emerges from such a series of 'intrinsic' variations on a dance is a variation form. This sort of exercise may also lead to the kind of dancing described by Arbeau (p.16): 'a kind of mute rhetoric by which the orator, without uttering a word, can make himself understood by his movements and persuade the spectators that he is gallant and worthy to be acclaimed, admired and loved'. Not only did Vogler make the same point about variations 200 years later, but it strongly reinforces the display element in both, which serves to convince the audience of the talents of the performer/composer.

5. The 16th century. Sets of variations appeared for the first time in the 16th century and, as their themes originating in dance and song indicate, they captured two forms of improvisation, the variations in repeated strains of dance music originating in its choreography and the varied settings and diminutions given successive stanzas of a song whose melody can be savoured as a cantus firmus or a springboard to figuration. Early 16th-century dances on short ostinato basses, such as Hugh Aston's *Hornpype* and the various forms of dump (e.g. *My Lady Carey's Dompe*, *HAM*, no.103), reveal a flourishing variation practice in England. The importance of diminutions in improvising embellished lines in polyphony and to a cantus firmus is attested by such treatises as Silvestro Ganassi, *Fontegara* (1535), Diego Ortiz, *Trattado de glosas* (1553) and Girolamo dalla Casa, *Il vero modo di diminuir* (1584). Intabulations of vocal polyphony and related dance-pairs such as pavan–galliard and passamezzo–saltarello in the Italian lute and keyboard repertories also participated in this development. As early as 1508, in J.A. Dalza's *Intabulatura di lauto*, two sorts of pavan herald the varied-reprise dance forms as well as the variation set *per se*: the *pavana alla ferrarese* with a series of open-ended phrases followed by varied repeats (*AA′BB′CC′* . . .) and freer material, and the *pavana alla venetiana*, with a somewhat longer phrase ending on the

'tonic' followed by a series of variations before a freer concluding passage (Horsley, 1959, calls these 'multiple-strain' and 'single-strain' variations respectively). 'Suites' of dances with related incipits, such as 'Passa e mezzo antico' (or 'moderno') and 'Salltarello', or 'Passamezo–Padoana–Saltarel' (all based on the same song) appear in Giacomo Gorzanis's four books of *Intabulatura de liuto* (1561–79).

The earliest published sets of variations, or *diferencias*, appeared in Spanish works for vihuela by Luis de Narváez (*Delphín de música*, 1538); especially influential were (1) the variations on *O guárdame las vacas* (ex.3), the Spanish version of the romanesca (identified as such by Francesco de Salinas, *De musica libri septem*, 1577), in which the first of three *diferencias* is much shorter than the theme while the third is followed by a coda; (2) *Conde claros*, on a two-bar theme; and (3) *diferencias* on a plainchant (*O gloriosa domina*, HAM, no.122). After the varied-reprise dances and ubiquitous *vacas* of Alonso de Mudarra (*Tres libros de música*, 1546), who used the terms *manera* and *diferencia* interchangeably, and Enríquez de Valderrábano (*Silva de Sirenas*, 1547, HAM, no.124), came the important diminution treatise of Ortiz (1553), which offered a series of *recercadas* on 'plain songs [*canto llano*] which in Italy are commonly called tenors' (bk.ii, f.47*r*). These *recercadas* resemble variations on the folia, romanesca and *passamezzo antico* and *moderno*, while Ortiz's *recercadas* on polyphonic compositions (e.g. Arcadelt's madrigal *O felici occhi miei*) have the cumulative effect of variations since diminution techniques are differently applied to each intabulation.

Antonio de Cabezón was the first master of the keyboard variation, with some published in Luis Venegas's *Libro de cifra nueva* (1557) and nine sets in his son Hernando's *Obras de música* (1578), including three on *O guárdame las vacas* and several calling attention to direct Italian influence, such as *Diferencias sobre la pavana italiana* and *sobre la gallarda milanesa*. Cabezón's four-voice polyphonic settings, while neither systematic nor progressive in figuration, often present diminutions first in the treble, then in the bass, then in both hands. Constant-melody technique is often present, sometimes with the theme melody lightly coloured. One wonders if such beautiful settings of plainchants as his *Ave maris stella XI*, which maintains the cantus firmus in the middle voice and surrounds it with precisely the kinds of

Ex.3 L. de Narváez: *O guárdame las vacas*

figurations found in the *diferencias*, were spurs to further variation in performance, especially in pieces based on a strophic original. His sojourn in England with Philip II from 1554 to 1556 has spurred theories of reciprocal influence in variation.

The flowering of keyboard music in the later 16th and early 17th century in England among composers later known as the 'English virginalists' went hand in hand with a vogue for variations on dances and popular tunes. In general these combine constant-melody, constant-harmony and melodic-outline types. Sometimes the varied repeats in the pavan – $AA^1BB^1CC^1$ – were followed by yet another chain of varied repeats – $A^2A^3B^2B^3C^2C^3$ – before the metric variation of the galliard (perhaps with its own varied reprises). Occasionally an unnamed 'alla venetiana' model produced a one-strain pavan with a longer chain of variations, as in Bull's Spanish Pavan (eight-bar theme) with eight variations (Fitzwilliam Virginal Book, i, no.131); Bull's Quadran Pavan with eight variations followed by a 'Variation of the Quadran Pavan' with another eight; Byrd's Passamezzo Pavana (16-bar theme) with six variations followed by the 'Galiardas Passamezzo' with eight (Fitzwilliam Virginal Book, i, no.203); Peter Philips's Passamezzo pavana and Galiardas passamezzo with seven and ten respectively, the ninth in the latter labelled 'Saltarella'. In most cases, however, variations on dances differentiated themselves from chains of variations by virtue of their emphasis on the varied reprise; thus Byrd's Monsieur's Alman has two parts each with a varied reprise (aa^1bb^1, followed by one variation in which each part has a varied reprise ($a^2a^3b^2b^3$), after which a 'Variatio' offers three further variations on the alman, each part with a varied reprise. Were all the varied reprises of Monsieur's Alman to be presented as a chain, it would be a theme with nine variations. While the vast majority of song variations are secular, the occasional plainchant appears, as in Bull's *Salvator mundi*, based on *Veni creator* and *Miserere*, and is treated as a cantus firmus in long notes moving from voice to voice in two- and three-part settings. Blitheman's six settings of *Gloria tibi Trinitas* and four of *Aeterne rerum conditor* in the Mulliner Book (MB, i, nos.91–6 and 49–52), if considered as variation sets rather than multiple settings of the same chant, may be the first chorale variations, challenging Sweelinck's position (see §6). Some ostinatos are lengthy and elaborate (e.g. Byrd, *My Lady Nevell's Ground*, 24 bars), while others consist of only two notes or chords (Byrd, *The Bells*, *The woods so wild*), perhaps the successors to the dump or older *pes*-like forms. Giles Farnaby's *Rosasolis* combines elements of both song and ostinato in that the theme is only four bars long and ends on a 'half-cadence', offering what would be an early example of the 'tonic-requiring' cycle, except that the piece ends on the 'dominant'. (*See also* PASSAMEZZO.)

The general pattern of many Elizabethan keyboard variations is progressive diminution in one or more groupings of several variations, broken up by dotted-rhythm variations (always seen as an intensification), and with triplets normally reserved for the last group of a cycle. A technique sometimes called 'mirroring' (by Mies, 1937, and Cavett-Dunsby, 1989), in which the treble figurative pattern in one variation goes into the bass in the next, helps to join variations as well. After a final build-up a quiet quasi-reprise, either reharmonized or simply a return to the theme's rhythm, leaves an elegiac

Ex.4 Byrd: *John come kiss me now*

sense of an ending. One of the best of these sets is Byrd's *John come kiss me now*, in which the melody is treated like a cantus firmus, except for its partial abandonment in variation 6; it appears in the treble in variations 1–9, 13 and 15, the tenor in 10–12, the bass in 14 and the alto in 16. Other groupings overcome the final bar-line to connect 5 and 6, so that the first variation without an immediately recognizable melody grows out of the previous one, and especially 11–14, in which both harmonically and rhythmically the variation is propelled into the next; this group also includes the triumphant triplet variation 12, which begins as a point of arrival and another rhythmic acceleration. The final variation disguises the theme melody in the alto and reharmonizes it while also crystallizing the upward and downward slopes of the theme into an articulation that grows out of the quasi-reprise variation 15 (ex.4). The tune *Walsingham* inspired some of these composers' longest sets – 30 virtuoso variations from Bull and 22 from Byrd – and most inventive figurations. Finally, dances with varied reprises and sets of variations for consort appear in Morley's *First Book of Consort Lessons* (1599) and other collections. Richard Alison's *Goe from my window* for broken consort treats the melody as a cantus firmus, moving from treble viol to flute to bass viol and to treble again, with the addition of florid figurations and counterpoints in the other instruments, unlike the keyboard set attributed to both Morley and Munday in the Fitzwilliam Virginal Book, in which the melody is much more variable than the bass and returns in a plain version only in variations 5 and 7. Byrd's 20 variations on *Browning my dear* ('The leaves bee greene') for viol consort retain the melody as a cantus firmus, beginning unobtrusively in the bass and working upwards, and are more contrapuntal than Alison's.

6. The 17th century.

(i) The earlier 17th century. The beginning of the 17th century saw the remarkable Dutch organist J.P. Sweelinck create a north German organ 'school' by virtue of his exceptional teaching in which variations, both chorale-based and secular song-based, played a large part. In introducing the forms and figurations of the English virginalists to organ music, he helped to develop the new genre of chorale variations in which the chorale melody, while always recognizable as a cantus firmus though occasionally slightly embellished, is embedded in an increasingly complex web of contrapuntal figurations in two, three or four voices. (His variations on Psalm cxl even appear in the Fitzwilliam Virginal Book, ii, no.151.) These figurations, often sequential repetition of short motifs, would change in the course of an individual variation, lending an exploratory aspect of the composer-performer at work to each piece; pieces begin with the first variation, perhaps because the melody was assumed to be familiar. In newly Protestant Amsterdam, these works would be performed during daily organ recitals in the church, rather than liturgically. In the rare cases where the chorale is itself highly figured, as in variation 6 of *Erbarme Dich mein, o Herre Gott*, the notes of the chorale remain at the metrically identical parts of the bar (ex.5). Sweelinck's variations on pavans and on songs like *Est-ce Mars*, *Onder een linde groen* and especially *Mein junges Leben hat ein End'* also begin with the first variation, present written-out variants of each reprise, and change the type, placement and speed of figuration several times in a single variation. Unlike the chorale variations, his secular variations may also change within a variation the voice in which the melody appears. The variations of his principal students, Scheidt and Scheidemann, who took his pieces and techniques to Halle and Hamburg respectively, continued and extended these characteristics to include more brilliant figurations and longer sets of variations. Scheidt sometimes headed a variation with the location of the chorale or song melody (e.g. 'Choralis in Alto', 'Variatio in Tenore'), and quick, slurred figures towards the end of a variation are marked 'imitatio violistica'. Unlike Sweelinck, he usually began with the 'theme' as a chordal rendering before the 'variations'.

Ex.5 Sweelinck: *Erbarme dich mein, o Herre Gott*

Variatio

Sexta variatio

With the rise of monody at the beginning of the 17th century, the repetitive impulse found outlet in two directions, both centred on retention of the bass: strophic arias with successive modifications to the melody or different melodies in each strophe, and vocal pieces, largely solos and duets, over an ostinato bass. The prototype of the former is perhaps Caccini's *Ard'il mio*

petto misero, the only strophic aria in his *Nuove musiche* (1601) to be written out with some changes to the melody (fewer to the bass). (There are, however, strophic songs with varied lute parts and slight vocal changes already in Narváez, 1538, e.g. *Sy tantos halcones.*) A striking later example is Frescobaldi's 'Aria di romanesca' (*Arie musicali*, 1630), which also shows the incorporation of 16th-century dance frameworks into vocal music. The melody is different in each strophe except for the cadential note at the end of each three-bar phrase. On the other hand, Monteverdi's *ciaccona* for two voices and bass, *Zefiro torna* (1632), exemplifies a non-coincidence between bass and treble typical of his style but differing from many vocal ostinato-bass pieces in this era (Merula, Schütz). Inevitable cadencing in the two-bar bass line (a classic tonic-requiring pattern) is mitigated by shorter, longer and asymmetrical passages in the upper voices, while texturally the flat plane of the bass contrasts with the quasi-imitative and often off-beat give-and-take of the singers. Brief or prolonged absence of the ostinato may also have a profound programmatic effect, as in the final 'tormented' stanza of the poem (where the 'sweet and joyous notes' of Phyllida and Cloris give way to the pain of the narrator, 'Sol io, per selve abbandonate e sole') with its affective, chromatic and dissonant word-painting in recitative style before the final return of the ostinato. Monteverdi similarly frames and punctuates his later madrigal *Lamento della ninfa* (Book 8, 1638) with a group of three male commentators while setting the nymph's own words to the descending '*lamento* bass' tetrachord, a powerful minor-mode evocation of despair that quickly spread to opera of the 1640s, 50s and 60s in works by Cavalli (including *Egisto*, *Rosinda*, *Giasone* and *Eliogabalo*), Cesti (*Argia*) and others. There is a difference, of course, between the endlessly recycling tetrachord that reaches only from i to V and the tetrachord that is extended to a final tonic-providing close; of the five elaborated lament basses by Cavalli given by Ellen Rosand (*Opera in Seventeenth-Century Venice*, Berkeley, 1991, p.649), only one ends on the dominant. Later examples include the justly celebrated lament from Purcell's *Dido and Aeneas* (1689), with its chromaticism and tonic-providing tail. The power of even the simple major-mode tetrachord may be seen in the opening and closing sections of the highly charged closing duet for Nero and Poppaea in Monteverdi's *L'incoronazione di Poppea* (1642), set to Benedetto Ferrari's text 'Pur ti miro, pur ti godo', perhaps the first operatic da capo (not knowing whether the music is by Ferrari, Sacrati, Cavalli, Laurenzi or a composer yet to be suggested does not detract from its ostinato-derived hold on the imagination). (*See also* LAMENTO; OSTINATO, §§4–5; and STROPHIC VARIATIONS.)

Whether the instrumental ostinato variations of the 17th and 18th centuries such as the CHACONNE and PASSACAGLIA owe anything to the vocal models is an open question, because they tend to take their points of articulation from the bass line, changing their figurations, textures and rhetoric at cadential points, and are thus true variation sets. The 'set rhythm' that builds throughout a span of continuous variations maintains the quality of overcoming its interior cadences at the same time that it uses the inevitability of cadences for energy and emotional power. Certainly variations on dance frameworks and progressions, or harmonic-metric 'schemes', constituted an important strand of variation writing up to the early 18th century, with occasional appearances thereafter. The first written variations of the chaconne, a dance imported from Latin America (*chacona*) in the late 16th century, appeared in Spanish guitar books of the early 17th century; the earliest set for keyboard is Frescobaldi's *Partite sopra ciaccona* (1627). Passacaglias originated in the early 17th century as a kind of 'walking-around music' for guitar that served as introductions, interpolated episodes and conclusions to songs and dances; these passages were also known as *riprese* or *ritornelli*, repeated several or many times with improvised variations. Frescobaldi's *Partite sopra passacagli* (1627) may have been the earliest for keyboard. Chaconnes tended to be major and passacaglias minor, and each had characteristic though similar bass lines and chord progressions, but early differences were often ignored. Indeed, Frescobaldi's *Cento partite sopra passacagli* (*Secondo libro di toccate*, 1637 edition) features sections headed 'passacagli' as well as 'ciaccona': both are in the minor, though with differing harmonic rhythms.

In addition to his vocal 'partite' on dance-bass patterns, Frescobaldi was thus the principal composer of variations and variation-inflected instrumental genres in the early 17th century in Italy. Of the established or evolving genres in which he was drawn to explore the concept of variation – suite, capriccio, canzona and ricercar – only the first had a natural connection with variation, developing as a stylized representation of dances with roots in both choreographic necessity and a form to which actual dancing occurred and to which repetition with improvised variations would have been common. Indeed, each of Lorenzo Allegri's eight balli (*Il primo libro delle musiche*, 1618) supposedly reflects the contents of actual dances performed as part of an *intermedio* at the Florentine court, and nearly all include pairs of dances in which the second is built on the bass and melody of the first (e.g. 'Quinto ballo detto le Ninfe di Senna', with opening pair: untitled 'prima parte' – 'Canario seconda parte'; the following 'Gavotta terza parte' and 'Corrente quarta & ultima parte' are unrelated). Three German publications with longer series of linked dances later known as variation suites appeared in the second decade of the 17th century: Paul Peuerl's *Newe Padouan, Intrada, Däntz unnd Galliarda* (four-movement sequence, 1611), Isaac Posch's *Musicalische Ehrenfreudt* (three-movement sequence, 1618) and the most celebrated of these, Schein's *Banchetto musicale* (1617). Schein asserted that the dances are 'arranged so that they correspond to one another in both mode and invention', thus clearly referring to the rhetorical notion of the principal idea of each piece. The principal ideas are variations of each other, even if there is no literal bar-to-bar correspondence, with the most ornate version appearing first in the leisurely pavans (Padouana), followed by Gagliarda, Corente and finally the Allemande and its Tripla, a simplified metrical recasting of the allemande. As the dances progress from complex to simple, texturally and melodically, they also descend in style from higher to lower.

The canzona, ricercare and so-called capriccio (actually a type of ricercare) were contrapuntal single movements, often in multiple sections differentiated by metre and dominated by imitative texture; the term 'variation' has been used to describe the rhythmic transformations of the imitative subjects and countersubjects of the successive

sections. While such a composition may be considered cyclic, it is not a variation form in the sense of a common substratum underlying each section. On the other hand, the impulse to connect contrapuntal and variational forms suggests a relatively borderless connection between them. Several composers of this era cultivated what modern scholars call the variation canzona and variation ricercare: Andrea Gabrieli, Ercole Pasquini (1600), Ascanio Mayone (1603), G.M. Trabaci (1603) and Frescobaldi beginning with his *Primo libro di toccate* (1615). Ladewig (1987) has persuasively placed the origin of the variation canzona in late 16th-century Ferrara with Luzzaschi, Ercole Pasquini and 'Giaches' (de Wert or Brumel), who subsequently influenced Neapolitan musicians. Frescobaldi's capriccios are, in most cases, witty or clever ricercares, free contrapuntal investigations of a given subject (e.g. a solmization pattern), occasionally with an ostinato (*Capriccio sopra il cucco*, no.3 of the *Primo libro di capricci*, 1624), though in one case the term refers to a set of variations (on *Or chè noi rimena in partite*, a binary theme with varied repetitions). The *Capriccio sopra l'aria di Ruggiero* (no.12; Monumenti musicali italiani, viii, 1984, p.78) treats the four phrases of the Ruggiero bass (*ABCD*) in a way that shares elements of the imitative ricercares and canzonas, on the one hand, and sets of variations on the other. Apel (1972) calls it a 'quadruple fugue' and divides it into eight sections according to metre, principal cadences, and the presence of particular phrases of the bass. Table 1 amends his chart to reveal the two variation structures that emerge first from the sections in which all four theme phrases are present (I, III, VI, labelled variations 1–3) and second from alterations to the theme phrases themselves through metric and rhythmic changes (II, IV, V, labelled variations a–c), as well as the 'finale'-grouping of sections VII and VIII (variation 4*d*) which combines both types by speeding up the figuration as well as presenting the *B*-phrase as a varied counter-figure (a chromatic 4th, both ascending and descending). The sections identified as variations, however, treat the phrases of the Ruggiero as separable entities, motivically and contrapuntally (ex.6); they are not structural variations like Frescobaldi's own *Partite 8 sopra l'aria di Ruggiero* (*Toccate e partite . . . primo libro*, 1615, expanded to 12 variations in the second edition), on the same popular subject already also set by Macque, Mayone and Trabaci. However, his *Capriccio sopra soggetto scritto sopra l'aria di Ruggiero* in the same volume adds the melody 'Fra Jacopino' to the harmonic pattern (Mw, xi). Dance-bass variations as well as variations on such melodies as 'Tanto tempo hormai' appeared in trio sonatas by Salomone Rossi (including 11 sets in his books 3 and 4, 1613–22), G.B. Buonamente (including eight of the 12 sonatas of his Book 4), Scarani and Merula.

Frescobaldi's *Aria detta la Frescobalda* (*Secondo libro di toccate*, 1627) is very possibly the first set of variations on an original theme and the first with variations labelled as dance-types: variations 3 and 5 are called Gagliarda and Corrente respectively. Apel (1972) considers this the earliest variation suite and suggests that the term 'suite variations' is more appropriate. Several other variation sets by Frescobaldi present the dance-flavoured alternation of duple and triple metre, such as the eight variations on the *Aria detta balletto* in the same collection, which alternates duple and triple metre for three pairs of variations, then for the last two increases the speed of figuration in duple metre, from triplets to semiquavers, while bringing back the melody in the 'ultima parte' for a theme reprise. Although the two triple-metre variations in the earlier *Partite sopra l'aria di follia* (variations 3 and 5, *Primo libro di toccate*, 1615) recall the corrente in rhythmic pattern, they are not labelled. A later, oddly titled type of variation suite is the *Balletto corrente passacaglia* (three in the 1637 edition of the *Primo libro di toccate*), with the corrente a triple-metre variant of the balletto, and the passacaglia a brief set of variations on a related bass line. Acknowledged as Frescobaldi's masterpiece in variations, the *Partite sopra l'aria della romanesca* (1615; HAM, no.192), offers both the bass and treble parts of the framework in the *prima parte*, though the treble is much less important than the bass in the variations. Several variations have a different structure from the first; the *ripresa* in particular is likely to be shortened. A single figurative pattern dominates in a few variations, a 'middle section' of slower variations (with notes of double value) right after the 'proportio tripla' variation that effectively speeds up the motion. The surface of both treble and bass is often so irregular, free and ornate that the underlying framework can scarcely be detected. A magical final variation strips all that away with simple off-beat chords and a newly emergent thematic essence never otherwise seen in this era.

(ii) The later 17th century. The later 17th century saw few innovations in variation writing. In Italy, composers continued to write dance-framework variations for keyboard (Michelangelo Rossi, Bernardo Storace, Gregorio Strozzi) or strings (Stradella, 24 variations for solo violin on the 'Gran Duca theme', G.B. Vitali's op.3 no.12 'sopra l'aria del pass' e mezzo', Corelli's ciaccona forming the trio sonata op.2 no.12 and his celebrated sonata on the folia for violin and bass op.5 no.12 (1700), imitated or coincidentally joined within a few years by Vitali, Albicastro, Vivaldi and Reali); Alessandro Scarlatti's toccata concluding with 29 variations on the folia conflates the trends by following Corelli on the keyboard. G.B. Vitali carried the principles of the variation suite into the sonata. Bernardo Pasquini, the most prolific composer of keyboard variations in this period, sometimes made specific reference to works by Frescobaldi (*Toccata con lo scherzo del cucco*, with the same insistent pattern as his predecessor's Capriccio but without the counterpoint) and in variations used several of the same theme-types (Ruggiero, folia) as well as his own themes, in this way following Frescobaldi even into originality. Pasquini's

Ex.6 Frescobaldi: 'Capriccio sopra l'aria di Ruggiero'

original-theme sets, in most cases called 'variationi' to distinguish them from the 'partite' on pre-existing frameworks, include 'Variationi capricciose', with a theme that already sounds like a variation (the texture simplifies later), and 'Variationi d'inventione', with dance-types labelled (variations 5–7 'in corrente', 11 'gagliarda'), allusions to several keyboard pieces by Frescobaldi and a final 'alla zoppa'-type syncopated variation.

In England few composers followed the brilliant virginalists, and their variations consisted largely of grounds (John Blow, William Croft, Henry Purcell), usually with a tonic-providing pattern. The best-known of these, Purcell's Chacony in G minor, resembles Dido's lament in the force of its chromatic expressiveness. The important mid-century improvisation treatise by Christopher Simpson, *The Division-Violist* (1659, 2/1665), offered ways both to 'break the ground', in which the viol player plays divisions over the notes of the ground held by harpsichord or organ, and to create 'descants to the ground', in which the viol makes a 'different-concording part unto the Ground', resulting in a series of divisions, an improvised variation form (*see* DIVISION). The torch of the most prolific variation composers had passed to Germany and Austria.

Froberger, a German musician who studied with Frescobaldi in Rome and travelled widely before joining the musical establishment of the imperial court in Vienna, wrote in several of the older genres, as can be seen in his *Libro secondo* (1649): variation canzona (e.g. FBWV305, on an attractive songlike subject, rhythmically transformed in successive contrapuntal sections in different metres), fantasia on a *soggetto* treated contrapuntally (e.g. FBWV201, 'sopra ut re me fa sol la', in which the hexachordal subject is diminished, treated with countersubjects of decreasing rhythmic value, changed metrically and finally offered chromatically), and variation suite (e.g. FBWV601–5, all in Allemand–Courant–Saraband format except 602, which adds a Gigue). Froberger's most celebrated variation set makes up the sixth suite, 'auff Die Maÿerin', FBWV606, also known as 'Schweiget mir vom Frauen nehmen' (the title of a poem by Georg Greflinger published in 1651; a variation set by Reincken with both titles made its way into the Bach family scriptorium). It consists of six *partite* with the melody coming out most clearly in the first and fifth (a simplified outline), and such interesting changes as 12/8 metre in the third (another way to write triplets), semiquaver mirroring in the fourth and fifth and pervasive chromaticism in the sixth ('Grammatica'), followed by a 'Courant sopra Maÿrin' with its *double* and a 'Sarabande sopra Maÿrin'. (The title 'Grammatica' has been interpreted as follows: as the first 'a' of the word was changed from an 'o', it seems that the artist who wrote the decorative titles of each *partita* on the autograph may have started to write 'Cromatica'; 'Grammatica' may refer to the Pythagorean temperament explained in the early 16th-century treatise by Magister Henricus Grammateus of Vienna because it contains both D♯ and E♭: see 'Commentary on the Works' in Froberger, *Neue Ausgabe sämtlicher Clavier- und Orgelwerke*, i, ed. S. Rampe, 1993.) It is odd to find suite movements labelled separately from the variations, especially because of Frescobaldi's practice in *Aria detta la Frescobalda*; this suggests that the *partite* are but one element in the larger suite and that dances and their *doubles* have a separate identity.

Alessandro Poglietti, who spent most of his career in Vienna, went considerably further in labelling his variations with characteristic and descriptive titles. His collection of pieces entitled *Rossignolo* (1677, written for Leopold I and his wife Eleanora) contains several series of pieces, among them a suite of dances (Allemande–Courente–Sarabande–Gigue), each with at least one *double*, and an 'Aria Allemagna con alcuni variationi Sopra l'Età della M[aes]ta V[os]tra', with 20 variations to correspond to her majesty's age. The designated characteristics include a 'lyra' (hurdy-gurdy, variation 5), 'Bohemian bagpipe' (8), 'Dutch flageolet' (9), 'Bavarian shawm' (11), 'Acrobat's tightrope dance' (16), 'Polish swordplay' (17), 'Military fife' (18) and 'Hungarian violins' (19) as well as such comedies of manners as 'French hand-kissing' and the satirically chromatic 'old women's funeral procession'. The other variations are figural, and one alludes to the learned style with 'soggetto rivoltato' (4), but in this means only that the melody is in the left hand. Unfortunately, Poglietti's theme is pedestrian to the point of lameness, which somewhat undercuts the attractiveness or cleverness of his imitations and descriptions. The programmatic aspects, however, guarantee it a place in the history of variations.

Johann Pachelbel contributed excellent works to the variation repertory, nearly all for organ or harpsichord. He wrote seven sets of chorale partitas, a form credited to Georg Böhm, who adapted the older contrapuntal form of chorale variations into a newer, more homophonic type that drew on techniques of secular works and was intended for non-liturgical performance. The chorale melody dictates the structure and is surrounded by 'accompaniments' rather than 'counterpoints'. The four in Pachelbel's *Musicalische Sterbens-Gedancken* (1683) possibly reveal a response to the recent death of his wife and son in the plague by incorporating one expressively chromatic variation in each set. He was also partial to the chaconne, writing six *ciaccone* for keyboard and the Canon in D, an ostinato variation set for three violins and bass. The Canon, with an eternally simple if utterly compelling bass line of root position triads, is a *locus classicus* of the tonic-requiring type, over which the canonic violins emerge, intensify and recede, towards the end revealing the power of the flattened seventh degree. In the F minor Ciaccona for organ, an intense series on the descending tetrachord, a segment of the piece modulates to the relative major and, as later in Bach's Passacaglia in C minor, thins out the texture before a final series of returns. The Ciaccona in D, on the other hand, is a surprisingly sectional work, on a two-reprise theme with each part ending on the tonic. Although the first reprise uses the same chord progression as the Canon in D, its force is dramatically weakened by the tonic-providing close, the repeat and the second reprise. Pachelbel's 'summa' of variations is the *Hexachordum Apollinis* (1699), a collection of six arias with mixtures of constant-harmony and melodic-outline variations arranged in the keys of the hexachord (D, E, F, G, A, all minor except the one in F) until the final piece, which uses the key signature of B♭ but is in F minor. The latter is in any case anomalous in the set: it is in triple metre, its first reprise remains in the tonic, and it has a title, 'Aria Sebaldina', referring though with unknown import to the Sebalduskirche in Nuremberg, where Pachelbel had worked since 1695. The collection as a whole appears to have had a serious purpose not often found in secular variations: with a preface attesting the 'beliefs of many' that music comes from the 'Dreymal-Heilig' sung by angels as well as from the harmony of the 'heavenly bodies' known by Pythagoras and Plato, it is dedicated to Buxtehude of Lübeck and F.T. Richter of Vienna, thus apparently attempting to unite north and south, Protestant and Catholic, religion and humanism.

Many composers of south Germany and Austria luxuriated in lengthy passacaglias and chaconnes, with notable contributions by Biber, Kerll, Georg Muffat and Fux; each composed other types of variation as well. Unlike his extraordinary Passacaglia for solo violin (65 repetitions of the descending tetrachord, perhaps originating for a religious purpose), however, Biber's ostinato movements are not always labelled more specifically than 'Variatio' (e.g. Sonata no.3 for violin, 1681, on the descending tetrachord, or Sonata no.1 on the *bergamasca* progression; the Mystery Sonatas also include many ostinato variations). Buxtehude, like Pachelbel an influence on J.S. Bach, imported the ostinato form into northern Germany, writing two *ciaccone* and a brilliant Passacaglia in D minor on four-bar themes as well as seven sonatas for violins and bass viol with ostinato movements. The Passacaglia presents a symmetrical structure of seven statements of the tonic-requiring bass in each of D minor, F, A minor and D minor. In the *ciaccone* the bass theme may be varied and moved from the pedals to the upper registers. In addition to chorale variations (one of which, 'Auf meinem lieben Gott', is actually a series of dance movements including a *double*) and suite *doubles*, he also composed six sets of secular variations, including one on a Lully ballet melody ('Rofilis') and his most celebrated, *La capricciosa* (BUXWV 250). The latter uses as melody the song *Kraut und Rüben*, found in the quodlibet (variation 30) of Bach's Goldberg Variations, and as the bass I–IV–V–I pattern of the *bergamasca* (twice in each reprise). Also in G major and also with 32 sections (*partite*), *La capricciosa* has in common with the Goldberg Variations a multiplicity of topics and styles: quasi-imitative 'canzona' (2, 5, 15, 20 and the chromatic 12), brilliant 'toccata' (3, 6, 7, 11, 13, 16, 22, 26), lute-like *style brisé* (10, 17 and the sarabande-like 25), gigue (9, 19) and tonic-pedal 'lyra' (18) styles (ex.7). In several variations the theme's harmonies are altered to I–IV–V–vi, leading in variation 25 to a striking expansion in phrase structure (giving 10 bars in each reprise instead of four or eight).

Ex.7 Buxtehude: *La capricciosa*

7. The early 18th century.

(i) Couperin and Rameau. French variations of the 17th century had consisted primarily of *doubles* for lute (Denis Gaultier) with figural patterns of the *style brisé*, *doubles* and other variations for harpsichord (Louis Couperin, Chambonnières, D'Anglebert, variations on *Les folies d'Espagne*), which used both *style brisé* and a more idiomatic keyboard 'division style', and noël variations for organ (Lebègue, Gigault). Chaconnes and *passecailles* were usually *en rondeau*, with the theme serving as an unvaried refrain to punctuate the *couplets*, rather than as a source of continuous variations, although the latter appeared in rare instances (e.g. Lebègue, Chaconne in F). Composition in every one of these genres continued during the 18th century.

François Couperin's many *ordres* and *pièces de clavecin* contain relatively few variation movements. Most of his passacaglias and chaconnes for harpsichord are *en rondeau*. A notable example is the vivid and intense *Passecaille* from *ordre* no.8. But an extraordinary set of variations in *ordre* no.13 (*Troisiéme livre de piéces de clavecin*, 1722), entitled *Les folies françoises, ou Les dominos* (ex.8), appears to represent a meaningful French answer to the *Folies d'Espagne* with its increasing frenzy or virtuosity, the meaning of which, if it ever had one, had long before been lost. Here Couperin populates a masked ball with characters charting a colourful progress of love from Virginity (clear mask), Modesty (pink mask), Ardour (carnation), Hope (green), Fidelity (blue), Perseverance (grey linen), Boredom (violet) and Coquetry (diverse masks, represented musically by changing metres), to their dispiriting progeny: *galant* old men and faded beauties (purple mask and dead leaves), benevolent cuckolds (yellow), silent jealousy (Moorish grey) and frenzy or despair (black). While the first three numbers in the *ordre* appear unrelated to the *Folies* ('Budding lilies', 'Reeds', 'Engaging one'), the concluding 'L'âme-en-peine' seems to be a doleful commentary on the foregoing. The eight-bar bass pattern whose twofold statement underlies each of the 12 *couplets* is reminiscent less of the folia than of Purcell's Dido's lament or Chacony in G minor (Z730), or of the minor-key sections of Bach's Goldberg Variations, that is, a quasi-descending tetrachord (the third bar loosens the pattern so that it briefly resembles the i–V–i of the folia) followed by an ascending formula ending on the tonic. As in many 16th- and 17th-century sets, the first couplet is already a variation: the 'pure form' of the theme must wait until its presentation in the bass in semibreves in the seventh couplet.

Rameau's Gavotte with six *doubles* from the third collection of keyboard pieces (*Nouvelles suites de pièces*, c1728) is his longest variation set. Part of its popularity derives from its harmonies which, like the Couperin *Folies*, refer to several sequences of chords from earlier dance basses: in the first reprise, the opening i–IV–V–i from the chaconne and descending tetrachord from the passacaglia, and in the second, the progression from III to V is reminiscent of the folia, while the final melodic-minor

inflected ascent recalls Purcell's Chacony. Mirroring techniques animate the first few variations, with the melody appearing complete or in part in either upper or middle voice. The final variation returns to an ornate version of the theme, rather than continuing an increasing rhythmic trajectory.

(ii) Bach and Handel. Bach's sets of variations are among his earliest and latest works, with very few written in mid-career. They encompass nearly all the available genres, both sectional and continuous, and include independent sets and suite-movement *doubles*. An early arrangement of the suite in A minor from Reincken's *Hortus musicus* shows the linked Allemande and Courante of the variation suite, of which Bach himself furnished a single example, the early Praeludium et Partita del Tuono terzo BWV833. Three sets of chorale partitas for organ BWV766–8, written perhaps as early as 1700, include both varied and unvaried, long-note and matching-note presentations of the cantus firmus within a single set, as do the greatest variations of this type, the canonic variations on *Vom Himmel hoch* BWV769 (1747). The length of each variation in the latter is itself so variable that the structure suggests a linked series of chorale preludes; a 'set rhythm' cannot develop. There exist two different orderings for these variations: the printed version arranges the variations in order of increasing complexity of canonic treatment while the autograph organizes the piece symmetrically around a central point.

In the *Aria variata alla maniera italiana* BWV989, probably written before 1714 in Weimar (possibly for a special type of harpsichord: the most authentic source heads the piece 'alla man. Ital.', transcribed by another early source as 'alla manuale Italiana'), the set combines elements of melodic-outline and constant-harmony techniques; harmonic progressions that occasionally resemble the dance-bass type, especially the move to III after the double bar; and the variation suite, in the different tempos (in some early sources) and the change from 4/4 metre to 12/8 in variation 7, a courante-type marked Allegro. The finale variation (10), after the toccata-like 8 and 9, returns to the rhythm if not precisely the melody of the theme, a quasi-da-capo not too far from concluding variations in the Fitzwilliam Virginal Book. In the great C minor Passacaglia for organ BWV582, possibly written before Bach's years in Weimar, and the masterly Chaconne in D minor, from Partita no.2 for unaccompanied violin BWV1004 (1720), Bach turned to the continuous type, the former with tonic-providing, the latter with tonic-requiring subject. Both evince a three-part design, but differently conceived: in the passacaglia, the 'middle section' (variations 11 to 15) is characterized by the subject ascending in register, being itself decorated, and even disappearing before the final section returns the subject to its proper register; in the chaconne, the middle section is articulated by a turn to major. Bach's use of ostinato variation includes the 'Lament of the Friends' movement (F minor) in the early *Capriccio sopra la lontananza del suo fratello dilettissimo* BWV992, and the adaptation of the first chorus of the Cantata BWV12 (F minor) to the 'Crucifixus' of the B minor Mass, which uses the powerful chromatic version of the *lamento* bass in a tonic-requiring series in E minor.

Ever since Sulzer included, in addition to the Goldberg Variations and the canonic variations on *Vom Himmel hoch*, Bach's *Art of Fugue* and D'Anglebert's fugues on the same theme as the 'highest type of variation' (not to mention works by Froberger, Krieger and the *Folies d'Espagne* of Corelli; J.A.P. Schulz: 'Veränderungen; Variationen', *Allgemeine Theorie der schönen Künste*, ed. J.G. Sulzer, iv, 1774), and Forkel called the *Art of Fugue*

'variations on a great scale . . . to show what can possibly be done upon a fugue theme' (*Über Johann Sebastian Bachs Leben*, 1802), subsequent generations have reopened the question of whether successive individual movements generated by the same theme may be considered variations. The term 'variation ricercare' may give comfort here without actually providing an answer. Bach's cultivation of 'monothematic' works during his last decade (the Goldberg Variations, *Vom Himmel hoch*, *Art of Fugue* and *Musical Offering*), especially when conceived as the focussed counterpoint of canons and fugues, suggests that variation goes hand in hand with thematic elaboration when systematically carried through works of a paratactic structure. The later addition of 14 increasingly complex perpetual canons on the first eight notes of the Goldberg bass line exemplify Bach's desire to wring every possible theoretical meaning from a given theme.

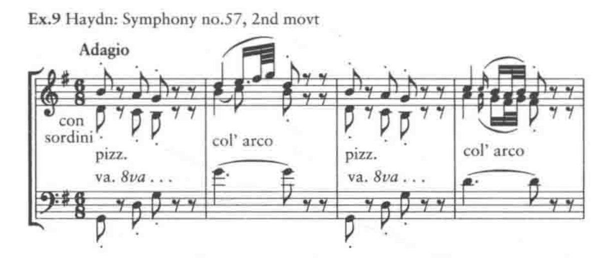
The Goldberg Variations BWV988 (1741), Bach's towering achievement in variation form, presents a compendium of topics and styles within two large-scale organizational plans: first, the division of the 30 variations in ten groups of three, each concluding with a canon whose interval increases each time, from unison to 9th; secondly, the division into two groups of 15, articulated by the French 'Ouverture' at variation 16. There may also be an esoteric meaning to Bach's composition of an aria with 32 bars and a piece with 32 sections (Aria, 30 variations, Aria da capo). The closed, descending pattern of the first eight bars of the bass line recalls 17th-century dance basses, and was used as chaconne subjects, both in G major, by Handel (Chaconne with 62 variations, published 1732) and Gottlieb Muffat (Ciaccona, *Componimenti musicali*, *c*1739); the first four notes also generated a sarabande given 12 variations by Johann Christoph Bach (1642–1703). The sarabande rhythm of J.S. Bach's theme comes out strongly only in variations 13 and 26 (and to a lesser extent 25, marked Adagio by Bach), while more lighthearted dances are signalled by the 3/8 and leaping basses in variations 4 and 19 and the 6/8 and 'al tempo di Giga' marking (in Bach's personal copy) of variation 7. 'Part 1' ends with the first *minore*, an Andante canon at the 5th which ends in contrary motion on an open 5th, a clear rhetorical question. 'Part 2' sees an acceleration in the degree of keyboard virtuosity (the cascades of 8, 9 and 14 now supplanted by toccata-like and increasingly brilliant writing in 17, 20, 23, 26, 28 and 29) offset by two variations in the minor (21 and 25), the second an Adagio. Each part has its fugue, the Fughetta of variation 10 and the second part of the 'Ouverture', variation 16, remarkably staying within the allotted number of bars. The final variation before the Aria da capo puts an end to the brilliant keyboard writing in favour of a contrapuntal quodlibet whose sources have been plumbed (one of them is the same folktune as underlies Buxtehude's *La capricciosa*). The work continues to inspire new interpretations and commentaries, among them David Schulenberg's idea that it was intended to recall the grand encyclopedic tradition of variations in order to counteract the slump into the merely pedagogical into which the keyboard variation had fallen (*The Keyboard Music of J.S. Bach*, 1992, p.319), and the imaginative hypothesis by Alan Street (1987) that the work originated as a detailed self-defence against Scheibe's attack on Bach's old-fashioned style, using a forensic mode of oratory modelled on Quintilian's *Institutio oratoria*.

Handel's variations are much more limited in scope than Bach's, entirely for harpsichord, and all reasonably early. Six suite movements have variations labelled as either *doubles* or variations, and their format tends towards a stereotypical use of mirroring. Every set has a progressive increase in speed of figuration, and with a sufficient number of variations will include one in triplets, usually rewritten in 12/8. The best of these is the celebrated 'Harmonious Blacksmith' set from the Suite in E, with its lovely introductory note and suspension in the second bar. The combination of mirroring and progressive diminution results in a pair of semiquaver variations, a pair of semiquaver-triplet variations, and finally a single demisemiquaver variation conflating treble and bass figuration. Pre-eminent among his ostinato variations, the G major Chaconne with 62 variations never changes mode, but it introduces sarabande rhythm as early as the first variation (and in 4, 5 and 9), uses mirroring to leave virtually no variation unpaired and also expands it to include a third element in the group, the variation with simultaneous figuration in treble and bass (5–7, 10–12, 13–15, 16–18) as well as other combinations (19–23).

8. THE CLASSICAL PERIOD. At the middle of the 18th century, constant-harmony technique was firmly established, but ostinato variations – indeed, ostinatos of virtually every type – dropped by the wayside. The sectional constant-bass variation had emerged, however, perhaps as a feature of figured bass practice. While the forces of innovation shifted to Vienna, variations in northern Germany continued to develop in interesting ways.

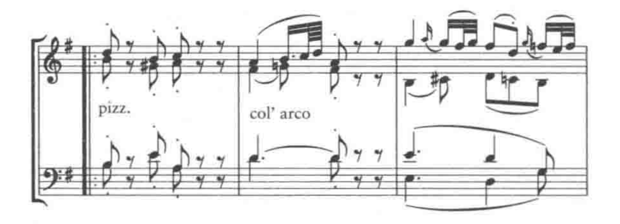
(i) C.P.E. Bach. C.P.E. Bach's interest in the concept of variation transcended that of most of his generation, and his cultivation of varied reprises was widely known during his lifetime, meriting praise in Schulz's 1774 article on variation in Sulzer's encyclopedia and profoundly influencing Haydn. Bach's varied-reprise works extended from the first volume of the *Versuch über die wahre Art das Clavier zu spielen* (1753), which ends with a reference to 'the present practice of varying extemporaneously the two reprises of an Allegro', illustrated in the third movement of the fifth *Probestuck* (H74, WQ62 no.55), to the six *Sonaten mit veränderten Reprisen* (1760, H126, 136–40, WQ50), the two sets of *Kurze und leichte Clavierstücke mit veränderten Reprisen* (1766, H193–206, WQ113, and 1768, H228–38, WQ114), individual sonatas in other collections, and even the delightfully titled *Variationes mit veränderten Reprisen* (1777 or later, H259, WQ118 no.10), a recasting of the variations for violin and piano (H534, WQ91 no.4) with varied repeats. Manuscript sources attest to his revisions of other works with more varied surfaces as well. The sixth of his varied-reprise sonatas is a one-movement work which varies in alternation a minor and a major theme ($ABA^1B^1A^2$), a structure that was to be important for Haydn and Beethoven. Bach wrote 12 independent sets (which spanned nearly his entire career, 1735–81) and six variation movements (all early). Of interest among his early works are the Vivace finale of a sonata for oboe and bass (written by 1735, H549, WQ135) and the variations on a minuet by Locatelli (1735, H14, WQ118 no.7). The three variations of the former arise as counterpoints to the unvaried figured bass, which is strikingly similar to a descending *ciaccona*

pattern, concluding with a theme da capo. Of the 21 variations in the latter piece, the first three seem closer to J.S. than to C.P.E. Bach, especially in the two-part (variation 1) and three-part invention (variation 3) textures, and anticipatorily resemble the Goldberg Variations; von Fischer asserts that the Brussels copy begins with two of Locatelli's own variations. The figurations beginning in variation 4 are much simpler and more repetitive than Locatelli's, until variation 10, where Bach places the theme melody in the middle voice (it has already appeared in the bass in variation 3). After this point in the set both texture and figuration styles grow more complex and interesting. Also worthy of note among his earlier variations is the finale of the Sonata in D minor for 'due tastature' (1747, H53, WQ69), in which each of the nine variations – by far his longest variation movement – is given a different registration.



Bach's last two variation sets are among his most significant works. The *12 Variationes über die folies d'Espagne* (1778, H263, WQ118 no.99) bring the old framework into a remarkably colourful and contrast-filled set, with dissociated textures (variation 7), changes of metre (6–8, 10–12) and tempo (7, 8, 12), imitation (4, 10), syncopation (2, 11), toccata style (3, 5, 9, 12) and French overture (8). Both this and the Locatelli set were published by Traeg in Vienna, together with Handel's Chaconne with 62 variations, in 1802, the same period that saw Beethoven's framework-variations in op.35 (1802) and WoO80 (1806); the Traeg print had a lukewarm review in the *Allgemeine musicalische Zeitung* (vi, 1803–4, cols.242–4). An Arioso in A with five variations for keyboard and violin (1781, H535, WQ79), Bach's last set, is reminiscent of the rondos in his contemporaneous keyboard collections 'für Kenner und Liebhaber', both in the nature of the theme, which includes an identical phrase in the first and second reprises, and in the linkages between variations: a three-bar modulating transition right after the *minore* (variation 3) prepares the surprising key change of variation 4, virtually a restatement of the theme in F, after which a transition similarly leads to the final variation and coda in A. The alternation of figured and unfigured variations is especially rondo-like. Variations by other central and northern German composers in the middle and later 18th century often used highly expressive, ornate themes, minor keys and dense and sometimes capricious figurations. Notable among these are the fanciful, overstuffed qualities of Müthel's two sets of Ariosi with variations (1756), Schulz's Larghetto con variazoni in his *Six divers pièces pour le clavecin* (op.1, 1776), which begins with a chromatically descending bass, C.F. Fasch's registral contrasts in the Ariette with variations in A (Berlin, 1782), and Neefe's variations on the Priests' March from *Die Zauberflöte* (1793), which features not only an expansive cadenza-like coda which brings back the F major theme in F♯, but also a variation in F minor (as well as variation 6 in F major) with remarkable passages in common with Haydn's F minor Variations of the same year.

(ii) Haydn. The variation principle and form were central to Haydn's creative mind. Indeed, the variation principle vied with the sonata principle in shaping his larger musical structures and became increasingly important to his style during his long and productive life. By the 1770s he emerged as a profound innovator in variation form itself, using it in weighty slow movements and transforming its repetitive shape in hybrid mixtures with rondo and ternary forms. It was Haydn's innovations – placing the variation set in every movement of the multi-movement cycle, broadening its array of theme types and transforming its larger shape – that created a recognizable 'Classical variation'. He was lauded for these achievements by contemporary writers: Koch (*Versuch einer Anleitung zur Composition*, iii, 1793, p.314) claimed that he was the first to write slow-movement variations among his 'pre-eminent masterpieces in this form'; Vogler (1793) called him 'a true Phoebus . . . [who] showed us in symphonies how we should vary' (p.70); Burney credited him with saving the world from the 'dull and unmeaning variations to old and new tunes' that had 'overwhelmed' the world at the middle of the century, turning them into 'the most ingenious, pleasing, and heart felt of his admirable production' by means of 'richness of imagination, by double counterpoint, and inexhaustible resources of melody and harmony' ('Theme', *The Cyclopedia*, ed. A. Rees); E.T.A. Hoffmann asserted that Haydn had invented the form of variations on two themes on which Beethoven drew (*AMZ*, xv, 1813, cols.150–51).



Strophic variations appear in Haydn's works from the beginning to the end of his career, a 50-year span, in every instrumental genre but the concerto. Of the 87 strophic sets, 81 are movements in larger works (the one-movement trio for two flutes and cello, H IV:2, was published with other movements), and the earliest and latest of these are in string quartets: the first movement of op.2 no.6 (?*c*1760–62) and of op.76 no.6 (1797). Many of his variations appear in the chamber music genres that he cultivated during the earlier part of his career (up to about 1770), such as string trios, baryton trios, every one of the six violin-viola duos (part of an apparent Austrian vogue for this genre in the 1760s and 70s), and divertimentos (H II:1 and 11); these sets are all first movements or finales. In string quartets and symphonies, variation movements were introduced into slow-movement position in 1772, with considerable deepening of expression and complexity of technique; the slow movement of op.20 no.4, Haydn's only strophic variations in a minor key, has an extraordinary coda after the reprise of its powerful theme, and Symphony no.47 sets its opening period in two-part invertible counterpoint which returns after a beautifully orchestrated middle section with the parts inverted. Only two later strophic sets in these genres are in other than slow movements (op.33 no.5, finale, and op.76 no.6, first movement), whereas the piano sonatas have no slow movement variations at all. Among Haydn's many sprightly or cantabile theme types are also serene hymns (Symphony no.75, second movement, an influence on Mozart's Piano Concerto K450), ethereal chord progressions (op.64 no.2, second movement) and character pieces (the Variations for piano in F minor, H XVII:6, a set of alternating variations). One of Haydn's wittiest yet most reticent themes is that of the epigrammatic slow movement of Symphony no.57 (1774), which alternates pizzicato cadential chords with bowed ornamental lines, but in units of one, two or three bars with plentiful rests (ex.9). The rhetorical wit of beginning and ending with the same gesture, especially when the final cadence reiterates a point already reached, is refined in each variation.

Perhaps as part of his professional interest in displaying the abilities of the first-rate Esterházy musicians, Haydn often turned, during the 1760s, to the overt display of

Ex.9 Haydn: Symphony no.57, 2nd movt

concertante textures. When this technique came to the fore during variation movements, it meant that the instruments in the ensemble, normally one to a variation, took turns revelling in figuration; for example, in the finale of Symphony no.31 ('Hornsignal'), the variations on the string theme feature by turns wind, viola, flute, horn, violin, tutti and double bass. The figured line also may migrate from instrument to instrument in a string quartet (as in op.20 no.4). Later in his career, concertante display might be localized to a single variation or to such novelties as a coda-cadenza for wind (slow movements of symphonies nos.84 and 87, the latter a monothematic sonata form with variation technique). An error in Kurt von Fischer's *MGG1* article on variation, replicated in the *Grove6* translation and left uncorrected in the *MGG2* revision (by Stefan Drees) refers to the concertante segments labelled 'variatio' after the minuet's second trio in the early string quartet H III:9 (op.2 no.3) which are really 'alternativos' rather than true variations. Not only is this work a divertimento with two horns (H II:21*) in a spurious arrangement, but, more critically, the 'variatio' segments themselves are not authentic (see the edition in *Joseph Haydn Werke*, VIII/1). Authentic 'alternativo'-style ones are in the Divertimento H II:24 (autograph in *US-NYpm*).

Only about a fifth of Haydn's strophic variations (18) have a *minore*, perhaps because his interest in alternating mode more often took the form of alternating variations on a major and a minor theme. After 1776, Haydn never included more than four variations in a movement, so that a *minore* has the power to reorganize the whole series by acting as if a 'middle section'; perhaps for this reason the *minore* is most often the second variation. Rarely decorative, Haydn's *minore*s normally do not retain the harmonic structure of the theme, tending instead towards a simple first reprise closing in the relative major, then an intensified second reprise, as in variation 2 of the 'Surprise' Symphony (no.94, second movement, 1791) and the first movement of the Sonata in D, H XVI:42 (1784). The latter also opposes the theme's improvisatory air, deriving from its frequent rests, to the *minore*'s powerful contrapuntal and suspension-laden development of its opening dotted rhythm in overture or preludial style. It is likely that such *minore*s provided the impetus for Haydn's slow movements in ternary (*ABA*) form, in which the *B* section in the parallel minor varies or develops material from *A*; he began writing them the same year (1784) in piano sonatas and trios and developed them to a high degree in the Andante of Symphony no.104 ('London') and the first movement of the Piano Trio in E♭ HXV:29. Only rarely is there a fast concluding section to a set of variations: op.33 no.5, H IV:2, and the fugue in op.76 no.6, and the codas of two symphony finales nos.31 and 72. The stereotyped concluding pattern of so many of Mozart's, a final Adagio–Allegro pair, the latter normally in a different metre, never appears.

Within about 15 years (mid-1750s to *c*1770), Haydn's variation types developed from sets entirely in constant-bass variation to those that mixed constant-harmony and melodic-outline variation, until the last finally predominated. This process, which affected all of his genres, is most evident in the 21 baryton trios with first-movement variations. At about the same time that melodic-outline variation came to the fore, Haydn began to develop hybrid types of variation based on recurrence and alternation, often in conjunction with the alternation of mode, in which recognition of the melodic theme is an important element of the form. While quite a few composers varied one or more refrains in a rondo movement, Haydn's rondos are often systematically rather than incidentally varied, to the point where they can be called 'rondo-variations' or variations with episodes (e.g. ABA^1CA^2); Koch's description reinforces this point (*Versuch*, iii, p.314). The 13 movements of this type are most often finales and slow movements, but the three first movements reveal that variation rather than rondo is the model. The latter include two piano trios H XV:25 and 31 (although only the final refrain is a variation in the latter), and the movement which furnishes the prototype for H XV:25, namely the Piano Sonata H XVI:39. The well-known G major Piano Trio H XV:25 is particularly delightful, uniting a charming theme and variations with the rare feature of two episodes in minor (parallel and

relative, respectively, like the Sonata, H XVI:39), the first of which sounds like a variation itself, the second like an episode.

Virtually no-one but Haydn was drawn to the idea of alternating variations on a major and minor theme (*ABA*[1]*B*[1]*A*[2] or *ABA*[1]*B*[1]*A*[2]*B*[2]), and he made that form his own in 21 movements and one independent set. (Reicha modelled the description in his *Traité de haute composition musicale*, ii, 1826, on Haydn, although it does not tally with Haydn's actual practice.) The very few precedents for this format, other than C.P.E. Bach's Sonata H140, are works that alternate only major and minor variations of the same theme: the finale of G.B. Martini's Sonata in C (1742; Mw, xi), an Arietta con variationi in A included in Leopold Mozart's *Nannerl Notenbuch* (1759) elsewhere attributed to Wagenseil, and the finale of J.A. Štěpán's C major Sonata op.2 no.6 (1760). Of Haydn's younger contemporaries other than Beethoven, Anton Teyber included an alternating-variation movement with three variations on each theme in his Notturno for two pianos (*A-Wgm* VII 15285), and the prolific variation composer Abbé Gelinek varied in turn a theme and its trio in *Les allemandes saxones* op.67. One element that might have appealed to Haydn is the often close relationship between the two themes: when they share melodic contour or rhythmic pattern, the second seems to be a reaction to or interpretation of the first. Thus, two themes of opposite character may find common ground by the end of the movement. He was also drawn to juxtaposing tonic major and minor in successive movements and in the trios of minuets, in works without variations such as the String Quartet in C op.20 no.2 (1772) and the Piano Sonata in B minor H XVI:32 (1776). Symphony no.70 (1779) exemplifies this trait with alternating variations in the slow movement (the austere minor theme in invertible counterpoint is here unrelated to the two playful *maggiore*s, and has the last word) and a finale alternating chordal and fugal passages first in the minor, then in the major. Moreover, the alternation of *galant* and learned style in the slow movement themes – the learned aspect underscored by the labelling of the *A* theme's melody as 'canto fermo' when it returns in the bass – is writ large in the symphony as a whole, where the *galant* style of accessible sonata form and minuet in the first and third movement alternates with the learned style of strict counterpoint and fugue in the second and fourth. A unique five-part alternating variation is the first movement of the Piano Trio H XV:19, in which the fifth section is not a variation of *A* but rather a Presto sonata-form expansion of the *B* theme. Haydn's richest six-part alternating variations, found in the slow movement of the 'Drumroll' Symphony, no.103 (1795), offer themes with contrasting scoring based on Croatian folktunes with similar opening bars. In the course of the movement each takes on some aspects of the scoring of the other. The only seven-part example of the form, the celebrated Variations in F minor for piano H XVII:6, is a revision of the original more typical six-part form ending in the major; Haydn added a theme reprise and a lengthy, extraordinarily expressive and chromatic coda to the already powerful piece. The dark-hued minor theme, with its inexorable dotted rhythms, registral shifts and dislocations and bruising syncopated Neapolitan chord towards the end, contrasts with the sweet, even frivolous, major theme. Haydn's later reassertion of the power of the minor theme, attested by changes in the autograph, shows his desire to have the movement end not merely with melancholy but with tragedy. Although the piece fades to a whisper, it contains some of his most dynamically vibrant piano music.

After 1780, Haydn began to infuse variation into most of his slow movements. Of the symphonies from the Paris set onwards, only the slow movements of nos.83, 98 and 99 are without significant variation. His last strophic variation movement, the first movement of the String Quartet op.76 no.6 (1797), explores the constant-melody variation type found in three other string quartet movements of the 1790s. While the beautiful 'Kaiserhymn' that Haydn had just composed as the new Austrian national anthem ('Gott erhalte Franz den Kaiser') seemed to call for this sort of treatment, the theme of op.76 no.6, on the other hand, is repetitive, circular and rhythmically static (ex.10*a*), so there is a touch of amusement in the exaggerated way in which it is repeated: in overture style in variation 2, with a mocking echo in variation 3. The movement even ends with a wonderful Allegro fugato (whose countersubject foreshadows the countersubject in the 'Eroica' finale). But this repetitive presentation has important consequences for the rest of the quartet. In the Fantasia slow movement, a series of repetitions of the same hymn-like theme in different keys connected by improvisatory transitions also gives way to a fugato, while in the Alternativo to the Minuet, the theme is an E♭ major scale given the cantus firmus treatment: it is stated over and over again in successive instruments either ascending or descending, with new counterpoints and accompaniments every time (ex.10*b*). The latter piece has never been described as theme and variations, but it clearly derives from the textural constant-melody variations of the first movement; one feels that one is hearing a witty staging of the scale with different characters entering and exiting with their textured retinues. Finally, the last movement uses a scale-based theme metrically displaced to different parts of the bar. Repetition, variation, counterpoint and humour form the underlying 'plot' of the entire work. No better example could be found of the importance of variation principles to Haydn's musical mind.

(iii) Mozart. In contrast to Haydn, Mozart's variations were primarily strophic and largely for piano; out of 55 movements and sets, only seven are rondo-variations, one is ternary and only 15 are for genres without piano. As his performance and publication opportunities increased, so did the number of variation works: 16 were written between 1766 and 1779, mostly for Salzburg and Paris (half were independent sets for keyboard) and 32 in Vienna between 1781 and 1791. He wrote no symphonic variations. Whereas Haydn tended to write a few variations on an elaborately detailed theme, Mozart wrote larger numbers of variations on relatively simple themes, exceptions being the texturally complex minor-key themes of the finale of the String Quartet K421/417*b* (1783) and the second movement of the Piano Concerto K456 (1784), each with five variations and coda, and that of the second movement of the Piano Concerto K482 (1785), a rondo-variation. The themes of these last two are also rich in expressive rhetorical figures and establish the idyllic pastoral wind-serenade variation as an important part of the concerto oeuvre.

Mozart's variation sets and movements were widely known and admired during and after his lifetime, as evidenced by contemporary accounts adducing the marvels of his improvising variations at the keyboard and by multiple editions of both independent sets and of piano arrangements of variation movements up to 1817. One of the sets most highly valued by Mozart himself and his Viennese audiences has had a chequered reputation in the 20th century because its brilliantly rhetorical element has not been understood. This work, known as the Rondo in D major K382, was composed in March 1782 as a new finale to his earlier piano concerto K175 (1773). In sending a copy to his father (23 March 1782), Mozart noted that it was making a 'big noise' in Vienna and was always greeted with torrents of applause; he asked that Leopold 'guard it like a *jewel* – and not give it to a soul to play . . .

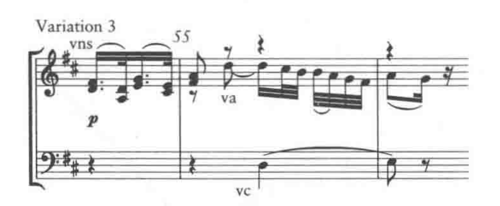
I composed it *specially* for myself – and no one else but my dear sister must play it'. Mozart continued to perform it for over a year, referring to it as a *Variazion rondeau* (Schmid, 1992, adduces the title as evidence of a vocal origin of the theme). It is a theme and variations in which the first reprise of the contredanse theme returns periodically like a ritornello or rondo refrain, as he was later to write in the piano variations K613. Persuasively arranged, the sectional format of the movement has the ritornello recurring first after a single variation (the solo foil to the tutti and thus the more personal signal of the genre), then after two variations (each increasing the speed of figuration), then after three (each with an expressive or characteristic reinterpretation: *minore*, scherzando with trill accompaniment, Adagio). The final ritornello is an Allegro in triple metre flanking a real variation and a coda. No other movement by Mozart asserts first genre, then technical strategy, then expressive value: it is a rhetorical tour de force.

Several of Mozart's improvised keyboard sets were later published, such as the ones originating at a Viennese concert of 23 March 1783 (at the Burgtheater, with the emperor present) on themes by Paisiello (K398/416*e*) and Gluck (K455). (Other improvised sets that were mentioned in letters and contemporary accounts – on Figaro's 'Non più andrai' (two different occasions), on Michael Kelly's melody to Metastasio's canzonetta 'Grazie agl'inganni tuoi', one on a theme given by Archbishop Colloredo in Vienna – do not survive.) The Paisiello set appears closer to what must have been the virtuoso display of its original performance, given the presence of the melody in all the variations and of three improvisatory passages, two smaller and one fully fledged cadenza, between the last four variations. The *minore* of variation 4 triggers the first of these with a change in phrase structure when the melody returns to the opening in a new key (A♭ major) rather than a return to the second element (the theme is *abcb′d*, in which *b* is a codetta to *a*, *b′* is on the dominant, and *d* is a short conclusion); here the short cadenza is Adagio and full of the *minore*'s expressive values. The scherzando trill variation 6 consists only of *a* and *b* and their varied repetition with the hands exchanged (mirroring). Two altered bars and a short cadenza lead to a final variation in étude style – triplets in right and left hand – in which *a* and *b* are heard only once before the lengthy cadenza and coda based entirely on *b*. Thus the last two and then the last three segments of the theme are sheared off in the process of stripping the theme to its most memorable elements.

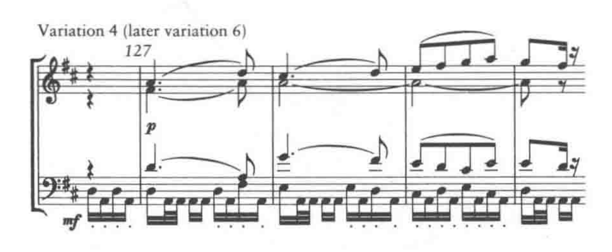
That K398/416*e* appeared in print so soon after its first performance suggests that Mozart may have changed it only little from the improvised form; all the sources before 1798 lack numbers for the variations and double bars between them, suggesting the through-composition of an extempore performance. The Gluck variations, on the other hand, came out more than a year later and seem more highly crafted, especially in the ways in which Mozart departs from the strongly profiled unison descent from the tonic to the fifth degree of the scale in the first four bars, whether by substituting another melody completely (variation 2) or by finding substitutes for the dominant chord on which it lands (as in variation 4, where every version of the phrase has a different chord and resolution). A lengthy cadenza doubtless refers to its origin and perhaps increased the salability of such a work by enabling the performer to mimic extemporization.

Mozart alluded to Haydn's variations four times, and possibly used one as a model, during the 1780s in Vienna. The variation movement from the Wind Serenade K361/370*a* employs a theme remarkably like that in Symphony no.75; the minor variation of the same serenade plays with the opening of the minor theme in Haydn's Symphony no.63 ('La Roxelane'); and the siciliana variation finale of Mozart's D minor Quartet K421/417*b* draws together the siciliana variation finale of Haydn's G major Quartet op.33 no.5 and Mozart's own earlier D minor variations in a piano and violin sonata (K377/374*e*, the sixth variation of which is a siciliana). Finally, one possible explanation for Mozart's revision to the theme of the slow movement of his Piano Concerto K450 after he had already begun composing the variations is that he realized that the material in the second reprise was too close to his model, Haydn's Symphony no.75, with its triple-metre hymn theme. One classic locus for the *inventio* of a theme is in imitation of the theme of another, or *imitatio*, so this kind of homage is especially appropriate to variations.

Mozart's methods of organizing sets of strophic variations differ in nearly every particular from Haydn's, but most obvious are cadenzas in keyboard sets and the way they chain variations together; opposite-mode variations, especially the two movements in C minor with two variations in two different keys (in the Wind Serenade K388/384*a* relative and parallel majors, in the Piano Concerto K491 with submediant and parallel majors; the rondo-variation movement in the Piano Concerto K482 also has relative and parallel major episodes); and the presence of an Adagio or an Adagio–Allegro pair. Of 29 movements, 20 have opposite-mode variations (half in fourth position out of five or six), seven have a penultimate Adagio variation, and 11 (including six of the sets with Adagios) conclude with a faster and often metrically altered variation. Mozart's *minore* variations tend to be imitative, chromatic and highly expressive, often with an air of mystery, as in the Piano Concerto K453 or the Divertimento for string trio K563.



The autograph of the String Quartet K464 supports the idea of a conscious plan for the ordering of variations. After completing five variations, Mozart decided that the coda should incorporate the cello figuration of the fourth variation, and thus reversed the order of the last two variations. The coda followed the original fifth variation in the manuscript. At that point the *minore* was added and given the number 4, and the original fourth variation was renumbered 6. The real question is why there was no *minore* variation originally: what was the rationale of the original plan? In fact, the most highly figured line in each variation descends through the parts from first violin to cello until, with every register sounded, a contrapuntal epitome offers a summation, obviously intended to be the final variation (ex.11). One other movement seeks to articulate its imminent close with a contrapuntal study, the slow movement of the Divertimento K563, which has four variations and a coda. In this work the contrapuntal variation is not imitative, as in K464, but rather is a layered species exercise in which the chorale-like cantus firmus, played by the viola, itself includes two different note values (minims and crotchets) and represents the theme melody stripped down to a scale. The cello, playing



Ex.11 Mozart: String Quartet K464, 3rd movt, original plan

in semiquavers, creates a largely third-species relationship to the viola, while the violin in demisemiquavers maintains a constant second-species relationship to the cello. In format, the movement resembles the ubiquitous figure of refining (*expolitio*) as described in the *Ad Herennium*: the theme expressed simply, the theme expressed in a new form (three-part version in the varied repeats), arguments from comparison, contrary and example (variations 1–2, 3 and 4, respectively), and a conclusion that restates the theme.

Other questions of ordering arise from the striking finales to two piano concertos, K453 (1784) and K491 (1786). The former has a labelled 'Finale' after five variations and extension, in which an entirely new Presto theme (of practically the same length as the variation theme) forms the first of five quasi-paratactic segments, all of which contain repeated and sometimes varied material. That these five segments might be intended to match and sum up the theme and variations is suggested first by the resemblance of the finale theme and its piano reiteration to the tutti variation theme and solo first variation, and second by the reference of the mock-serious *ombra* passages and ascending imitative sequences with suspensions to the *minore*. The finale of K491 features alternation between piano-dominated and wind-band-dominated opening periods and at the same time a kind of three-part form in which the 'middle section' appears to develop aspects of the first, with a contrapuntal piano variation alluding to the march-like variation 3 and the *maggiore* variations (4 in A♭, 6 in C), developing the wind-band sonority of variation 2. The final section offers two variations without repeats and a coda: the first is a melodic reprise uniting all instrumental groups and the second has both a new time signature and a new auxiliary-note motif from which the coda develops.

(iv) Beethoven. In works by Haydn and Mozart, the decorum of a variation movement – its traditional and hence normative technical and expressive limits – depended upon position in the work, upon genre and upon the nature of the theme. In general, its implicit code included several different properties: ordering, in which simpler textures appeared early in a set but imitative polyphony never did; performance style, in which extremes of orchestration and dynamics would be introduced for local contrasts, rarely as the topic of an entire variation; and contrast and return, in which distantly related or contrasting material would be followed by returns of the theme melody. Finally, the theme itself would observe certain properties, in its (usually) two-reprise phrase structure with clearly delineated phrases, its degree of repetition, and contrast in melodic segments, rhythms and textures. All these properties devolve upon the concept of familiarity and recognition, without which, Koch said, '[the variations] give the impression of a group of arbitrarily related pieces which have nothing in common with each other, and for whose existence and ordering one can imagine no basis' (*Musikalisches Lexikon*, 1802). Thus Beethoven issued the first serious challenge to the decorum of the classical variation in the very first variation of the String Quartet op.18 no.5 (1799), a gritty contrapuntal build-up starting in the cello which, by suddenly eradicating the harmony and registration of the theme, inserts a new level of difficulty into a previously more accessible form.

Beethoven's first published work was an ordinary set of variations on a minor-key march by Dressler (WoO63), promoted by his teacher Neefe to attract attention and money to the 11-year-old composer. Only eight years later Beethoven wrote the exceptional set of 24 variations on Righini's 'Venni amore' (WoO65, 1790–91), which featured an imaginative array of both melodic outline and constant-harmony techniques and a wide variety of piano

figurations and sonorities sometimes reminiscent of the thicker and more contrast-orientated mode of writing for piano characteristic of such northern German composers as C.F. Fasch, J.A.P. Schulz and J.G. Müthel. The Viennese style in keyboard variations favoured thinner textures, as evidenced in the works of such composers as Mozart, Vanhal, Štepán and Kozeluch. For his early Viennese sets, Beethoven generally adopted many of the common features of Mozart's keyboard sets, especially the *minore*, Adagio and finale variations, though the last in his case are normally rondos with extended excursions into foreign keys and no cadenzas. His 'peculiarities of style', however, were copied by others and 'palmed off with pride as their own', as Beethoven wrote testily to Eleonore von Breuning in 1794, forcing him to write down and publish pieces that 'I should never [otherwise] have written down'. The fine craftsmanship of the Righini set is once again in evidence in the set on Salieri's 'La stessa, la stessissima' (WoO73, 1799); concluding with an 'alla Austriaca', Beethoven thus joins a popular trend to characteristic variations, one example of which is Vanhal's *Theme avec VII variations caractéristiques* (*c*1805), with its variations 'alla Polonese', 'alla Ungarese', 'alla Francese' and 'alla Inglese'. In the set on Süssmayr's 'Tändeln und Scherzen' (WoO76, 1799), Beethoven for the first time tried to link several variations tonally: variations 5, 6 and 7 in this F major set are in D major, B♭ major and F major (Adagio), followed by an Allegro fugue in the eighth variation with a chain of third-related keys after it reaches the dominant. For all his efforts, however, it was reported (*AMZ*, 1799, col.607) that 'he does not understand how to vary well'; in the same year Haydn's F minor Variations, just published, received the comment 'varied as only a master can'.

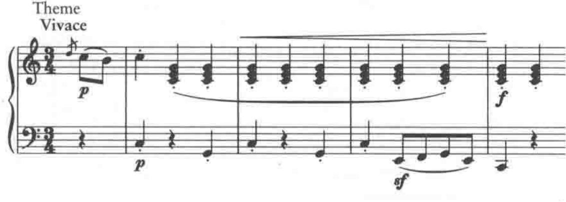
That Beethoven revised his variation style is attested by the two sets op.34 and op.35, offered to Breitkopf in 1802 with the request that they be given the opus numbers of his '*greater musical works*, the more so as the themes have been composed by me'. On 18 October 1802 he claimed that these pieces were composed '*in a completely new manner*, and each in a *separate and different way*'. Considerable scholarly attention has been paid to these claims, mostly focussed on the demonstrably new elements in both sets: it has been suggested (Küthen, 1984) that the phrase 'wirklich gantz neue Manier', however, was intended as a parody of Antoine Reicha's 'new kind of fugue' in the *36 Fugues* dedicated to Haydn in 1803, Beethoven having contemptuously interpreted the description to mean 'the fugue is not a fugue' (Reicha's *L'art de varier*, op.57, was however similarly exploratory and inventive). The F major set op.34, the first free-standing Adagio with variations, moves from F to variations in D, B♭, G, E♭ and C minor before returning to F, also changing the time signature and tempo in every one but the first. The rather conventional techniques of melodic decoration are thus given new life in changes of character and in what sounds like a radical defamiliarization of the theme as early as the D major of the first variation, virtually a conjurer's trick. The E♭ Variations op.35, later known as 'Eroica' or 'Prometheus' variations because the same contredanse theme was used in the finales of both those works, were called 'grand' by Beethoven in contrast to the 'small' F major set, probably because of their length (15 variations and fugue), enormous technical difficulty and large-scale contrapuntal pretensions – immediately shown by the 'Introduzione col Basso del Tema', with three constant-melody variations, the 'canone all'ottava' and the fugal finale. Beethoven first claimed to Breitkopf that this set had 30 variations, just like the Goldberg Variations, recently published in several editions starting in 1799. (The publication in 1802 of Handel's Chaconne and C.P.E. Bach's folia variations may have inspired Beethoven's passacaglia-like work on an eight bar theme, 32 Variations in C minor WoO80, of 1806.) Like these older models, op.35 uses constant-harmony technique almost exclusively, in contrast to the melodic orientation of op.34. In variation movements of the middle period, however, melodic-outline technique prevails, but with very different cyclic shapes: the sublime D♭ slow movement of the 'Appassionata' Sonata in F minor op.57 (1804–5) adumbrates the trajectory of its beautiful hymn theme by combining the *gradatio* of register with that of rhythm in an arc-like shape, while the finale of the E♭ major String Quartet op.74 (1809), with a metrically ambiguous theme, offers an alternation in dynamics which effectively groups the variations into *piano–forte doubles* in which the first of each pair is melody-orientated, the second more motivic and figural.

Beginning with the 'Eroica', every one of Beethoven's odd-number symphonies has prominent conjunctions of variation and fugue, forecasting the central place these forms would have in his late style; moreover, every symphonic variation movement except that of the Ninth Symphony finale adopts some type of alternating-variation scheme, with extensions and transitions making a more or less continuous and fluid succession of variations such as also marked Haydn's symphonic movements and Mozart's piano concerto variations. The 'Eroica' finale modifies both the nature of the theme and the alternating plan itself in a virtual compendium of available variation techniques with a symmetrical harmonic plan, all within a progressive structure. The two themes are those familiar from op.35; the first theme (*A*) is the bass of the second (*B*), but they are always varied in turn (after the first two cantus firmus variations on the *A* theme), with the first always treated contrapuntally (cantus firmus, fugato, countermelody), the second with melodic reprise, melodic-outline and constant-harmony technique. The first fugato introduces a dynamic, asymmetrical 'middle section' in keys, largely minor, outside the tonic, and it is during the final truncated variation in a foreign key (B^2, C major, bar 258) that the two themes meet as equals, while in the second fugato *B* becomes a countersubject to *A* and helps to banish it entirely. During the final two Andante variations, the *A* theme is not present even as a bass line, and the return of the Presto introduction now leads to *B*; the predominance of *A* at the outset is more than compensated by the final emphasis on *B*.

The slow movements of the fifth and seventh symphonies draw on the alternating-variation model, each offering a different reading of it and resembling 'Eroica' more than any movement of Haydn's. Both suggest a three-part design together with their alternations. In the Fifth Symphony, a middle section is articulated by a series of shortened variations followed by a climactic reprise of the first theme; E.T.A. Hoffmann noted its resemblance to Haydn's variations separated by *Zwischensätze* (*AMZ*, x, 1810, col.641). The Seventh, on the other hand, has a more developmental middle section between the two *maggiore* sections: a variation with bass cantus firmus

Ex.12 Beethoven: String Quartet op.127, 2nd movt

that creates a dominant pedal leads to a fugato and then to a shortened reprise-like variation. The *maggiore* sections also serve to defuse the climaxes generated by each group of variations on the first theme, including the extraordinary ever-expanding constant-melody variations of the first theme at the beginning. The Adagio of the Ninth treats its hymn theme to echoes and internal repetitions as in the Fifth, and its alternation of the themes in B♭ and D major is initially unproblematic except for the deceptive cadence that ends each theme. When the second theme comes back in G major, however, 'resolving' D, future progressive developments are forecast: the following modulating episode on A begins in E♭ major, develops the upbeat motif of the theme and generates the next round of alternations, in which the *B* theme disappears and variations on *A* now alternate with fanfare episodes both on *A* and on the upbeat, each time beginning in E♭ and then modulating through darker-hued keys. The tonal palette is expanded and the alternating principle is extended to include the thematically derived episodic material, which is itself alternated to generate the movement's climax. In the finale of the Ninth, chains of strophic variations on the 'Freude' theme are used to generate climaxes as well, in the manner of the first section of the Allegretto of the Seventh, a kind of *incrementum*.



In chamber genres, Beethoven tried alternating variations twice, first in the Haydnesque Piano Trio op.70 no.2 (1808), where two consecutive variations of *A* interrupt the alternations before an unusual ending in the minor. In the late String Quartet in A minor op.132 (1825), the *Heiliger Dankgesang* apparently retreats from the progressive alternation of the symphonies in favour of the earlier five-part alternating model. Yet the movement is anything but Haydnesque: the extraordinary modal polarities of the otherworldly *A* (chorale) sections set the stage for the deceptive yet emphatic tonal resolutions at the beginnings of the virile *B* sections, while the tempo change is given a programmatic rationale ('Neue Kraft fühlend'). The increasingly vigorous figurations of the already highly elaborated *B* sections become *stile moderno* foils to the gently accelerating contrapuntal figures of the *stile antico* variation (A^1) and fugue (A^2) on the chorale.

Beethoven's late strophic variations are the Diabelli set and fully five of the slow movements in the piano sonatas (opp.109, 111) and string quartets (opp.127, 131, 135) in addition to the instrumental and vocal chains of variations on the 'Freude' theme amalgamated with the larger composite structure of the finale of the Ninth Symphony. The inner world of the hymn theme in the Adagio of the Ninth Symphony is previewed in the sonatas, which also examine the propriety of concluding a work with a slow variation movement. The solution is similar in conception but differently realized in each work: progressive diminution leading incrementally to extremes of registration, dynamics and speed of figuration (trills), followed by a theme reprise. In op.109 the diminutions occur within a single 'sprung' microcosm, variation 6, after the grouping of variations 3–5 covers three Baroque topics in turn: invention in invertible counterpoint, pastorale and canzona. In op.111, progressive diminution and registral expansion open out into a linking trill-laden modulatory episode with elements of a developmental *minore* between the ethereal fourth and retrospective fifth variations, the latter a conspectus of melodic reprise and two of the previous levels of rhythmic diminutions. A comparable episode appears with even larger-scale tonal resonances in op.127, because in that movement in A♭ variation 3 is in E major, and the episode after variation 4 is in D♭ major/C♯ minor, a connection reiterated in the coda. The highly detailed part-writing in variation 1, with its foretaste of Mahler's Adagietto, is unprecedented in variations, as is the suspended-animation introduction, a slowly unfolding dominant 7th chord out of which the theme emerges very tentatively (ex.12). In op.131, the central variation movement has a role to play in the integrated design of the quartet as a whole, beginning as the 'aria' following the 11-bar third movement with its recitative-like close. Perhaps these suggestions of an earlier style prompted Beethoven to use an Andante 2/4 theme ending with a cadence formula of the

1760s (bars 23–4 and 31–2) and even, during variation 3 with its texture of contrapuntal voice-pairs and false fugato, an ascending trio-sonata-like trill figure also found in the first movements of Haydn's quartets op.20 no.1 (copied out by Beethoven) and no.2. The compressed sonorities of variation 5 recast for quartet the technique already found in the Diabelli Variations op.120, variation 20 (ex.13) and later taken up by Schumann and Brahms. A lengthy coda brings in cadenza-like trills, several partial, decorated returns of the theme and final reiterations of the cadence formula. After the intricate part-writing of op.127 and 131, Beethoven's extremely slow last variation movement, op.135, the first to be marked Lento, is largely unfigured until the final variation, and also brings in melodic reprise after the *minore*.

Ex.13

(a) Beethoven: Diabelli Variations op.120

(b) Beethoven: String Quartet op.131, 4th movt

Beethoven's two bouts of working on the Diabelli Variations, 1819 and 1822–3, surrounded the composition of the last piano sonatas. Like the Goldberg Variations, they represent a grandiose final statement, and like them had a strange reason for coming into existence: in 1819, Diabelli sent his waltz to composers important in Austria and asked each to contribute a single variation to a patriotic *Vaterländischer Künstlerverein* for the benefit of widows and orphans. The resulting cross-section of variation style was not published until 1824, the year after Diabelli brought out Beethoven's 33 variations, with the impressive total of 50 in alphabetical order from Assmayer to Worzischek (Voříšek), with a coda by Czerny. Included are a contrapuntal variation by Sechter, a *minore* by Schubert, one of brilliant virtuosity from Kalkbrenner (hastily commissioned during a visit to Vienna), variations by Czerny, Moscheles and Gelinek, an overture by Dreschler, a polonaise by Tomášek and, at opposite ends of the generational span, contributions from the elderly Förster and Schenk and the 11-year-old Liszt. As Kinderman's research has shown, Beethoven's 1819 draft already included 23 variations, to which he added variations 1–2, 15, 23–6 and 28–9, and revised the conclusion. The addition of the Alla Marcia maestoso as variation 1 is crucial because it instantly reveals contrast to be the primary aesthetic of the set. Just as Bach took the pensive Aria and turned it into an athletic two-part invention for the first Goldberg variation, so Beethoven announces a new topic, metre, tempo and texture immediately. Although characteristic variations do not remain at the fore during this formal-outline set, extremes of textures and of expressive types do. It is significant that after all the contrapuntal, brilliant, scherzando, fugal, epigrammatic, *espressivo* and comic variations, the finale should be a Tempo di Menuetto, *grazioso e dolce*, a tribute to Beethoven's and Diabelli's shared patrimony.

9. The 19th century.

(i) Early 19th century. Schubert was a master of the melodic reprise varied by means of beautiful new figurations or harmonies, in such pieces as the Andantes of the A minor String Quartet (a sonata-rondo), the C major String Quintet (an *ABA* variation) and late sonatas (alternating rondo-variations, D850, 894 and 958). Several of his variations, including the best-known variation movements, are based on his own lieder, and only four times did he vary themes not written by himself (D576, 624, 823 no.22, 908); the first of these gave a hint of Schubert's interest in linking the opposite-mode variation to one in a related foreign key. His first important set, on *Die Forelle*, was the Andantino of the Piano Quintet in A (1819), reflecting its vocal source with a constant melody during the first three variations (first violin, piano, second violin, cello). After the *minore*, a variation in the flat submediant – coloured by its own minor and flat mediant keys – simultaneously offers the most rhythmically layered variation in the entire movement. (This grouping of a *minore* with a different major key related to it is found also in the Piano Sonata in A minor D845, B♭ Impromptu D935 no.3, and the C major variations on a theme from Hérold's *Marie* for piano four hands D908.) The final theme reprise returns to something outside the piece: the piano accompaniment of the lied itself. The Wanderer Fantasy (1822) not only links each movement by a head-motif related to the lied *Der Wanderer*, but clothes that eight-bar melody in the slow movement with different

accompaniments, keys (C♯ minor, E, C♯) and cadence patterns, finally dissolving the melody itself into periphrastic figurations. Virtuoso interludes and conclusions outside the variation chain assimilate the movement to the technically demanding cycle. The year 1824 saw the ornate Introduction and Variations on *Trockne Blumen* for flute and piano D802, the String Quartet in D minor with slow movement variations on *Der Tod und das Mädchen*, the Octet with variations on a duet from *Die Freunde von Salamanka*, and the A♭ variations for piano four hands, with its nod in variation 5 to the Allegretto of Beethoven's Seventh Symphony. Of these, the quartet and piano sets are among Schubert's finest and most significant. Using the sombre chords of *Der Tod* for the theme, the quartet maintains a quasi-constant melody for variations 1 and 2 and the first reprise of 5, but breaks into a gallop for 3 based on a diminution of the theme's anapaestic rhythm. In the general shape of the set, including the ethereal *maggiore* of variation 5 and the major-mode coda, recalling the major ending of the lied, the movement appears to be modelled on the finale of Mozart's D minor Quartet K421/417*d*.

Of the composers making their name at the turn of the century who excelled at variations, especially in the eyes of contemporary reviewers, those who stand out are Spohr (for violin, clarinet, harp and string chamber music), Hummel (mostly for piano but some in chamber music; variations account for a quarter of his published piano works, some single opus numbers containing up to three sets), Prince Louis Ferdinand of Prussia (for piano and piano chamber music) and particularly Weber, who wrote a number of variations on original themes and in new genres like the concertinos for clarinet and for horn, as well as on such much-varied themes as *Schöne Minka*. These last pieces have elaborate introductions, which were becoming more and more common, and lengthy linked finales.

The 1820s and 30s saw a vast increase in the number of showy variation sets for piano on popular tunes tricked out with all manner of introductions, finales and virtuoso details in such a way that they became nearly indistinguishable from the numerous fantasies on popular melodies. Already under way in the 1790s with Daniel Steibelt and Abbé Gelinek, the trend accelerated with the growing concert scene in Paris, Vienna and Berlin and with such composers as Herz, Hünten, Kalkbrenner, Thalberg and Moscheles. That the 1830s exacerbated this trend may be seen in setting Diabelli's encyclopedic *Vaterländische Künstlerverein* of 1824 against the public display of the *Hexaméron*, a set of 'grandes variations de bravoure' on a theme from Bellini's *I puritani* commissioned for a benefit concert in Paris in 1837, with contributions by Liszt, Thalberg, Czerny, Pixis, Herz and Chopin. Indeed, the previous year saw the publication of Czerny's *L'art d'improviser*, in which Hummel, Moscheles, Kalkbrenner and Ries are upheld as models, although the student is also advised to study Mozart's K354/299*a*, Clementi's variations on the same theme in the finale of a B♭ Sonata, and Beethoven's opp.34 and 35 and WoO80. 'The number of forms at the disposal of the artist is infinite', Czerny proclaims, giving as examples figurations for either or both hands while retaining the melody or at least the harmonies of the first part; trills and ornaments of all kinds; a new cantabile theme on the original bass and harmony; 'strict style' with the theme placed in a higher or lower voice; canons or fugues on the theme; and changing the tempo, metre and key, as in an Adagio, Polonaise or Rondo, and in a finale with free development (p.92).

Schumann found most variations of this time irredeemably trite and vapid. Although he praised a few sets of variations by his contemporaries, especially Chopin's variations for piano and orchestra on Mozart's 'Là ci darem la mano' op.2 – which prompted his memorable 'Hats off, gentlemen: a genius!' – Schumann more often deplored their lack of meaning. He argued against using popular themes, notably 'the most hackneyed Italian ones', because the best sets have themes with personal resonances for the composer, and against the empty virtuosity and mechanical figurations of salon variations; in a scathing review of 1836 he asserted that 'in no other genre of our art is more bungling incompetence displayed . . . variations should create a whole, whose centre is the theme. . . . The time is past when one can create astonishment with a sugary figure, a yearning suspension, an E♭ major run over the keyboard. Now one strives for *thoughts*, for inner *connections*, with the whole bathed in fresh fantasy' (*Gesammelte Schriften*, i, 219, 221, 223).

A.B. Marx similarly believed that the theme 'must be worthy of treatment' and that its interest lay in its musical content, not its external associations; yielding to fashion in choosing an opera aria is thus detrimental both to the variations and to the opera (on account of the 'Profanation des Hauptwerks, das man zerreisst und stückweis' abnutzt': *Die Lehre von der musikalischen Komposition*, iii, 1848, 3/1857, pp.54–5). Marx's problematic distinction between 'formal' variations, which vary melody, modulation, accompaniment, mode, rhythm and form, and 'character' variations, which change the form of the theme into a character piece, rondo, sonata form or fugue, not only seemed to suggest that variations before the Diabelli could not adequately change character but, by apparently downgrading the former type, gave greater weight to fantasy-like departures.

A more thoughtful typology from within the Schumann circle was published in 1860 by the Berlin composer Julius Schäffer:

> The variation form, although cultivated by the masters with special partiality, is still so badly mistreated by bunglers and hacks that, when it appears, people avoid it or encounter it with mistrust, and as a consequence of its bad reputation noteworthy theorists and aestheticians scarcely want to grant it even a modest spot next to legitimate art forms. This appears to us unjust.
>
> If we exclude the bravura variation, then the different forms of variation divide into three principal categories. In the first, which can appropriately be described as the decorative, all interest lies in the theme. In each variation, this is clothed, as it were, in a new attire, but it is not disguised. . . . It is usually a known melody and the goal of this genre is the ever-new charm of its differently turned-out repetitions. In the second [category], which we call the contrapuntal, the centre of gravity lies in the variations themselves. . . . Here the theme is only the outline, on which different architectonic creations are built. . . . This category stands higher than the first . . . [and features] the creation of independent structures on the basis of the given harmonic relationships. . . .
>
> In the third category, the centre of gravity lies neither in the theme alone nor in the variations alone, but rather in the psychological bond between the two. . . . That the theme is usually an invention of the composer's – a so-called original theme – is entirely in the nature of the thing. The individual variations will have to manifest a connection with the theme as well as with each other . . . ; in other respects, however, they will come into the world bringing with them their newborn motifs and new developmental laws, thus [each] to expand into autonomous art forms – often even as related movements not directly derived from the theme [but] like 'intermezzi' draw into their

own realm. Just as the variation form in this genre achieves its highest significance, it reaches at the same time its outermost limits, striving to overcome them and to pass into the sphere of the free fantasy. It appears not inappropriate to give them the name Fantasy-Variations. (*Echo*, x, 1860, p.95; quoted in Puchelt, 142–3)

These remarks keep the same hierarchy as Schulz's rank-ordered list of 1774 while adding fantasy-variations. Brahms was later to argue that fantasy variations are not really variations at all.

Schumann's own variations chose a personally meaningful subject as early as the Abegg Variations op.1 (1830); he went on to vary themes by Clara Wieck (Impromptus op.5, based on her *Romance variée* op.3) and by Ernestine von Fricken's father (*Symphonic études* op.13), and to base another work, *Carnaval* op.9, on a cipher, A–S–C–H, in which the distinction between a motif to be varied and to be transformed breaks down. From Clara's theme he took an idealized bass line, which is initially presented alone, in the manner of Beethoven's op.35; its opening I–IV–V–I puts it in the much older tradition of the *bergamasca* and other dance schemes (ex.14). Von Fricken's theme, on the other hand, was a melody only, originally for flute. Schumann reassured von Fricken that he was very strict with the theme because the unfolding structure was based on it; in variations the object in view is 'always before us' but seen 'as though through coloured glass'. Thus he sought to 'break the pathetic [nature of von Fricken's C♯ minor theme] into divers colours' (*Jugendbriefe*, 251–4). In the second edition of the *Symphonic études*, now titled *Etudes en forme de variations*, Schumann also differentiated terminologically between 'variations' more closely related to the theme and structurally freer 'études'. He followed Beethoven and Schubert in including a lengthy finale, here a rondo on a theme of Marschner. In addition to variations for piano, Schumann wrote variation movements in two string quartets, op.41 nos.2 and 3, as well as the finale of a sonata for piano and violin op.121. His compositional 'last thought' was a set of variations on a theme in E♭, on which he was working just before his suicide attempt in 1854.

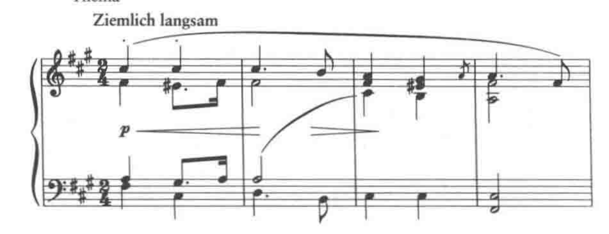
Other responses to the superficiality of the form included two by Mendelssohn, his 17 *Variations sérieuses* op.54 (1841), which despite a fugato in variation 10, several scherzandos and an example of 'Schumann shorthand' in variation 11 (a curtailed outline of the theme's melody), stay close to the harmonically quixotic theme, and his chorale partita on *Vater unser in Himmelreich* (Six Sonatas, op.65 no.6), a set of cantus firmus

Ex.14 Schumann: Impromptus op.5

variations with chorale fugue and finale. Formal seriousness and a striking set rhythm come to the fore in Liszt's two sets of ostinato variations on Bach's bass line from Cantata BWV12, *Weinen, Klagen, Sorgen, Zagen*. The first of these is a small-scale Prelude (1859) that is actually a passacaglia with 25 repetitions of the bass theme. The much larger Variations (1862) contain not only 43 variations but also a recitative, finale and chorale ('Was Gott tut, dass ist wohlgetan', the same one that ends Bach's cantata), and considerable chromaticism within its formal outlines. These two works mark the reappearance of the Baroque ostinato-variation as conscious archaism, although ostinato form had made an appearance in Chopin's *Berceuse* op.57, with a much simpler pattern. Liszt even included a series of variations on the folia within his *Rhapsodie espagnole* for piano, immediately after the introduction.

(ii) Brahms. Brahms was the first composer after Beethoven to whom variations were central. For over 40 years, in seven independent sets and nine variation movements from his op.1 to his op.120, he showed 'what could still be done with the old forms' (Kalbeck, quoting Wagner on op.24). He also used variation technique extensively in slow rondo movements, like the first movement of the Horn Trio op.40, slow movements of the Piano Quartet in A op.26, the String Quintet in F op.88 and the Violin Sonata in A op.100, and nearly every slow *ABA* movement. While the varying of theme returns is quite common in this period, Brahms exceeded contemporary practice by placing variations in sonata form movements: the second theme group in the first movement of the Piano Quartet in C minor op.60 consists of an eight-bar melody with three variations (the second in the minor), which is recapitulated with new variations, with the final one an actual recapitulation of the exposition's first. The development section of the Piano Quartet in A op.26 begins with three variations of the opening theme in B minor. Like Schumann, Brahms claimed that the theme was centrally important, but more particularly

In a theme for variations, it is almost only the bass that *actually* has any meaning for me. But this is sacred to me, it is the firm foundation on which I then build my stories. What I do with melody is only playing around. . . . If I vary only the melody, then I cannot easily be more than clever or graceful, or, indeed, [if] full of feeling, deepen a pretty thought. On a given bass, I discover new melodies in it, I create. (Letter of Adolf Schubring, Feb 1869; *Briefwechsel*, viii, 217–18)



Brahms went on to trace the 'path made by the art of variation', from Bach's Goldberg Variations to the melodic variations of Herz, to Beethoven and himself, and then to Schumann, asking wistfully 'But could we not make a distinction between variations and fantasies on a melody, a motif?' In two other letters Brahms seems eager to assess the history of the form and his place in it. To Joachim, with whom he was engaged in a 'correspondence course' in counterpoint in the summer of 1856 and who had just sent him some variations on an Irish folksong, he wrote:

From time to time I reflect on variation form and find that it should be kept stricter, purer. The Ancients were very strict about retaining the bass of the theme, their actual theme. With Beethoven, the melody, harmony and rhythm are so beautifully varied. I sometimes find, however, that the Moderns (both of us!) more often (I don't know the right expression) worry the theme. We anxiously retain the entire melody, but don't manipulate it freely. We don't really create anything new out of it; on the contrary we only burden it. The melody thus becomes scarcely recognizable.

Brahms's final verbal document on variations is the rather censorious letter he sent to Heinrich von Herzogenberg, who in 1876 was about to publish the first variations ever written on a theme of Brahms:

> I wish people would distinguish between the title Variations and something else, possibly Fantasy-variations, or however we would want to call almost all the newer variation works. I have a singular affection for the variation form, and believe that this form still compels our talents and ability. Beethoven treats it so extraordinarily severely, he can even justly translate [the title variations as]: alterations [*Veränderungen*]. What comes after him, by Schumann, H[erzogenberg] or Nottebohm, is something else. I have, of course, as little against the method as against the music. But I wish people would distinguish by name what is different in the method.

Ex.15 Brahms: Variations on a Theme of Schumann op.9

What the variations Brahms labelled 'fantasy-variation' – by Nottebohm (on a theme of Bach, op.17), Herzogenberg (on a theme of Brahms, op.23) and Schumann – have in common are extensive alterations in the structure, metre and tempo of the theme while retaining its melody or motifs. Brahms's own variations, like Beethoven's, may depart from many details of the theme but normally retain its formal outline. Like Schumann, he often chose themes with personal significance and let the character and source of the theme play a role in the nature of the variations: a song theme led to melody-orientated variations, as in the sonatas opp.1 and 2 (with colourful harmonic substitutions) and op.21 no.2 on a Hungarian song, a Handel theme led to a stricter conception (as well as Baroque topics like siciliana and musette, canon and fugue), a Paganini theme led to virtuoso variations.

Brahms's independent variation sets up to 1862 show a tendency to pair stricter and freer conceptions. In the Schumann variations op.9 (1854), that contrast emerges from the attribution of most of the variations in the autograph manuscript either to 'Brahms' (variations 4, 7, 8, 14, 16) or to 'Kreisler' (5, 6, 9, 12, 13), referring to his Schumann-inspired *alter ego* from E.T.A. Hoffmann's character, and the piece becomes the embodiment of a dual persona. The 'Brahms' variations are nearly all slow, like the theme, and tend to have a lyrical melody which is sometimes treated in canon, while the 'Kreislers' are fast, feature melodic fragments embedded in figurations that consciously recall Schumann, contain codas, lack canons and depart more strikingly from the theme's structure, harmony and affect (ex.15). The theme itself, a poetic Albumblatt, was doubtless chosen by Brahms because Clara had written her op.20 variations on it the previous year, a colourful, pianistically rich set with a canon in variation 6 and melodic resemblance throughout; to make his own set still more Schumann-connected, Brahms quoted from Clara's *Romance* op.3, which Schumann had already varied in op.5 (variation 10), as well as from another Albumblatt (variation 9), and added his own Clara-cipher in variation 11. Brahms's next variation pair, op.21 nos.1 and 2 (1856–7), share several features: *minore* variations limited to a single large grouping, linking of most of the major variations by melody or speed of figuration, and a finale which includes a reworking of the first variation (the last also in Joachim's Variations in E for viola and piano op.10, 1854). The greater sophistication of op.21 no.1, written somewhat later than no.2, derives from its theme, Brahms's first written specially for a set of variations; the theme of no.2, an eight-bar Hungarian song, had been written down as early as 1853, and Brahms's interest in things Hungarian was rekindled with Clara's trip to Budapest in 1856. Both sets have Beethovenian elements. His final big pairing is the Handel Variations op.24 with the four-hand Schumann Variations op.23 of 1861; the theme of the latter, Schumann's 'letzte Gedanke', was chosen by Brahms for its 'melancholy sound of farewell' (letter to Joachim, 29 Dec 1862, *Briefwechsel*, v, 331). The stricter–freer paradigm can be seen in the conclusions of each set – the Handel set ends with a fugue, the Schumann with a funeral march – as well as in the telling differences between their two-part imitative *minore* variations: variation 6 in the Handel set is entirely canonic and resembles the theme's melody, while 4 in the Schumann set is more freely imitative and mysteriously evocative. Schubring's lengthy 1868 review of the latter piece includes an account of its emotional 'meanings' (Eng. trans. in *The Compleat Brahms*, ed. L. Botstein, 1999, p.200). Finally, the Handel set draws liberally on the Diabelli Variations, especially in variation 3 (Diabelli 11, 19), 7–8 (Diabelli 15), 14 (Diabelli 16) and 2 and 20 (Diabelli 3 and 12). The Handel 'music-box' variation 22 goes back to Couperin, and among the more contemporary styles are étude (2, 4, 21), introspective character-piece (5, 12), triumphal march (25) and Hungarian rhapsody (13). Of the two Paganini sets op.35, book 1 contains a preponderance of variations with melodic and harmonic resemblance to the theme, as well as older

topics like the descending tetrachord bass (4) and quasi-musette (11), while the variations in book 2 immediately reinterpret the theme's harmonies, even at cadence points, and contain the variation most remote from the theme (12).

The variation movements up to 1864 also reflect pairing to a degree. The Sonata op.2, while close in variation technique to op.1, uses a more chromatic theme and recycles it as the scherzo theme. More profoundly connected are the two string sextets op.18 (1860) and op.36 (1864). The theme of the D minor Andante of op.18 suggests older models such as the folia and the Allegretto of Beethoven's Seventh Symphony, and its treatment includes expanding register while decreasing note values in the first three variations, a 'heavenly' *maggiore* musette (variation 5), a final quasi-reprise and a coda referring to Mozart's D minor quartet finale and the plagal major conclusion of Schubert's D minor Quartet 'Der Tod und das Mädchen'. The slow movement of op.36, on the other hand, uses a floating, chromatic treble theme written much earlier (dedicated to Clara in a little pocket notebook of Christmas Eve 1854, and sent to her two months later) which fluctuates between minor and major, opens with a sequence on I and ♭VII, and opposes rising 4ths and descending chromatic figures. In short, the theme is sufficiently 'free' for it to be varied strictly and still suggest fantasy, as in the first variation, which sounds like a continuation of the theme while actually incorporating augmentation, diminution and a new bass line. After two sets of paired variations (1–2, 3–4), the second resembling the aggressive counterpoint of Beethoven's Quartet op.18 no.5, the *maggiore* returns to melodic-outline technique using diminutions of the rising 4th radiated throughout the texture.

Brahms's later variation period, spanning years from the St Anthony Variations op.56 (1873) to the Clarinet Sonata in E♭ op.120 no.2 (1894), reveals new preoccupations and older models of a different kind: finale variations which quote the theme of the first movement to bind the work together (String Quartet in B♭ op.67, Clarinet Quintet op.115) or serve to conclude the work with a slow movement like Beethoven's late sonatas (op.120 no.2); the passacaglia (the tonic-requiring finale of the formal-outline variations in op.56, the bass subject deriving from the theme melody, and the tonic-providing fourth movement of the Fourth Symphony op.98, the theme deriving from Bach); alternating variations based on a split theme, like the finale of the 'Eroica' (Andante con moto of the Piano Trio in C op.87); and fantasy-like reiterations of a theme in different keys, like Haydn's Fantasia in op.76 no.6 and Schubert's 'Wanderer' Fantasy slow movement (Adagio of the String Quintet in G op.111). The 'St Anthony' or 'Haydn' Variations (the chorale theme was not written by Haydn) was probably the first independent set written for orchestra and is widely viewed therefore as Brahms's 'warm-up' for a real symphony, yet he conceived of it in both orchestral and two-piano versions, each a fully autonomous work, and in an even more unusual move did not destroy the extensive sketches. The anapaest rhythm of Beethoven, Schubert and the Handel Variations returns in variation 6, and other evocations of op.24 appear here and there (e.g. 7, a combination of the Handel's 17 and musette 22). Characteristic variations, like the scherzando (5) and siciliano (7), are few. The embellished varied repeats of variation 3 contrast with the repeats in invertible counterpoint in 4 and with the added countermelody in 8. In the passacaglia finale, progressive diminution and expanding registers articulate the close of this novel form. In the finale of the Fourth Symphony, on the other hand, which bears a quite different kind of weight, Brahms drew on the formal articulations of Bach's Passacaglia for organ and Chaconne for solo violin, the second of which he had already arranged for piano left hand, while writing 30 variations and coda, the number (minus da capo) of the Goldberg Variations. There is a 'middle section' of slow variations, all but one in the major (12–15, the last two with 'Wagnerian' brass), after which the theme returns nearly unvaried (16); this return halfway through the set suggests the 'Ouverture' of the second half of the Goldberg set. A further return to the theme and to the rhetoric of the first two variations (23–5) immediately follows the 'scherzo' variation (22). Other variations deliberately recall the first movement of the symphony: 10, with its antiphonal echoes, strange harmonies, crescendos on a single chord; and especially the final group, 28–30, which brings back the descending 3rds of the opening theme.

(iii) Symphonic variations after Beethoven. The attractions of the ostinato variation as a format for conflations of old and new, as well as its appearance in composers as different as Liszt and Brahms, predicated the wholesale return of the passacaglia in the 20th century. However, within the post-Beethoven symphony, Brahms's Fourth was anomalous because so few composers wrote variation forms at all, preferring instead to vary returns and repeats in their slow movements. Those who did, notably Bruckner and Mahler, appropriated as models the Beethovenian alternating variation of the fifth, seventh and ninth symphonies. Most of Bruckner's symphonic adagios vary two themes in turn, usually by enriched orchestration, accompaniment patterns, countermelodies and different keys; like Beethoven's Ninth, they generate a substantial climax. Variations are important in the slow movements of Mahler's early symphonies, but only the Second and the Fourth can be said to have true variation forms, while the First and Third contain opening themes varied in inventive ways when they return in the course of more rondo-like structures. His Second Symphony alternates variations on themes in tonic major and minor ($ABA^1B^1A^2$, in A♭ major and G♯ minor) with lengthy mood-changing transitions and transparent techniques of variation; in early 1900 he told Natalie Bauer-Lechner that, unlike Brahms's strict variations, his own variations (in the Second and Third) are 'more embellishments, playing around, and entwinements, than a careful following up and working through of the same grouping of notes' (*Gustav Mahler in den Erinnerungen von Natalie Bauer-Lechner*, ed. H. Killian, 1980, p.153). The 'entwinement' doubtless includes the countermelody added in A^1. B^1 reaches a climactic level of scoring and dynamics. The Poco Adagio of his Fourth Symphony, on the other hand, draws more on the variation groupings of Beethoven's Seventh, even while referring to the pizzicato bass line of the Adagio of Beethoven's Ninth. Expansion of register, enrichment of orchestration and addition of countermelodies characterize the opening series of *A* variations, but the ascent leads to greater peacefulness rather than to a climactic restaging of the theme. Like the Seventh, Mahler's movement has bass elements of the *A* sections in the more episodic and increasingly dissonant *B* sections,

which begin in the relative rather than tonic minor but move far afield. The second *A* group presents faster, more dance-like tempos and characters, while the third increases progressively in tempo and metre (Andante 3/4, Allegretto subito in 3/8, Allegro subito in 2/4, Allegro molto in 2/4) until the *Anfangstempo der Variation* returns, Andante subito in 3/4, and after it the Adagio. The 'heavenly music' of the finale appears in the coda, with an apotheosis of the bass figure in the timpani. In some ways the strophic form and progressive tonality of the finale are adumbrated in the variations of the Poco Adagio.

Brahms's St Anthony Variations launched the independent orchestral set as a genre. Closest to the model are sets on borrowed themes, like Dvořák's Symphonic Variations (1877), Parry's Symphonic Variations (1897) and the variations by Reger on themes by Hiller (op.100, 1907) and Mozart (op.132, 1914). Others, recalling such earlier works as Chopin's op.2, add a featured solo instrument, such as Tchaikovsky's Variations for Cello and Orchestra on a Rococo Theme (1876), Franck's *Variations symphoniques* (with piano, 1885) or Delius's *Appalachia* (1896), or adapt variations to a programme, as in Strauss's *Don Quixote* (also with prominent solo cello, 1896–7), d'Indy's *Istar* (1896) and Elgar's 'Enigma' Variations (1898–9). Dvořák begins in Brahmsian fashion without introduction; the theme, based on a Czech folksong the composer had recently set for male chorus ('I'm a fiddler, poor as can be'), is in C with a raised fourth (the triumphant end of the coda repeats the opening four notes diatonically), stated at once with minimal accompaniment, then varied 27 times, concluding with a fugue. The first three variations maintain a constant melody, so that its three-strain (*ABA*) construction is firmly fixed in mind. After this point the departures in length, metre, tempo and key cannot obscure the essentially formal-outline status of the rest, with frequent returns of the melody, during which time characteristic topics of pastoral, scherzo, 'mysterious' adagio and martial exhortation make their appearance. The work was an enormous success. Franck's *Variations symphoniques* are a different matter: only one part of the lengthy piece is actually a theme plus strophic variations (bars 100–249), after a lengthy opening section on two different melodic ideas. The piano states the theme and the variations perform a kind of historical synopsis of the form, though out of chronological order: a dialogue in variation 1 emphasizes melodic-outline technique, constant-melody technique enters in 2 and 5, the étude-like 3 conceals just a few melody notes in its constant-harmony technique, while 4 is a centrally located expansive climax with a new structure. After the variations *per se*, the theme of the introduction returns at a slower tempo and is varied rather freely and developmentally, as it was in the introduction proper. An extended final section, Allegro non troppo (bar 285), brings back both themes in new guises, with the variation theme in the bass. The structure of the whole shares features with early 19th-century piano fantasias that might contain a set of variations within more improvisatory material (e.g. Beethoven's Fantasia op.77); while Nelson assigns the entire piece to a category of 'free' variations, it is clear that the variations themselves are not free but are embedded within a fantasia-like larger structure that alludes to a multi-movement work.

Strauss's *Don Quixote*, on the other hand, is subtitled 'fantastische Variationen über ein Thema ritterlichen Charakters', and is indeed a set of 'fantasy-variations' in an episodic form (Strauss's first notated idea for the work calls them 'Verrückte, freien Variationen'). Like so many others, Strauss not only wrote down a few words on the history of variation but found a threefold historical typology:

> I consider as the historical high points of the so-called variation form: the unbelievably brilliant Chaconne of J.S. Bach, in which the invention of *figural* elements appears to have sprung like Minerva from the head of Jupiter in a perfection since then no longer achieved; the paradisally beautiful Kaiservariations in the immortal Haydn's C major Quartet, as the ideal expression of the *melodic* clothing of a beautiful theme; and third, the *metaphysical* (I know no better expression), unearthly creation of the A♭ Adagio from Beethoven's E♭ Quartet op.127, with which I take the variation form as a purely musical creation, music-historically speaking, to have concluded. It found in the prelude to *Rheingold* and in Siegfried's Blacksmith's Song an application scenically full of meaning and dramatically important, after which it leads in my *Don Quixote* to representations of futile phantoms in the head of the Knight of the Sad Countenance – a kind of Satyrspiel *ad absurdum*. (Diary entry quoted in W. Werbeck, *Die Tondichtungen von Richard Strauss*, 1996, p.454)

Thus Strauss's term 'fantastic variations', like Brahms's 'fantasy-variations' category, consciously distances itself from the form, but Strauss goes further in appearing to mock it. There is no 'ur'-structure to which the variations refer; the themes are melodies personified as Don Quixote (cello) and Sancho Panza (bass clarinet, bass tuba, viola), though the latter theme is marked simply *maggiore* and its status with respect to the first and primary theme is unclear; both are fully 'thematized' versions of melodies heard in the introduction (Dulcinea, also heard there, returns in variations 1, 3, 5 and 6) which subsequently appear varied by division and by other sorts of rhythmic and harmonic transformation as the programme requires. Unlike *Till Eulenspiegel*, a rondo in which the prankster's theme peeps out unvaried between episodes of mischief-making, in *Don Quixote* the themes are incorporated into the sometimes precisely delineated action, from the adventures with the windmills (variation 1) and sheep (2), ending with Quixote's death. More ruminative sections include the introduction, which details Quixote's process of derangement after reading knightly romances, and variation 3, a mad conversation between Don and squire.

The attention given to Elgar's Variations on an Original Theme op.36 has focussed primarily on the 'enigma' contained therein, a word authorized by the composer to be placed in the score, alluding possibly to an unwritten theme that goes 'through and over the whole set', as well as a 'dark saying' that 'must be left unguessed'. Commentators on the works, while assessing Elgar's words and subsequent theories, have also made clear (as did Elgar himself, and Tovey) that the piece should be evaluated on its own musical terms (see Rushton, 1999). Each variation is a character portrait of someone close to Elgar, including himself, and the initials and other cryptic references that serve as headings to the variations have all been identified. The ternary structure of the G minor theme, with a *B* section in the parallel major, looks ahead both to the frequent appearance of variations in the major (3, 8, 10, 13, 14, as well as 6–7 in C major and 9 in E♭) and to the relatively greater importance of the melody of the *A* section as a virtual *idée fixe*. That melody, appearing in a variety of rhythmic transformations, in different registers, metres, tempos and instruments, has been the focus of intense scrutiny both because of the contrapuntal possibilities suggested by the enigma and because of its

similarity to other melodies by Elgar and to the second theme of the slow movement of Mozart's Prague Symphony. Its prominent chains of 3rds and ascending bass line have also drawn comparisons with Brahms's Fourth Symphony, in the first and last movements respectively. As in Schumann's *Etudes symphoniques*, variations with less thematic resemblance are differently titled: 10, 'Dorabella', is an 'Intermezzo' and 13 '(***)' a 'Romanze'. Elgar's work appears to exemplify the 'Fantasy-variation' category of Schäffer, especially in the matter of the 'psychological bond' between theme and variations evidenced throughout but especially in variation 1 (C.A.E., his wife), which is expressively and texturally very complex, and 9 ('Nimrod', his friend Jaeger, who had saved him from recent depression with a conversation about Beethoven's slow movements), justly celebrated for its spacious and moving harmonies, and ostensible references to the 'Pathétique'. The finale has been interpreted as two complete variations, the first quoting from 'Nimrod', the second from 'C.A.E.', with a peroration and coda (Rushton).

10. THE 20TH CENTURY. Because variation form seemed a good candidate either for relegation to the dustbin of tonality or for a final one-way flight into fantasy, its resilience in the 20th century is a surprising phenomenon. The serial variation emerged; the strophic form continued; the passacaglia flourished; diverse types of motivic fantasy left recognizable traces of variation form; and new forms of repetition promised a new paratactic emphasis, though without much in the way of reference to older forms. Moreover, composers seemed more willing to label movements with such titles as 'Variationen', 'con variazioni' and 'Passacaglia'.

Reger was perhaps the most dedicated composer of variations after Brahms and clearly upheld parts of his tradition, not only in writing large-scale independent sets for orchestra and for piano, often with a concluding fugue, but also in the evident care with which he connected type of theme and type of treatment. His two independent sets for orchestra (on themes by J.A. Hiller, op.100, 1907, and Mozart, op.132, 1914) joined piano sets on themes of Bach (op.81, 1904), Beethoven (op.86, 1904, two pianos, orchestrated 1915) and Telemann (op.134, 1914), a Chaconne in G minor for violin, two pieces called Introduction, Passacaglia and Fugue (op.96, 1906, two pianos; op.127, 1913, organ), Variations and Fugue on an Original Theme (op.73, 1903) for organ, as well as several choral fantasias for organ which include elements of the cantus-firmus-like chorale partita. In addition, his inclusion of many variation movements in chamber works – among them two violin sonatas (opp.84 and 139), two string quartets (opp.74 and 109), a string trio (op.141*b*), a clarinet quintet, a serenade – mark him as a successor to Brahms. Unlike Brahms, Reger keeps the early variations in a set quite close to the theme, perhaps because in some cases the themes themselves lack a memorable profile; these early variations are sometimes already in new keys (as in the Beethoven variations, on the Bagatelle op.119 no.11). The chamber variations are often transparent, with growing dissonance as the movements proceed, as in the String Trio op.141*b*. Typically dense, Reger's independent variations contain elaborate figurations marked by chromaticism, as well as thick textures dominated by a particular motif; the concluding fugues and double fugues are extremely long. The piano set on a theme from Bach's Cantata no.128 (op.81, 1904) is noticeably polyphonic and chromatic, while the figurations in the Telemann set (on a theme from the *Musique de table*) seem strikingly derivative, with Brahms's Handel Variations (also in B♭) as the main model and including echoes of Schubert's B♭ Impromptu and Beethoven's op.109. In the Mozart set for orchestra, on the theme from the A major Sonata K331/300*i*, the first variation reiterates the theme melody against a rich and sparkling orchestral tutti texture, but this turns out to be the only variation in the tonic; while the melodic outline is nearly always apparent and is nearly reprised in variation 6, the keys are different in each variation, moving from F in variation 2 to A minor, E minor, A minor, D major and E major. The last variation is an expansive *sostenuto* of poetic breadth. Reger's variation sets, which combine melodic-outline and formal-outline types, are considered to be among his most important works.

Other notable variations of the first quarter of the 20th century include Glazunov's *Thème et variations* op.72 (1900) for piano, Rachmaninoff's Variations on a Theme of Chopin op.22 (1902–3) for piano, Dukas's *Variations, interlude et final sur un thème de Rameau* (1902) for piano, Szymanowski's Variations on a Polish Folk Theme op.10 (1904) for piano, Tovey's Brahmsian *Elegiac Variations* op.25 (1909) for piano and cello, the first movement of Joaquin Turina's *Sonata romántica* op.3 (1909) for piano and Dohnányi's Variations on a Nursery Theme op.25 (1914) for piano and orchestra. The Passecaille in Ravel's Piano Trio (1914) emerges from the depths, reaches a climax, and sinks down again. Sibelius's Fifth Symphony (1915), like Vaughan Williams's much later Fifth, has a variation-like slow movement that gradually loosens its structural components. Nielsen's Symphony no.6 (*Sinfonia semplice*, 1924–5) ends with a set of nine variations in which chaos and death intrude: variation 6 is a waltz that seems to function as a theme da capo, in 7 raucous noises break up the ball, 8 suggests the presence of death, and Nielsen compared 9 to a 'grinning death's head', finally dispelled by a 'fanfare'. Vaughan Williams's *Fantasia on a Theme by Thomas Tallis* for string orchestra (1910), like other works with similar titles, presents 'versions' of a theme, rather than variations on a theme, and although a variational impulse is present it does not dominate. The work inherits the broadest strand of music 'on' another piece, whether capriccio, fantasia or variation, and becomes influential in new conceptions of variations later in the century (e.g. Britten's *Lachrymae*, 'Reflections on a song of Dowland' for viola and piano, 1950, or Foss's *Baroque Variations*, 1967; see below).

(i) Schoenberg, Berg, Webern. Schoenberg's contributions to the history of variation emerge from his writings and teachings as well as his compositions. He identified variation as an important ingredient in compositional technique generally ('developing variation'), and variation form seemed congruent with the techniques of serialism. Indeed, his earliest set of variations, in the third movement of his String Quartet in D (1897), reveals a progressive texture already in the theme, which begins with a single line opening out into two-part counterpoint (bars 5–8). This texture, described as 'unique in the variation literature' (Frisch, *The Early Works of Arnold Schoenberg, 1893–1908*, 1993, p.43), appears to conjure both with the chromatic lament bass in its initial iambic

semitone descent and the tetrachord span of its first incise and with the contrary-motion dynamic of the variation theme in the third movement of Brahms's Sextet no.2, op.36, while at the same time foreshadowing the solo serial theme of the Serenade op.24. As is often noted, Schoenberg's seven other variations sets plus the passacaglia ('Nacht') in *Pierrot lunaire* span a complete tonal arch from that early quartet, moving from the extended tonality of 'Litanei' in the Second String Quartet op.10 (1908) to the atonal 'Nacht', through the serial 'Variationen' of the Serenade op.24 (1923), 'Thema mit Variationen' from the Suite op.29 (1926) and *Variationen für Orchester* op.31 (1926–8), back to the tonality of the Variations on a Recitative for organ op.40 (1941) and Theme and Variations for wind band op.43*a* (1943). Schoenberg regarded variations as a 'very strict form', but allowed himself liberties of various kinds; one rationale might be his comment on Brahms's Handel Variations, that 'Brahms fulfills his obligation to the theme in the first part of the measure, and is thus freed for the rest of the measure' (see Nelson, 1964). In 'Litanei', the eight-bar structure of the theme remains constant while its four basic motifs, derived from the first and second movements, are manipulated and enriched in the presence of the soprano voice. Schoenberg identified these motifs ('An Introduction to my Four Quartets', *Schoenberg, Berg, Webern: the String Quartets, a Documentary Study*, ed. U. von Rauchhaupt, trans. E. Hartzel, 1971, pp.35–64), stating that his goal was their elaboration, omitted in the earlier movements; moreover the form would keep him from becoming 'too dramatic' for chamber music, a risk brought on by Stefan George's emotional poem. Indeed, the climax occurs not in the variations but in the overwrought coda, which has its own postlude. In this respect, the trajectory of the piece is not unlike that of the variations in Haydn's String Quartet op.20 no.4.

In contrast to the strict structure of 'Litanei', in the passacaglia 'Nacht' the structural element of the theme in this normally pattern-based form disappears, with a motif of only three notes (*e–g–e♭*) radiating through the texture, first in minims, then in quavers, sometimes transposed and usually countered by chromatic scales. The singer has only one exposed statement of the motif, in minims (bar 10), ironically to the text 'verschwiegen' (silently); it also begins her final phrase (bar 23). Perhaps the note-based subject foreshadows the note-based serial structures to come, first in the 'Variationen' third movement of the Serenade op.24, with its 14-note theme. That the theme contains both the row and its retrograde immediately reveals the tension between the row and the theme. Schoenberg describes the variations as using 'inversions and retrograde inversions, diminutions and augmentations, canons of various kinds, and rhythmic shifts to different beats – in other words, all the technical tools of the method are here, except the limitation to only twelve different tones' ('My Evolution', *Style and Idea*, ed. L. Stein, 1984, p.91). The variations in the Suite op.29 exacerbate the row–theme issue by using a tonal melody, Silcher's *Aennchen von Tharau*.

During the composition of the *Variationen für Orchester*, op.31, Schoenberg wrote the Third String Quartet op.30 (1927), the Adagio of which still provokes controversy. After Erwin Stein's published analysis of it as a theme with variations and alternations (foreword to the Philharmonia score, 1927), Schoenberg asserted that the movement was really a rondo. Odegard (1966) supports the variation model, linking it to Haydn's alternating variations and the contrasts of rhythm and mood in Beethoven's *Heiliger Dankgesang*, while Dale (1993) claims that this view was 'refuted' by Schoenberg. But Schoenberg may have been hoist on the petard of his strict definition that variations require the 'recurrence of one structural unit', or he was disingenuously deflecting attention away from the Beethovenian echoes during 1927 centenary festivities. The orchestral Variations, Schoenberg's first independent set, take their place in the genre inaugurated by Brahms. Schoenberg himself gave a radio talk about the piece in 1931 and published an analysis in *Style and Idea*. The theme – which he describes as 'simple' and 'characteristic' – contains four forms of the row and generates a series of what he called both 'formal' or 'developing' variations, in which 'everything develops from the theme and its individual features and there is, as usual, a general tendency toward quicker movement', and 'character' variations, 'in that each of them at the same time develops some particular character' and contains a 'characteristic motif' (1960, p.36). In his radio talk he seemed to reiterate some of his general critique of variations, especially the aspect of 'mere' juxtaposition or 'different views' that makes inevitability and growth unlikely or impossible; he uses this idea to justify a 'preparatory' introduction and a 'symphonic' (that is, organic) finale. As in 'Litanei' and the Serenade, the theme is cantabile, focussing on shapes and rhythms that remain memorable. The cellos begin the theme (the prime, of five bars, is given in ex.16*a*; it is followed by a transposed retrograde inversion, seven bars; and a retrograde, five bars), and for the last phrase they are joined by the violins (transposed inversion, seven bars) while they return to the transposed prime, thus lending a three-part construction with a sense of return to the relatively symmetrical four-phrase theme. The focus is on finding motifs connected to the theme and a play of topics relating to genre, mood or dance-type (variation 2 is 'chamber-music-like', 3 'stormy', 4 'idealized waltz': exx.16*b–c*). The B–A–C–H motif is also quoted here and there. Neither of Schoenberg's last two variation sets, the independent works for organ and for band, approach the combination of inner complexity and surface sheen of op.31.

All Berg's variations, beyond the Brahms-inflected student piece *Zwölf Variationen über ein eigenes Thema* (1908), are in vocal works and concertos and show a remarkably dramatic and expressive organizing power. From the start he revealed a predilection for cantus firmus structures, in passacaglias (no.5 of the Altenberg lieder op.4; *Wozzeck*, Act 1 scene iv), and in chorale variations (*Lulu*, Act 3 scene i; Violin Concerto). His first set, 'Hier ist Friede' in the Altenberg lieder (1912), is based on three principal themes, stated one by one at the outset and varied nine times; five-bar segments are marked in the score. In an open dedicatory letter to Schoenberg, Berg wrote about the 'motto' of the first movement, 'Thema scherzoso con variazioni', of the Kammerkonzert for piano, violin and 13 wind instruments (1925): before the theme appears, three motifs give out the musical letters in the names Schoenberg (piano), Webern (violin) and Berg (muted horn). The motto is woven into the 'Thema scherzoso', and extends to 30 bars in three segments. Berg identified variations 1 and 5 as 'reprise' variations, using the prime form of the row, and 2–4 as 'a kind of

Ex.16 Schoenberg: Variations for Orchestra op.31

development section' of increasing density and speed, featuring retrograde, inversion and retrograde inversion respectively. Often considered a less successful work because of its eclecticism, the variations are persuasive sonically because of their shape and recognizable motifs.

In his operas Berg used variation as he did other traditional forms, to structure scenes and acts; repetitive forms are particularly effective in charting the characters' obsessions. The passacaglia in Wozzeck's scene with the Doctor (Act 1 scene iv) undergoes 21 variations in which the original serial theme, presented linearly as a bass line to the Doctor's initial manic admonishment, is fragmented, overlapped, turned into simultaneities, moved from part to part and, most importantly for the scenic movement, becomes more and more compressed as the exchanges between the characters become increasingly rapid. The variations at the beginning of Act 3, labelled 'Inventions on a theme', similarly intensify and speed up as Marie's soliloquy becomes more and more overwrought, but the theme, by contrast, is an eerily tonal and consciously archaic melody, in imitative texture and with a hollow 5th, to underscore the Bible's ancient wisdom before more chromatic motifs intrude with her present-day cries of anguish. Variations 1 and 5, which like the theme introduce a new Bible reading, are the most tonal; 2 and 6 are continuations. The fugue, a counterpart to and completion of the theme, also begins in a high register and works into climactic statements with the subject blared out in the bass. Whether the rest of the 'inventions' in Act 3 owe anything to at least a conception of variation form is moot, but the 'Inventions on a rhythm' in scene iii have a structural component that is suggestive. *Lulu* sees an even greater use of variations. The largest of these is the set-piece 'Konzertante Chorale-Variationen' during the dialogue between the Marquis and Lulu in Act 3 scene i, which is broken up by 'intermezzi' referring to earlier music (e.g. the English waltz from Act 1 scene iii). The chorale melody, introduced in Act 1 scene iii (bars 1113–22) and Act 2 scene i (bars 250–61), is presented in Act 3 in 12 variations (beginning in bar 83) that include a polonaise (variations 1 and 5), wind chorales (2 and 6), four-part canon (7), bass chorale linking 8, 9 and 10 and the chorale in diminution linking 11 and 12. Act 3 continues with a set of variations between scenes i and ii based on Wedekind's lute-song, already introduced as an intermezzo during the chorale variations (bars 103–18), and that returns later in the act as funeral music for Alwa. Like Schoenberg's Suite op.29 and Berg's later Violin

Ex.17 Webern: Variations for Orchestra op.30

Concerto, these variations use a tonal theme in non-tonal contexts.

The Adagio finale of Berg's Violin Concerto uses the chorale melody *Es ist genug* from Bach's Cantata no.60, granting it both serial and tonal treatments; the alternation between chorale phrases in dissonant counterpoint led by the solo violin and their repetition in 'Bach'schen Harmonisierung' by an ensemble of three clarinets, designed to sound like a small organ, is especially compelling. Traditional segmentation is altered in two ways. First, the layout of chorale and two variations gives way to a folksong (the Carinthian song with personal resonances heard originally in movement 1b and here played 'wie aus der Ferne') before the coda; second, in variation 1 (bar 164), Berg introduces a new melody, the 'Klagegesang' of Willi Reich's original programme note, which rises to a climax, bringing along the other violins. This and the chorale return in the coda, turning it into a kind of summary variation. Thus the clear structure and multiple rhythmic levels of the chorale variations are intercut with programmatic elements that fulfil a broader role for the finale of the work.

Like Berg's early piano variations of 1908, Webern's orchestral Passacaglia op.1 of the same year owes something to Brahms, but its debt to the finale of Brahms's Fourth Symphony is repaid in a mature and compelling work. (The passacaglia finale of Zemlinsky's Symphony no.2, 1892–3, is clearly also indebted to Brahms's Fourth, as is Reger's *Suite 'Den Manen J.S. Bachs'*, op.16, for organ.) The chromatic crux in Brahms's theme is the raised fourth degree as the fifth of eight notes; here it is the lowered fifth degree as the fourth of eight. The eight-bar pizzicato theme, a bass line in D minor, exerts a hold on many of the variations, but during the continuous sweep of the overall three-part shape, with a 'middle section' of variations in the major (variations 12–15, like the Brahms and the Bach Chaconne), the theme tends to be lost during climactic points and at other times may be orchestrally redistributed note by note. As in the Brahms, a flute variation prepares the turn to major. After 20 years, Webern's next set of variations, the second movement of his Symphony op.21, turned its back on this world: 99 bars, lasting barely more than three minutes, in as compressed and lapidary a form imaginable. As in Schoenberg's Serenade, the clarinet gives out the theme but instead of a complete retrograde turns back on itself after only six pitches, in tritone transposition, and with its complete retrograde as accompaniment in harp and horns. Every section of the movement (theme, seven variations, coda) but variation 4 maintains a palindromic structure, and Webern claimed that it was 'the midpoint of the whole movement, after which everything goes backward' (*The Path to the New Music*; see Nelson, 1968–9); thus the entire movement is a palindrome (see Hitchcock, 1970, and Starr, 1970). The variations strive for contrast, each maintaining a distinctive scoring, texture, predominant motif and articulation: variation 1 is a double canon and 7 a quadruple one, 2 has a horn ostinato, and so on.

In Webern's last three variation works, questions central to the identity of any such work come to the fore: what is the subject for variation? what must remain constant? Indeed, in the first two of these the issue is more basic: where are the variations? The Variations for piano op.27 (1936) is in three movements, and analysts have disagreed about variation structures in the first two, whose overall designs are *ABA* (with three 18-bar sections of contrasting texture) and binary respectively, but with palindromic motifs and other mirror effects. Webern, however, composed the third movement first, writing to Hildegard Jone, 'The completed part is a variations movement; the whole will be a kind of "Suite"'; Bailey (1973) takes this to mean that only the third movement contains true variations, with its six sections of 11 bars each. Here the nature of the form is increasingly abstract, with no identifiable theme beyond the level of the motif. Just as Webern had once described the last movement of his Cantata no.1 op.29 as a combination of variations, scherzo and fugue, so he wrote to Willi Reich that the 'basic principle' of the serial Variations for Orchestra op.30 ('my overture') is an 'adagio' form, which he clarified in a subsequent letter by relating each variation to a part in a sonata structure: theme = introduction, variation 1 = main theme, 2 = transition, 3 = second theme, 4 = reprise of main theme, 'however in the manner of a development' ('for it is an andante form!', i.e. slow-movement sonata form), 5 = 'repeating the manner of the introduction and transition', 6 = coda (see Bailey, 1973). (He similarly described the first movement of the String Quartet op.28 as variations in an adagio form.) Indeed, the 'first theme' is the closest thing in the piece to accompanied melody, while the 'second theme' after a chordal transition presents the tiny motifs slightly more lyrically than the theme. The row itself (ex.17) forms pitches 6–12 as the retrograde inversion of 1–6, and Webern identified the first six pitches (four in the double bass, two in the oboe, immediately retrograded so that two four-note motifs sound) as the source of all the rest of the material (the 'Gestalt' to be subjected to 'metamorphoses', that is, variations; but the theme itself is already a variation, itself a metamorphosis of the basic shape: letter to Jone, 26 May 1941). Yet despite this skein of motivic development in formally recognizable groupings, Webern described the variations as in 'a quite different style' with an 'affinity with the type of presentation one finds in the Netherlanders', thus forging a new path with elements of an archaic constructive principle.

(ii) Stravinsky, Hindemith, Britten. Stravinsky's eight variation movements on original themes are framed by the 'Gavotte e due variazioni' in *Pulcinella* and the orchestration of Bach's *Vom Himmel hoch* variations (1955–6), after which he wrote his single independent set, the *Variations (Aldous Huxley in memoriam)* (1963–4), which is of an entirely different stripe. Remarks he made to interviewers after the première of his Octet for wind (1922–3) about his affinity to earlier music, together with his comment that 'in writing variations my method is to remain faithful to the theme as a melody' (Nelson, 1962),

have focussed attention on his tendencies towards constant-melody variation or use of at least parts of the theme melody as a cantus firmus. The layered rhythmic texture of many of his variations bears this out, and in the Octet's middle movement the theme melody returns in different keys in variations 1, 3 and 6, each time in the trombones with faster figurations in the other voices. (The Sonata for Two Pianos also returns to the melody of theme in variations 1, 2 and 6.) These are separated by dance-like and antic characteristic variations (march, waltz, cancan), sometimes with ostinato accompaniments. The lengthy legato theme melody also differs strikingly from the atomized melodies of the Viennese composers but is treated with octave displacement later in the set to reduce the degree of resemblance. Stravinsky described the 'ribbons of scales' he added to variation 1 that would return later, and pointed out the theme played in rotation by instrumental pairs in the final fugato variation. Similar elements appear in his ballet scores (*Jeu de cartes*, 1936; *Danses concertantes*, 1940–42) and other instrumental works (Concerto for Two Pianos, 1932–5; Sonata for Two Pianos, 1943–4; *Ebony Concerto*, 1945), even the serial Septet (1952–3), a relatively strict passacaglia on 16 notes in the second movement. The oscillating 3rds of the final movement of the *Ebony Concerto* appear unpromising material for a theme, yet always stand apart rhythmically from the surrounding texture; only in the third and final variation are they treated with diminution, and the repeated chords of the theme's accompaniment also become a subject for variation. Stravinsky's later variations increasingly feature disjunct themes, but from the beginning he treated his themes with octave displacement and instrument dispersal to recast the melody. Sometimes a fragment of the theme appears as an ostinato during a variation (Concerto, variation 4; *Danses concertantes*, variations 1 and 3; Sonata, variation 1) or becomes the subject of a fugal variation (Octet, variation 7; Sonata, variation 3). The Concerto for Two Pianos draws on Haydn's model of alternating variations in its third movement, though different melodic shapes obscure the relationships between the first theme and its variations; using the first theme as a subject for the fourth-movement fugue brings to mind Brahms's Piano Sonata op.2, in which the theme is used for the Scherzo, as well as his op.24, importing the closing fugue of variations into a multi-movement work (ex.18). Another procedure derives

Ex.18 Stravinsky: Concerto for two pianos

(a)

(b)

from Beethoven's op.34, placing every variation in a different key according to a pattern (*Jeu de cartes*, descending semitones; *Danses concertantes*, ascending semitones). In his last set, the serial *Variations (Aldous Huxley in memoriam)*, the lack of a clear theme and degree of abstract concision resemble Webern, and the overall organization of the 12 sections suggests a refrain in the recurrence of dense polyphony (called '12-part variations' by Stravinsky) in II (all violins), V (all strings) and XI (all wind) and the textures of I returning in XII. In these respects, as well as the appearance of a fugato (X), this set recalls at least the plans of his earlier ones, if not their style.

Important strands in the history of variations were contributed by Hindemith and Britten, beginning with their early works in the 1920s and 30s respectively. Hindemith was also drawn to the passacaglia, especially in finale position, in both instrumental music (String Quartet no.5, op.32, 1923) and vocal music (*Das Marienleben*, 1922–3; *Cardillac*, 1926; *Die Harmonie der Welt*, 1956–7, of which Act 5 is also a separate symphony). In the quartet finale the bass subject is sometimes restated intact, especially at the beginning, and sometimes participates rhythmically with the upper voices. The song cycle *Das Marienleben* includes a passacaglia in the 'Darstellung Mariä in der Tempel' as well as ostinato variations in the three pieces 'Vom Tode Mariä'. Another early work, the Viola Sonata op.11 no.4 (1919), seems to have a surfeit of variations: the movements are Fantasie, Thema mit Variationen, Finale (mit Variationen). The Fantasie acts as an improvisatory introduction and the finale introduces a new theme which alternates with variations continuing from the second movement. Perhaps the connection of the fantasy with variations gave rise to Hindemith's more rhapsodic variations of the 1930s, such as the *Philharmonisches Konzert* (1932) and the finale of the viola concerto *Der Schwanendreher* (1935). A stricter strand of melodic-outline variation writing is evident in the variations on Mozart's lied *Komm, lieber Mai* that conclude the *Sonata 'Es ist so schönes Wetter draussen'* op.31 no.2 (1924) for violin. Hindemith's most important variation work, *Die vier Temperamente* for string orchestra and piano (1940, also well known with Balanchine's choreography, 1946), takes a rather extensive theme in three sections – a broad orchestral section, a faster, more scherzando section which introduces the piano, and a siciliano theme for strings, embellished by the piano (ex.19*a*) – and subjects it to four characteristic interpretations according to the ancient theory of humours: 'Melancholic', 'Sanguinic', 'Phlegmatic', and 'Choleric'. Points of melodic contact with the theme are evident throughout, as are the theme's hollow 5th chords. The first, also slow–fast–slow, introduces a meditative solo violin into the first section; the second is entirely for strings; and the siciliano has been transformed into a 'slow march' (ex.19*b*). 'Sanguine' stays in 'waltz' time throughout, with the occasional dance-like repeated section; 'Phlegmatic', for five solo strings and piano, returns to the three-tempo structure; while 'Choleric' has the most improvisatory piano writing and give-and-take with the orchestra, and for the first time presents the final section of the theme, always previously dance-like, as a broad, even chorale-like, summary statement (ex.19*c*).

Britten's exuberantly characteristic Variations on a Theme of Frank Bridge, op.10 (1937) runs a gamut of moods and topics, some of them parodistic, but arrestingly places its Adagio variation at the very beginning, contravening tradition, before turning to the March, Romance, Aria italiana (strumming violins and exaggerated melodic gestures), Bourrée classique and Wiener Walzer (full of discordant sighs and surface-skimming turns, some at an eerie distance). The mood abruptly changes during the Funeral March, Chant, and even the return of the theme as a cantus firmus during and after the fugue. Other early variations include the choral variations *A Boy was Born*

(1933), the middle movement of the Sinfonietta op.1 (1932) and the *Temporal Variations* for oboe and piano (1936), the latter including an 'Oration' (marked 'Lento quasi recitativo'), Commination (bearing the arresting marking 'Adagio con fuoco') and Chorale, in addition to the more common March, Waltz and Polka. His best-known set of variations, the *Young Person's Guide to the Orchestra* (Variations and Fugue on a Theme of Purcell) op.34, is, in the felicitous words of Paul Griffiths ('Variations', *Grove6*), 'at once a tour of the forces and a tour de force'. Like the Bridge variations, it includes colourful character pieces while exploring orchestral colour and brings back the theme as a cantus firmus during the most frenzied moments of the fugal finale. Mood and character pieces and a concluding fugue appear again in a later work, *Gemini Variations*, 'Twelve Variations and Fugue on an Epigram of Zoltán Kodály' op.73, for flute, violin and piano four hands (1965); except for the ruminative final Romanza and lengthy fugue subject, the variations are very concise, including two 'mirrors' in contrary motion (variations 6 and 9 are Specchio 1 and 2 respectively). Like his contemporaries, Britten was attracted to the passacaglia, especially as a finale, notably in the Violin Concerto (1939), the second and third string quartets (1945, 1975), in *Peter Grimes* (1945, extracted as one of the *Four Sea Interludes*) and in *The Turn of the Screw* (1954). In this last work, the passacaglia is the culmination of a variation structure covering the entire opera, with a theme stated in the Prologue and 15 variations spread over the orchestral interludes that link the scenes. The theme rises in pitch in every variation during Act 1 from A, associated with the Governess, to A♭ associated with the ghosts, then each time descending in pitch during Act 2 to the final confrontation, with all 12 tonal centres present during variation 15.

(iii) Other mid-century approaches. Several composers during the middle of the century found variation techniques an essential part of their approach to composition, without writing many actual variations: Bartók, K.A. Hartmann and Shostakovich, among others. Apart from the second movement of his Violin Concerto (1937–8), some early pieces (Violin Sonata of 1903, piano variations) and two pieces in *Mikrokosmos* as true variation movements, Bartók tended to put into practice what he told the interviewer Denis Dille in 1937: 'I never repeat [an idea] unvaried; this is connected to my love of variation, of thematic transformation'. He was partial to palindromic forms within a cycle, where a later movement may vary elements of an earlier one or be based on a varied version of the earlier movement's theme; this procedure he called a 'Brückenform', evident in the Violin Concerto, the Second Piano Concerto (1930–31) and the five-movement fourth and fifth quartets (1928, 1934). Whether the later movement may be considered 'a variation' of the earlier one is doubtful, however. His Music for Strings, Percussion and Celesta (1936) does reflect a four-movement-wide re-presentation of thematic material in varied forms. Bartók noted in his introduction to the 1937 score that in the development section of the second movement the theme of the first movement appears 'in veränderter Gestalt'; that the theme of the fourth movement is alluded to there as well; that in the recapitulation of the same movement the 2/4 rhythm of the exposition is changed into 3/8; and that in the finale the theme of the first movement is 'extended' from its original chromatic form into a diatonic one (ex.20). Hartmann was similarly concerned with variation procedures and presented large-scale forms as variants of each other. His Symphony no.6 (1951–3), for example, concludes with a 'Toccata variata' of three fugues, in which the second two are variants of the first. Shostakovich's variation movements include the passacaglia slow movements of his string quartets nos.3 (1946, unusual in that the theme is a lyrical melody, rather than a framework), 6 (1956) and 10 (1964) as well as the Violin Concerto no.1 (1947–8). The finale of String Quartet no.2 (1944) is a variation movement beginning with a constant-melody build-up, which makes the remaining variations seem developmental; in fact, all the movements of the quartet are thematically connected and the variation movement alludes to the others. At the level of individual movements, however, it is unclear how to differentiate between cyclic procedures and variation techniques. If we have managed to avoid the temptation to see variations

in the thematic transformation of developmental and cyclic forms of 19th-century music, then there is no reason to succumb to it for that of the 20th.

Other notable variations of the second quarter of the 20th century include Copland's astringent Piano Variations (1930, orchestrated in 1957), about which the composer wrote 'it was not composed in the consecutive order of its finished state . . . I worked on the variations individually, not knowing exactly where or how they would eventually fit together. One fine day, when the time was right, the order of the variations fell into place' (Copland and V. Perlis, *Copland*, i: *1900 through 1942*, 1984); the sixth movement of Zemlinsky's String Quartet no.4, op.25 (1936), subtitled 'Barcarole'; Kodály's Variations on a Hungarian Folksong, *The Peacock*, 1938–9, in which the 16 variations are grouped in threes, except for variation 10, which stands alone, and 11–14, the massive slow-movement group which reorganizes the whole into a three-part form; Poulenc's suite of character sketches *Les soirées de Nazelles* (1930–36), framed by a 'Préambule' and then a 'Cadence' and 'Final'; three sets on Paganini's much-varied A minor Caprice: by Rachmaninoff (Rhapsody op.43, 1934) for piano and orchestra, by Lutosławski (for two pianos, 1941) and by Blacher (op.26 for orchestra, 1947); Rósza's Theme, Variations and Finale op.13 (1934), on a theme 'in the manner of a Hungarian folksong'; Eisler's serial variations *14 Arten, den Regen zu beschreiben* (1940) for flute, clarinet, piano and strings (written for a documentary film), notable for their lyricism, for the 'chorale-étude' (no.3) and for the initial 'Anagramm' on Schoenberg's name; and Dello Joio's 'Variations, Chaconne and Finale' for orchestra (1947), based on a Gregorian theme. The soaring lyricism of the second movement of Tippett's String Quartet no.3 (1945–6) conceales the technique of constant-melody variation.

(iv) The later 20th century. Stockhausen's critique of variation in 1952 began from the premise that musical ordering begins with the note, not the theme or figure, and thus took issue with Webern's identification of the entity to be varied as a 'Gestalt':

> Musical variation assumes a pre-formed Gestalt that is varied. This Gestalt bears its own fixed ordering of tones. It is complete, not arising as the inevitable outcome of an idea for a specific arrangement of tones . . . In the 'variation', however, it is not a question of the to-be-varied [*das Variierende*], but rather of the varying [*das Variieren*]. (H. Weber, 1986, p.43)

Thus the composers involved in inventing total serialism generally eschewed variation, at least at the time; Stockhausen's later *Inori* for soloist and orchestra (1973–4) is related to variations. Boulez used the term 'double' in both *Le marteau sans maître* (1953–5) and *Figures–Doubles–Prismes* (1963) and 'Variation' for the first piece of *Livre pour cordes* for string orchestra (1968), the three parts of which he described respectively as 'based on simple, static elements', 'a tangle of decorated lines' and a combination of the two. But a composer could use the title 'variation' for nearly anything. Cage's *Variations I–VIII* (1958–78) are chance compositions: *Variations I* is for any number of players and any number and kind of instruments, the score consisting of clear plastic overlays with lines and dots, each player making an individual part; *Variations V* includes choreography by Merce Cunningham with film and video images. Cage's *Hymns and Variations* for 12 amplified voices (1979) takes two hymns by William Billings, subjects them to 'subtraction' (chance operations reducing their elements) and then follows with a series of ten 'variations' in which each has five such 'subtractions'; the piece lasts nearly half an hour. Cage's *Themes and Variations* (1982) consisted of chance operations on text alone, designed to be read aloud; as in *Hymns and Variations*, the variations 'succeed the theme as four more composite realizations of the original prose-poems' (Radano, 1982). Electronic works are often only tangentially related to variations: Pierre Henri's *Variations pour une porte et un soupir* (1963) generates 25 variations from the *musique concrète* elements of a creaking door, breathing and a musical saw. Noah Creshevsky articulates the principle underlying his Variations (1987) as 'perpetual variation' while acknowledging that 'sectional repetitions are interrelated solely through a few prominent motivic and rhythmic elements'.

But the encroachments of the avant garde on the term 'variation' did not mean that composers ceased to produce remarkable 'true' variations during the 1950s and 60s. Ginastera's *Variaciones concertantes* for chamber orchestra (1953) combines characteristic and concertante approaches, as well as a new form: an interlude inserted between theme and variations, another interlude between the variations and a theme reprise, and a final variation 'in modo di Rondo'. Berio's unusual *Cinque variazioni* for piano (1952–3) finds its theme (by Dallapiccola) in variation 5, only to edit it out in the 1966 revision (shades of Brahms editing Schumann and others out of his op.8). Elliott Carter's *Variations for Orchestra* (1954–5) invented two new modes of organization, in the first of which the variations progress from vivid contrast to the 'misterioso' variation 5, sonorous but without rhythmic propulsion (4 is 'ritardando molto', 6 is 'accelerando molto'), then increase in textural and rhythmic complexity. The work also uses two ideas as ritornellos, the first a quick ascending one that gets slower at each restatement (variations 1, 3, 8, finale), the second a descending line (played by two violins during the theme) that gets faster as the work progresses (variations 2, 8, finale): the ritornellos meet at the end. Milton Babbitt's *Semi-Simple Variations* for piano (1956), a 36-bar serial piece, spreads its six-pitch theme (ex.21) over six bars, so that variation 1 contains the second hexachord which, as in the Webern Symphony, is a retrograde in tritone transposition. Moreover, the 12 notes are sustained, like a cantus firmus, and the set has been 'registrally partitioned' (Barkin, 1967); the composer noted in addition that 'the sixteenth notes in the first six measures represent all 16 possible partitions of the quarter note in terms of the 16th note unit'. Charles Wuorinen wrote six inventive sets of

Ex.21 Babbit: *Semi-Simple Variations*

variations, mostly for solo instruments (piano, flute, violin, cello, bassoon plus harp, and timpani) between 1963 and 1975. Peter Westergaard's serial *Variations for Six Players* (1963) features a disjunctive Webernian *Klangfarbenmelodie*; from the same year come Walton's Variations on a Theme by Hindemith (1962–3), which uses a meandering theme from the slow movement of Hindemith's Cello Concerto no.2, a source that generates the variations' long-breathed melodies against vividly orchestrated faster-moving lines contrasting with more motivically organized variations.

The tradition of variations on a borrowed theme was extended in the 20th century to formal interactions with earlier music. There is perhaps a fruitful connection here with Picasso's 44 variations on Velázquez's *Las Meninas* (1957), in which the first painting is already a variation. 13 of the next 19 variations focus on the central figure, the Infanta in a white dress, and one can see her face progressively dissociating in 4–11. The vista broadens before a 'theme reprise' in 22, which inaugurates a series of four variations on the entire picture. The rest of the variations concern the secondary figures, with the Infanta returning only as part of a larger ensemble (36–8). This engagement with an earlier 'text' that creates varied 'views', and different perspectives of a model may be at work in Paul Lansky's *Six Fantasies on a Poem by Thomas Campion* (1978–9), an electronic piece in which each fantasy uses the text of the poem ('Rose cheekt Lawra, come') read in its entirety to very different effect; the whole has an extraordinary overall shape and impact. But Lukas Foss's *Baroque Variations* (1967), which the composer called 'dreams about' rather than 'variations on', uses three different pieces, each given in its entirety but realized in an entirely different way, without the necessary repetition and, in the case of no.3, with only a set of instructions for the performer. The latter situation is made especially vivid in Brian Eno's Variations on the Canon in D by Pachelbel (1975), which gives the players instructions on how to use selected parts of the (unplayed) theme so that each of the three variations unfolds as a process, a 'self-regulating and self-generating system'. In the first ('Fullness of Wind'), each player's tempo is decreased, with the rate of decrease governed by the instrument's register (bass = slow). In some respects this resembles Arvo Pärt's *Cantus in memoriam Benjamin Britten* (1977–80), in which all the strings inexorably descend the A minor scale with the upper strings moving much faster than the lower, and each progressively slowing. Rochberg's variations on Pachelbel's canon in his Quartet no.6 (1978), by contrast, maintain the structure of the theme even while moving far away from and then back towards its style. An entirely different approach to the historical sense of 'Variations on . . .' animates Mauricio Kagel's *Variationen ohne Fuge* for orchestra (1971–2), a peculiar *hommage à Brahms* that keeps the phrase structure and rhythm of the Handel Variations while changing their harmony and ordering (2, 19, 21, 3 etc.); the effect is rather like a smear of sound over a distanced but recognizable original. As in Alexander Goehr's Variations on the Sarabande from Bach's English Suite in E minor (a work with which it has nothing else in common), the Baroque theme appears only at the end. Kagel includes ad libitum parts for two actors to impersonate a silent Handel and a monologist Brahms. Other modes of calling up the past are rendered in Rochberg's *Partita-Variations* (1976), with its mix of

Ex.22 Zwilich: *Prologue and Variations*

(a) Prologue

Andante misterioso

18th- to 20th-century styles in different characteristic variations; the theme, a ballade, is in the centre of the set.

The idea of repetition in combination with gradual change makes problematic the relationship between the minimalist musical style of the 1970s and 80s and variations. Very tiny ostinatos produce the feeling of pulsations rather than structures to be varied. Some pieces in a minimalist style or aesthetic do reveal a more structural approach, however, especially when governed by a text, as in Steve Reich's *Tehillim* (1981), which sets four psalms. The first presents strophic variations at each text repetition, with canons, elaborate vocal overlapping and interplay and increasing complexity, then dwells almost developmentally on two- or three-line segments, finally returning to the entire text in a set of recapitulatory variations. The last psalm uses incantatory canonic repetitions within each stanza while retaining the strophic form until the coda. Reich's *Variations for Winds, Strings and Keyboards* (1979) makes three increasingly complex statements of a long harmonic progression into a stretched chaconne.

Indeed, contemporary progeny not only of variations but of its older forms continue to exert fascination, as they did in the early 20th century. Mario Davidovsky's *Chacona* for violin, cello and piano (1971) is based on a regularly recurring pattern of durations; George Edwards's *Draconian Measures* (1976) and *Czeched Swing* (1994) maintain an element of harmonic structure in each variation, while in the latter, as in jazz, the bars may be variable in length but every variation has the same number of bars. Movements in larger works also adopt an updated 'constant-harmony' chaconne type: the slow movement of Tippett's Piano Sonata no.3 (1972–3) varies 17 chords; in John Harbison's Oboe Concerto (1991), the Passacaglia middle movement maintains a sarabande-like tread and harmonic structural elements especially in the tutti sections, while the solo sections are either connected to the substructure or more freely rhapsodic; in Thomas Adès's *Concerto conciso* for piano and orchestra (1997), a seven-bar chordal theme underlies the *ciaconetta* slow movement. Other composers interested in older forms of repetition include Birtwistle ('varied ostinato'), Maxwell Davies ('doubles', a far cry from *Theme and Variations: Mavis in Las Vegas*, 1997), Schnittke (passacaglia) and Kernis ('ground'). Ellen Zwilich's Prologue and Variations (1984) uses 'prologue' in place of 'theme' (ex.22*a*), in the sense of the introduction to the 'characters' in a drama, here represented by different musical motifs and textures over 69 bars of Andante misterioso; the four variations develop now one, now another of these aspects without maintaining a structural resemblance (102, 26, 86, 42 bars respectively, at Allegro (ex.22*b*), Lento, Presto, Tempo I). A look at these and other remarks composers make about their variations suggests a self-consciousness about claiming 'true' variation status, especially when the structure of the theme is changed, even when they use the title. This reveals the tenacity of the model both as a sense of limitation and as a testing-stone for the compositional imagination.

ELAINE SISMAN

Varischino [Varischini], **Giovanni** (*fl* Venice, 1680–92). Italian composer. He composed two operas for Venice: *L'Odoacre* (S Angelo, 1680, libretto by N. Bonis; MS score in *I-Vnm*) and *L'amante fortunato per forza* (S Angelo, 1684–5, libretto by P. d'Averara; music lost). They are his only known works apart from six manuscript cantatas (in *A-Wn*) which may themselves be excerpts from operas. The libretto of *L'Odoacre* describes him as a nephew and pupil of Giovanni Legrenzi. Varischino published two of his uncle's works in 1691 and 1692 in response to prevision of the latter's will. The score of *L'Odoacre* shows the hand of a competent and at times graceful composer with no great fund of imagination. Most arias are written-out da capos with extended reprise, typical in form of the period *c*1675–85. A trumpet joins the string ensemble several times, as in the strikingly imitative opening symphony.

THOMAS WALKER/R

Varlamov, Aleksandr Yegorovich (*b* Moscow, 15/27 Nov 1801; *d* St Petersburg, 15/27 Oct 1848). Russian composer, singer and teacher of Moldavian descent. He showed an early aptitude for music, and in his youth taught himself to play the violin, cello, piano and guitar. In 1811 he was sent to St Petersburg, where he was enrolled as a chorister in the court chapel. At this time the director of the choir was Bortnyansky, who was so impressed by Varlamov's musical ability that he took him on as a pupil. In 1817 he graduated to the adult choir, but he left in 1818 after his voice had broken. The following year he went to The Hague as director of the choir in the Russian ambassadorial chapel, and was attached to the court in Brussels of Princess Anna Pavlovna, the Russian wife of Prince William of Orange. He returned to Russia in 1823 and later the same year took up an appointment as singing teacher in the St Petersburg theatre school, where he remained until 1826. In 1829 he taught the young solo singers in the court chapel choir, but he resigned at the end of 1831 to take up, in January 1832, the post which was to occupy him for the next 12 years, that of Kapellmeister of the imperial theatres in Moscow. It was in this period that Varlamov flourished as a composer, producing a vast number of songs, two ballets, piano pieces and incidental music to 17 plays. Nine of his songs were published in the *Muzïkal'nïy al'bom na 1833 god* ('Album of Music for 1833'), and thereafter his works enjoyed widespread popularity and were published in several contemporary journals.

Some of his songs, like *Krasnïy sarafan* ('The Red Sarafan'), a setting of Tsïganov's poem, are written in a folk idiom; many more are conceived in the romantic, sentimental vein popular at this time. Varlamov composed 138 solo songs, besides those written for plays, with texts from numerous Russian poets, including Lermontov, Fet, Del'vig, Kolt'sov, Tsïganov and F.N. Glinka. He also wrote 31 songs for vocal ensembles, and made arrangements of over 50 folk melodies, a collection of which was published under the title *Russkiy pevets* ('The Russian singer', Moscow, 1848). The first plays for which Varlamov composed incidental music were Shakhovskoy's *Roslavlev* (1832) and *Dvumuzhnitsa* ('The Woman with two Husbands', 1833). In March 1834 the first volume of Varlamov's music journal *Eolova arfa* ('Aeolian Harp') was published in Moscow; this ran for ten issues, and contained some 40 pieces by Varlamov and other composers. He also produced a three-part educational book, *Polnaya shkola peniya* ('Complete school of singing', Moscow, 1840, 2/1950). Varlamov left his theatrical post in December 1843, and in 1845 moved to St Petersburg. Here his hopes of gaining an appointment in the court chapel were not realized. His health deteriorated rapidly and he spent the final years of his life giving private singing lessons, intermittently performing in concerts and writing songs.

His complete works comprising 223 pieces were published posthumously in 12 volumes (*Polnoye sobraniye sochineniy*, ed. F.T. Stellovsky, St Petersburg, 1861–4); a further complete edition, comprising 225 pieces, was published in 1886. An extensive bibliography and list of works is contained in Listova.

GEOFFREY NORRIS

Varna. City in Bulgaria. It is the largest Bulgarian port and resort city on the Black Sea coast. Once the ancient Greek colony of Odessos, Varna is the centre of operatic activity in north-eastern Bulgaria. The first performances of opera scenes date from the founding of a choir at St Michael's Church in 1893 and of the Gusla Music Society in 1899. In 1920, 1928 and 1930 attempts were made to organize a permanent theatre; from the period 1926–37 the first Bulgarian musical festivals began to be organized.

After the socialist revolution in 1944, Varna became the home of the Varnensko Lyato (Varna Summer), an

international music festival. A symphony orchestra was founded in 1946, and the Varnenska Narodna Opera (Varna National Opera) in 1947, housed in the National Theatre. The first opera performance was Smetana's *The Bartered Bride*. The repertory is predominantly Italian and German, with special emphasis on Mozart and modern European and Bulgarian music (especially that of Parashkev Hadjiev). Operas staged for the first time in Bulgaria include *Così fan tutte*, Britten's *Albert Herring* and his version of *The Beggar's Opera*, *Il turco in Italia* and Prokofiev's *Betrothal in a Monastery*. The regular season starts in September and ends in August, with between four and eight new productions a year. The theatre, built by N. Lazarov in 1932 in a mainly classical style, holds about 600; it was renovated during the 1980s and reopened with *Die Zauberflöte* (1989). The company presents four opera performances weekly in addition to those staged as part of the summer festival.

MAGDALENA MANOLOVA

Várnai, Péter P(ál) (*b* Budapest, 10 July 1922; *d* Budapest, 31 Jan 1992). Hungarian musicologist and conductor. He studied composition under Szervánszky and conducting under Ferencsik at the Budapest Conservatory, and from 1945 to 1950 worked at Hungarian Radio. After some years as a conductor at Szeged (1951) and as a theatre conductor (1952–4) he turned to music criticism and musicology, and was an editor of Editio Musica, Budapest (1956–82). His research was initially focussed on Hungarian music: in 1952 he found, among others, scores of the first Hungarian Singspiel with extant music, Mátray's *Cserni György*. Opera, especially that of Verdi, was his main interest. He was a permanent member of the Istituto di Studi Verdiani of Parma, and gave papers at many Verdi conferences. In his articles he demonstrated how different means of expression serve dramatic characterization. He was also an authority on 20th-century Hungarian composers and wrote biographies of Béla Tardos (1966), Rudolf Maros (1967) and the singers Mihály Székely (1967) and Endre Rösler (1969).

VERA LAMPERT

Varnay, Astrid (Ibolyka Maria) (*b* Stockholm, 25 April 1918). American soprano of Swedish birth. Her family emigrated in 1920 to the USA, where she studied with Paul Althouse and Hermann Weigert, whom she married. She made her début at the Metropolitan in 1941 as Sieglinde, a last-minute replacement for Lotte Lehmann; six days later she replaced Helen Traubel as Brünnhilde. She also sang Elsa, Elisabeth, and Telea in the première of Menotti's *The Island God*. In 1948 she attempted her first Italian roles (La Gioconda, Tosca, Aida, Santuzza) in Mexico City and made her European début at Covent Garden as the *Siegfried* Brünnhilde; she also sang Isolde and returned to London as a powerful Kostelnička. In 1951 she sang Lady Macbeth at the Florence Maggio Musicale and first appeared at Bayreuth, returning every year until 1967, as Brünnhilde, Isolde, Ortrud, Kundry and Senta. In the 1950s and 60s Varnay sang mostly in Munich, Düsseldorf, Berlin and Vienna. In 1959 she created Jocasta in Orff's *Oedipus der Tyrann* at Stuttgart. In 1962 she began to take mezzo roles, including Strauss's Herodias and Clytemnestra, Begbick (*Aufstieg und Fall der Stadt Mahagonny*) at the Metropolitan in 1979 and Claire (*Der Besuch der alten Dame*). Although her vocal technique was imperfect, her intense, passionate singing and committed acting made her a superb Wagnerian soprano, as can be heard in her live recordings of Senta, Ortrud and Brünnhilde from Bayreuth; she also recorded Elektra at the Metropolitan, and sang Clytemnestra in a film of the same opera.

HAROLD ROSENTHAL/R

Varney, Louis (*b* New Orleans, 30 May 1844; *d* Paris, 20 Aug 1908). French composer and conductor. He was one of two sons of the theatre conductor and composer Pierre Varney (1811–79), from whom he received his musical training. His early career was spent as conductor at the Théâtre de l'Athénée in Paris, for which he composed the one-act operetta *Il signor Pulcinella* (1876) and music for revues. After his father's death he became known as a prolific composer of opérettes, beginning with *Les mousquetaires au couvent* (1880). For two decades he produced about two opérettes a year, some of which were also produced abroad, and composed ballets for the major Paris music halls. In the last years of his life, however, he

composed little due to a disease which obliged him to move to Bagnères-de-Bigorre in the Pyrenees; he was taken back to Paris the day before he died. Varney's music displays a lightness and gaiety which owe much to Offenbach, but only *Les mousquetaires au couvent* has remained in the French repertory, having a good libretto based on a vaudeville of the 1830s, *L'habit ne fait pas le moine*.

WORKS

unless otherwise stated, all are opérettes listed in order of first performance and first performed in Paris: for more detailed list see GroveO

Il signor Pulcinella, 1876; Les mousquetaires au couvent, 1880; La reine des Halles, 1881; Coquelicot, 1882; Fanfan-la-tulipe, 1882; La petite reinette, Brussels, 1882; Joséphine, Trouville, 1883; Babolin, 1884; Les petits mousquetaires, 1885; L'amour mouillé, 1887; Dix jours aux Pyrénées, 1887; Divorcée, 1888; La japonaise, 1888; La Vénus d'Arles, 1889; Riquet à la houppe, 1889; La fée aux chèvres, 1890; La fille de Fanchon la vielleuse, 1891; La femme de Narcisse, 1892; Le brillant Achille, 1892; Miss Robinson, 1892; Cliquette, 1893; Les forains, 1894; La fille de Paillasse, 1894; Les petits Brebis, 1895; Mam'zelle Bémol, 1895; La belle épiciére, 1895

La falote, 1896; Le papa de Francine, 1896; Le pompier de service, 1897; Pour sa couronne, 1897; Les demoiselles des Saint-Cyriens, 1898; La tour de bois, 1898; Les petites Barnett, 1898; La fiancée de Thylda, 1900; Frégolinette, 1900; Mademoiselle George, 1900; Princesse Bébé, 1902; Le chien du régiment, 1902; L'âge d'or, 1905

Ballets-pantomimes, incl. Princesse Idéa, Eden, 1895; Paris-Cascades; music for revues; dance music

ANDREW LAMB

Varnish. A resinous solution applied to string instruments to protect the wood from which they are made. Varnish has always been held to be of the utmost importance to string instruments, the violin family in particular. Apart from the distinctive beauty of the finish achieved by Antonio Stradivari and his fellow luthiers in Cremona in the 17th and 18th centuries, it is commonly regarded as having a significant effect on the tone of the instruments. Stradivari's varnish stands as the culmination of centuries of development. The painter Gentileschi (1563–1639) noted that lute maker's amber varnish was sold by all the artist's colourmen in Italy, but the technique was lost in the general decline of Italian violin making after Stradivari's death. The subsequent mass-production of instruments led to the use of cheaper, fast-drying alcohol-based varnish in the 19th century, but in the 20th century there was a revival of traditional methods, spurred on by a substantial body of scientific research into the nature of Cremonese varnish.

The violins and viols surviving from 16th-century Italy, most importantly from Cremona and Brescia, already have all but one of the definitive qualities of the varnish of Stradivari. There is a deep colour in the wood itself, without the appearance of staining, a reflectiveness which illuminates the wood structure and the so-called bi-refractive quality in which different hues are visible depending on the angle of observation. The top coats of varnish are tender, usually marked to varying degrees with craquelure, and have little or no coloration apart from a deep golden tone. In contemporary paintings, string instruments are usually depicted as either white or pale gold. Stradivari's main achievement in the years after 1700 was the incorporation of a transparent red colour which did not compromise the other qualities of the varnish. Coloured varnishes did appear elsewhere before then, but they do not have the subtlety achieved by Stradivari. The old Cremonese varnish was available to all the members of the Amati family and their pupils in the 17th century, Rugeri, Rogeri and Andrea Guarneri. Following Stradivari's example, Andrea Guarneri's son Giuseppe, with his son Giuseppe Guarneri and Carlo Bergonzi, used the highly coloured varnish with differing levels of success, but after Del Gesu's death in 1744 the recipe appears to have been abandoned. Lorenzo Storioni, a virtually self-taught maker who revived the Cremonese tradition at the end of the 18th century, used an inferior varnish which, although enhanced by the passage of time, has not the delicacy of the earlier Cremonese. Other 18th-century Italian centres – Venice, Milan, Florence, Rome and Naples – all had their own distinctive varnish, the Venetian in particular being very fine, with an intense red layer, often with a strong craquelure, above a rich yellow ground. The other varnishes tend generally to be harder and paler yellow in colour.

Outside Italy, varnish of good quality seems to have been in regular use throughout Europe, applied over different qualities of ground, with some variation in hardness and durability. The universal quality of the varnish may be attributed to the widespread use of a drying oil, such as linseed or walnut, with various proportions of hard resins and driers added. The Tyrolean Jacob Stainer was, however, the only maker outside Italy to approach the Cremonese level. The distinguishing feature of the best Italian work, which Stainer may have shared, is the ground. Recent research has suggested that Italian instruments have a sealing layer of powdered mineral strong in silica applied to the wood. Analysis of the coloured top layer shows evidence of transparent pigments, both organic and mineral, in various mixtures. Examples of varnish by later makers, however, including Storioni, reveal the use of coloured dyes rather than pigments in the varnish.

If varnish does have any influence on tone, it is probably deleterious. A soft, slow-drying varnish that invades the wood has as much of a muting effect as a hard, quick-drying varnish that stays on the surface. The Cremonese seem to have evolved a system involving a durable ground that protects the wood and isolates it from the softer outer varnish, which wears away quickly but exhibits great beauty in the differing effects of light and depth, and in the patina it easily acquires. One danger now confronting this delicate old varnish is the intense use to which old violins are put by present-day concert performers, and the resulting tendency to protect it with layers of shellac and french polish. Because the old varnish is slightly absorbent, any layers added subsequently are drawn in and are virtually impossible to remove without damaging the original surface. Overpolishing changes the character of the varnish, giving a uniform sheen that destroys its distinctive texture and contrasting tones.

JOHN DILWORTH

Varoter, Francesco. *See* ANA, FRANCESCO D'.

Varotto, Michele (*b* Novara, before *c*1550; *d* Novara, ?1599). Italian composer. He was a cleric, first a canon on the island of S Giulio in Lake Orta, and then from at least 1580 at Novara Cathedral. He was the first *maestro di cappella* of the cathedral, being nominated on 7 August 1564. On 13 July 1599 he was succeeded in this post by Francesco Ramella. He probably remained in Novara until his death, and was admired and honoured both in Italy and elsewhere: his pupil Giovanni Battista Portio attested to this in the dedication of his collection *Fiamma ardente* (RISM 1586[19]). Fedeli and other scholars have maintained that Varotto may perhaps be identified with a certain Michele Novarese whom Antonfrancesco Doni introduced as the interlocutor in his *Dialogo della musica* (Venice, 1544); Einstein, however, disagreed with this view. Varotto wrote predominantly sacred music, adopting the concertante style and the antiphonal choral practices of the Venetian school, showing originality and mastery. He also composed madrigals, which were published in collections. In the *Dialogo* for ten voices, 'A Segnor Hermano io digo' (in 1586[19]), he set up a conversation between different characters of the *commedia dell'arte*, including, for example, Pantalone, Graziano and a gypsy.

MARIANGELA DONÀ

Varro, Marcus Terentius (*b* ?Reate [now Rieti], 116 BCE; *d* 27 BCE). Roman scholar and poet. During four decades he took an active part in political life, but his passion was for scholarship. Educated at Rome and Athens, he made available to his countrymen much of the entire range of Hellenic and Hellenistic erudition. Varro is the first Roman example of the polymath, and he remained deeply Roman. His eclecticism continued to be subservient to an abiding concern for the virtues of earlier generations, even as his prodigious learning was lightened and made palatable for ordinary readers by a strong feeling for earthy realities. He has been called the 'most learned of the Romans'.

The 55 known titles constitute but a partial list of Varro's major works. Of these, only *On Farming* survives in a complete form; six books remain of the 25 originally comprising the systematic treatise *On Latin*, as well as 600 fragments of his *Menippean Satires*, written on the model of the Cynic philosopher Menippus of Gadara. These exemplify both the author's moral concern and his gift for the common touch. Among them is the *Onos lyras* ('When the ass hears the lyre'), a defence of music against the stock charges of its low esteem and effeminate practitioners. Even though the champion is a personified figure taken from the everyday practice of music (*phōnaskia*, i.e. 'vocal training'), the actual defence goes well beyond considerations of utility for the statesman and others: cosmic harmony, rhythmic ethos and the power of music to calm wild beasts are also included. With reference to men, who are said to have an inborn affinity for the musical, the ethical power of music is exemplified by the effect of tibiae (double reed pipes; the Greek auloi) upon audiences in public performance. Notably un-Platonic, this may echo the doctrines of the *Politics*. The high praise accorded to Aristotle's celebrated pupil ARISTOXENUS does not seem merely coincidental. It is noteworthy that the individualizing approach to musico-ethical theory, well established in Stoic doctrine by Varro's time, has no place in the scattered remains of the *Onos lyras*. Several of the fragments contain coarse or obscene references; one, involving string tension, has its prototype in Hellenistic comedy.

Varro's lost *Disciplines* dealt with the liberal arts, with medicine and architecture added, in nine books. The contents of book 7, on music, have been surmised from references in the work of later theorists and scholars of sundry kinds, from Pliny and Quintilian to Isidore of Seville, but only the most general outline can be recovered. The topics of the Menippean dialogue reappeared, with elaborations and additions. Further, Varro discussed the liturgical, military and therapeutic uses of music. There was also a section devoted to consonances and dissonances. The definition of music itself as 'scientia bene modulandi', stated by Censorinus (*On the Day of Birth*, 10), Augustine (*De musica*, i.2), Cassiodorus (*Institutiones*, ii.5), Pseudo-Odo (*Dialogus*) and in the *Scolica enchiriadis* and closely paraphrased by Aurelian of Réôme (chap.2: 'scientia recte modulandi'), has commonly been attributed to Varro. None of these authors, however, associated the definition with Varro and the attribution is certainly doubtful.

Varro united Greek theorizing with Roman practical experience. His influence was enormous on later Latin authors, in whose writings faint traces of his erudition can still be discerned.

WARREN ANDERSON/THOMAS J. MATHIESEN

Varró [née Picker], **Margit** (*b* Barcs, 22 Oct 1881; *d* Chicago, 15 May 1978). Hungarian piano teacher. Initially self-taught, she studied with Árpád Szendy at the Budapest Academy of Music, graduating in 1907. After consolidating her teaching experience at the Ernő Fodor School of Music (1907–8), she began to give concerts and develop her own private teaching practice. For a short period from 1918 she taught the piano and methods of piano teaching at the Budapest Academy, the first woman instrumental teacher to be appointed. Thereafter she concentrated on private teaching. Her detailed, systematic observations on piano teaching, music psychology and performance form the basis of her first book, *Zongoratanítás és zenei nevelés* (1921). Translated into German in 1929, it immediately assured her reputation as an outstanding teacher well beyond Hungary, and attracted invitations to give lectures, courses and broadcasts throughout Europe. In November 1938 Varró moved to the United States, where she continued teaching and writing. She is considered to be a pioneer of the 'auditive approach' to piano teaching, and in the area of teacher-pupil relationships based on psychological observation and experimentation.

BETTY VERGARA-PINK

Varsovienne (Fr.; It. *varsoviana*). A dance originating in France during the 1850s. It is a genteel variation of the mazurka, incorporating elements of the waltz; its name – from the French form of 'Warsaw' – was intended to remove the exotic connotations of 'mazurka'. It would have returned to obscurity, having served its purpose as an instructive piece for dancing classes, had it not become unexpectedly popular at balls at the Tuileries in Paris; it is said to have been a favourite of the Empress Eugénie. Its tempo is rather slow, and its music is characterized by strong accents on the first beats of the second and fourth complete bars.

MAURICE J.E. BROWN

Vartan, Hayg (*b* Ruse, Bulgaria, 5 April 1953). Armenian composer and pianist. In 1977, after graduating from the piano class of Lyuba Entscheva at the Bulgarian State Conservatory, Sofia, he moved to Switzerland, where he continued his studies at Basle University (1977–83), continuing his piano training and studying composition with Friedhelm Doehl. In 1985 he began teaching the piano at the Basle Conservatory and started a career as a concert pianist, appearing in Switzerland, Germany and France. He then worked with Nono in studios in Freiburg, Frankfurt and Cologne (1986–90); it was in Freiburg that he conceived *Promethée XII*, a *dramma per musica* which he completed in 1991. The first act of this work was staged in 1994 at the Teatro Goldoni, Venice; its first complete performance took place in 1995 in the Opera Studio of the Yerevan Conservatory. *Promethée XII* received further performances in Europe over the next year sponsored by UNESCO. His training as a pianist left its stamp on his early works, but by the start of the 1980s a refined technique notable for its linear textures, strictness of form and use of classical counterpoint had developed. Extra-musical symbolism, frequently sacred in origin, imparts a ritualistic character to many works (*Modus* for soprano and computer). His mixed technique brings together elements of archaic vocal declamation, free dodecaphony and sonoristic experiment; all these elements are subordinated to a concern for musical expressiveness.

SVETLANA SARKISYAN

Värttinä (Finnish: 'Spindle'). Finnish folk music ensemble. It was created in 1983 by the composer and singer Sari Käasinen and her sister Mari, in the village of Rääkkylä. They take their inspiration from the surrounding culture of Karelia, the area of Finland that borders with Russia. Originally formed with 21 musicians, who wore national dress, sang ancient, local melodies, and played the traditional *kantele*, accordion, tin whistle, flute, guitar, fiddle, double bass and saxophone, by 1987 it had been transformed into a ten-piece ensemble, incorporating new instrumentalists, with guitar, fiddle, accordion, double bass, saxophone and *bouzouki*. Owing to the fact that many members had by then become graduates of the folk music department of the Sibelius Academy the sound shifted to absorb more complex influences from other world musics as well as rock and jazz. By 1991 Värttinä had become one of Finland's leading folk groups. Despite the five men in the group, Värttinä's overriding image has been of an energetic front line of women singers reinterpreting traditional 'runolaulu' songs, some original laments about love, and the loneliness and often misery of marriage, others the traditional boasting songs of village boys and girls. Much of their music has come from the Finno-Ugric areas of Finland lost in war to Russia, as well as the music of the Setu people of Estonia and the

Rönttyskä dance-songs of Ingria. Värttinä's approach has rejuvenated the ancient rune song form of melody, confined to the first five notes of the scale. The four stressed syllables, set to time signatures, usually 4/4 or 5/4, by varying the melodic line, emphasize the alliterative qualities of phrases and the play on double meaning and poetic metaphor. Sari Käasinen's departure to pursue a solo career in the mid-1990s did not hold Värttinä back: rather the extraordinary talent of the group has continued to blossom as they have moved more intensely into composition to become one of Scandinavia's and the world's leading contemporary groups. They have made a number of recordings including *Oi Dai* (1991), *Kokko* (1996) and *Vihma* (1998).

JAN FAIRLEY

Varunts, Viktor Pavlovich (*b* Tbilisi, 26 Aug 1945). Russian musicologist. He studied theory and composition with Nest'yev at the Moscow Conservatory, graduating in 1972. He worked as a pianist and accompanist at the Institute of Theatrical Arts from 1972 to 1976, and since 1976 has taught at the Moscow Conservatory, where he has been head of doctoral and postgraduate studies since 1979 and professor in the department of history of foreign music since 1996. He took the *Kanditat* degree in 1988 with a dissertation on neo-classicism in 20th-century music, and the doctorate in 1994 with a dissertation on popularizing Stravinsky and Prokofiev. Source studies on these two composers have dominated his research, and he has published many papers on their legacies of writings, correspondence, new biographical material and previously unknown manuscripts.

LARISA GEORGIEVNA DANKO

Varviso, Silvio (*b* Zürich, 26 Feb 1924). Swiss conductor. The son of a singing teacher, he studied music in Zürich and began his career as an accompanist. His first conducting appointment came in 1944 at the Stadtheater, St Gallen, where he made his début in *Die Zauberflöte*. He worked at the Basle Opera, first as assistant, then as principal conductor (1950–62, musical director from 1956). He directed a wide range of Classical and contemporary operas, to which he applied the eye of a talented painter as well as the ear of a sensitive musician. His wider travels began in 1958 with opera in Berlin and Paris, and the next year he made his American début with the San Francisco Opera (where in 1960 he conducted the American première of Britten's *A Midsummer Night's Dream*).

After his engagement by the Metropolitan Opera in 1961 for *Lucia di Lammermoor*, he returned to conduct 14 different operas during the next four seasons (1962–6). His British début was at the 1962 Glyndebourne Festival in *Le nozze di Figaro*, and his Covent Garden début later that year in *Der Rosenkavalier*; he returned there often in a varied range of operas. He was musical director at the Royal Opera, Stockholm (1965–71), and became a frequent guest at the Vienna Staatsoper. He first went to Bayreuth in 1969 (*Der fliegende Holländer*) and was musical director at Stuttgart, 1972–80, and at the Paris Opéra, 1980–85, since when he has worked as a freelance conductor, mainly in Belgium and Germany. Varviso has achieved particular distinction for his buoyant and sensitive style in Rossini, Bellini and Donizetti, and for his clarity and expressiveness in Mozart, Wagner and Richard Strauss. His recordings include several complete operas, among them *L'italiana in Algeri*, *Il barbiere di Siviglia*, *Norma*, *Anna Bolena* and a *Meistersinger* recorded at a performance at Bayreuth in 1974.

NOËL GOODWIN

Varvoglis, Marios (*b* Brussels, 10 Dec 1885; *d* Athens, 31 July 1967). Greek composer. He studied painting with Lytras at the Athens School of Fine Arts (1900–02), and it was not until he had gone to Paris to study law that he decided on a musical career. He remained in Paris from 1902 to 1920 (except for a period between 1909 and 1912 or 1913 spent in Vienna and Düsseldorf), and there he met Saint-Saëns, Ravel, Casella, Varèse, Moréas and Modigliani, who used him as the model for *Le beau Marius* (1919). According to a curriculum vitae (1965) submitted by the composer to the Athens Academy, he studied harmony with Leroux and counterpoint and fugue with G. Caussade at the Paris Conservatoire (Anoyanakis gave the dates 1903–9 for this period of study), and composition with d'Indy and music history with Bourgault-Ducoudray at the Schola Cantorum (*c*1913). Back in Athens Varvoglis taught at several schools; he also taught harmony, counterpoint, composition, orchestration and music history at the Athens Conservatory (1920–24) and at the Hellenic Conservatory (from 1924), of which he was made co-director in 1947. He was vice-president of the Union of Greek Composers (?1940–1957) and president of the League of Greek Composers from 1957. He contributed to various periodicals and was appointed music critic of the daily paper *Ta nēa* in 1955. Awards made to him included the National Award

for Fine Arts and Letters (1923) and the Takis Kandiloros Music Prize of the Athens Academy (1937). His music contains no more than a slight suggestion of Greek folk music, whose modes and rhythms he used in producing a clear polyphony that often has a pastoral quality. Varvoglis's orchestration was sober and conservative, and his harmony inclined more to Franck, d'Indy and Fauré than to the Impressionist manner, although some of the piano pieces (such as the Sonatina) are somewhat reminiscent of Ravel.

GEORGE LEOTSAKOS

Vásárhelyi, Zoltán (*b* Kecskemét, 12 March 1900; *d* Budapest, 21 Jan 1977). Hungarian conductor and composer. He studied the violin with Kemény and composition with Kodály at the Liszt Academy in Budapest before becoming leader of the Estonian SO in Tallinn (1924–6). In 1926 he played with the Bergen Chamber Orchestra and then taught the violin and choral conducting at the Kecskemét Conservatory until 1942, when he became professor of choral conducting at the Budapest Conservatory. He was awarded the Kossuth Prize in 1949. He was a central figure in the Hungarian choral movement that began with Kodály, giving many first performances of works by Kodály and other Hungarian composers. As a teacher he influenced a generation of choral conductors in Hungary, where the effects of his work are still felt. His compositions include a string quartet and suite for violin (early works), a symphony (1956) and many choral arrangements of folksongs; he also wrote a manual on choral conducting, *Az énekkari vezénlyés módszertana* (Budapest, 1965).

□

Vásáry, Tamás (*b* Debrecen, 11 Aug 1933). Swiss pianist of Hungarian birth. Gifted in childhood with a remarkable ear, Vásáry gave his first recital in Debrecen aged eight. At the Franz Liszt Academy in Budapest he studied mainly with Josef Gat, but he was also much influenced by Kodály, who gave him a Steinway grand piano and invited him to take over half his solfège class as soon as Vásáry's studentship was ended. Having won the Franz Liszt Competition in 1948, Vásáry began his career as an accompanist on state-sponsored tours, but after his talent was recognized in Moscow he quickly graduated to a soloist's status.

During the 1956 uprising he left for Brussels, soon afterwards settling near Lake Geneva. Much-praised recordings of Liszt made in Brussels led to his débuts in Vienna, Berlin, New York, Milan and London in 1960–61. In London, where he made his home, he was particularly warmly received. Since then he has toured the world and played with every major orchestra. He was granted Swiss nationality in 1971. He has recorded most of Chopin's music, a good deal of Liszt and some Debussy, the concertos of Schumann and Rachmaninoff and (with Peter Frankl) duets by Mozart. Though regarded as a Romantic, he enjoys playing Bach, Beethoven and especially Mozart. His virtuosity is delicate, his phrasing is seductive, and always at the service of a sensitive poetic imagination.

Vásáry made his long-desired conducting début at the 1971 Menton Festival and in 1979 he became musical director of the Northern Sinfonia, since when he has concentrated as much on conducting as on the piano. In 1982, when he left the Northern Sinfonia, he was appointed principal conductor of the Bournemouth Sinfonietta, with whom he recorded music by Respighi and Honegger; an appointment as music director and principal conductor of the Budapest SO followed in 1993, with a tour of Britain in 1995. Appearances as guest conductor have taken him to the Berlin PO, the Accademia di S Cecilia Orchestra, the Orchestre de Paris and various orchestras in the USA.

JOAN CHISSELL/JESSICA DUCHEN

Vasconcellos, Joaquim (António da Fonseca) de (*b* Oporto, 10 Feb 1849; *d* Oporto, 2 March 1936). Portuguese lexicographer. He apparently had little formal training in music. After studies at the University of Coimbra (1865–9) he travelled in Germany, France, England and Spain from 1871 to 1875. In 1886 he became director of the Museum for Industries and Commerce. He is noted for his dictionary *Os musicos portuguezes: biographia-bibliographia* (Oporto, 1870), a remarkable publication for a man of 21. It was the first comprehensive work in its field, and is distinguished by its range; it is complementary to the dictionary of Vieira. His monograph *Luiza Todi: estudo critico* (Oporto, 1873, 2/1929) has remained a standard work on this famous singer. Vasconcellos made several contributions to Pougin's supplement to Fétis's *Biographie universelle*. Besides a useful *Ensaio critico sobre o catalogo de el-Rey D. João IV* (1873), he published, with index and commentary, a facsimile of the catalogue of the great Royal Library of Lisbon which was destroyed in the earthquake of 1755. His fine music library was anonymously sold by auction in 1898 (copies

of the catalogue are in the Hirsch Library, British Museum, and in the Library of Congress). His other writings include books on art history and ceramics. He was a member of the Gesellschaft für Musikforschung.

ALEC HYATT KING

Vasconcellos Corrêa, Sérgio (Oliveira) de (*b* São Paulo, 16 July 1934). Brazilian composer and teacher. He began his music studies in 1946 with Ilíria Serato, then attended the piano classes of Ubelina Reggiani de Aguiar at the Conservatório Dramático e Musical of São Paulo (diploma 1953). He then studied harmony and conducting with Martin Braunwieser and choral singing. From 1956 to 1968 he studied composition with Camargo Guarnieri, who strongly influenced his adherence to musical nationalism and neo-tonalism. From 1957 he taught music education at various institutions, in São Paulo, and since the 1970s he has taught at the Art Institute of the University of Campinas (1975–9), at the Escola Superior de Musica S Marcelina (1976–9) and the Art Institute of the University of the State of São Paulo (UNESP) since 1980. His compositions have earned him several prizes, including the Casa de Goethe prize (1969) for his piano piece *Contrastes*. His educational writings include *Planejamento em educação musical* (São Paulo, 1971) and *Introdução à harmonia* (São Paulo, 1975).

GERARD BÉHAGUE

Vasconcelos [Vasconcellos] **(Moniz Bettencourt), Jorge Croner de (Santana e)** (*b* Lisbon, 11 May 1910; *d* Lisbon, 9 Dec 1974). Portuguese composer and pianist. After initial studies with his mother, Laura Croner, he entered the Lisbon Conservatório Nacional, where he studied the piano with Silva and composition with de Freitas Branco. A government grant enabled him to pursue his studies in Paris (1934–7) with Dukas, Boulanger, Roger-Ducasse and Cortot. On returning to Lisbon he was appointed professor at the conservatory (1938–74). He continued his activities as a pianist, but in 1943 he abandoned his career as a soloist to dedicate his life to teaching and composition. Vasconcelos's works were influenced mainly by Ravel, but also by Stravinsky and Hindemith. He preferred the harmonic, rhythmic and structural aspects to the melodic, with a tendency towards short, condensed forms.

WORKS
(*selective list*)

Ballets: A faina do mar, ?1936; A lenda das amendoeiras, 1940; Coimbra, 1959

Orch: Poemeto sinfónico, 1928; A vela vermelha, sym. poem, 1961

JOSÉ CARLOS PICOTO/ADRIANA LATINO

Vasilenko, Sergey Nikiforovich (*b* Moscow, 18/30 March 1872; *d* Moscow, 11 March 1956). Russian composer, conductor and teacher. He began systematic music studies in 1888 as a private pupil of Richard Nokh and then took lessons with Grechaninov (theory), Sergey V. Protopopov (harmony) and Konyus (composition). From 1891 to 1896 he studied law at Moscow University and attended the conservatory (1895–1901) as a pupil of Taneyev (counterpoint and form), Ippolitov-Ivanov (composition) and Safonov, leaving with a gold medal. He conducted at the Mamontov Private Opera, Moscow (1903–5), and organized and conducted the Historic Concerts in the city (1907–17). From 1918 he gave concerts and lecture-concerts in Moscow; in 1925 he participated in the organization of music broadcasting there. He taught orchestration and composition at the Moscow Conservatory (1907–41, 1943–56) where he was appointed professor in 1907 and head of the faculty of orchestration in 1932. In 1938 he worked in Tashkent on the first Uzbek opera, *Buran* ('The Snowstorm').

Vasilenko's early works reflected his enthusiasm for Russian folk music, *kryuk* (neume notation) and Old Believer song. After 1906 he produced several pieces that show a connection with Russian symbolist poetry, among them the orchestral *Sad smerti* ('The Garden of Death') and *Polyot ved'm* ('Flight of the Witches') and the songs on texts by Blok and Bryusov. Then between 1910 and 1920 he was attracted by eastern exoticism; an interest in oriental folk music, particularly that of central Asia, remained with him in the post-revolutionary period, as is evident from the ballets *Noyya* and *Iosif prekrasnïy* ('Iosif the Beautiful'). His work is distinguished by masterly orchestration. He received the title People's Artist of the Uzbek SSR in 1939 and the State Prize in 1947.

INNA BARSOVA

Vasilescu, Ion (*b* Bucharest, 4/17 Nov 1903; *d* Bucharest, 1 Dec 1960). Romanian composer and conductor. At the Craiova Conservatory (1914–16, 1919–23) he studied harmony with G. Fotino and the violin with Ida Capatti; his studies were continued at the Bucharest Conservatory (1923–4) under Castaldi (harmony and counterpoint) and at the Schola Cantorum, Paris (1924–6), under Le Flem (composition). Conductor of the Craiova National Theatre from 1926 to 1932, Vasilescu went on to conduct variety shows and musical comedies at various theatres in Bucharest during the period 1930–55. As a composer, he abandoned work in serious genres after the String Quartet of 1926, becoming the most renowned composer of light music in Romania. His stage pieces are distinguished by outstanding tunes handled with delicacy and purity, and he also wrote many successful dances and songs, some of which achieved international fame after 1940.

WORKS

VIOREL COSMA

Vasil'yev-Buglay, Dmitry Stepanovich (*b* Moscow, 28 July/9 Aug 1888; *d* Moscow, 15 Oct 1956). Russian composer and choral conductor. From 1898 to 1906 he studied at the Moscow Synodal School (in Kastal'sky's composition class and Viktor Kalinnikov's harmony class). He actively popularized choral music and from 1906 he directed choirs in various Russian towns. In 1918 he was in charge of the mass-education undertaken by the music section of the Tambov *Proletkul't*. He and the choir (of 150 members) that he organized performed on the fronts during the Civil War with revolutionary, anti-religious and campaigning and satirical repertory. He was later a member of RAPM (1923–5) and ORKIMD (1925–30), both proletarian music organizations. He wrote vocal music almost exclusively and principally for chorus; the main part of his legacy consists of mass songs. In his work he relied on traditional peasant and soldiers' songs, and in the course of his folklore studies he gathered about 500 folksongs. In 1938 he wrote the opera *Rodina zovyot* ('The Motherland Calls') for a collective farm initiative and later composed *Kolobok* ('Round Loaf'), an opera for children (1941). He became an Honoured Representative of the Arts of the RSFSR in 1947 and received the State Prize in 1951.

WORKS
(*selective list*)

Stage: Alyonkin vïbor [Alyonka's Choice] (vaudeville, 1, F. Chernishev and F. Il'insky), solo vv, chorus, bayan, 1930; Rodina zovyot [The Motherland Calls] op, 2, I. Persanov, F. Kanatov and M. Reznik), spkr, folk orch, 1938, collab. G. Bruk; Kolobok [Round Loaf] (children's op, 3, after Ukrainian folk tale), 1941; Polin'ka (comic op, 1, Vasil'yev-Buglay, after A.P. Chekhov), 1946; Svad'ba [The Marriage] (comic op, 1, Vasil'yev-Buglay, after Chekhov), 1946; Unter Prishibeyev [NCO Prishibeyev] (comic op, 1, Vasil'yev-Buglay, after Chekhov), 1946

Vocal: Sten'ka Razin (suite, A.S. Pushkin), chorus, 1935; Lenin-Stalin (suite, D. Bedny, F. Kanatov, trad., Ya. Rodionov), chorus, 1937; Borodino (cant., M.Yu. Lermontov), B, chorus, small orch, 1941–2; Poltava (orat, after Pushkin, A.N. Tolstoy), solo vv, chorus, orch, 1944; Moskva [Moscow] (suite, Lermontov, trad.,

V. Vitka, L. Oshanin), chorus, 1947; Devushka i smert' [The Maiden and Death] (orat, A.M. Gor'ky), 1948; Zhenshchinï mira – za mir! [The Women of the World – for Peace!] (orat, B. Dubrovin), Mez, T, chorus, boys' chorus, 1952

YELENA DVOSKINA

Vasina-Grossman, Vera Andreyevna [Grossman, Vera] (*b* Ryazan', 21 Feb/5 March 1908; *d* Moscow, 1 July 1990). Russian musicologist. She graduated from the department of history and theory at the Moscow Conservatory in 1938. She took the *Kandidat* degree in 1941 with a dissertation on the early 19th-century Russian ballad and in 1954 was awarded the doctorate for her work on the Russian classical ballad. In 1939 she began teaching at the Central School of Music and was on the staff of the Central Correspondence Institute for Musical Education (1939–41). She taught at the Moscow Conservatory (1943–57) and was senior research fellow at the Institute for the History of Arts in Moscow (1949–78). Vasina-Grossman's research has centred on small-scale vocal genres. Her superb knowledge of poetry and her keen ear for the musicality of the poetic word found their reflection in her writings on the vocal music of Glinka, the Romantic lieder of Austria and Germany, and the classical ballads of Soviet composers. Her work in this area resulted in the three-volume book *Muzïka i poèticheskoye slovo* (1972–8), in which she analysed the components and aspects of the synthesis between words and music. She was on the editorial board of and wrote on 19th- and 20th-century Russian music for the important collective works *Istoriya russkoy sovetskoy muzïki* (Moscow, 1956–63) and *Istoriya muzïki narodov SSSR* (Moscow, 1970–73) and also wrote on film music. Vasina-Grossman was concerned with music education at all levels: her writings include books for beginners (*Pervaya knizhka o muzïke*, 1951) to volumes for more experienced audiences.

NELLI GRIGOR'YEVNA SHAKHNAZAROVA

Vasks, Pēteris (*b* Aizpute, 16 Apr 1946). Latvian composer. He studied the double bass with V. Šereika at the Lithuanian State Conservatory (Vilnius) from 1964 to 1970 and graduated from Valentīns Utkins's composition class at the Latvian State Conservatory (Riga) in 1978. From 1963 to 1974 he played in various symphonic and chamber orchestras in Lithuania and Latvia. Since 1989 Vasks has been teaching composition at the Emīls Dārziņš Music School in Riga.

Vasks specializes in instrumental chamber music with programmatic titles, which speak of nature under threat and the need to defend humanity from forces hostile to mankind in the development of civilization. The presence of this ethical imperative creates a deeply meditative basic mood, as well as frequent sharp contrasts between the clear beauty of ideals and tragic pathos. Vasks bases his style on Lutosławski and the Polish school of the 1960s, but with his own radical individuality and aesthetic rooted in traditional Latvian culture. His works have gained broad attention outside Latvia.

ARNOLDS KLOTIŅŠ

Vaslin, Olive-Charlier (*b* Montreuil-Bellay, 10 March 1794; *d* Saint Julien-sur-Sarthe, 5 Aug 1889). French cellist and teacher. He was one of the more elusive musical figures of 19th-century Paris, overshadowed by fellow cellist and Conservatoire professor, Louis Norblin. He entered the Paris Conservatoire in 1808 and studied with Nicolas Baudiot, taking second prizes in 1809 and 1810 and first prize in 1811. He accepted a position at the Théâtre des Variétés in 1809, and joined the Opéra orchestra in 1814. In 1827 he assumed the retiring Baudiot's position as cello teacher at the Conservatoire, remaining there until 1859. Between 1820 and 1840, he played second cello for Pierre Baillot's quintets, and first cello for the Athénée Musical. Other chamber music activities included a performance with Bériot and Liszt in April 1828. After his retirement, he spent his time composing, writing several incidental works and a cello method (1884). He owned a 1725 Stradivari cello, but was reportedly unhappy with the neck adjustment, having it replaced several times before finally scraping it down himself (Hill). He sold the instrument in 1869.

Although a student of Baudiot, Vaslin devised his own individual mannerisms derived from violin technique. A self-proclaimed admirer of Baillot, he adopted an oblique rather than perpendicular left-hand position. This enabled him to overcome the weakness of a double-jointed third finger, although the position was considered old-fashioned by other cellists. His bow hold was above the frog, as was that of most other French cellists of his era, but his fingers took a more acute slant towards the tip than was usual. His method was formulated as a tribute to the bowing style of Baillot and provides a comprehensive survey of mid-19th-century French bowing technique. In particular, he addresses issues of bow management for varied articulation and phrasing, and highlights clarity of attack and uniformity of sound as the focus of instruction. The method also implies a distinct difference in musical style between generations of players. Vaslin was 90 at the date of publication, and expressed pointed disdain for the portamento shifts and left-hand vibrato favoured by more youthful Romantic cellists.

VALERIE WALDEN

Vásquez, José (Francisco) (*b* Arandas, Jalisco, 4 Oct 1895; *d* México City, 19 Dec 1961). Mexican composer and conductor. After studying at the National Conservatory, Mexico City, with Rafael Tello (piano) and Carrillo (theory), he established his own Escuela Libre de Música y Declamación in 1921, where he taught until his death; he was also a founding teacher of the Escula Nacional de Música (1929). In 1926 he created the National University SO, and, as a conductor, performed in Europe and South America, as well as being the first Mexican to conduct in Japan (with the Osaka SO and Tokyo SO). He organized his own opera company, *Pro arte patrio*, which performed his own operatic works and other operas by Mexican composers. A prolific composer, he wrote, among other works, nearly 50 songs for voice and orchestra. His style was largely influenced by the late German Romantics, though works such as *Acuarelas de viaje* (written after a trip to Guatemala) also display the influence of the French Impressionists, particularly in their manner of orchestration. The *Suite para instrumentos de arco* was awarded a composition prize by the Congreso Nacional de Música in 1927.

RICARDO MIRANDA-PÉREZ

Vásquez, [Vázquez] **Juan** (*b* Badajoz, *c*1500; *d* ?Seville, *c*1560). Spanish composer. His name first appears as a 'contralto' hired on 27 October 1511 in the cathedral of Plasencia; he next appears as a singer in Badajoz Cathedral's capitular acts of 22 April 1530, and by September he had the task of teaching plainchant to the cathedral's 'disorderly' choirboys. On 26 June 1535 he was appointed *sochantre*. In 1539 he was a singer in Palencia Cathedral, and in 1541 Juan Tavera, Archbishop of Toledo, gave him 20 ducats to travel from Palencia to his court in Madrid. Vásquez's stay there may have been short, for his name has not been found in subsequent lists of chapel singers. In 1545 he returned to Badajoz as *maestro de capilla* at the provincial cathedral, and he remained there until 1550. The following year he was employed by Don Antonio de Zuñiga, a Sevillian nobleman to whom he dedicated a collection of secular music, *Villancicos i canciones* (1551). Vásquez's only extant sacred music, *Agenda defunctorum* (1556), appears in a beautifully executed volume dedicated to the 'noble Juan bravo' in which Vásquez described himself as a priest and a native of Badajoz. His last publication, *Recopilación de sonetos y villancicos* (1560), is a compilation of his secular works, including seven reprints and three reworked

settings from the 1551 book, and pieces first published as vihuela intabulations by Valderrábano (1547) and Pisador (1552). The dedication of the *Recopilación* to Don Gonzalo de Moscoso y Casceres Penna, an *hidalgo* of the Cáceres family of Badajoz, shows that Vásquez remained in Seville, where he probably died in about 1560. It is unlikely that he is identifiable with the Vázquez who was *maestro de capilla* at the court of the Duke of Medina, and to whom the chapter of Las Palmas de Gran Canaria offered the post of *maestro de la catedral* in 1572.

The *Agenda defunctorum* is monumental, both in length and in display of the composer's powers of organization. He assumed the use of chant as well as polyphony in his settings for Matins with three nocturns (the invitatory, six lessons and nine antiphons are polyphonic), Lauds (plainchant apart from *Benedictus domine Deus*), and part of the Burial Service (the responsory *Libera me* is polyphonic). The Requiem Mass is polyphonic and shows its historical position in its range of texts: items differing from the present liturgy are the tract, *Sicut cervus*, without sequence, an interpolated motet, *Sana me, Domine*, and a communion, *Absolve, Domine*. Musical interest is maintained by varying sonorities: the setting is generally for four voices but includes three- and five-voice sections, and high and low voices are contrasted. The cantus firmus may be placed in any voice. The texture ranges from a homophonic chant paraphrase to a fully polyphonic style, seen particularly in the Requiem Mass.

Vásquez achieved greatest fame with his secular music. Although a few settings are of italianate poetic forms, three-quarters of the contents of the new secular forms are settings of villancicos. They include poetry by leading Spaniards, and Vásquez himself may have glossed traditional refrains. His villancicos are traditional in form, but he made them longer and more imposing by expanding the *estribillo* with phrase repetitions, and by complete or partial repetitions of the *estribillo* itself before or after the *mudanza*. Some villancicos show the traditional form clearly; in others, phrase extensions or madrigalisms obscure repetitions. Vásquez typically began with an imitative point, but neither his counterpoint nor his rhythmic patterns are complex. The diatonic melodies often include phrase shapes related to folktunes and to the medieval cantigas; he was careful to provide proper text declamation. The synthesis of folksong and folk poetry in Vásquez's courtly villancicos, and their charm and variety, may explain their numerous intabulations and his great popularity in Spanish courts. Bermudo, in his *Libro Mamado Declaración de instrumentos musicales* (1555), praised Vásquez's music and recommended it as a model for study. It is probable that Vásquez composed the music, now lost, for the *Farsa del juego de cañas* by Diego Sánchez de Badajoz (*c*1500–*c*1550).

ELEANOR RUSSELL/MARICARMEN GÓMEZ

Vass, Lajos (*b* Poroszló, 5 Apr 1927; *d* Budapest, 6 Nov 1992). Hungarian choirmaster, composer and folksong collector. After Lajos Bárdos, Vass was the last figure of great consequence in the history of the Hungarian choral movement linked with the name of Kodály. He completed his secondary education at a teacher-training college in Debrecen (1941–6), after which he studied composition and singing at the Liszt Academy of Music; he graduated in 1951. His composition teachers were Veress and Ferenc Farkas. He held appointments as conductor (from 1949) and artistic director (1953–7) of the Hungarian Army Art Ensemble, conductor of the Hungarian State Male-Voice (1957–8) and Steel Sound (1960–64) choirs and as chief conductor of the Art Ensemble of the Ironworkers' Union (1964–92).

As choirmaster he was a faithful interpreter of the works of Kodály and Bartók and a disseminator of more recent Hungarian choral works. With his choirs he raised the standard of Hungarian singing to an international level, as attested by the many prizes he won at international competitions. His dynamic personality was well suited to the dissemination of musical knowledge. (He was, among other things, a well-known personality on Hungarian television and radio.) Additionally, he played an important role in the Hungarian folk music revival of the 1970s. Understandably, vocal music lies at the centre of his output. His musical language developed gradually from the early folksong adaptations to a style involving discernible use of dodecaphonic technique. He was awarded the Erkel Prize (1952) and, posthumously, the Hungarian Order of Officers (1993).

MELINDA BERLÁSZ

Vassallo, Paolino (*b* Cospicua, Malta, 24 July 1856; *d* Valletta, 30 Jan 1923). Maltese composer, teacher and church musician. He studied theory, organ and composition with Luigi Fenech and Giuseppe Spiteri Fremond and violin with Domenico Amore. In 1875 he went to Paris, where he remained for 10 years, during which time he studied with Ernest Guiraud and Massenet who, on the evidence of extant letters, rated Vassallo's musical gifts highly. On his return to Malta, he founded his extremely successful Music Institute which offered comprehensive courses ranging from the basics to advanced compositional and orchestral techniques; most Maltese composers prominent in the first half of the 20th century, including Carlo Diacono, Giuseppe Caruana and Josie Mallia Pulvirenti, studied with Vassallo.

The turning-point in Vassallo's career as a church musician came in 1903 with the issue of Pope Pius X's *Motu proprio*, which emphasized the importance of plainchant and Palestrina-style polyphony in the Roman Catholic liturgy, and condemned the operatic style previously in vogue. Vassallo immediately started producing effective liturgical music in line with these instructions. The many ecclesiastical commissions he received culminated in his appointment in 1912 as *maestro di cappella* of Mdina Cathedral, a position he held until his death.

Vassallo was one of the most influential figures in modern Maltese musical history. He was the first Maltese composer to go for advanced training not in Italy, as had been the convention, but in France. He revitalized Maltese church music, historically the primary genre of Maltese musical expression, leading it away from the heavily operatic Italian idiom of the second half of the 19th century. It is natural, given contemporary circumstances, that his splendid liturgical music is influenced by Gregorian chant and 16th-century Italian polyphony, but it also exhibits a Gallic line of elegance and word-setting, which is even more apparent in his secular works, especially his three operas, where the influence of Massenet is evident.

JOSEPH VELLA BONDIN

Vasseur, Léon (Félix Augustin Joseph) (*b* Bapaume, 28 May 1844; *d* Pas-de-Calais, 25 May 1917). French composer, organist and conductor. After studying music with his father, an organist at Bapaume, he moved to Paris at the age of 12 to study at the Ecole Niedermeyer. In 1867 he published his *Méthode d'orgue expressif ou harmonium* (Paris), and in 1870 he became organist at St Symphonien, Versailles. While continuing with religious compositions, he turned to operetta, and in 1872 his *La*

timbale d'argent ran for over 200 nights at the Bouffes-Parisiens, saving the theatre from bankruptcy and setting Vasseur on a career of composing light music. However, none of his later operettas, many of them comic treatments of historical subjects, had equal success. In 1879 he reopened the former Théâtre Taitbout as the Nouveau Théâtre-Lyrique, but his attempt at theatre management soon proved a disaster. In 1890 he became conductor at the Folies-Bergère, but in 1897 retired from the theatrical scene where his attractive if unexceptional style of light music was finding little acceptance.

WORKS

STAGE

all are opérettes listed in order of first performance and first performed in Paris, unless otherwise stated; for more detailed list see GroveO

2 masses, offertories, anthems, Magnificat

ANDREW LAMB

Vasson, Pierre. *See* VACHON, PIERRE.

Vatelot, Etienne (*b* Paris, 13 Nov 1925). French violin maker and restorer. He began his training in the workshop of his father, Marcel Vatelot, one of Paris's foremost luthiers. From there he went in 1946 to learn to make new instruments under Amédée Dieudonné in Mirecourt, returning to Paris to study repairs with Victor Quénoil. He spent a few months in New York in 1949 before rejoining his father. In 1959 Marcel Vatelot handed over the business to his son, staying on as a consultant and making his almost daily contribution at the shop until his death in September 1970. In the meantime Etienne Vatelot's skill, knowledge and reputation continued to grow; he was president of the French Violin Makers' Society from 1965 to 1969, and was appointed to the Légion d'Honneur in 1972. His opinion as an expert on early instruments has been widely sought and highly regarded, and he has also been especially noted for his expertise in tonal adjustments. He published the definitive work on French bows, *Les archets français* (Paris, 1976), whose detailed photographs (in colour) make it an invaluable study.

CHARLES BEARE

Vater, Christian (*b* Hanover, bap. 11 Oct 1679; *d* Hanover, 25 Jan 1756). German organ and harpsichord builder. He learnt organ building from his father, Martin Vater, is known to have worked for Arp Schnitger as journeyman in 1697 and 1700, and he set up on his own in about 1702. He became organist to the court of the Elector of Hanover (later King George I of England) in 1708–9, and court organ builder in 1714. By 1716–17 he had to his credit '33 organs, some new-built, some renovated'. Most of his work was done in the electorate of Hanover, the bishopric of Osnabrück and the county of Oldenburg, but he also worked for the landgraves of Kassel and Darmstadt, and in Amsterdam he built a new organ for the Oude Kerk (1724–6) and rebuilt an instrument in the Westerkerk (1726). Like his brother Anton in Paris, Christian Vater was in demand as a builder of harpsichords and clavichords. His son Johannes succeeded him as organ builder to the court of Hanover.

Organs by Vater survive at Bockhorn, Oldenburg (1722); Wiefelstede, Oldenburg (from 1729); St Nikolai, Gifhorn (1748) and Hohenrode, near Bad Hersfeld (built for Gestorf, 1749). Surviving cases are to be found at Wathlingen (1707), Melle, near Osnabrück (from 1722), Riessen (1738), Zeven (1750) and elsewhere. Vater's Amsterdam organ, which was substantially altered and enlarged as early as 1738 by Johann Caspar Müller – probably a brother or cousin of Christian Müller – now contains only a few ranks of pipes by Vater. He built slider-chests, having no appreciation for the spring-chest. His instruments, with their well-balanced specifications, are typical of the late Baroque organ in northern Germany.

HANS KLOTZ

Vatielli, Francesco (*b* Pesaro, 31 Dec 1876; *d* Portogruaro, Venice, 12 Dec 1946). Italian musicologist. He took an arts degree at the University of Bologna (1895) and a diploma in composition from the Liceo Musicale, Bologna, having studied with Mascagni and Antonio Cicognani. Under the guidance of Riccardo Gandolfi he developed an interest in music history, which he taught in 1905–6 at the Bologna Liceo. His publication *Canoni musicali di Ludovico Zacconi*, on a manuscript found in the Biblioteca Oliveriana in Pesaro, appeared in the same year; he presented further biographical information for the subject in 1912. In 1906 he succeeded Torchi as director of the Liceo library, a post he held until 1945. In 1908 he published his research on the *Lyra Barberini* of G.B. Doni and took the chair of music history at the University of Bologna.

Vatielli's access to the rich Bologna Liceo library led to the publication of research on Corelli, Torelli and the musical heritage of Bologna in general. He was one of the first Italian musicologists to write on the history of 17th- and 18th-century Italian instrumental music, the 16th-century *canzone popolare* and the dramatic madrigal, and to create a better understanding of the 17th-century Bologna school of instrumental music. He was active in music education (*Materia e forme della musica*, 1923–6;

Letteratura poetica e drammatica, 1938), journalism (as music critic of *Il resto del Carlino*), administration (he founded *Cultura musicale*, the Società del Quartetto) and also as a composer of piano, choral and vocal works.

CAROLYN GIANTURCO

Vatsyayan, Kapila (*b* Delhi, 25 Dec 1928). Indian classical dancer, scholar and administrator. She was educated at the Universities of Delhi and Michigan and took her PhD in Indology from Banaras Hindu University, which is among those universities which later awarded her honorary degrees. In addition to her studies in art, history and English and Sanskrit literature she trained in several styles of Indian classical dance. Her numerous published writings show a broad interdisciplinary interest in the cultural, historical and philosophical contexts of Indian art and performing traditions. She has stressed the conceptual links between different Indian arts and has striven to identify underlying symbolic and intellectual themes in the various regional styles and genres she has studied. In her administrative career she has held Indian government posts in cultural policy and has headed departments responsible for archaeology, museums and libraries as well as literary, visual and performing arts. She became first the secretary and then the academic director of the Indira Gandhi National Centre for the Arts in New Delhi. She has held visiting appointments at universities in the USA and has represented India in international conferences, seminars and exhibitions; she has also been a member of UNESCO committees. Under Vatsyayan's leadership the Indira Gandhi Centre has become an important documentation centre for the study of classical Indian texts and traditional Indian philosophy and performing arts. It has also published a series of primary texts and translations, dictionaries and reference works concerning music and other arts. Vatsyayan's academic and administrative achievements have been recognized in a number of national awards including the Padma Shri of the Republic of India in 1990.

JONATHAN KATZ

Vaubouin [Vauban, Vauboyet]. *See* VOBOAM.

Vaudeville (Fr.). A French poem or song of satirical or epigrammatic character common in the 17th and 18th centuries. Its use in the French theatre (*comédie en vaudevilles*) led in the 19th and 20th centuries to a broader application of the term as a name for theatrical entertainments similar to modern musical comedy or music-hall variety shows. The term itself is the result of the cohesion and confusion of two genres of French song which have separate origins. The earliest, the *vau de vire*, was a popular, satirical song originating in Normandy in the 15th century; the *voix de ville* was a courtly song of Parisian origin, the spelling of which in the earliest known reference ('vaul-de-ville', 1507) is already confused with that of the Norman genre. The existence of three villages in Lorraine, all named Vaudeville, adds to the confusion of etymology.

1. *Vau de vire*. 2. *Voix de ville*. 3. Vaudeville in the 17th and 18th centuries. 4. *Comédie en vaudevilles*. 5. Vaudeville final. 6. Vaudeville in the 19th and 20th centuries.

1. 'VAU DE VIRE'. *Vau de vire* literally means 'valley of Vire', the place near the city of Vire in Normandy where the song originated. A local genre, concerned with events and personalities of Normandy, celebrated in songs of love, drinking and current events, the *vaux de vire* were probably created and sung by a society or guild of poet–singers, the 'bons compaignons du Vau de Vire' mentioned in the song *Hélas, Olivier Basselin*. The most notable of them was Olivier Basselin (*c*1400–50), a semi-legendary figure whose name appears in two 15th-century Norman collections, the Vire manuscript (texts only) and the Bayeux manuscript (texts and melodies). Gasté linked Basselin and his 'bons campaignons' with the Norman trouvères of an earlier period.

By 1500 there was a sizable repertory of *vaux de vire*, which had become very popular and spread all over France as 'lais des Vaux de Vire'. Francois Briand's *Novels nouveaux* (1512) includes a 'Noël sur une chanson du Vau-de-Vire', *Plaisante fleur*. The name remained current for songs of popular, topical satire long after the original and authentic *vaux de vire* had died out. In 1570 Jean Le Houx published a collection of *Vaux-de-Vire nouveaux*, intended to revive the earlier style of Basselin, but in fact consisting entirely of drinking-songs. The title of one of Jacques Mangeant's six collections (Caen, 1608–15), based in part on Le Houx, shows the broad application of the term by this time: *Recueil des plus beaux airs accompagnées de chansons a dancer, balets, chansons folâtres et bachanales, autrement dites vaudevires*. Cotgrave's *Dictionarie of the French and English*

Tongues (1611) includes this definition: 'A country ballade, or song; a Roundelay or Virelay; so tearmed of Vaudevire, a Norman towne wherin Olivier Bassel, the first inventor of them lived; also a vulgar proverb; a country or common saying'. This definition appears under 'vaudeville', showing that by the early 17th century the more modern term and spelling had replaced the Norman one, and the confusion of origins had begun.

2. 'VOIX DE VILLE'. The term 'voix de ville' ('city voices'), current during the 16th century, described a courtly lyric of several strophes and, more particularly, the simple tune repeated to each strophe. Often written by the most famous poets of the day (unlike the 17th- and 18th-century vaudeville), the *voix de ville* poem covered the full range of courtly poetry, with a preference for love-poems. The music was distinguished by its chordal setting, although Bourgeois wrote in his psalter of 1574 that melismas and short imitations were occasionally used, suggesting the possibility of a style like that of the Parisian chanson of about 1530.

The term 'voix de ville' may have originated as a courtly and urban response to the popular and provincial *vau de vire*. The first known reference to it, in the courtly play *La comdamnacion de banquet* (1507) by Nicolas de la Chesnaye, occurs in a spelling linking it to the older genre. De la Chesnaye listed the text incipits of 17 songs, some of which are said to be 'vaul-de-ville'. In spite of the occasional appearance of the spelling 'vaudeville' in the 16th century, 'voix de ville' was more common, as in Adrien Le Roy's *Le second livre de guiterre, contenant plusieurs chansons en forme de voix de ville* (1555; an earlier edition may have appeared in 1551, but it is now lost). This collection, the first known to consist entirely of *voix de villes*, gives the full texts with their melodies and tablatures for accompaniment. Most of these pieces, which exemplify the mid-century *voix de ville*, also double as dances ('Chanson-Gaillard', 'Chanson-Branle gay'), a practice widespread in France. Some of the same tunes appear as tenors in polyphonic chansons of the period, e.g. Certon's *Premier livre de chansons* (Paris, 1552), and Le Roy's *Premier livre de chansons en forme de vau de ville* (Paris, 1573) uses them in the upper voice. Levy has shown that many chansons of Arcadelt and Sandrin, published by Attaingnant in the first half of the century, are really *voix de villes* in form or style. Levy and Heartz have also traced the relation between certain dance tunes, and the verses written for them by court poets, which appear among the settings in the *voix de ville* collections.

Chardavoine's *Recueil des plus belles et excellentes chansons en forme de voix de ville* (Paris, 1576, 2/1588) contains 200 poems by earlier and contemporary poets and a few folksongs, provided with 'chants communs' adaptable for either monophonic vocal or instrumental performance. The variety of dance types used with these verses is shown by a list in the preface: pavanes, gaillards, branles, tourdions, 'et tant d'autre chansons que l'on dance et que l'on chante ordinairement par les villes'. Le Roy's publications of 1571 and 1573 alternate the spelling *voix de ville* and *vau de ville*; in the preface of his *Airs de cour* (Paris, 1571) Le Roy wrote that such songs were formerly called 'voix-de-ville'. St Juliens' *Meslanges historique* (1588) uses both *voix-de-villes* and *vaux-de-villes*, but the single-word form 'vaudeville' was in common use by the end of the 16th century.

3. VAUDEVILLE IN THE 17TH AND 18TH CENTURIES. After 1600, the term 'air' or 'air de cour' was generally used for settings of strophic texts, particularly for accompanied solo songs. Vaudeville continued to be used, but with a meaning more limited than before; in his *Harmonie universelle* (1636–7), Mersenne defined it as the simplest sort of *air*, using all sorts of verses set syllabically and sung without fixed metre according to the rhythm of the words, making it possible for even the least skilled to sing them. On the other hand, De Sercy made some kind of distinction between *air* and vaudeville, as is apparent in the title of his *Airs et vaudevilles de cour* (Paris, 1665–6). During the reign of Louis XIV, however, vaudeville came primarily to mean topical songs in which political and court events were satirized ('mazarinades', for example, were vaudeville lampoons of Mazarin). Furetière, in his *Dictionnaire universel* (1690), defined vaudevilles as 'chansons du Pont Neuf', the bridge in Paris where it was customary to sing or recite them.

These songs for dancing, drinking and satire became a national pastime. Since everyone knew the tunes, they were transmitted orally and usually not printed in the numerous 17th- and 18th-century collections of 'historical' songs about life in Paris and the court. There are numerous manuscript collections, however, most notably those of Clérambault and Maurepas in the Bibliothèque Nationale, Paris. Vaudeville tunes soon became dissociated from their original words and could be re-used by any rhymer; they were known by an identifying tag or 'timbre' which consisted usually of part of a refrain or, often, of nonsense syllables, if these existed in the original text. Sometimes several timbres came to be used for the same tune, and the false ones (*faux timbres*) complicate finding the original. Occasionally one *timbre* may refer to different tunes in different centuries.

Between 1627 and 1663 Ballard published numerous volumes of vaudevilles, separating the lighter (*Chansons pour dancer et pour boire*) from the more serious (*Airs*). His *Meslanges de chansons, airs sérieux et à boire* (1674) mixed the two styles, and volumes of this series appeared almost every year thereafter. After the turn of the century, the words 'parodie' and 'brunette' became associated with vaudeville in the titles of these volumes. Finally, in 1717, Ballard brought out *La clef des chansonniers, ou Recueil des vaudevilles depuis 100 ans et plus*, in which he gathered together for the first time over 300 pieces. This encouraged the founding in 1733 of the famous singing society Le Caveau, in which the vaudeville was cultivated along with the arts of eating and drinking. Capelle's *La clé de caveau à l'usage des chansonniers* (1810), with its later supplements, increased the original Ballard repertory to 2350 tunes. Singing clubs of this kind flourished into the 19th century, and the tradition still continues with the chansonniers in cafés and concerts. Many vaudevilles of 16th- and 17th-century origin remained popular into the 19th and 20th centuries. One of the most stable of these is *Réveillez-vous, belle endormie* (ex.1*a*).

In Grout's succinct analysis, the musical features of the vaudeville are to be found in a short, folklike melody of narrow range and persistent rhythmic pattern, with occasional irregular phrase structure. Many vaudeville tunes are of dance origin, whether the *timbre* suggests this or not. Other features are a preference for the keys of G and D, both major and minor, the preservation of the word rhythm of the text, melody in the middle of the

vocal range, ornaments carefully placed (the cross, + or ×, is the usual ornament sign) and frequent three-part form (*ABA*). The minor mode often heightens the sly, humorous effect that characterizes so many of these songs.

4. 'Comédie en vaudevilles'. Comedy using vaudeville tunes with new words was one of the new theatrical styles that caught the imagination of the Paris public in the late 17th and early 18th centuries. Two collections of plays, Evaristo Gherardi's *Théâtre italien* (1694), representing the repertory of the Comédie-Italienne, and Le Sage and d'Orneval's *Le théâtre de la foire, ou L'opéra comique* (1721–37), provide examples of the gradual evolution of these comedies into a new genre, the *opéra comique*.

At various times theatres at the annual Paris fairs of St Germain and St Laurent experimented with acrobatic shows, plays with songs and dances, monologues, pantomimes, poster plays and marionettes, all centred heavily on the use of vaudevilles (*see* Théâtres de la foire). Some of these types of spectacle arose in response to the restrictions placed on the Théâtres de la Foire by the theatrical monopolies of the Comédie-Française and the Opéra; for example, the poster plays (*comédies par écritaux*), in which the actors' lines were displayed on placards or posters while the audience sang the vaudevilles, originated in 1710 as a way of circumventing a prohibition of singing or reciting on stage. Opera parody was also a great favourite, and the Théâtres de la Foire were quick to produce their version as soon after an opera première as possible.

Originally vaudevilles made up the bulk of the music used in these comedies, supplemented by short opera excerpts which quickly invaded the vaudeville repertory, dances and instrumental interludes. Composers were employed to organize a small orchestra, work with the playwrights in selecting appropriate vaudevilles, and eventually to write original songs, called *ariettes*. Serious attempts were made to select vaudevilles that best represented the emotional state of the play at the point they were to be introduced, either through the tune itself or by recalling or re-using part of the original text. A clever choice could underscore a situation forcefully, or even contradict it in a humorous way. Double meanings abounded.

In writing new words for vaudeville tunes, authors were seldom successful in making all the syllables fall correctly on the musical accents (ex.1*b*), but in such light entertainments wit and gaiety were more important than correct declamation. Vaudevilles were also used to carry dialogue, as in ex.1*c*. Le Sage and his composer-collaborator Gilliers sometimes created continuous musical scenes with several vaudevilles in succession, and in *La princesse de Carizme* Le Sage cleverly interwove separate phrases of different vaudevilles (because most vaudevilles were written in keys with one or two sharps it was easy to link them by simple modulations).

As the *opéra comique* developed, more original music was added, beginning with the finales to each act or play, and the vaudevilles were gradually dropped. After 1752 the Querelle des Bouffons and the resulting popularity of the Italian *opera buffa* style also affected its musical content. However, the French style of *comédie en vaudevilles* itself had an international influence. It spread to England as the ballad opera and to Germany as the early Singspiel, but the exchange was mutual. Coffey's ballad opera *The Devil to Pay* (1731) became *Der Teufel ist los* (Berlin, 1743) and Sedaine's *Le diable à quatre* (1756).

5. Vaudeville final. Placed at the end of an act or play, the *vaudeville final* reassembled on stage all the important characters and allowed each to sing one or more verses of a vaudeville. At times the strophic form of this closing ensemble was made more obvious by having a chorus repeat a refrain line. Sometimes a few dances intervened. This divertissement style was common to both French opera and *opéra comique* of the period. Beaumarchais's play *Le mariage de Figaro* ends with a vaudeville, while Rousseau's *Le devin du village* has a *vaudeville final*. Rameau, along with Gilliers, Mouret, Duni, Monsigny and Philidor, wrote them for the Théâtres de la Foire and Opéra-Comique.

Normally the words of the *vaudeville final* were still in keeping with the characters singing them, each of whom usually presented some moral to be deduced from the play. The comic lead generally delivered the final verse 'to the public': a curtain speech asking for the audience's indulgence and renewed patronage. Ex.1*d* comes at the end of a long final scene that opens with 15 stanzas of a different *vaudeville final*, followed by a short comic scene in place of a ballet and then this short verse asking the audience to return the next day.

Attempts to make the final scene more impressive soon led composers to write an original *vaudeville final*, chorus and dance music. With this as its starting-point, original music then gradually infiltrated the entire play. The influence of the *vaudeville final* can also be seen in other genres and continued into later periods, as in Gluck's *Orfeo*, Rossini's *Il barbiere di Siviglia*, Mozart's *Der Schauspieldirektor*, *Die Entführung aus dem Serail* and

Don Giovanni, Verdi's *Falstaff*, Ravel's *L'heure espagnole* and Stravinsky's *Rake's Progress*.

6. VAUDEVILLE IN THE 19TH AND 20TH CENTURIES. By the end of the 18th century, with *opéra comique* tending to use more elaborately constructed musical numbers, comedy with sung vaudevilles became separated from it under the names *comédie à couplets* and *comédie-vaudeville*. In 1792 Piis and Barré opened the Théâtre du Vaudeville for this kind of entertainment, which at first resembled what is now called musical comedy. Eventually these shows were called simply vaudevilles. Their producers increasingly used satire and variety acts with all kinds of popular music. This lighthearted style of entertainment spread across Europe and by 1890 was patterned after the English music hall, even adopting that name. At the turn of the century in the USA vaudeville achieved great popularity with its combination of songs, dances, pretty girls, rapid-fire comics, skits and acrobatics. Such variety shows are still popular, though less common.

CLIFFORD BARNES

Vaudry, Jean Etienne, Seigneur de Saizenay et de Poupet (*b* Saizenay, nr Salins, Jura, 26 Sept 1668; *d* Besançon, 21 July 1742). French amateur lutenist and theorbo player. He compiled two sizeable anthologies (*F-B*; facs. (Geneva, 1980), see Chauvel; ed. in Burchmore), which are among the most important lute and theorbo sources of the late French Baroque. He was in Paris towards the end of the century (the larger anthology is inscribed '*Parisÿs. 1699*'), presumably studying law, concurrently studying the lute with Guillaume Jacquesson and, some time later, lute and theorbo with Robert de Visée. By 1704 he was living in Besançon, after he was nominated counsellor to the parliament. His tablatures span the entire history of the French Baroque lute. The most famous lute pieces of the earlier 17th-century repertory (e.g. *La belle homicide* by Denis Gaultier) are mixed with the works of later composers such as Jacques Gallot, whose *Pièces de luth* (Paris, *c*1683) was copied in its entirety by Vaudry. One of the manuscripts (279152) contains virtually all of Visée's attributed music for theorbo and lute; it is the only extant source of his lute pieces. Also present are Visée's arrangements of operatic airs, vaudevilles, noëls and so on, so common to the repertory of later 17th-century *luthistes* and *clavecinistes*.

BRUCE K. BURCHMORE

Vaughan, James D(avid) (*b* between Lawrence Co. and Giles Co., TN, 14 Dec 1864; *d* Lawrenceburg, TN, 9 Feb 1941). American music publisher. He was a composer and compiler of gospel songs published in shape notation. From 1890 to 1911 he produced songbooks under his own name, beginning with *Gospel Chimes*. In 1912 he established the Vaughan Company in Lawrenceburg, which by 1964 had issued over 105 collections of music, most of them known as convention books because they were intended primarily for use in singing conventions. The firm also published five instruction books for singing school use and a trade journal, the *Musical Visitor* (later *Vaughan's Family Visitor*; ceased 1986), which publicized activities of gospel singers. Vaughan has been credited with having originated the idea of the male gospel quartet in about 1891 and beginning radio broadcasts by such groups; later his firm employed up to 16 quartets at one time. In 1921 he established the first radio station in Tennessee, to promote Vaughan songs and songbooks. His firm also sponsored singing schools and normal music schools, the latter to train singing-school teachers. Since 1965 the Vaughan Company has been managed by Pathway Press of Cleveland, Tennessee, the trade division of the Church of God publishing house. Selected Vaughan

books are kept in print, including the famous *Rudiments*, and a new one produced every few years.

HARRY ESKEW

Vaughan, Sarah (Lois) [Sassy] (*b* Newark, NJ, 27 March 1924; *d* Los Angeles, 3 April 1990). American jazz and popular singer. She sang in the choir of Mount Zion Baptist Church, Newark, as a child, where at the age of 12 she became organist. In October 1942 she won an amateur contest at the Apollo Theater, New York; shortly afterwards, in April 1943, she joined Earl Hines's big band as second pianist and singer to Hines and Billy Eckstine. Eckstine formed his own bop-orientated big band early in 1944, and Vaughan joined him a few months later, making her first recording with his orchestra on 31 December. She left Eckstine after about a year, and thereafter, except for a brief stay in John Kirby's group in winter 1945–6, she worked only as a soloist. After George Treadwell (her manager and first husband) refashioned her stage appearance and repertory she achieved considerable success on television, in recordings from the late 1940s, and in international performances from the early 50s. Although she began to perform predominantly slow, popular ballads with heavy vibrato to the accompaniment of 'easy listening' orchestras (notably *It's Magic*, 1947, Musi.), her early associations with bop musicians – especially Dizzy Gillespie and Charlie Parker (with whom she recorded *Lover Man*, 1945, Guild) – established her lasting reputation as a jazz singer. This reputation endured in part because of her tendency to treat her voice more as a jazz instrument than as a vehicle for lyrics: she negotiated wide leaps within her full-bodied contralto range, improvised subtle melodic and rhythmic embellishments, and made fluid alterations of timbre – from a bell-like clarity to a bluesy growl. Her most blues-influenced performance was on *After Hours* (1961, Roul.).

During the five-year contract with Columbia that marked her rise to stardom (1949–54), Vaughan recorded often with studio orchestras and only once in a jazz context (with Miles Davis in 1950). A new contract with Mercury (1954–9) allowed her to pursue a dual career: for Mercury she made commercial discs, including her hit *Broken-hearted Melody* (1958), while for EmArcy, Mercury's jazz subsidiary, she recorded with Clifford Brown, Cannonball Adderley, the sidemen of Count Basie's orchestra and other jazz musicians; one of her most successful titles was *Lullaby of Birdland* (1954, EmA). She combined these activities under later contracts with Roulette, Mercury and Columbia (1960–67). In 1971, after a five-year absence from recording, she began once again to make popular albums, occasionally employing a jazz-flavoured accompaniment. In public performances Vaughan was accompanied by a trio of piano, double bass and drums, either alone or as the nucleus of a big band or symphony orchestra.

BARRY KERNFELD

Vaughan, Stevie Ray (*b* Dallas, 3 Oct 1954; *d* East Troy, WI, 27 Aug 1990). American blues guitarist and singer. He grew up listening to the blues record collection of his elder brother Jimmie, a guitarist and co-founder of the Fabulous Thunderbirds, thus absorbing influences from the whole pantheon of black American and white British blues guitarists. He made his first public performance at the age of 12 and appeared regularly in Dallas clubs until he moved to Austin, Texas (1970). There he formed Double Trouble (named after a song by Otis Rush) with the singer Lou Ann Barton, Tommy Shannon (bass guitar) and Chris Layton (drums). In the late 1970s Barton left the group and the remaining trio established a reputation as Austin's most exciting performers. In 1982 they played at a party held in New York for the Rolling Stones and were subsequently booked to appear at the Montreux Jazz Festival and Vaughan gained a recording contract. With Layton and Shannon he recorded the critically acclaimed album *Texas Flood* (Epic, 1983), which showed him to be a technically unrivalled electric guitarist in the tradition of Buddy Guy, Eric Clapton and Johnny Winter. He also played guitar on David Bowie's album *Let's Dance* (EMI, 1993) but turned down the invitation to join Bowie's band. His later albums included *Couldn't Stand the Weather* (Epic, 1984), with its reverential version of 'Voodoo Chile' by Jimi Hendrix, and *Soul to Soul* (Epic, 1985). Double Trouble made several successful international tours and Vaughan won Grammy awards in 1984 and 1989.

In 1987 his career was interrupted in overcoming drug and alcohol addiction, which he wrote about for his final studio album, *In Step* (Epic, 1989). In August 1990 he died in a helicopter accident after appearing on stage with Eric Clapton and Robert Cray. Since his death there have been numerous reissues of his recordings as well as an album of duets with his brother and a 1996 tribute album which featured such blues performers as Clapton, Guy, B.B. King and Bonnie Raitt performing his best-known songs. In 1993 the city of Austin erected a statue of him. For further information, see J.N. Patoski and B. Crawford: *Stevie Ray Vaughan: Caught in the Crossfire* (Boston, 1993).

DAVE LAING

Vaughan Thomas, David (*b* Ystalyfera, 15 March 1873; *d* Johannesburg, 15 Sept 1934). Welsh composer. His keyboard skills were noticed in the Dowlais area in 1882 and he came to national prominence on winning a prize for harmonium playing at the 1883 National Eisteddfod. After initial studies with Joseph Parry at Swansea, he attended Llandovery College, winning a scholarship to study mathematics at Exeter College, Oxford (BA 1895, BMus 1906, DMus 1911), where he played a prominent role in university musical life. He taught at the United Services College, Westward Ho!, Monkton Combe School, Bath, then at Harrow, where he was college organist and a music master. Thomas returned to Wales in 1906 and thereafter worked freelance as a composer, teacher, adjudicator, organist and lecturer. He applied for the post of professor at Aberystwyth in 1918 but was passed over in favour of Walford Davies, a decision which

created considerable controversy at the time. He was chief music advisor to the National Eisteddfod in 1926. After becoming an overseas examiner for Trinity College, London (1927), he often travelled to exotic locations, as his colourfully written diaries make clear. He died in Johannesburg in 1934, seen by many as a prophet without honour in his own land.

He began to compose in his early 20s and left a considerable body of work, particularly songs and partsongs, large-scale choral works, instrumental works (most notably the fine String Quintet written in Cape Town in 1930), hymns and arrangements of folk tunes. The earliest songs display an affinity with the Welsh Victorian repertory but he quickly established a more independent voice. While his first large-scale choral work, *Llyn y Fan* (1907), is rather drawn out, he shows a much surer touch in *The Bard* (1910), with its echoes of Straussian harmony and the influence of his close friend Bantock.

His embrace of modernism was short-lived however, and Thomas returned to his roots through a detailed study of Welsh folksong and medieval Welsh poetic metres, of which he was a skilful translator into English. He was also an accomplished poet. The cycle *Saith o ganeuon* ('Seven Songs') sets *cywydd* metre for tenor, harp and strings in a manner that recalls earlier *penillion* singing, particularly in the third song. His finest work is perhaps the song *Berwyn* for voice and harp or piano in which a sharpened 4th delicately heightens poetic declamation to great effect. His settings of Meredith are particularly sensitive; his sturdy diatonic hymn tunes are surprisingly assured for one who was a lifelong agnostic. With Morfydd Owen and others, Thomas was one of the most important Welsh composers of his time.

WORKS

Choral: Bendithiaf Yr Arglwydd [I Bless the Lord], anthem (1906); Llyn y Fan [The Van Lake], solo vv, chorus, orch, 1907; A Song for St Cecilia's Day, 1909; The Bard (cant.), 1910; Pwy yw y rhai hyn? [Who are these People?], anthem (1915); Ysbryd yw Duw [God is a Spirit], anthem; Phoebus, Arise (W. Drummond), chorus, orch, 1924; Bywyd [Life], motet (1926); Chwe alan gwerin [6 Popular Tunes], children's vv, orch, 1926; Yr Arglwydd yw fy Mugail [The Lord is My Shepherd], anthem, chorus, org (1930); *c*19 partsongs, many hymn tune arrs. (Eng. and Welsh)

Orch: Ov., 1922; Interlude, tpt, hp, str, 1923; Tair emyn-dôn [3 Hymn Tunes], 1924; The Woods of Westermain, ov.; Tir na n-og (incid music, T. Gwynn Jones)

Chbr: A Welsh Dance, ob, vn, hp, 1924; 2 str qts, 1929, 1930; Duo, G, vc, pf, 1931; Sonata, C, vn, pf, 1932; Bourrée and Musette, vc, pf; Romanza, vc, pf

Pf: Allegro vivace, 1924; Romanza, 1934

Songs (1v, pf, unless otherwise stated): Angladd y Marchog [The Knight's Burial] (*c*1908); Ysbryd y Mynydd [Mountain Spirit] (1914); Bedd y Dyn Tlawd [The Poor Man's Grave] (1914); Llais yr Adar (1914); Si hwi lwli (1914); Nant y Mynydd [Mountain Stream] (1921–2); 5 Meredith Songs, 1922; Y Bwythn Bach [The Small Cottage], 1923; Saith o ganeuon [7 songs] (D. ap Gwilym and others), T (hp, str)/orch, 1923; 2 Meredith Songs (1923–4); Yr Wylan Deg [Fair Seagull] (ap Gwilym), 1924; Stafell Gyndyllan [The Hall of Cyndyllan], 1v, vn, vc, hp (1926); Berwyn (1926); O Fair Wen (1926); Y Lloer [The Stars], S, Mez, pf, 1926; 10 Welsh Folksongs, arr. (1928); Ymadawiad Arthur [Arthur's Leaving] (1930); Caledfwlch (1931); Seren Heddwch [Star of Peace], 1931; Cantref Gwaelod, 1931; Y Delyn [The Harp], 1v, pf/hp/str orch, 1932; Cartre'r Bardd [The Bard's Home], 1932; Ffarwel Fy Ngeneth [Farwel Fair Maiden] (1933)

PETER CROSSLEY-HOLLAND/LYN DAVIES

Vaughan Williams, Ralph (*b* Down Ampney, Gloucs., 12 Oct 1872; *d* London, 26 Aug 1958). English composer, teacher, writer and conductor. The most important English composer of his generation, he was a key figure in the 20th-century revival of British music.

1. EARLY LIFE AND BELIEFS. Although born in Gloucestershire, Vaughan Williams considered himself a Londoner. The youngest of three children, he grew up at his mother's family home, Leith Hill Place, Surrey, and most of his life was spent in the Dorking and Leith Hill area or in London. The move from Down Ampney came as early as 1875, on the death of his father, the Rev. Arthur Vaughan Williams. On both sides of the family there was distinction and independence. The Vaughan Williamses were a family of eminent lawyers: Sir Edward Vaughan Williams, the first Judge of Common Pleas, was the composer's grandfather. His maternal grandparents were Josiah Wedgwood III and a sister of Charles Darwin.

Encouraged to take an active interest in music, the young boy received his first lessons from a Wedgwood aunt, who not only taught him the piano but took him through *The Child's Introduction to Thorough Bass* and Stainer's *Harmony*. By the time he went to preparatory school, at Rottingdean, Sussex, he had some acquaintance with the violin as well as with the piano and organ. During three years at Charterhouse (1887–90) he switched from the violin to the viola, played in the school orchestra and, but for family misgivings, would possibly have decided on an orchestral career. There followed a period of two years at the RCM, then three at Trinity College, Cambridge (MusB 1894, BA in history 1895), and a further year or so at the RCM: a substantial period of study, during which his teachers of composition were Parry, Wood and Stanford.

Even as a schoolboy Vaughan Williams had been drawn increasingly to composition, and on going up to Cambridge he knew very well what he wanted to become. But progress was slow; Wood did not believe he would ever make a composer, and a Darwin cousin, Gwen Raverat, writing of her Cambridge childhood, recalled 'overhearing scraps of conversation about "that foolish young man, Ralph Vaughan Williams", who *would* go on working at music when "he was so hopelessly bad at it"'. In later years the composer himself remarked on his 'amateurish technique', which he said had dogged him all his life; but his early groping had much to do with a deep dissatisfaction with the English musical scene and an inability to see his own path. He knew that he must strive for the highest professional standards; hence his return to the RCM and his subsequent studying with Bruch in Berlin (1897) and Ravel in Paris (1908). At the same time he recognized that, creatively, salvation would be found, not in imitating foreign models, but in a regenerative use of native

resources. This led him to English folksong, to Elizabethan and Jacobean music, and to a philosophy of musical citizenship, which he both practised and preached (see especially his essay 'Who Wants the English Composer?' and *National Music*). These interests and ideals he shared with Holst, whom he met at the RCM in 1895. The close friendship that at once developed is notable because the two composers subjected their work in progress to each other's criticism. These 'field-days', as they called them, lasted until Holst's death in 1934, and Vaughan Williams missed them keenly in the years that followed.

It is a part of Vaughan Williams's strength and importance that he cannot be adequately discussed in narrowly musical terms. His outlook was human and social. He never forgot that music was for people; he was interested in every situation, however humble, for which music was needed; and his feeling for genuinely popular traditions amounted to a reverence that was almost religious: the most obvious comparison is with Bartók and Kodály in Hungary. Two points immediately follow: throughout a public life of more than 60 years, Vaughan Williams engaged in a wide range of musical activities, sometimes of a kind that many lesser composers would have considered beneath them; and at every stage in his development the extensive list of works shows different levels of composition, from the simplest occasional pieces to the most visionary personal expressions.

'Visionary' is a word much used in discussing Vaughan Williams's music, and it has often been assumed that the vision is theistic and specifically Christian. The reality is more complex. 'He was an atheist during his later years at Charterhouse and at Cambridge', wrote Ursula Vaughan Williams, 'though he later drifted into a cheerful agnosticism: he was never a professing Christian'. He was a first-generation atheist with a profound sense of the past, which means a disappointed theist. Moreover, in the popular traditions of the English church, as in folksong, he was aware of the common aspirations of generations of ordinary men and women with whom he felt a deep, contemplative sympathy. And so there is in his work a fundamental tension between traditional concepts of belief and morality and a modern spiritual anguish which is also visionary.

It was not until 1909–10 that a personal voice fully emerged in Vaughan Williams's music: *On Wenlock Edge* and the Fantasia on a Theme by Thomas Tallis are reliable points of reference. By then he had gained experience in a number of directions; he had worked as a church organist – perhaps the only appointment he was glad to give up – had taken the FRCO and MusD, and had launched out as writer, lecturer, music editor and folksong collector. He was editing *Welcome Songs* for the Purcell Society, but far more important was his selecting of the tunes for *The English Hymnal* (1906), a task to which he devoted many months, rediscovering old tunes and weeding out Victoriana. Some tunes, including the justly celebrated *Sine nomine* ('For all the saints'), he wrote himself; he adapted more than 40 from folksongs. Since collecting his first folksong, *Bushes and Briars*, in 1903, he had become one of the foremost activists in the movement, notably in Norfolk, Essex and Sussex. In all he collected over 800 songs and variants, the vast majority before 1910. Another important development was the Leith Hill Musical Festival: from its inception in 1905 until 1953 Vaughan Williams was principal conductor, and his performances of Bach, particularly of the *St Matthew Passion*, became national events. His Bach was noted for its dramatic and spiritual qualities; he had little time for the school of 'authenticity'.

By 1914 he had behind him a considerable body of work, including two symphonies, and a growing reputation for independence and strength of character. Although nearly 42, he felt bound to involve himself in the war. He served as a wagon orderly with the Royal Army Medical Corps in France and on the Salonika front, and later returned to France as an artillery officer. Soon after the armistice he was made director of music for the First Army of the British Expeditionary Force, with responsibility for organizing amateur music-making among the troops. The impact of the war on his imagination was deep and lasting but did not express itself in an obvious protest or change of style; rather it is felt in a more intense inwardness.

2. The years after World War I. Demobilized in 1919, Vaughan Williams joined the teaching staff of the RCM, became conductor of the Bach Choir (1920–28), for a short time conducted the Handel Society, and did much to revive and expand the Leith Hill Festival. The English Folk Dance Society and other bodies made demands on his time, which he gave freely, still managing to revise pre-war compositions – *A London Symphony*, *The Lark Ascending*, *Hugh the Drover* – and to write new ones. This capacity for reconciling all manner of musical activity – practical, educational, administrative, advisory – with his own creative work lasted into old age. So did his capacity for friendship, which became particularly marked in the 1920s as he found himself thrust into prominence in many branches of musical life. One new friend was the young conductor Adrian Boult, who in 1922 gave the first performance of the *Pastoral Symphony* and soon emerged as Vaughan Williams's foremost interpreter. That same year the composer was invited to Connecticut to conduct the American première, and it was also played (under Boult again) at one of the ISCM festivals: works by Vaughan Williams were given at Salzburg (1924), Venice (1925), Prague (1925), Geneva (1929) and London (1931).

As a teacher of composition, Vaughan Williams shared Parry's gift for encouraging his pupils to be themselves. He expected them to do as he did – seek the best advice but use their own judgment. Where there was strength of character as well as some talent he succeeded, and often a lasting relationship resulted, as with Gordon Jacob and Elizabeth Maconchy. He also taught and conducted at summer schools of the English Folk Dance and Song Society, of which he was elected president in 1932. In the same year he lectured on national music at Bryn Mawr College, Pennsylvania. From the 1920s onwards, he was increasingly in demand as composer–conductor, a role in which he often distinguished himself, particularly in performances of *A London Symphony*. His 1937 recording of the Fourth Symphony is not only 'historic' but an outstanding performance in its own right.

The Fourth Symphony, first performed in 1935, is another notable landmark; although controversial, for many it confirmed Vaughan Williams's leadership of 'the English school' and his lasting capacity for self-renewal. In the same year, having previously refused a knighthood and other honours, he accepted the OM. Many years later he wrote to Rutland Boughton: 'I have always refused all

honours and appointments which involved obligation to anyone in authority – the OM involved no such obligation'. Purely musical honours, which had effectively begun in 1919 with an honorary DMus at Oxford, included a number of other doctorates from British universities, the Cobbett Medal (1930), the Gold Medal of the Royal Philharmonic Society (1930), the Collard Life Fellowship (1934, in succession to Elgar), the Shakespeare Prize (University of Hamburg, 1937), the Howland Memorial Prize (Yale University, 1954) and the Albert Medal of the Royal Society of Arts (1955).

The Hamburg award troubled him, and before accepting he stated bluntly that he belonged to 'more than one English society whose object is to combat all that the present German *régime* stands for'. Although his politics have rarely been discussed, they were inseparable from his overall outlook. He voted Radical or Labour throughout his life, except in 1945, when he felt that the Labour Party was wrong to force an election. His socialism stemmed from a deep-rooted compassion for the underprivileged as real human beings rather than social abstractions (although he had enough taste for political theory as a young man to work through the Fabian tracts). As for the international scene, despite his conviction that nations should proudly maintain their cultural identities, he believed federalism to be the best hope for solving the destructive dilemmas of Europe and beyond. In many ways he followed the tradition of the 19th-century freethinking radical who devoted his energies to particular causes.

For Vaughan Williams the plight of the German refugees was just such a cause, and his activity on their behalf led in 1939 to his music being banned by the Nazis. During the war years he directed the work of the Home Office Committee for the Release of Interned Alien Musicians, helped to organize the lunchtime concerts at the National Gallery and did much for the Council for the Encouragement of Music and the Arts (now the Arts Council of Great Britain) and other bodies engaged in promoting music. A new interest, beginning with *49th Parallel* (1940–41), was music for films, which was almost the only medium that he had not explored, and he found it stimulating. But his principal wartime composition was the Fifth Symphony, 'music imbued with what one can only call greatness of soul' (Mellers, B1946); first played in 1943, this met with a response of deep gratitude, even from many who had not known that Vaughan Williams mattered to them.

In the postwar years he learnt to his dismay that he had become an almost patriarchal figure and that critics were attributing prophetic intentions (and concrete meanings) to the symphonies nos.4–6. A reaction to the latter, almost certainly, was his writing of semi-facetious programme notes, particularly for the first performances of the Sixth and Ninth symphonies. He denied that the Sixth was a 'war symphony'; but this disturbing work, first played in 1948, accorded so well with the postwar disillusionment that within a little over two years it had received 100 performances – a record exceeded by only one English symphony, Elgar's First. Once again, though not with intent, he had done the unpredictable and challenged comfortable opinion.

The 1950s brought important changes in Vaughan Williams's personal life, his music and the critical climate. In 1951 his wife Adeline (née Fisher), whom he had married in 1897, died at the age of 80, having been an invalid for many years; and in the same year he suffered 'the bitterest disappointment of his musical life' (Douglas, E1972), the inept production at Covent Garden of the morality *The Pilgrim's Progress*, on which he had been working, intermittently, for up to 40 years: Bunyan, like Blake and Whitman, had long been embedded in his personal mythology. In 1953 he married Ursula Wood, a close family friend, and left Dorking, where he had been living since 1929, for central London. Apart from deafness, he was in good health; London's cultural life was paradise regained, and he travelled abroad more than he had done for decades. In 1954 he visited the USA again, lecturing at Cornell and other universities, conducting *A London Symphony* and touring extensively. Everywhere he went he received an enthusiastic welcome; overwhelmed by invitations, he turned down a dinner in his honour to have been given by the League of Composers and the offer of a coast-to-coast television interview. Throughout these last few years he was not only a familiar presence at London concerts, the Cheltenham Festival and the Three Choirs Festival, but was active in public controversy – for example, over the threat to the BBC Third Programme (1958) – and wrote a great deal of music, including the last two symphonies.

When he died many English music-lovers felt a sense of loss that was personal no less than musical. This 'extraordinary, ordinary man' (Kennedy, C1964) had not only become an institution; he had also, as Parry said of Elgar, reached the hearts of the people. On 19 September 1958, before a crowded assembly, his ashes were interred in the north choir aisle of Westminster Abbey, near the burial places of Purcell and Stanford; the first music that was played was his *Five Variants of 'Dives and Lazarus'*, on a tune that he had known and loved since 1893.

3. Early works. Although the variety within Vaughan Williams's extensive output would seem to favour discussion according to genre, the development through 60 years presents an overriding case for division into periods. The five periods chosen here are neither arbitrary nor absolute: up to 1908, 1908–14, 1919–34, 1935–44 and 1945–58. Each has its distinguishing character, or characters; equally striking, however, at least from the second period onwards, is the recurrence of earlier modes of expression. Few major composers have kept open so many avenues for so long, which is a reflection of that unusual blend of outward- and inward-looking qualities which characterized the man. Because he was an intuitive artist, little disposed to theorize, except about the human and social aspects of music, he was never inhibited by fears of inconsistency, stylistic or otherwise. Some unlikely works appear side by side, particularly in the third period: for instance, *Job* and *The Poisoned Kiss*, the Fourth Symphony and the Suite for viola and small orchestra. If there was a streak of clumsiness in his make-up, he was also 'a perfectionist, though he might not have thought of himself as such' (Douglas, E1972). This shows clearly in his revisions of some of the works that meant most to him. As late as 1950 he made some changes in the scoring of the *Pastoral Symphony* (first performed 1922), and the much revised *Hugh the Drover* (1910–14) did not take its final form until 1956.

The first period, that of Vaughan Williams's long 'apprenticeship', culminated in *A Sea Symphony* (1903–9), which stands at the brink of the first period of maturity.

The balance throughout is tilted towards vocal music, but with the orchestra prominent and becoming increasingly important in the last five or six years. Although there are songs and partsongs dating from the 1890s, the earliest composition that is widely known is *Linden Lea* (1901). This setting for voice and piano of words by the Dorset dialect poet William Barnes is not without significance: sub-titled 'a Dorset folksong' (which it is not), it has an open-air freshness and an attachment to simple things, but is also related to the domestic (drawing-room) song forms of the time. This vein is extended and broadened in the *Songs of Travel* (Stevenson, 1901–4), which have likewise retained their early popularity. These have a moving eloquence and afford many insights into the composer's temperament, particularly 'The Infinite Shining Heavens' and 'Bright is the Ring of Words'; but there is also a received Romanticism of a kind that disappeared under the impact of folksong and of Elizabethan music. This is also marked in the rather less sharply focussed Rossetti cycle *The House of Life* (1903), from which 'Silent Noon' has remained popular. However remote they may seem from the composer of 20 years later, these early songs are among the finest written in England around 1900 and are as notable for strength of purpose as for sensitive word-setting. Their achievement is underlined by the fact that at no other stage did Vaughan Williams give much attention to the solo song with piano accompaniment.

Choral music, with and without orchestra, is prominent throughout his development. *Toward the Unknown Region* (Whitman, 1904/5–6), 'a song for chorus and orchestra', was the first work to make a major impact on critics and public alike. Despite the choral debt to Parry and some residual chromaticism, there is much that is individual, particularly in the harmonic language and the scoring. Noteworthy too is the first four-note phrase (ex.1), a melodic fingerprint that persisted into old age.

The crucial years for *A Sea Symphony* (Whitman) were 1906–8. Beginning as 'songs of the sea' in emulation of Stanford, this became a fully choral symphony, a triumph of instinct over environment. The tone is optimistic, Whitman's emphasis on the unity of being and the brotherhood of man comes through strongly, and the vitality of the best things in it has proved enduring. Whatever the indebtedness to Parry and Stanford, and in the finale to Elgar, there is no mistaking the physical exhilaration or the visionary rapture. Melodic invention mingling duplets and triplets, harmonic images such as ex.2, the quasi-epilogue with its alternating chords and

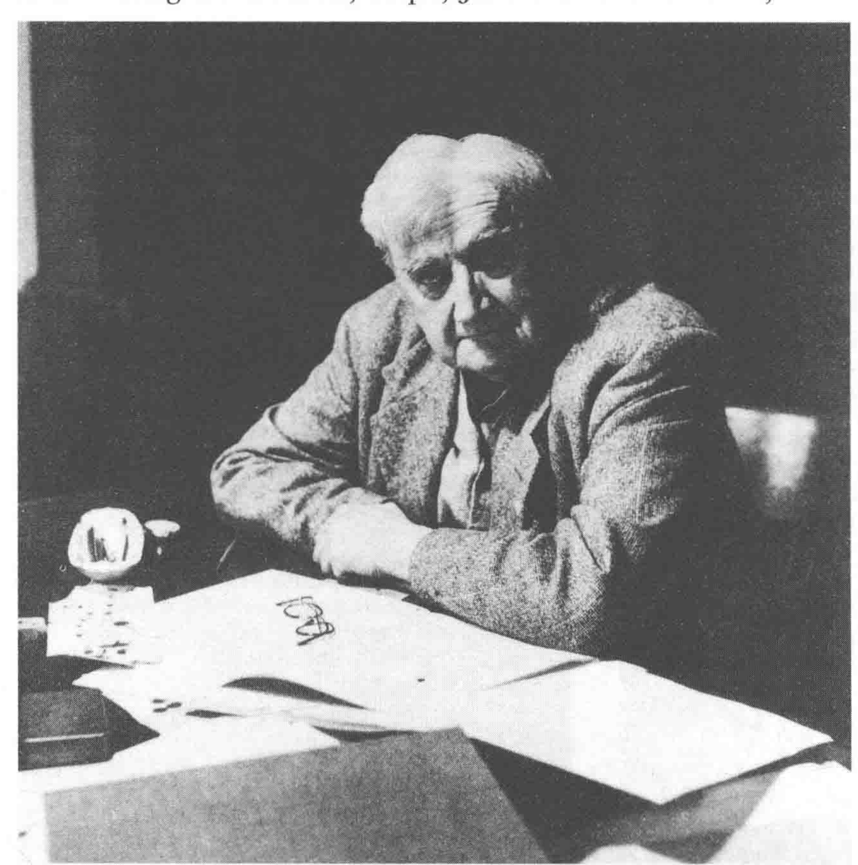
niente close, these are among the features that are fundamental Vaughan Williams.

The unpublished works include two or three for orchestra showing an earlier and more significant interest in the medium than has sometimes been suggested, notably the *Bucolic Suite* (1900), the *Heroic Elegy and Triumphant Epilogue* (1900–1) and *Harnham Down* (1904–7). The composer thought well enough of *In the Fen Country* (1904) to revise the scoring in 1935; it registers the first impact of his folksong collecting and contains elements of his mature pastoral style, albeit alongside an alien chromaticism. The first works to quote folksong directly are the three *Norfolk Rhapsodies* (1905–6), of which the second and third were withdrawn: no.1 has a distinctive tone poetry, atmospheric and pure in expression, and points clearly to the next period. Two folksongs appear briefly in the scherzo of *A Sea Symphony*, but these are incidental in a work whose style has a different ancestry. Whitman's liberating thought and the music of English villagers had still to make common cause.

In general, Vaughan Williams did not use folksongs in orchestral and instrumental works, but he so absorbed the folksong idiom that his melodic writing was profoundly conditioned and freed from inconsistencies.

Certain tunes, notably *Searching for Lambs* and *Dives and Lazarus*, are often felt to be almost within earshot, so much a part of him did their turns of phrase become. From the period 1905–35 there are many folksong arrangements, for voice and piano and for unaccompanied chorus, and as late as 1949 he wrote *Folksongs of the Four Seasons* for women's voices and orchestra. The harmonization is always idiomatic: even in his later student years he was drawn to the modes; indeed, he once presented Stanford with a modal waltz.

4. TOWARDS 'A LONDON SYMPHONY', 1908–14. This period extends from the String Quartet in G minor and *On Wenlock Edge* – the immediate beneficiaries of Vaughan Williams's study with Ravel – to *Hugh the Drover*, *A London Symphony* and *The Lark Ascending*, all substantially complete in 1914. The common ground is the assimilation of folksong, the confident use of a distinctive body of imagery, at once national and personal, and the achievement of a unified style. In most works, but not the Fantasia on a Theme by Thomas Tallis, there are traces of former ways, usually involving a chromatic expressiveness: only in the G minor Quartet (1908–9) and the *Five Mystical Songs* (Herbert, 1911) are these a serious handicap. At least five works from this period are among those that have proved most durable, and their popularity is not unconnected with their emotional background, which is stable and secure, however anguished the foreground. This 'security', though in part a reflection of the composer's growing self-confidence, has much to do with the pre-war climate of Liberal optimism and the sense of community inherent in it. The most anguished foreground is in the finale of *A London Symphony*, but at the close, after a climax of harrowing intensity, the vision is 'contained' by a warm G major chord throughout the orchestra. Similarly, the romance for violin and orchestra *The Lark Ascending* is wholly idyllic, and therefore different in feeling from the postwar pastoral works. The boisterous good humour of the suite from *The Wasps* (incidental music to Aristophanes' comedy, 1909) is a more extroverted reflection of the same stable background. All these works are rich in expressions basic to Vaughan Williams's maturity. Less well known, yet an especially beautiful product of this period, are the *Four Hymns*, for tenor, strings and viola obbligato (1914); significantly, these contain seeds of what lay just ahead, in terms of their particular musical realization of spiritual imagery.



The achievement that most clearly transcends this period, however, is the Fantasia on a Theme by Thomas Tallis for double string orchestra (1910, rev. 1919). This is perhaps the first unqualified masterpiece; it is also the work that has travelled most widely. He was drawn to Tallis's Phrygian tune when researching for *The English Hymnal* (see no.92) and found in it a grandeur and an intimacy which crystallized something essential to his own musical style: this way of writing for strings, though many times modified, may be traced as far as the Ninth Symphony.

Although less concentrated, and less pure in expression, the Housman song cycle *On Wenlock Edge* for tenor, piano and string quartet (1908–9) is more broadly representative of the works of this period. It is also an outstanding contribution to English song, more ambitious than the great majority of Housman settings and sounding greater depths. (A comparison of 'Bredon Hill' and 'Is my team ploughing?' with the slightly later settings by Butterworth can only emphasize Vaughan Williams's dramatic sense and the scale of his intentions.) Essentially a cycle, framed by songs that give a cosmic dimension to human suffering, *On Wenlock Edge* has plenty of vital ideas and marks the first clear emergence of the 'disappointed theist'. In the opening song, which gives its title to the whole, there is a new chromaticism, anguished and free from Rossetti-like associations (cf the finale of *A London Symphony*) and in 'From far, from eve and morning' and 'Clun' consecutive triads form awesome, yet disarmingly simple, images of eternity. The vocal part, too, is generally simple (also demanding), but is less close to folksong than some have suggested. Early in the 1920s the composer made a version for tenor and orchestra, but it is the original that has achieved classic status.

In their separate ways the most ambitious works from this period are *A London Symphony* (1911–13, with substantial postwar revisions) and *Hugh the Drover* (1910–14, also much revised). The former, Vaughan Williams's first purely orchestral symphony, stands in much the same relation to the Germanic mainstream as do the later symphonies of Dvořák: the form is broadly traditional, the expression personal and national. A striking innovation is the matching introduction and epilogue. Also used by Bax, the epilogue is Vaughan Williams's most personal contribution to symphonic form (cf all his symphonies except the *Pastoral*, where the finale has its own introduction and epilogue, and nos.8 and 9). Although the *London* was originally to have been a symphonic poem and has been described as 'a misplaced opera' – more concretely the composer acknowledged a background link with H.G. Wells's *Tono Bungay* – Vaughan Williams rightly insisted that it was 'self-expressive, and must stand or fall as "absolute" music'; the use made of the Westminster chimes and other London sounds does not amount to a programme.

Hugh the Drover, or Love in the Stocks, was ambitious in attempting, almost unconcernedly, to break through the barrier of English taste that stood in the way of native opera, and in this it had some success, becoming the best-known example between the revival of *Dido and Aeneas* in 1895 and *Peter Grimes* (1945). Some, including Czechs, have seen it as an English equivalent of *The Bartered Bride*, but the libretto is artificial, presenting a picture-postcard view of Cotswold village life in the 19th century, and the music ranges in style from the *Songs of Travel* to *A London Symphony*. Although stagy, it is also stageworthy, and in a good performance holds the attention with its picturesque action, which includes a boxing-match, and its sense of musical enjoyment. Approximately ten traditional tunes are incorporated: the term 'ballad opera', used by the composer though strictly misapplied, is appropriate in spirit. For *Hugh the Drover* is above all an entertainment.

5. THE INTER-WAR WORKS, 1919–34. Bounded by the next symphonies, the *Pastoral* and the F minor, this was a period of immense vigour and variety in which three trends are particularly striking: a deepening of the visionary aspect; an extending of the expressive range, embracing new forms of imagery; and a simultaneous working on markedly different levels. This last puzzled some of Vaughan Williams's admirers, especially those who had set their own limits to the kind of composer he was. Folksong arrangements, occasional and 'serviceable'

2. *Ralph Vaughan Williams*

church music, competition partsongs and simple, popular expressions such as the unison song *Let us now praise famous men*, these are found side by side with some of his most penetrating masterpieces. There are important achievements in almost every field except chamber music.

Ideas for the *Pastoral Symphony* had begun to form as early as 1916, when Vaughan Williams was in France with the Royal Army Medical Corps, and of this the 'bugle call' for a natural trumpet in the slow movement is direct evidence. More thought-provoking pointers are the tensions experienced beneath the seemingly tranquil surface of the music and the sudden impassioned upsurges which challenge the prevailing quietude. For all its indifference to the things commonly held to make a symphony 'go', notably contrasts in tempo, dynamics and basic material, the *Pastoral* is a dramatic work; it is also the expression of a man thrown back on his innermost resources, making discoveries and 'licking his cultural wounds'.

Kennedy (C1964) said Vaughan Williams 'did not seek solace in religion after the war', which, at the conscious level, is probably true. Nonetheless, there is a succession of works, culminating in *Sancta civitas*, that suggests a deep concern with reaching out towards a religious, though not necessarily Christian, view of reality. *The Shepherds of the Delectable Mountains* (1921), a one-act 'pastoral episode' based on Bunyan and later incorporated in *The Pilgrim's Progress*, renews the blessedness glimpsed at the end of the *Pastoral Symphony*; and in the unaccompanied Mass in G minor (1920–21), written in response to the revival of Byrd and the English polyphonic school at Westminster Cathedral, there are similarly musical links with the *Pastoral*, notably in the Sanctus. The Mass broke new ground, setting a standard for the re-creation of the *a cappella* tradition. *Sancta civitas* (1923–5), a biblical oratorio to words mainly from *Revelation*, is prefaced by a quotation from Plato concerning the immortality of the soul. This is the most visionary of these works; its expression is plainer, more severe, in a way that anticipates aspects of *Job*, and a less 'churchy' oratorio would be hard to imagine. Although the deepest of Vaughan Williams's choral works, it has not achieved the prominence of Holst's *Hymn of Jesus*, with which it has a close spiritual affinity.

An exploratory impulse is particularly marked in a group of major works conceived during 1924–6, an unusually fertile time that was critical for the course of this larger period. A number of these employ a solo instrument. The Concerto for violin and strings (1924–5), originally called *Concerto accademico*, is Vaughan Williams's nearest approach to a Bachian 'neo-classicism' and was probably written in response to Holst's Fugal Concerto. The Piano Concerto (1926–31), in which the toccata-like manner of the first movement invites comparison with Bartók (who heard and admired the work), is an interesting transition to the Fourth Symphony, but it was conceived piecemeal and cannot be considered wholly successful. There is also a version by Joseph Cooper for two pianos and orchestra (1946), which overcomes some problems of balance – but not, of course, those of unity. The outstanding work in this group is *Flos campi* (1925), a suite for solo viola, small chorus (wordless) and small orchestra, each movement of which is headed by a Latin quotation from the *Song of Songs*. Rapt, intense, yet

ultimately serene, this is among Vaughan Williams's most imaginative achievements. The often quoted bitonal opening is a natural development from the *Pastoral Symphony* and *Sancta civitas*, and the diatonic polyphony of the final number points to the close of the Fifth Symphony. There is also much that reaches out through *Riders to the Sea* to the Sixth Symphony and beyond. The Suite for viola and small orchestra (1934), written, like *Flos campi*, for Tertis, is a comparatively low-pressure work in eight short movements, some of which are excellent examples of the composer's treatment of folk-song-like material. Perhaps the finest actual folksong work from this period is the Six Studies in English Folksong (1926) for cello and piano.

The three operas written between 1924, when *Hugh the Drover* was first performed, and 1932 are remarkable evidence of Vaughan Williams's working on different levels. The first, *Sir John in Love* (1924–8), is a natural successor to *Hugh* without any of the immaturities. Based on *The Merry Wives of Windsor*, it is an opera in four acts requiring 20 soloists and elaborate staging; musically, however, it represents a relaxation from the visionary vein, an enjoyment of traditional cakes and ale, although Ford's jealousy opens up a deeper and darker vein, and there are many passages of ravishing, and at times Italianate, lyricism. The one-act *Riders to the Sea* (1925–32), an almost complete setting of Synge's play, is both a theatrical tour de force and a visionary masterpiece; moreover, in its response to the theme of man defeated by nature – a far cry from the *Pastoral Symphony* – and in the comprehensiveness of its musical imagery, it seems to reach to the brink of the final period: even the characteristic chord relationship from the end of the Sixth Symphony makes its first appearance here (ex.3). Very

different from both these operas is *The Poisoned Kiss* (1927–9), a 'romantic extravaganza' with spoken dialogue based on a story by R. Garnett. Here a sense of fun prevails, and a delight in doing something different, without obligations; significantly, this is one of the few compositions not shown to Holst while in progress.

Holst's influence outlived his death in 1934 (in, for instance, the Sixth Symphony) but is most marked in this period. Particular evidence may be found in the Violin Concerto, the *Magnificat* for contralto solo, women's choir, solo flute and orchestra, the ballet *Job* and the Fourth Symphony. This in no way limits the individuality of these works, of which the last two would have to be included in any reckoning of Vaughan Williams's most important creations. *Job*, 'a masque for dancing' (1927–30), brings together a number of the basic types of imagery from the preceding years and in the music for Satan introduces new ones: so potent are the ingredients, and so high the imaginative level, that the symphonies nos.4–6, utterly different from each other though they are, are all indebted to this seminal score. The scenario by Keynes and Raverat based on Blake's *Illustrations to the Book of Job* failed to interest Diaghilev, for whom it was intended, and Vaughan Williams completed his score as a concert work in nine scenes, in which form it was first given. The ballet was mounted by the Camargo Society in 1931 and has entered the repertory of the British Royal Ballet.

The Fourth Symphony, in F minor (1931–4), renews the angular, Satanic element in *Job*, turns away from modal 'blessedness' and achieves a structural power that is intellectually and emotionally challenging in a way quite new to Vaughan Williams's music. Two basic motifs (ex.4) unite the four movements and dominate the musical

imagery. Their extreme terseness, their discordant harmonic implications and the tension arising from their immediate juxtaposition go far to account for the essential violence of this work. Together with *Riders to the Sea*, the Fourth may be held to represent a response to experience so different from that of the *Pastoral* and its 'religious' satellites as to constitute an opposite pole.

6. The World War II period, 1935–44. The many who, unlike the composer, interpreted the Fourth Symphony as 'ancestral voices prophesying war' thought they saw corroborative evidence in *Dona nobis pacem* (1936), a cantata for soloists, chorus and orchestra using texts from various sources, with Whitman well to the fore. There is some related imagery – not least the falling semitone on 'dona' – but this work ranges widely in point of style, successfully incorporating a setting of Whitman's 'Dirge for Two Veterans' made before World War I, and ending with an affirmation of hope in a serviceable, popular manner found in works from all periods. Although less than a masterpiece, *Dona nobis pacem* deserves a permanent place among the musical works written against war, and the idea of combining Latin liturgical material with biblical texts and modern vernacular poetry surely influenced Britten's more famous *War Requiem*. *Five Tudor Portraits* (1935), a Skelton suite for soloists, chorus and orchestra, is by the composer of *Sir John in Love* and the Suite for viola and small orchestra; it is music of relaxed enjoyment, with many characteristic niceties of expression.

Neither of these works is particularly representative of this fourth period, but in their broader lyricism and warmth of manner they may be said to point the way. Disappointed expectations based on the 'modernity' of the Fourth Symphony gave rise to the view that, after Holst's death, Vaughan Williams reverted to a more traditional style. The cause remains speculative, but it is true that for a number of years he concentrated on a more benign, euphonious manner which was regarded by many as definitive. Reversion is too crude a description: a drawing-out and interweaving of threads going back through *Job* to the Tallis Fantasia would be more accurate. A sense of spiritual security is conveyed by a modal–diatonic norm of expression, offset but seldom undermined by contrary elements. The sentiments made explicit in the *Serenade to Music* (1938), a setting for 16 soloists and orchestra of words from *The Merchant of Venice*, are basic to this period. Written for Wood's golden jubilee as a conductor, the *Serenade* is best in its original version but may be given by only four soloists, with chorus, or with all the vocal parts treated chorally. There is also an orchestral version. In a similar vein is *The Bridal Day* (1938–9, rev. 1952–3), a masque with a text by Ursula Wood (later the composer's wife) after Spenser's *Epitha-*

lamion. Originally intended for the English Folk Dance and Song Society, this was not performed until 1953, when it was presented by BBC television (in 1957 Vaughan Williams based a cantata, *Epithalamion*, on it).

The commanding landmark in this period is the Fifth Symphony (1938–43, rev. 1951), written after some sustained work on *The Pilgrim's Progress* but apparently in the belief that the morality (opera) would not be completed. Three principal themes and some subsidiary material are therefore 'borrowed' but are treated independently with few, if any, programmatic overtones. Making its affirmations in spite of the Fourth, with which it has in common only its mastery of means, the Fifth marks the climax of Vaughan Williams's traditional (religious) responses.

Like the *Pastoral Symphony*, the Fifth has a number of 'satellites' or associated works. These include the *Five Variants of 'Dives and Lazarus'* (1939) for strings and harp(s), which is perhaps the most personal of all the folksong compositions, the String Quartet in A minor (1942–4) and the Concerto for oboe and strings (1944). Written for Goossens, the Concerto is at once capricious, lyrical and nostalgic, and is the composer's most successful essay in the form. The A minor Quartet ends in D in the spirit of the Fifth Symphony, but the other movements, which are either agitated or joyless, make the dominant impression in this fine work. Here, and in some of the music for the war film *The Story of a Flemish Farm* (1943), are the first definite intimations of the ferment that was to produce the Sixth Symphony. Not that anyone could have foreseen the Sixth, still less the richness of the period that followed.

7. THE FINAL PERIOD. After its many early performances Hubert Foss remarked on 'the flood of explanatory prose which the [Sixth] Symphony has unloosed'. Few other works in the post-Romantic era had so compelled their admirers to ask what the music meant; for the Sixth, in E minor (1944–7, rev. 1950), was experienced by many as a spiritual negation of the Fifth, which it was felt to supplant as a definitive statement. The composer denied that he had written a 'war symphony', but later cited Prospero's words 'We are such stuff as dreams are made on, and our little life is rounded with a sleep' as a verbal indication of 'the substance of my last movement' (Kennedy, C1964). This movement, Epilogue, presents the ethos of the work in its most acute form and with the emphasis of an unrelieved *pianissimo* (*senza crescendo*). Essentially it is a meditation on a single theme, which 'drifts about contrapuntally' and finally disintegrates, leaving only the chords of E♭ major and E minor alternating in a void. An equivalent chord relationship, though less decisively used, has been noted in *Riders to the Sea* (ex.3), which of the earlier works is the one that has most in common with the imagery of the Sixth. Both these works bear directly on the score for the film *Scott of the Antarctic* (1948).

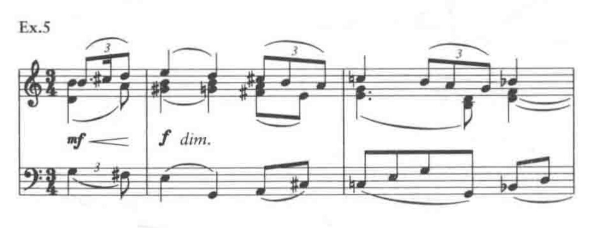
It was a stroke of artistic good fortune that Vaughan Williams was asked for that particular score precisely at this juncture. The spiritual desolation of the Sixth found its physical counterpart in the polar wastes, and the sense of challenge and endurance was re-engaged by the story of Scott's last expedition. Moreover, whatever Vaughan Williams's reservations about the vainglorious aspects of Scott's enterprise, the human values represented – heroic endeavour, loyalty, dedication, personal warmth – were a timely corrective to the 'ultimate nihilism' (Cooke, D(iii)1959) of the symphony. He soon knew that what he was writing was no ordinary film score and that an Antarctic symphony might well come of it. In fact, he was achieving a reconciliation that would open the way for not one but three more symphonies and would affect almost everything he wrote in the very active ten years remaining to him. This is partly a matter of colour – he was fascinated by his new Antarctic sounds 'the 'phones and 'spiels' (tuned percussion) particularly – but basically it concerns the fusion and transformation of hitherto opposed worlds of feeling: the 'blessedness' of the Fifth and the nihilistic vision of the Sixth were resolved in a tragic but resilient humanism. Thus the last three symphonies share the same stylistic and philosophical orientation and have a wider range of imagery than any of the others since *A London Symphony*.

The *Sinfonia antartica* (no.7) was begun in 1949 but proved troublesome and other works supervened. The same year saw the completion of *The Pilgrim's Progress*, which really belongs to the two preceding periods. Both the dramatic conception – effectively, a series of tableaux – and the musical realization have been adversely criticized, but a minority holds that this morality in four acts is one of Vaughan Williams's supreme achievements: a distinguished Cambridge production by Dennis Arundell in 1954 is cited as supporting evidence and the 1992 revival by the Royal Northern College of Music was also enthusiastically received. The most penetrating critical point is both musical and dramatic: that *The Pilgrim's Progress* is 'an aftermath' (Richard Capell, in the *Daily Telegraph* of 28 April 1951), the composer's Bunyanesque vision having already found its most intense expression in the middle symphonies. But it remains a deeply individual work and will always have its advocates. No less individual are two smaller-scale works from 1949. One of these, *An Oxford Elegy* for speaker, small chorus and small orchestra, uses another text long thought of by Vaughan Williams as a possible basis for an opera libretto – Arnold's *The Scholar Gipsy*, parts of which are combined here with some lines from *Thyrsis*. This is an unusually successful melodrama and, although broadly pastoral in manner, belongs unequivocally to the final period: like the Cavatina in the Eighth Symphony and many pages from the Ninth, it makes a unique contribution to the music of old age. The other work is in an equally problematical genre, that initiated by Beethoven's Choral Fantasia: the *Fantasia on the Old 104th* for solo piano, chorus and orchestra, which is a paean of praise in the composer's 'serviceable' manner but also contains his most distinguished piano writing. Since the piano was in general unsympathetic to him, its use here might almost be included among the instances of unlikely instruments featured in this period. There is a Romance in D♭ for harmonica, strings and piano (1951) – a markedly post-*Scott* piece written for Larry Adler – and a Concerto in F minor for bass tuba and orchestra (1954), notable for its warmly lyrical slow movement. This instrumental interest was by no means limited to soloistic possibilities; the Eighth Symphony has an important part for vibraphone, and the Ninth has a flugelhorn and three saxophones.

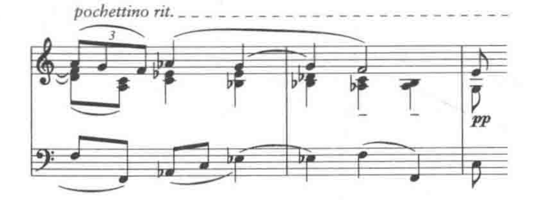
The *Sinfonia antartica* was completed in 1952. It is arguably neither sufficiently symphonic nor sufficiently programmatic, and for that reason the least successful of the mature symphonies, but is capable of making a deep

3. Autograph MS from the first movement of Vaughan Williams's Symphony no.5 in D, composed 1938–43, with the revisions of 1951 (GB-Lbl Add.50372, ff.2v, 3 and 4); the violin and viola notes, most of the clefs, and the crossed out portions are not in Vaughan Williams's hand.

impression. The opening theme, which is a kind of 'motto', reveals a synthesis of the harmonic feeling of the Sixth Symphony and the melodic aspiration of the Fifth and is thus a microcosm of the most characteristic music of the last years. In the Eighth (1953–6) and Ninth (1956–8) the post-*Scott* orientation achieves unambiguous symphonic form. The Eighth, in D minor, has a comparative lightness of heart and a capacity for humour, but these qualities are shot through with sadness and anxiety, even in the rumbustious finale; melodic allusions to Holst and Bach suggest that a thread of remembrance for the fallen of World War I, and for absent friends in general, runs through the work (see Neighbour in Frogley, C1996). The Ninth, in E minor, is a more sombre work, at once heroic and contemplative, defiant and wistfully absorbed.

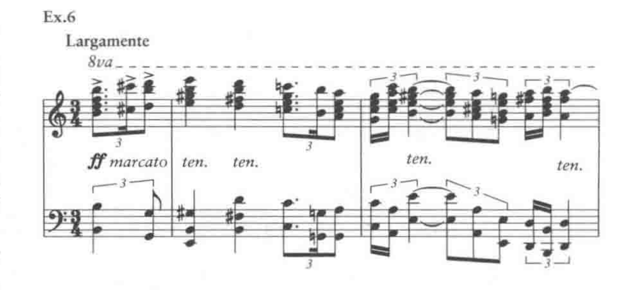


Of the other late works, the following are of special interest: the *Three Shakespeare Songs* (1951) for unaccompanied chorus, of which the second, 'The Cloud-capp'd Towers', is a memorable setting of the words associated with the Epilogue of the Sixth Symphony; *Hodie* (1953–4), a Christmas cantata (various texts) for soloists, chorus, boys' voices and orchestra, which looks back over many years but could only have been written in the 1950s; the Sonata in A minor (1954) for violin and



piano, which incorporates a theme from the early Piano Quintet in C minor (1903); and, supremely, the *Ten Blake Songs* (1957) for voice and oboe, a masterpiece of economy and precision written for the film *The Vision of William Blake*. In his last years Vaughan Williams showed more interest in the solo song than at any time since the first decade of the century; he had planned two song cycles for voice and piano, to poems by his wife, and of these the completed items were published posthumously as *Four Last Songs*. At the time of his death the composer was in the advanced stages of work on a cello concerto and on a new opera, *Thomas the Rhymer*.

All assessments of Vaughan Williams have emphasized his Englishness. This is a matter of temperament and character no less than of musical style and may be felt to have permeated everything he did. In the long run, however, more attention will be given to the specific content of his music: that is, to individuality rather than nationality. That he re-created an English musical vernacular, thereby enabling the next generation to take their nationality for granted, and did much to establish the symphony as a form of significance for the English revival is historically important; but his illumination of the human condition, especially though not exclusively in those works commonly regarded as visionary, is a unique contribution.



8. Musical language. Vaughan Williams's path to musical maturity was long and hard – not least because he rejected comfortable solutions – but by the eve of World War I he had developed one of the most distinctive musical personalities of the century. This is characterized as much by the nature of its integration and by the relationship of certain idioms to broader expressive trajectories as by any mannerisms of harmony or rhythm. In the Fantasia on a Theme by Thomas Tallis, for example, the simple juxtaposition of triads with roots a third apart and involving false relations (ex.5), superficially a Vaughan Williams 'fingerprint', is initially charged with distinctive, slow-burning energy by the sense of wondering awe created by scoring, spacing and harmonic rhythm. This suggests hidden depths which must be revealed; but contemplatively and obliquely rather than through direct dialectic. The process of revelation, impelled by sleights of modal mixture that echo the emblematic harmonies, builds to a luminous climax in which false relations are painfully intensified (ex.6): once impersonally remote and with each chord allowed time to resonate, they are now fused into an impassioned homorhythmic declamation that fleetingly transcends dualism.

Ex.5

Ex.6

This kind of ecstatic revelation and the particular way in which it is approached became the model for some of Vaughan Williams's finest creations, including the last movement of the *Pastoral Symphony* and the first and last movements of the Ninth Symphony. The aura of mystery surrounding common chords in these works is by no means arbitrary: in an age of chromatic saturation, emergent atonality and Debussyan added-note chords, pure triadic harmony could become a thing of wonder (and the climax of the Fantasia, as intense as any of Wagner's or Tchaikovsky's, does not use a single appoggiatura). Rather than expunging non-diatonic elements, Vaughan Williams reintegrated them through modally enriched diatonic means, creating a musical tension not compromised by chromatic saturation.

Such concerns underline Vaughan Williams's commitment to reinvent rather than reject the achievements of his 19th-century predecessors. This continuity with the past has frequently been obscured in the critical literature, which has tended to exaggerate the profound but by no means exclusive influence of pre-18th-century music and folksong on his style; the concept of the passionate and transcendent climax, and the confrontational dynamism of the Beethovenian symphonic tradition, however, were also important to Vaughan Williams. Even if he resisted Austro-German developmental and variation processes for their potentially mechanical or routine effect, he nevertheless embraced the sense of spiritual quest and probing exploration of contrasts that underpinned 19th-century large-scale genres (as can be gleaned from the centrality of symphony, concerto and opera to his oeuvre). For all his love of early music, as a searching agnostic with a social conscience he was in larger works drawn more to the conflict-ridden example of Beethoven than to the serene symmetries of Bach. It was surely this influence which eventually impelled him to engage with aspects of musical modernism.

The unusually intimate relationship between expression and technique in Vaughan Williams's music created the central challenge to his development, a challenge intensified by his nationality and by the cultural shockwaves of World War I: how to forge a set of materials and techniques capable of sustaining structures which both emulated the extended heroic narratives of the Austro-German repertoire, yet broke decisively with its idioms

and now hollow triumphalist ethos. The task was complicated by other elements in his make-up. Wishing to work with large canvasses, his reverence for the stanzaic 'tune' (a clear reflection of his humanistic belief in direct musical expression accessible to a wide audience) presented him with the dilemma of reconciling rounded lyrical statements with the demands of evolving large-scale structures. This challenge was compounded by his general inclination towards material of a contemplative, rather than active, character.

One strategy was to make clearly defined melody the culmination of a work, rather than its point of departure, a procedure adopted in the *Pastoral Symphony*, *Flos campi* and *Riders to the Sea*. But the success of this depended on broader techniques for creating melody-based form. These, which stand at the heart of Vaughan Williams's mature music, generate complex structures from elements that are in themselves extremely simple and easy to assimilate, and do so with apparent spontaneity and minimal recourse to traditional patterning or elaboration (such as diminution, sequence and other direct parallelism). Influenced by contemporary Russian and French music as well as native sources, Vaughan Williams developed a unique musical language based on three closely interdependent elements: the interaction – sometimes confrontation – of common-practice tonality with modality and pentatonicism; a plain and yet pliant rhythmic idiom; and a melodic discourse based on seamless extension rather than fragmentary development (see in particular Payne, C1953, and Neighbour, C1958).

Although these elements, at one level, constituted a sharp break with 19th-century models, Vaughan Williams found in them fresh ways of creating the goal-directed momentum that had sustained Classical and Romantic structures. Pentatonic and modal collections, particularly the Dorian and Mixolydian, not only offered a 'pure' alternative to post-Wagnerian chromaticism, but could also generate a rival field of ambiguities and tensions. In the wordless soprano solo of the *Pastoral Symphony* finale (ex.7), shifting inflections within a single seven-note diatonic collection suggest several different pitches as potential key centres, an uncertainty that seems to urge the music forward in search of clarification. To reinforce the tonal ambiguity of the melodic line, other kinds of restlessness are also imparted to it: the rhythmic profile, while plain and unassertive on the surface, is rendered unstable by fluctuation between duple and triple groupings of quavers and by a flurry of semiquavers. (Such disruptions are magnified elsewhere in the work as alternations of rhapsodic passages with material in a steady duple metre.) Furthermore, while the melody appears improvisatory, closer examination reveals firm overall control, especially in terms of preparing the climax on *a″*. Each phrase leading to this extends the range upwards by one pitch in the collection; gradual ascent is then matched asymmetrically by a swift post-climax descent that extends the lower end of the range, a new element which compensates for a return to the opening phrase, now transposed. Each phrase is enmeshed in the next, and literal repetition avoided until the last bar; nevertheless, overall the loose arch-structure is also shadowed by a traditional four-phrase scheme. Paradoxically, then, while it emulates the immediate impact of a self-contained tune, the melody is generated in such a way that it can be extended or compressed without violating its underlying principles of construction, and can evolve into significantly different material. While English folk-song, medieval chant and modern Franco-Russian sources have clearly influenced such 'organic' melodic structures, so has Brahmsian 'developing variation'. Interestingly, it is this kind of passage that has led to accusations of 'aimless rhapsody' in Vaughan Williams's music; clearly the idea that such music meanders ineffectually without a goal in sight could scarcely be further from the truth.

Ex.7

Typically, Vaughan Williams projects the kinds of instability inherent in ex.7 into the vertical domain of harmony and counterpoint as well. As World War I drew near, he began to explore combinations of independent melodic lines, or of melodies and harmonic backgrounds, featuring conflicting tonal or modal implications. By the early 1920s, he had begun to superimpose layers of tonally divergent material, often comprised of discrete melodic strands thickened into streams of parallel triads. This allowed simple modal figures to generate complex harmonic aggregates. In the opening bars of the *Pastoral Symphony* (ex.8), for example, the principal voices suggest a modally inflected major-minor shift at the 'Poco tranquillo'. The triadic magnification of these lines, however, blurs the harmonic interaction of upper and lower layers (bars 1–8) and introduces bitonal effects (bars 9–12). Working out the implications of these oppositions becomes central to the symphony as a whole.

While tonal superimposition was common currency by the 1920s, Vaughan Williams used it to individual ends that grew naturally from his pre-war concerns. Nevertheless, in the decade following the *Pastoral Symphony* he explored such oppositions in increasingly stark and dialectical ways, prompting inevitable comparisons with continental modernism. The fortissimo minor-9th crunch that launches the Fourth Symphony presents the fundamental dissonance of tonal music as pure linear conflict, stripped of any harmonic padding (ex.9); the outer voices grind against each other in a mostly fruitless search for resolution until the end of the symphony. A similar gesture is taken up in the Sixth Symphony, and even the gentler Fifth opens unhesitatingly with a tritone framing its quiet harmonic question.

Harmonic propositions of this kind underline the consistency of expressive purpose in Vaughan Williams's music, however much its terms were distilled, diversified and qualified over the years. Implicit dualism is already apparent in the two-chord progression from *A Sea Symphony* (see ex.2), but does not become a disruptive force there; by the Fourth Symphony, however, it has been drawn out and collapsed into a form, the polarities of which cannot co-exist without dialectical confrontation. Whatever spiritual or philosophical significance

attributed to such oppositions, they are a central feature of Vaughan Williams's entire oeuvre.

The impressive variety of contrasts that Vaughan Williams commanded during his career owed much to the diverse range of styles and materials he mastered from the mid-1920s onwards – partly through experimentation and partly through continental influences, the most important of whom was Bartók. (Holst was important as a conduit for continental developments as well as through direct influence.) In terms of pitch organization, Vaughan Williams incorporated chromatic elements within individual modal or gapped constructions as well as through polymodality and parallel harmonic motion. Octanic and hexatonic collections are introduced during this period; the so-called Lydian minor scale (e.g. C-D-E-F♯-G-A♭-B♭) makes its first appearance in *Sancta Civitas* and was used frequently in the composer's final decade. Such materials normalize chromatic elements without invoking their expressively charged functions as leading notes or appoggiaturas (although these are still available when required). Other anti-Romantic features of the inter-war music include the doubling of melodic strands at the bare fourth or fifth; quartal structures may also play a melodic role.

A new tendency for sparse textures reflected Vaughan Williams's interest in the neo-classical movement (though he had loved Bach well before the 1920s made it fashionable). Baroque motor rhythms furnished an energy that was well-suited to his new harmonic concerns and an emotionally neutral quality that added a dimension to his expressive gamut; both qualities were exploited in the openings of the violin and piano concertos. Neo-classical concerns may have also suggested the dance and march parodies notable in *Job*, the final movement of the Piano Concerto (an angular chromatic waltz), the scherzos of the symphonies from the Fourth onwards, the finale of the Fourth, the 'Homage to Henry Hall' from the Partita and parts of *The Pilgrim's Progress*, although such music tends to evoke Mahler and Shostakovich rather than Stravinsky or Milhaud.

In his final decade, Vaughan Williams extended his expressive resources further with a new approach to timbre. This not only involved experimentation with unusual instruments and combinations, but also the use of timbre and texture as a primary means of articulating structure (such as in the third movement of the *Sinfonia antartica*), an approach facilitated by the submergence of through-composed trajectories under fragmented, modular surfaces of sharp juxtapositions. Yet fragmentation at one level was offset by the motivic and harmonic interpenetration of contrasting ideas in a subtler and deeper fashion than ever before: the starkly opposed dualisms of the works of the 1930s and 40s are now shown to be formed of cognate terms, and paradox and ambivalence predominate at almost every level. The most impressive achievement of the period, and the last

completed major work, is the Ninth Symphony. Both outer movements employ highly original structures – the carefully graded and layered engineering of rhythmic momentum in the first movement is especially striking – and the work offers one of Vaughan Williams's most impressive essays in finely balanced tonal and modal ambiguities. Ex.10, taken from the finale, is typical of the

Ex.10

late works in its Janus-faced, light-dark reiteration of a cadential formula.

Nearly all commentators have stressed the centrality of British models in shaping Vaughan Williams's development. Indeed, it has been implied that he was technically unable to master the challenges of the more 'progressive' foreign music of his day. While it is true that folksong and early English music provided a strong impetus on certain fronts, not least as a model of flexible contrapuntal technique and a fund of modal resources, the impact of these influences can be easily over-estimated. A general emphasis on British sources has fostered the myth of a lone, rather amateurish figure almost entirely cut off from continental developments. Yet Vaughan Williams's early works show him well able to learn from the dominant continental composers of the day – Brahms, Wagner, Tchaikovsky and Verdi among others – and from Parry, Stanford and Elgar; he was one of the first British composers to assimilate successfullly the influence of Ravel and Debussey; and later he responded to Bartók, Stravinsky and Sibelius, and even, at the end of his life, to the young Britten. He was, in fact, a composer of great originality who was nevertheless perennially curious about the music of others.

9. RECEPTION AND INFLUENCE. Vaughan William's place in the repertory now appears secure, fixed by a number of the symphonies and smaller-scale orchestral works, and by vocal music, particularly for amateurs. For a long time his reputation was inextricably enmeshed with the degree to which his art and life were deemed to reflect narrowly English concerns and influences. Specifically, a perceived association with the trope of Englishness dominant during the inter-war years – conservative, agrarian, insular and emotionally undemonstrative – made him a natural musical target for the wider post-1945 reaction against this national self-image. Although a more balanced picture is emerging, stressing the multi-faceted and at times subversive character of Vaughan Williams's nationalism, echoes of old polemics still revererate. Nevertheless, if the critical pendulum has swung back and forth, tallies of performances, broadcasts and recordings have always remained healthy, even if sustained during some periods more by amateur, semi-professional and provincial groups than by first-rank ensembles.

A bifurcation between critical and popular reception was evident early in the composer's career, but here the poles were reversed. As early as 1903 and 1904 the composer received enthusiastic critical notices – from influential figures such as Edwin Evans and William Barclay Squire – that already singled him out from the rest of his generation; and in 1907 the première of *Toward the Unknown Region* established a definite landmark for his growing reputation. Yet broader appreciation came only slowly. Even 'Linden Lea' (1901), probably Vaughan Williams's most widely performed piece, did not become a standard until the 1920s; the Tallis Fantasia, eventually played internationally, was not an immediate success. In the pre-war period, it was rather *A London Symphony* that finally confirmed him as the leading English composer of his generation. Here for the first time nationalism became as significant issue in his reception: the 'London' set the stage for the 1920s and the formation of enduring facets of Vaughan Williams's image. Paramount was that of the nature mystic, and here another symphony, the *Pastoral*, served as a focal point. Among supporters and detractors alike, the reception of his work established much of the misguided rhetoric surrounding the so-called 'cowpat' school; the true character of this haunted symphony, conceived on the battlefields of France, was almost buried under facile quips about cows, sheep and farmers.

For much of his career, but especially in the inter-war years, Vaughan Williams enjoyed the mixed blessing of being closely associated with key elements in the emerging musical establishment, including the RCM, Oxford and Cambridge, *The Times* and, perhaps most importantly of all, the BBC (although he used these connections as often to benefit other composers, including the young and relatively unknown, as himself). He was well served by publishers; here the key relationship was that begun in 1924 with Oxford University Press. In contrast with broadcasting, the gramophone industry did not figure largely in his career (comparison with Elgar and Britten here is instructive): he conducted just two discs of his own music, and was not generally well represented in the catalogue until after World War II. But another medium – the cinema – became important to him, bringing his music before a new mass audience from the early 1940s on.

During this decade the Fifth and Sixth Symphonies also reached a large public, as well as finding critical favour. But by the 1950s the cool critical reception of the last three symphonies foreshadowed the slump that would follow the composer's death; *The Pilgrim's Progress* also failed to convince, and the achieved simplicity of *Hodie* was misconstrued as 'damaging primitivity' (Mitchell, C1954–5). A common charge was that of insularity; ironically, during this same period Vaughan Williams's reputation in the United States was at its zenith (other evidence refuting the idea that his music cannot be exported includes a strong tally of performances in continental Europe during his lifetime, and recent interest in his music in Russia and Germany). Aware of Vaughan Williams since just after World War I, by the 1950s American audiences placed him in the same category as Prokofiev, Hindemith and Sibelius, and conductors such as Szell and Mitropoulos competed fiercely for premières; his influence is plain to hear in works by Hovhaness, Hanson, Schuman and others.

Vaughan Williams's impact on British composers was strongest between the wars. Although reinforced by his teaching, it was not limited to official pupils; this is clear from the music of Howells, Finzi and Rubbra, as well as

certain works by Tippett and Britten. His influence on art music faded in the radical environment of the 1960s, but church music remained susceptible, along with film and television scores. Both his and Holst's impact on grass-roots musical culture can be detected in the confluence of folk-like melody and modal harmony notable in the later music of the Beatles and subsequent progressive rock. The waning of his influence in art music was exacerbated by a global trend away from tonal and large-scale symphonic music towards atonal modernism. Inevitably this affected musicological interest as well as performance and composition, and after the official life and works studies were published in the mid-1960s little else appeared for two decades; although the USA generated some academic dissertations, few constituted primary research, and the virtually complete absence of such studies in the UK is striking. Yet with the decline of hard-line modernism in the wider musical world, and the growing popularity of contemplative tonal music by Tavener, Górecki and others, Vaughan Williams's fortunes have begun to rise once again. The mid-1980s saw a surge in new research projects, live performances and recordings, and in 1994 the Ralph Vaughan Williams Society was founded.

WORKS

for a complete list including juvenilia, sketches, incomplete works and arrangements, see Kennedy (A1982, rev. 2/1996)

Dates given are of main period of composition

STAGE

The Shepherds of the Delectable Mountains (pastoral episode, 1, Vaughan Williams, after J. Bunyan), 1921; London, RCM, 11 July 1922; incl. in The Pilgrim's Progress
Old King Cole (ballet), chorus and orch, 1923; Cambridge, Trinity College, 5 June 1923
Hugh the Drover, or Love in the Stocks (romantic ballad op, 2, H. Child), 1910–14, last rev. 1956; London, His Majesty's, 14 July 1924
On Christmas Night (masque with dancing, singing and miming, A. Bolm and Vaughan Williams, after C. Dickens), 1926; Chicago, Eighth Street, 26 Dec 1926
Sir John in Love (op, 4, Vaughan Williams, after W. Shakespeare), 1924–8; London, RCM, 21 March 1929
Job (masque for dancing, G. Keynes and G. Raverat, after W. Blake), 1927–30; London, Cambridge, 5 July 1931
The Poisoned Kiss (romantic extravaganza, 3, E. Sharp, after R. Garnett), 1927–9, last rev. 1956–7; Cambridge, Arts, 12 May 1936
Riders to the Sea (op, 1, Vaughan Williams, after J.M. Synge), 1925–32; London, RCM, 1 Dec 1937
The Bridal Day (masque, U. Wood, after E. Spenser), 1938–9, rev. 1952–3; BBC TV, 5 June 1953
The Pilgrim's Progress (morality, 4, Vaughan Williams, after Bunyan etc), completed 1949, rev. 1951–2; London, Covent Garden, 26 April 1951

ORCHESTRAL AND BAND

for orchestra unless otherwise stated

Fantasia, pf, orch, 1896–1902, rev. 1904, unpubd
Serenade, a, 1898, unpubd
Bucolic Suite, 1900, unpubd
Heroic Elegy and Triumphal Epilogue, 1900–1, rev. 1902, unpubd
Symphonic Rhapsody, 1901–3, destroyed
The Solent, impression, 1903, unpubd
Boldre Wood, impression, ?1904–7, lost
Harnham Down, impression, 1904–7, unpubd
In the Fen Country, sym. impression, 1904, last rev. 1935
Norfolk Rhapsody no.1, 1905–6
Norfolk Rhapsody no.2, 1906, unpubd
Norfolk Rhapsody no.3, 1906, lost
March Past of the Kitchen Utensils, 1909
The Wasps, Aristophanic suite, incl. ov., 1909 [from incidental music]
Fantasia on a Theme by Thomas Tallis, 2 str orch, 1910, last rev. 1919
Fantasia on English Folk Songs, 1910, lost
A London Symphony (no.2), 1911–13, main rev. 1918, last rev. 1933
The Lark Ascending, romance, vn, orch, 1914, rev. 1920
Pastoral Symphony (no.3), completed 1921
English Folk Song Suite, military band, 1923
Sea Songs, march, military/brass band, 1923
Concerto (Concerto accademico), d, vn, str, 1924–5
Toccata marziale, military band, 1924
Flos campi, suite, small SATB chorus, va, small orch, 1925
Piano Concerto, C, 1926–31
Fantasia on Sussex Folk Tunes, vc, orch, 1929, unpubd
Job, concert version of ballet, 1930
Prelude and Fugue, c, 1930 [arr. of org work, 1921]
Symphony no.4, f, 1931–4
The Running Set, 1933
Fantasia on Greensleeves, 1/2 fl, harp, str, 1934 [arr. R. Greaves from Sir John in Love]
Suite, va, small orch, 1934
2 Hymn-tune Preludes, small orch, 1936
Symphony no.5, D, 1938–43, rev. 1951
Serenade to Music, arr. orch 1939
5 Variants of 'Dives and Lazarus', str, hp(s), 1939
The Story of a Flemish Farm, suite, 1943 [suite from film]
Concerto, a, ob, str, 1944
Symphony no.6, e, 1944–7, rev. 1950
Partita, 2 str orch, 1946–8 [from Double Trio, 1938]
Sinfonia antartica (no.7), S, small SSA chorus, orch, 1949–52
Concerto grosso, str in 3 groups, 1950
Romance, D♭, harmonica, str, pf, 1951
Prelude on an Old Carol Tune, 1953 [based on incid music to The Mayor of Casterbridge]
Bass Tuba Concerto, f, 1954
Prelude on 3 Welsh Hymn Tunes, brass band, 1955
Symphony no.8, d, 1953–6
Symphony no.9, e, 1956–8
Flourish for Glorious John [Barbirolli], 1957, unpubd
Variations, brass band, 1957

VOCAL ORCHESTRAL

Mass, S, A, T, B, SSAATTBB, orch, 1897–9, unpubd
The Garden of Prosperine (Swinburne), S, SATB, orch, 1897/8–9
A Sea Symphony (no.1) (W. Whitman), S, Bar, SATB, orch, 1903–9, last rev. 1923
Toward the Unknown Region (Whitman), SATB, orch, 1904/5–6
3 Nocturnes (Whitman), Bar, semi-chorus, orch, 1908, unpubd
Willow-Wood (cant., D.G. Rossetti), Bar/Mez, female chorus, orch, 1908–9 [after version for 1v, pf]
5 Mystical Songs (G. Herbert), Bar, SATB, orch, 1911
Fantasia on Christmas Carols, Bar, SATB, orch, 1912
4 Hymns (J. Taylor, I. Watts, R. Crashaw, R. Bridges), T, va, str, 1914
Lord, Thou hast been our Refuge (Ps xc), motet, SATB, semi-chorus, orch/org, 1921
Let us now praise famous men (Bible: *Ecclesiasticus*), unison chorus, pf/org/ small orch, 1923
On Wenlock Edge (A.E. Housman), T, orch, arr. *c*1923
Sancta civitas (orat, Bible: *Revelation* etc.), T, Bar, SATB, semi-chorus, distant chorus, orch, 1923–5
Darest thou now, o Soul (Whitman), unison chorus, pf/str, 1925
Te Deum, G, SATB, org/orch, 1928
Benedicite (Apocrypha, J. Austin), S, SATB, orch, 1929
3 Children's Songs for a Spring Festival (F.M. Farrer), unison chorus, str, 1929
3 Choral Hymns (M. Coverdale), Bar/T, SATB, orch, 1929
Psalm c, SATB, orch, 1929
In Windsor Forest (cant., Shakespeare), SATB, orch, 1930 [based on Sir John in Love]
Magnificat, A, SA, fl, orch, 1932
5 Tudor Portraits (J. Skelton), choral suite, A/Mez, Bar, SATB, orch, 1935
Dona nobis pacem (cant., Whitman etc), S, Bar, SATB, orch, 1936
Nothing is Here for Tears (J. Milton), choral song, unison chorus/ SATB, pf/org/orch, 1936
Festival Te Deum, SATB, org/orch, 1937
Flourish for a Coronation (various), SATB, orch, 1937
All Hail the Power, hymn, arr. unison chorus, SATB, org/orch, 1938
Serenade to Music (Shakespeare), (4S, 4A, 4T, 4B)/(S, A, T, B, SATB), orch, 1938

6 Choral Songs, to be Sung in Time of War (P.B. Shelley), unison chorus, pf/orch, 1940
England, my England (W.E. Henley), choral song, Bar, SSAATTBB, unison chorus, orch/pf, 1941
A Song of Thanksgiving (various), spkr, S, SATB, orch, 1944
An Oxford Elegy (M. Arnold), spkr, small SATB chorus, small orch, 1947–9
The Voice out of the Whirlwind (Bible: *Job*), motet, SATB, org/orch, 1947
Fantasia (quasi variazione) on the Old 104th (Pss), pf, SATB, orch, 1949
Folksongs of the Four Seasons (cant.), SSAA, orch, 1949
The Sons of Light (cant., U. Wood), SATB, orch, 1950
Sun, Moon, Stars and Man (Wood), song cycl, unison chorus, str/pf, 1950 [based on The Sons of Light]
Hodie (This Day) (Christmas cant., various), S, T, Bar, SATB, boys' chorus, orch, 1953–4
The Old Hundredth Psalm Tune, arr. SATB, unison chorus, orch, org, 1953
Epithalamion (cant., E. Spenser), Bar, SATB, small orch, 1957 [based on The Bridal Day]
The First Nowell (S. Pakenham), nativity play, solo vv, SATB, small orch, 1958, completed Douglas

See ORCHESTRAL AND BAND for works with wordless chorus

OTHER CHORAL WORKS

with org/pf

Sound Sleep (C. Rossetti), SSA, pf, 1903
O clap your hands (Ps xlvii), motet, SATB, brass, org, 1920
A Farmer's Son so Sweet (trad.), arr. TBB, pf, 1921
The Seeds of Love (trad.), arr. TBB, pf, 1923
Magnificat and Nunc dimittis (The Village Service), SATB, org, 1925
An Acre of Land (trad.), arr. TTBB, pf, ?1934
O how amiable (Pss lxxxiv, xc), anthem, SATB, org. 1934)
The Pilgrim Pavement (B. Partridge), hymn, S, SATB, org, 1934
The Ploughman (trad.), arr. TTBB, pf, ?1934
Morning, Communion and Evening Services, d, unison chorus, SATB, org, ?1939
9 Motets, ?1941, lost: All nations whom thou hast made shall come; Be strong all ye people of the land; I heard a voice from heaven saying unto me; Jesus said, Inasmuch as ye did unto one; Jesus said, Upon this rock will I build my church; Nations shall come to thy light; Jesus said, Blessed are they that mourn; There were great voices in Heaven saying; Thou wilt keep him in perfect peace
The Airman's Hymn (E.G. Lytton), unison chorus, pf/org, 1942
O Taste and See (Pss), motet, SATB, org, 1952
A Choral Flourish (Pss), SATB, org/2 tpt, 1956
A Vision of Aeroplanes (N. Ezekiel), motet, SATB, org, 1956

unaccompanied

3 Elizabethan Songs, partsongs, SATB, ?1891–6: Sweet Day (G. Herbert), The Willow Song, O Mistress mine (Shakespeare)
Come Away Death (Shakespeare), partsong, SSATB, early
Rest (C. Rossetti), partsong, SSATB, 1902
Ring out your bells (P. Sidney), madrigal, SSATB, 1902
Fain would I change that note (anon.), canzonet, SATB, 1907
Love is a sickness (ballet, S. Daniel), SATB, 1913
O Praise the Lord of Heaven (Ps cxlviii), anthem, SSAATTBB, semi-chorus, 1913
Mass, g, S, A, T, B, SSAATTBB, 1920–21
O vos omnes, motet, A, SSAATTBB, 1922
I'll never love thee more (S. Graham), SATB, 1934
Valiant for Truth (Bunyan), motet, SATB, org/pf ad lib, 1940
A Call to the Free Nations (Briggs), SATB/unison chorus, 1941
The Souls of the Righteous (Bible: *Solomon*), motet, S, T, Bar, SATB, 1947
Prayer to the Father of Heaven (Skelton), motet, SATB, 1948
3 Shakespeare Songs, SATB, 1951: Full Fathom Five, The Cloud-capp'd Towers, Over Hill, Over Dale
Silence and Music (U. Vaughan Williams), SATB, 1953
Heart's Music (T. Campion), SATB, 1954
Song for a Spring Festival (U. Vaughan Williams), SATB, 1955

arrangements of English folksongs unless otherwise stated

Bushes and Briars, TTBB/SATB, 1908
The Jolly Ploughboy, TTBB, 1908
Alister McAlpine's Lament (Scottish trad.), SATB., 1912
Down Among the Dead Men, TTBB, 1912
Mannin Veen (Manx trad.), SATB, 1912
Ward the Pirate, TTBB, 1912
The Winter is Gone, TTBB, 1912
5 English Folksongs, SATB, 1913: The Dark-eyed Sailor, The Springtime of the Year, Just as the Tide was Flowing, The Lover's Ghost, Wassail Song
The Farmer's Boy, TTBB, 1921
Loch Lomond (Scottish trad.), Bar, TTBB, 1921
The Mermaid, S, SATB, 1921

HUGH OTTAWAY/ALAIN FROGLEY (1–7); ALAIN FROGLEY (8–9, work-list, bibliography)

Vaughan Williams Memorial Library. Library of the ENGLISH FOLK DANCE AND SONG SOCIETY.

Vautor, Thomas (*fl* 1600–20). English composer. His only extant works are contained in his single madrigal volume, *The First Set, beeing Songs of Divers Ayres and Natures, of Five and Sixe Parts, Apt for Vyols and Voyces* (London, 1619/20; ed. in EM., xxxiv, 1924, 2/1958), dedicated to George Villiers, the notorious Duke of Buckingham. Vautor was already in the service of the elder George Villiers and his wife when the future Buckingham (*b* 1592) was still very young. At that time the family lived at Brooksby in Leicestershire, but after the elder Villiers's death in 1606 his widow remarried and moved with her sons to Goadby. On 4 July 1616 Vautor was admitted BMus of Oxford through Lincoln College.

Vautor is one of the most interesting of the lesser-known English composers of his time. Some pieces in his volume evidently date back to the 1590s, and his work is notable for its range. Among the last works to be written were the two elegies, *Melpomene bewaile* for Prince Henry (*d* 1612), and *Weepe, weepe, mine eyes* for Sir Thomas Beaumont (*d* 1614). Paradoxically the style of these grave viol-accompanied duets is the most old-fashioned in the collection, though the concluding chorus of the former switches easily to a madrigalian manner. The three balletts which open the volume are modelled on those of Morley and Weelkes, and elsewhere Vautor resembles the latter in his occasional use of musical repetition, usually at the suggestion of a verbal repetition, as a means of clarifying the musical structure. Wilbye's influence may be detected in certain of Vautor's sequential practices, and perhaps in certain features of his scoring. Despite the style of Vautor's elegies, his essential remoteness from the more native English tradition is underlined by a comparison of Gibbons's noble setting of *Daintie fine bird*, a translation from Guarini, with Vautor's related, but more text-dominated treatment of another translation of the same text, *Dainty sweet bird*. Vautor's greatest strength lay in his ability for fashioning broader, more contrapuntal paragraphs reinforced with sturdy, sometimes very expressive dissonances. This quality is most admirably displayed in certain of his more serious madrigals, such as *Fairest are the words, Cruell madam* and *Sweet thiefe*. For Sidney's sonnet, *Locke up faire lids*, Vautor ventures into chromaticism, partly to underline dramatically the words 'strange dream', but at the opening of the concluding sestet integrating the device into a broad paragraph with deeply expressive effect.

Vautor's aptitude for a lighter type of madrigalian expression is best displayed in *Sweet Suffolke owle*. The rapid declamation and enthusiastic musical representation of textual details have infectious wit, yet the piece is haunted by a shadowy, melancholy quality which transforms it into one of the most individual of English madrigals. *Shepheards and nymphs* belongs to the family of posthumous Oriana madrigals, with the conclusion altered from 'Long live fair Oriana' to 'Farewell, fair Oriana'.

DAVID BROWN

Vautrollier, Thomas (*d* 1587). English printer, publisher and bookseller of French birth. He was a Huguenot refugee who settled in London (*c*1562) and worked in London and Edinburgh. He ran a general printing and publishing business, and in 1570 he published an English edition of Lassus's *Recueil du mellange*. He also printed in 1575 the *Cantiones sacrae* of Tallis and Byrd (*see* PRINTING AND PUBLISHING OF MUSIC, fig.8), the first work published under the terms of a music-printing monopoly granted to the two composers by Elizabeth I. Neither the quality of the music nor the high standard of the printing stopped the venture from being a failure and Vautrollier printed no more music under this licence, although he printed two psalm books in 1587, which were exempt from the monopoly. His type was almost certainly acquired from the Netherlands, and on his death his partbook fount passed to Thomas East. A street was named after Vautrollier in the Blackfriars district of the City of London.

Vaziri, Ali Naqi (*b* 1887; *d* 1979). Iranian teacher, composer, conductor and writer. He began music lessons at the age of 15, learning the *tār* and the violin with prominent masters in Tehran including Darvish Khan (1872–1926) and Aqa Hossein Qoli (*c*1851–1915). In 1918 Vaziri travelled to Europe to continue his musical

studies. He spent three years in Paris and two years in Berlin studying harmony, theory, composition, counterpoint, piano and singing. On his return from Europe in 1923 he became principal of the Madresseh-ye Āli-e Musiqi, the first music school in Iran, and subsequently devoted much of his time to developing and expanding the provision of music education in Iran. Several of his pupils became prominent musicians.

In order to make performances of classical music more widely available, Vaziri organized and conducted public concerts featuring orchestras of Iranian instruments. In his arrangements of traditional melodies and his own compositions he used western classical-style harmonies which had not previously been heard in Iranian music; he believed that Iranian music needed to adopt some elements of European music in order to survive in the 20th century. Staff notation had been introduced to Iran by Europeans in the 19th century, but Vaziri was the first Iranian to advocate its wider use within the classical tradition. His *Dastur-e tār* (1913) included materials from the teaching repertory (*radif*) of Mirza Abdollah (1843–1918), technical exercises, Vaziri's own compositions and extracts from pieces by European composers such as Schubert, Beethoven and Rossini. In this and in *Dastur-e violon* (1933) Vaziri introduced terms and symbols for the *koron* and *sori* pitches of Iranian music, and these have become standard within the tradition.

Vaziri's westward-looking stance was typical of the prevailing attitude in the early and middle years of the 20th century when European music was regarded as more 'scientifically' grounded than Iranian music (*see* IRAN, §I, 2). His significance lies in the diversity of his work and in his endeavours to revitalise Iranian music; he has had a lasting influence on many aspects of musical life in Iran in the 20th century.

LAUDAN NOOSHIN

Vázquez, Alida (*b* Mexico City, *c*1931). American composer of Mexican birth. She attended the Conservatorio Nacional de Música, 1941–7, studying the piano with Esperanza Cruz de Vasconcelos and theory with Julián Carrillo. In the next year she moved to New York City, where the Diller-Quaile Music School gave her a scholarship; she also studied with Mario Davidovsky at City College. In 1959 she enrolled in the Columbia University School of Journalism, but from 1960 worked as a music therapist and from 1976 taught in the Bank Street College of Education. Her compositions include numerous solo and chamber works, song cycles (*Acuarelas de México*, 1970), electronic music for dance and electro-acoustic works (*Electronic Moods and Piano Sounds*, 1977). Her works are notable for their rhythmic energy, for example, the *Pieza para clarinete y piano* (1971) and the *Música para siete instrumentos* (1974). Vázquez's principal publisher is See-Saw Music (New York).

ROBERT STEVENSON

Vázquez, Juan. *See* VÁSQUEZ, JUAN.

Vaz Rego, Pedro. *See* REGO, PEDRO VAZ.

Veale, John (*b* Shortlands, Kent, 15 June 1922). English composer. His great-uncle was the composer Cyril Rootham. He read modern history at Oxford University (1939–41) and studied music with Wellesz (1940–42, 1947–8) and with Sir Thomas Armstrong. A USA Commonwealth Fellowship (1949–51) enabled him to study with Sessions and Roy Harris. His *Panorama* was conducted by Boult at the Malvern Festival of 1951 and Barbirolli conducted the première of the Symphony no.1 at the 1952 Cheltenham Festival. He was a junior research fellow at Oxford (1951–3). For 15 years he was film correspondent for the *Oxford Mail* and has himself written many film scores. His music is tonal and may show an indebtedness to the mystic and modal styles of Vaughan Williams. He has a gift for colour and orchestral texture, seen in *Kubla Khan*, a work that marries the indigenous atmosphere of the East with the English choral tradition. *Song of Radha* is an erotic love-poem of Indian origin. The *Demos Variations* and the Violin Concerto have both had successful premières.

DAVID C.F. WRIGHT

Veana, Matías Juan de (*b* ?Játiva, Valencia, *c*1656; *d* ?Madrid, after 1707). Spanish composer. In 1680 he competed unsuccessfully for the position of *maestro de capilla* at Palencia Cathedral. He was *maestro* of Madrid's royal convent of Descalzas between 1683 (at the latest) and 1686, and by 1692 he was *maestro* at the Convento de la Encarnación in the city. In that year Juan de Uruela, an Encarnación tenor, wrote a letter nominating Veana for *maestro de capilla* at Palencia Cathedral. Uruela stated that Veana was 36 years old, was then assisting his family in Játiva and had previously been employed in a cathedral. Veana accepted the Palencia position but left in 1693 when he failed to secure a benefice, returning to the Encarnación as *maestro*. He was there until at least 1708, when he was succeeded by Francisco Hernández Pla.

Confusion exists between Veana and Matías Ruiz, identified as *maestro* at the Encarnación in a 1702 publication, but works ascribed to both men exist in many archives and it appears they were different persons.

Veana was important in Madrid's musical circles, but should probably be regarded as less eminent than Sebastián Durón and Juan Hidalgo because his works are not as widely distributed. Latin pieces by Veana survive, but obviously his villancicos were more highly prized by his contemporaries, since they are extant in a number of archives in Spain and Guatemala. Veana wrote many fine polychoral villancicos, including *El juego del soldado* (*E-E*). An effective Corpus Christi villancico is the four-part *Ay dulce laberinto* (*E-MO*), a gentle but intense work including notable textural variety and special rhetorical devices in the *estribillo*. A humorous Christmas villancico is *El sacristán de Belén* (Laird, 1986, ii, pp.193–226) for six-part chorus and continuo.

WORKS

MSS in *E-Bc, E, Mn, MO, PAc, SA, SE, V, VAc, Zs; GCA-Gc*

Mass, Sapientia aedificavit, 8vv; other masses, 8vv, 12vv

Pss, 8vv: Beatus vir qui timet Dominum; Dixit Dominus; Laetatus sum; Laudate Dominum

7 hymns, 7vv; Mag, 8vv; Lesson for the Dead, 8vv; 2 Salve regina, 8vv; several motets, 7vv

Over 65 villancicos, 4–12vv, mostly for Christmas, Epiphany, Corpus Christi and St Augustine

PAUL R. LAIRD

Veasey, Josephine (*b* Peckham, London, 10 July 1930). English mezzo-soprano. She studied with Audrey Langford and in 1949 joined the Covent Garden chorus, returning in 1955, after a spell with Opera for All, to make her solo début as Cherubino. Later roles included Magdalene, Rosina, Marina, Dorabella, Carmen, Waltraute, Fricka, Amneris, Preziosilla, Berlioz's Dido and Cassandra, Eboli, the title role of *Iphigénie en Aulide*, Brangäne, Venus and the Emperor in the première of Henze's *We Come to the River* (1976). She first appeared at Glyndebourne in 1957 as Zulma (*L'italiana in Algeri*), then sang Cherubino, Clarice (Rossini's *La pietra del paragone*), Octavian and Charlotte. She sang Fricka (*Das Rheingold*) at the Salzburg Easter Festival (later recording the role with Karajan) and for her Metropolitan début in 1968. Having made her Paris Opéra début in 1969 as Dido, she returned for Kundry in 1973, then sang Eboli in San Francisco. In 1980 she sang Gertrude (*Hamlet*) at Buxton and in 1982 made her final appearance, at Covent Garden, as Herodias. On the concert platform Veasey was a noted soloist in Verdi's Requiem (which she recorded under Bernstein) and the works of Berlioz. She had a rich, vibrant voice of wide range and dramatic power, highly effective in roles such as Berlioz's Dido, which she recorded for Colin Davis.

ALAN BLYTH

Vecchi, Giuseppe (*b* S Giovanni in Persiceto, Bologna, 26 Nov 1912). Italian musicologist. He studied musicology at the University of Bologna (graduated 1939), specializing in medieval and early Renaissance music, and also took a degree in philosophy (1942). On the basis of a thorough study of medieval texts and their settings (sequences, tropes, organa, hymns etc.) he became *libero docente* in medieval Latin literature (1951) and in music palaeography (1955). He was appointed lecturer in music history at the Catholic University of Milan (1955) and at the University of Bologna (1958), where he also held the chairs of medieval Latin literature (from 1957) and music history (from 1970).

Vecchi's research is characterized by patient and logical investigation of both the music under examination and the circumstances that produced it. His studies, mainly of medieval music, are also informed by his thorough grounding in the classics, philosophy and the liturgy. For example his *Uffici drammatici della chiesa padovana* (1954), a critical edition of the dramatic texts and music, contains a description of the specific Paduan liturgy and processions to which they belong as well as a discussion of the individual roles and participants. He has shed new light on the much discussed terms 'Classical' and 'Baroque', traced sources of early polyphony in Italy (e.g. his study of the Aosta manuscript of *planus contrapunctus*, 1973), and examined the musical rapport between Italy and Poland. He has also written a series of articles on the librettos of Verdi. His writings have been collected and published in a multi-volume book *Dulce melos* (1972–96). The Festschrift *Contributi e studi di liturgia e musica nella regione padana* (Bologna, 1972) was published to mark his contributions to the study of medieval music. In addition to his own research in musicology, Vecchi has encouraged the development of the discipline in Italy in several concrete ways. At his university he has organized and directed both the Scuola di Perfezionamento (recognized by the Ministry of Education 1966) and the Istituto di Studi Musicali e Teatrali; he also founded (1965) and has edited the medieval music journal *Quadrivium* as well as the series Bibliotheca Musica Bononiensis (an enormous series of reprints and new editions of music studies), Medium Aevum and Antico Teatro Italiano. Vecchi was a member of the Accademia Filarmonica of Bologna (as archivist-librarian) and the Italian representative on the ISCM council (1977–87). He was awarded an honorary doctorate from the University of Warsaw in 1989.

L. Callegari Hill, ed.: *Sodalium voces* (Poznań and Bologna, 1983) [section on music dedicated to Vecchi]
I. Cavallini, ed.: *Studi in onore di Giuseppe Vecchi* (Modena, 1989) [incl. list of writings, 267–73]

CAROLYN GIANTURCO/TERESA M. GIALDRONI

Vecchi, Lorenzo (*b* Bologna, before 1564; *d* Bologna, 3 March 1628). Italian composer. As a young boy he attended the school attached to Bologna Cathedral, where he studied grammar and music and was eventually ordained. He was appointed chaplain at the cathedral in 1589 and he was made a *mansionario* (beneficed chaplain) and a member of the *cappella musicale*. He was appointed *maestro di cappella* on 30 April 1599, with a monthly wage of 7 lire; this amount was raised to 9 lire on 4 April 1603 'pro eius benemeritis'. The cathedral records show that during his career he was highly esteemed by his employers and contemporaries, for both his personal virtues and his musical talents. He dedicated a set of masses to the chapter in 1605 and on 4 November of that year received the sum of 120 lire in recognition of his skills. After Vecchi had served for many years, his pupil Domenico Brunetti was appointed by the chapter as his coadjutor, beginning on 26 October 1618. On 31 December Vecchi was assigned an annual pension of 24 lire, which he evidently received until his death.

His masses for eight voices (Venice, 1605) are based on plainchant cantus firmi: the *Missa 'Ecce sacerdos'* on the antiphon of that name, the *Missa apostolis* on Kyrie IV (*Cunctipotens genitor Deus*), and the *Missa pro defunctis* on various incipits from the Requiem Mass, which are intoned by the tenor. The fourth mass, a *Missa sine*

nomine, is a parody mass based on an unknown source, containing a canon in unison as its 'Agnus Secundus'. All his masses are in a conservative antiphonal style with full passages at the close of phrases and sections. A canon based on the antiphon *Ecce sacerdos* ends the collection. Two of his madrigals, for five voices, are printed in *Le gemme* (RISM 1590[13], inc.).

ANNE SCHNOEBELEN

Vecchi, Orazio [Horatio] **(Tiberio)** (*b* Modena, bap. 6 Dec 1550; *d* Modena, 19 Feb 1605). Italian composer. He is known mainly for his entertainment music, of which the madrigal comedy *L'Amfiparnaso* is his best-known work; his sense of drama and contrast made him a pioneer of dramatic music in the 16th century.

1. LIFE. Vecchi received his ecclesiastical education from the Benedictines of S Pietro in Modena, and his musical training from the Servite monk Salvatore Essenga, who included a madrigal by Vecchi in his *Primo libro di madrigali a quattro voci* (RISM 1566[8]). At some point during the next 11 years Vecchi took holy orders. He accompanied Count Baldassare Rangoni to Brescia in 1577 and to Bergamo in 1578. It is evident that by the time of his first publications he was well established in Venetian circles, since in 1579 he joined Andrea Gabrieli, Claudio Merulo and others in writing a sestina in honour of the marriage of the Venetian Bianca Capello and Grand Duke Francesco de' Medici, which was published in *Trionfo di musica* (1579[3]). The same year, the Venetian publisher Gardano published Vecchi's first book of motets, the *Mottetti a otto voci*. He accepted the appointment of *maestro di cappella* of Salò Cathedral on 9 April 1581 but left on 24 June 1584 to assume the duties of *maestro di cappella* at Modena Cathedral. (It was at this time that he began to use the spelling 'Horatio' rather than the Italian form 'Orazio'.) Meagre finances and heavy family responsibilities persuaded him to accept a better position as *maestro di cappella* at the cathedral of Reggio nell'Emilia, and then a few months later, on 15 October 1586, to accept an appointment as canon at Correggio Cathedral. His financial difficulties continued, however, a fact which he underlined in a light-hearted autobiographical *Capitolo* written in 1587 (in *I-Bu*).

During his years in Correggio Vecchi composed both sacred and secular works. When the Roman Gradual was republished in 1591, he was chosen along with Giovanni Gabrieli and Lodovico Balbi to revise and correct it. He was raised to the status of archdeacon at Correggio on 26 July 1591. Looking for a more sophisticated environment, and despairing of finding a position in the north, he returned to Modena in 1593 as *maestro di cappella*. On 14 October 1596 he was promoted to *mansionario* (beneficed priest with choral duties, but with no vote in the chapter). He was also admitted into the brotherhood of the Annunciation in the churches of S Maria and S Pietro, where he directed the music on various special occasions. Spaccini recorded that on 26 March 1597 Vecchi visited Venice in the company of a nobleman, and while there supervised Gardano's publication of his *Canzonette a tre voci* (1597[21]), a collection which includes 16 compositions by his pupil Gemignano Capilupi. Although Vecchi had published nothing for six years, the fact that he had been writing vigorously during this period is evident in the large number of his works published in 1597, including the *Sacrarum cantionum liber II*, *L'Amfiparnaso* and *Il convito musicale*.

In February 1598 Duke Cesare d'Este heard a mass by Vecchi and was so impressed that in October of the same year he named Vecchi *maestro di corte* at Modena. His activities are well documented as composer and performer at the Este court, and his popularity is recorded by Spaccini, who described numerous performances of his mascheratas in the streets of Modena. When in 1600 the newly appointed Cardinal Alessandro d'Este was called to Rome, Vecchi went with him as a courtier for three months. In October Jacopo Peri boasted that the illustrious composer Orazio Vecchi had heard a performance of his opera *Euridice* in Florence. On 3 March 1603 the general council of Modena voted Vecchi the sum of 500 lire to be divided into equal instalments for the next five years, as an inducement to keep a 'man of such rare abilities' in their city. Later the same year the imperial ambassador came to Modena to offer Vecchi the position of *maestro* at the court of Emperor Rudolph II, in succession to Monte. Full recognition had finally come to him, but unfortunately Vecchi was compelled to refuse the appointment because of ill-health.

Despite his lingering illness, he managed to continue composing and to fulfil his duties at the cathedral. The new bishop, however, prevented him from directing music at the cathedral convent; when he disregarded the prohibition Capilupi reported this breach of discipline to the bishop, who suspended Vecchi from his duties at the cathedral and appointed Capilupi as his replacement. Vecchi's death shortly afterwards suggests that the bishop used the incident as an excuse for retiring the ailing composer. In 1607 a memorial to Vecchi was placed in the church of the Carmelites, where he was buried. A contemporary portrait (fig.1) is in the Museo Civico of Modena. Spaccini's accounts of two minor episodes in Vecchi's life during 1595 have been used as evidence of a quarrelsome and even violent nature, but these must be tempered by contemporary evidence that he was a genial and cultured man.

2. WORKS. Much of Vecchi's reputation during his own lifetime rested upon his six books of *Canzonette*. They constitute a popular but refined compromise between the serious madrigal and the simplicity of the villanella which, in Vecchi's words, 'did not bring great fatigue of mind'. Nearly all his canzonettas are strophic, with a largely homorhythmic texture varied by occasional modest imitation. He also published two books of madrigals, and both genres appear in his larger, mixed-genre, publications. His most individual characteristic, in madrigals and canzonettas alike, is a rhythmic variety and vitality that enlivens even the simple homorhythmic canzonettas. Often this variety is the result of his sensitive use of rhythmic and metric accents which, when enriched by cross-rhythms and syncopation, produces a rhythmic interest and freshness approached by few of his contemporaries. His facility with single and two-subject imitation, augmentation, melodic inversion and harmonic inversion shows him to be a master of contrapuntal technique as well.

1. *Orazio Vecchi: portrait by an unknown artist (Museo Civico, Modena)*

Vecchi's major achievements are concentrated in four publications: *Selva di varia ricreatione* (1590), *L'Amfiparnaso* (1597), *Il convito musicale* (1597) and *Le veglie di Siena* (1604). The *Selva di varia ricreatione* was Vecchi's first large publication in which secular forms other than the madrigal and canzonetta were used. Of the 47 titles, eight are serious madrigals, the rest light pieces, including *capricci*, balli, arias, *giustiniane*, canzonettas, fantasias, serenatas, dialogues, a villotta, a *battaglia* and two purely instrumental compositions. Lute accompaniments are provided for one of the instrumental and 11 of the vocal pieces. Of interest is the madrigal 'a diversi linguaggi', for nine voices: five composed by Marenzio serve as a point of departure for the four voices added by Vecchi. The piece is a delightful miniature in the madrigal-comedy style: the nine voices represent nine characters each speaking a different 'language' or dialect. Seven of the characters are drawn from or related to the *commedia dell'arte* and two are from the *commedia erudita*.

The madrigal comedy *L'Amfiparnaso* is the best-known and most original of Vecchi's large works. It was first performed in 1594, and was published in 1597 in a lavishly illustrated edition (fig.2; *see also* MADRIGAL COMEDY, fig.1). There is evidence that Vecchi departed from his customary dual role as poet-composer by collaborating with the Bolognese poet Giulio Cesare Croce. While Vecchi maintained the semblance of a plot throughout the 13 scenes of *L'Amfiparnaso*, he clearly indicated in the prologue that staging was not intended. *L'Amfiparnaso* is less a genuine precursor of opera, than a final stage in the history of 16th-century *a cappella* polyphony. Vecchi's title for this quasi-dramatic work is undoubtedly a reflection of his adherence to the 16th-century literary philosophy that the 'Parnassus' of expression is to be reached through contrasting the serious ('grave') with the gay ('piacevole'). The principal serious characters of *L'Amfiparnaso*, the shepherd and shepherdess Lucio and Isabella, are separated through a misunderstanding, but they are reunited and celebrate their wedding in the final scene. The work contains several highly dramatic madrigals, characterized by word-painting and masterly use of polyphony. The text draws on the buffooneries of the familiar comic characters of the *commedia dell'arte*: the Venetian Pantalone, who pursues the courtesan Hortensia, the pompous Bolognese Doctor Gratiano and others (*see* MADRIGAL COMEDY, fig.2). Except for Gratiano's serenade, which is a four-voice parody of Rore's madrigal *Ancor che col partire*, the entire madrigal comedy is scored for five voices. The characters in this drama converse in madrigalesque dialogue, implemented through the alternation of combinations of three voices, frequently in homophony. This hybrid vocal form was derived from reciprocal influences of the madrigal and light entertainment music. Other composers, including Alessandro Striggio (i) and Andrea Gabrieli, had written in this style, and it was also imitated by Croce and Banchieri, but none achieved either the sustained dramatic portrayal or the musical virtuosity of *L'Amfiparnaso*.

The 65 compositions of *Il convito musicale* comprise a comprehensive selection of nearly every 16th-century secular form and style. It includes some of Vecchi's most poignant works, including *Fummo felici un tempo*, *Questo legato in oro*, and his setting of Petrarch's sestina

2. *Opening of Act 1 scene i of Vecchi's 'L'Amfiparnaso' (Venice: Angelo Gardano, 1597)*

Chi è fermato written in the style of Rore, alongside examples of light entertainment music. The madrigalesque dialogues included in *Il convito* are particularly entertaining: two musical games are presented in the bipartite *Bando del asino*; one includes animal imitations, the other creates an orchestra of voices imitating musical instruments; and the three-part *O giardiniero* has an extended monophonic opening and an interesting musical depiction of drunkenness: possibly the first of its kind.

Vecchi alluded to the contrast of the 'piacevole' with the 'grave' in the preface to *Le veglie di Siena* of 1604 asking, 'How is the musician better able to be useful than with the serious, and to amuse than with the ridiculous?'. He borrowed much of the literary background for the musical games used in this work from Girolamo Bargagli's treatise on games, *Dialogo de' Giuochi* (Venice, 1581). Vecchi adapted the three-part form outlined by Bargagli (proposal, imitation and applause) for the seven entertainments of the first *veglia*, using dialect pieces for the imitations. Four more games make up the second *veglia*. The 'grave' half of the work consists principally of 14 compositions depicting the varied temperaments of love.

Vecchi also composed an impressive amount of distinguished sacred music, including masses, a *Magnificat*, and three volumes of motets, as well as a volume of Lamentations and one of hymns. These works reveal that this master of nearly every 16th-century secular genre produced an equally wide range of sacred works. The influence of the Venetian style and of his own secular music is immediately apparent. In his motets he combines a seemingly endless variety of the latest contrapuntal techniques with the skilful use of homorhythmic passages for contrast and text reinforcement. Word-painting, triple-metre sections and the use of note values approximating those of the canzonetta and madrigal give his sacred works an extraordinary sense of drama, movement and variety. He also recalls the wide range of familiar techniques used during the previous part of the 16th century, even including the use of cantus firmus, fauxbourdon and a puzzle canon. His *cori spezzati* motets, although not as numerous as those of his contemporary Giovanni Gabrieli, rival them in virtuosity. In these works he contrasts a deft use of imitative counterpoint in and between the two groups with homorhythmic passages for maximum effect.

WILLIAM R. MARTIN

Vecchi, Orfeo (*b* Milan or Vercelli, *c*1551; *d* Milan, 26 Nov 1603). Italian composer. According to the title-pages of his printed works and the testimony of his contemporaries, he was Milanese and *maestro di cappella* of S Maria della Scala in Milan. But the discovery of documents in the diocesan archives of Milan and in the archives of

the cathedral of Vercelli has shed new light on his early years and shows that his musical training and preparation for an ecclesiastical career took place in Vercelli. It is not known whether he was born there, but it is recorded that in 1570 he was senior singer at the Collegio degli Innocenti, Vercelli, where he probably taught grammar and singing. A further document of 1596 (in Milan), the *status personalis* of Vecchi, attests that he was a *mansionario* in S Maria della Scala (Toffetti). This document gives us new information about his biography and lists the stages of his ecclesiastical career. He was the son of Rainaldo, from Milan, and in 1596 he was 45 years old (making 1551 his year of birth). In 1561 he was in Vercelli, where he received his first tonsure; in 1581 he took minor orders under Cardinal Carlo Borromeo in Milan; in 1582 he was first a sub-deacon to the Archbishop of Novara, then deacon to the Bishop of Casale. In 1583 he was in Hippona then Vercelli, and by 1591 he was *mansionariato* in S Maria della Scala. Vecchi was always a member of the secular clergy (contrary to the opinion of some scholars). As to his musical career, a letter of 1 June 1580, discovered by Martin Morrel in the diocesan archives of Milan, contains a recommendation from Carlo Borromeo and Monsignore di Vercelli for the young Orfeo Vecchi to be taken on as *maestro di cappella* of S Maria della Scala. The appointment was probably made in the same year, for on 24 September 1582 the chapter of canons at Vercelli Cathedral decided to grant an incumbency to 'Master Orfeo, *maestro di capella* at the church of Santa Maria della Scala in Milan, and to see that he was made *maestro* of their church'. Vecchi was *maestro* of Vercelli Cathedral from October 1582 until perhaps 1586 (records show that in 1587 there was a new *maestro*, G.A. Piccioli). Following his appointment in Vercelli, Vecchi moved for the last time to Milan, where he was *maestro di cappella* of S Maria della Scala until his death. His death certificate records that he died of a stroke at about 50 years of age.

Vecchi was much admired by his contemporaries for his prodigious talent and for the speed with which he composed. He was well known beyond his own region of Lombardy, as shown by the inclusion of 117 of his compositions in the Pelplin keyboard tablatures (13% of the entire repertory contained in this collection). According to Picinelli, he published 24 books of music, 23 of which were listed by the printer Lomazzo in the posthumous re-issue of the *Salmi intieri a cinque voci* (1614). A catalogue by the printer Tini (*c*1596) mentions a book, *Francese di Orfeo Vecchi a 4 da sonar novi*, which is lost. This is the only known collection of secular music by Vecchi. With the exception of three instrumental pieces and two madrigals, which appear in collections by various composers, Vecchi wrote sacred music only. He lived during a period of austerity and was therefore prompted to arrange madrigals by other composers as motets (*Scielta de madrigali*, 1604). Even his only collection of madrigals, *La donna vestita di sole* (1602), is not truly secular (although the texts are Italian), as they are a cycle in honour of Our Lady. In his Masses of 1588 Vecchi showed himself to be a master of polyphony, but he later conformed to the instructions of the Council of Trent and more particularly to those of Carlo Borromeo, who prescribed that musical texts should be set simply and comprehensibly. Like Vincenzo Ruffo, Vecchi adopted a style based principally on syllabic word-setting.

WORKS

published in Milan unless otherwise indicated

Missarum liber primus, 5vv (1588)
Missa, psalmi ad Vesperas dominicales, Magnificat, Motecta et psalmorum modulationes (1590)
Psalmi integri in totius anni solemnitatibus, 2 Magnificat, 4 antiphonae ad B.V.M., 5vv, bc (1596) [bc also pubd separately, 1598]
Missarum liber primus, 4vv, bc (1597), ed. O. Beretta (Lucca, 1991)
Motetti libro primo, 5vv (1597, 2/1599^{4})
Missarum liber secundus, Missa pro defunctis, sacrae cantiones, 5vv (1598)
Motectorum liber secundus, 5vv, bc (1598^{3})
Motectorum liber tertius, 6vv (1598)
Falsi bordoni figurati sopra gli otto toni ecclesiastici, Magnificat, Te Deum laudamus, hinni, antifone, Letanie, 3–5, 8vv (1600)
Hymni totius anni . . . cum antiphonis et Litaniis B.V.M., 5vv (1600)
In septem Regii Prophetae psalmos, liber quartus, 6vv (1601)
Psalmi in totius anni solemnitatibus, 2 Magnificat, 5vv (1601)
Missarum liber tertius, 5vv (1602)
La donna vestita di sole . . . 21 madrigali (1602)
Magnificat liber primus, 5vv (1603)
Motectorum liber primus, 4vv (1603)
Cantiones sacrae, 6vv (Antwerp, 1603)
Scielta de Madrigali, 5vv (1604)
Cantiones sacrae, 5vv (Antwerp, 1608)
Salmi intieri, 5vv (1614) [not 1st edn]
Further vocal works, 2–8vv, 1588^{3}, 1596^{1}, 1598^{3}, 1598^{6}, 1598^{8}, 1598^{13}, 1599^{4}, 1604^{11}, 1604^{12}, 1607^{29}, 1610^{1}, 1611^{1}, 1613^{2}, 1617^{2}, 1619^{4}, 1621^{2}, 1624^{8}, 1627^{1}
1 pater noster, 5vv, *I-Mcap*; Messe, 5vv, *Pcd*; Motetti, *GB-Ob*, formerly Tenbury; 4 motetts, 6vv, *A-Wn*

MARIANGELA DONÀ

Vecchi detto Delle Palle, Scipione. *See* DELLE PALLE, SCIPIONE.

Vécla, Djemma. *See* GRANDI, MARGHERITA.

Vecoli [Veccoli]. Italian family of composers and musicians. The exact relationship of the three Lucchese composers sharing the surname Vecoli has not been established. The dates of their appointments and publications suggest that Regolo was a generation older than Francesco and Pietro, but this must remain supposition until supported by more precise evidence.

(1) Regolo Vecoli (*b* Lucca; *fl* 1557–86). Composer and cornett player. He was in service as an instrumentalist to his native city in 1557. He worked in Lyons from 1561 to 1581 and then went on to Paris. He referred to his *Primo libro de madrigali a cinque voci* (Lyons, 1577^{10}, 1 ed. in Dobbins, 384) as 'my first musical compositions'. In the dedication to *Il secondo libro de madrigali a cinque voci* (Paris, 1586) he commented that his removal to Paris was forced upon him by the 'misfortunes that are now afflicting Lyons', an apparent reference to the upheavals caused by religious strife there. With this book of 1586 he became, through his publisher Le Roy & Ballard, the

first Italian composer to have a complete book of madrigals printed in Paris. Also in 1586 Vecoli was awarded the prize in the Puy d'Evreux, the musical competition that was held annually on St Cecilia's Day between 1570 and 1614; his prize-winning piece was a *De profundis*, which was apparently never published and is now lost. No other compositions by him were published after this date, suggesting that he died soon afterwards. Although he spent most of his career away from Lucca, he maintained ties with it and dedicated both of his madrigal publications to members of its nobility. His musical style is also Italian, even Luccan, in its similarity to that of Nicolo Dorati (see Dobbins). The first includes a piece by Francesco Vecoli, who had included a piece by him in his own book of five-part madrigals of 1575.

(2) **Francesco Vecoli** (*b* Lucca; *fl* 1575–97). Composer. Unlike his two relatives, he remained in Lucca and pursued an ecclesiastical career. He taught at the recently founded seminary of S Michele in Foro, Lucca, and wrote his *Primo libro de motetti a cinque voci* (Venice, 1580) for its use. He had already published *Il primo libro de madrigali a cinque voci* (Venice, 1575[16]), in which he included a piece by Regolo Vecoli, a favour returned in the latter's book of five-part madrigals of 1577. In 1597 Francesco Vecoli was named 'cappellano benefiziato' of S Martino, Lucca.

(3) **Pietro Vecoli** (*b* Lucca; *fl* 1580–97). Composer and musician. He seems to have worked most consistently in Savoy. The title-page of his *Madrigali ... il primo libro a cinque voci* (Turin, 1581[12]) states that he was a musician of the Duke of Savoy. Six years later he had apparently left that position, since he claimed his *Primo libro de madrigali a sei voci* (Paris, 1587), dedicated to Sebastiano Zametti, as his first production under the auspices of his new patron; only one partbook of this print survives, but one madrigal, *Nel vago e lieto aprile*, survives in a later anthology (RISM 1601[5]). Vecoli returned to his service as a chamber musician in Savoy in time to produce the *intermedi* for Federico della Valle's tragedy *Adelmonda di Frigia*, presented during a state visit by the Cardinal Archduke of Austria in November 1596. The *intermedi* (*I-Tn* Ris.mus.II, 8) consist of 20 movements for three voices, mostly for two high voices and bass, with indications for performance by sirens, shepherds, satyrs and harpies ('who sing hovering in the air'), as well as for entrées and dances by the princes and princesses. Vecoli prepared a presentation manuscript of the work with a dedication to the Duchess of Savoy; he received at her command on 2 April 1597 a payment of 217 lire, presumably, a remuneration connected with the work or with the manuscript.

STEVEN LEDBETTER/R

Vecsey, Franz von (*b* Budapest, 23 March 1893; *d* Rome, 6 April 1935). Hungarian violinist. He studied with his father and with Hubay, and also had some lessons from Joachim, who conducted his performance of Beethoven's Violin Concerto in Berlin in 1904. He made débuts in London in 1904 and in New York in 1905 with great success. Sibelius dedicated his Violin Concerto to Vecsey, who played the work in Berlin and Vienna and was its most brilliant early interpreter. He served in the Austro-Hungarian army during World War I, and made an acclaimed reappearance in Berlin in the 1920s. His playing was said to be technically perfect and of classical purity, but was regarded by Flesch and others as being musically undistinguished. During his later years he rarely appeared in public. He composed a number of short pieces for the violin, among them a set of caprices.

MARGARET CAMPBELL

Vécsey, Jenő (*b* Felsőcéce, Abaúj, 19 July 1909; *d* Budapest, 18 Sept 1966). Hungarian composer and musicologist. He studied composition with Kodály at the Liszt Academy of Music (diploma 1935) and in 1941 graduated as professor of chemistry and biology at the university. After a period of school music teaching he received a scholarship to study in Vienna (1941–2), where his String Quartet was performed by the Végh Quartet. In 1942 he joined the staff of the National Széchényi Library, Budapest, where he was head of the music department from 1945 until his death. He was responsible for the reorganization and cataloguing of the valuable collection along modern lines. Besides composing original works, of which the most successful are the Piano Concertino, the Double Bass Concertino, the String Sextet and the Krúdy Concerto, he revived forgotten museum-pieces. His fine sense of style and his experience as a composer and orchestrator inform his reconstructions and editions of 19th-century Hungarian music and the Classical works in the collection he directed. He was founder-director of the series Musica Rinata.

MÁRIA ECKHARDT

Veerhoff, Carlos (Heinrich) (*b* Buenos Aires, 3 June 1926). German composer of Argentine origin. He studied composition at the Berlin Hochschule für Musik with Hermann Grabner and privately with Kurt Thomas. In Cologne he studied composition with W. Braunfels and conducting with Günter Wand. Piano studies were undertaken with Gieseking in Wiesbaden. In 1948 he returned to Argentina and taught at the University of Tucumán; he also attended conducting courses given by Scherchen in Buenos Aires. In 1951 he went back to Berlin as assistant to Fricsay; he moved to Munich the following year. Since then he has been a freelance composer, based in Stuttgart, Argentina, Paris (on a scholarship) and, from 1988, Murnau am Staffelsee. He has received several awards.

Veerhoff has composed in a wide variety of genres, eschewing avant-garde tendencies in developing his own creative language. For him, composing (in which the twelve notes are given the same value but not the same weight) is made freer and broader through both symmetrical and asymmetrical structures; to these structures are applied strict, thematic conditions. Through his structures Veerhoff says that the notes 'gain a kind of mirror image formation both in melodic runs and in sound structures', and quotes his orchestral *Mirages* (1960–1) as a particular example of this. His works' expressiveness is balanced by a scientific objectivity and solid craftmanship.

ALFRED GRANT GOODMAN

Veg, Willem de. *See* DE FESCH, WILLEM.

Vega. Family name of FRANCISCO DE SANTIAGO.

Vega, Aurelio de la (*b* Havana, 28 Nov 1925). Cuban composer, writer on music and teacher. He studied in Havana, receiving the BA in humanities at the De La Salle College (1944) and the doctorate in diplomacy at the university (1947); he also studied theory, composition and orchestration privately with Frederick Kramer (1942–6). In 1947 he was appointed cultural attaché to the Cuban consulate in Los Angeles, and while there he took private composition lessons from Toch (1947–8). On his return to Cuba in 1949 he was appointed editorial secretary of *Conservatorio*, the official review of the Havana Municipal Conservatory, and elected president of the Cuban section of the ISCM. He studied for a doctorate in composition with Gramatges at the Instituto Musical Ada Iglesias, Havana (1950–55), directed the music department at the University of Oriente, Santiago de Cuba (1953–9), served as music adviser to the National Institute of Culture (1953–9) and worked as a music critic. In 1959 he returned to settle in California as professor of composition at the San Fernando Valley State College (later, California State University, Northridge; emeritus professor since 1994) and director of its electronic music studio; he became an American citizen in 1966. He has received numerous commissions and awards, including two Friedheim awards from the Kennedy Center. In 2000 he was the recipient of a FACE (Facts About Cuban Exiles) Excellence Award.

Some of de la Vega's early works (1944–50), such as the song cycle *La fuente infinita*, show Szymanowskian post-Impressionist traits in contrast to the neo-classical and neo-Romantic nationalism then prevailing in Cuban music. Although he did rely to a certain extent on Afro-Cuban rhythmic complexities in some early pieces, he never adhered to folklorist nationalism and even voiced his opposition to it on many occasions. The Piano Trio of 1949 demonstrates some of his lasting technical concerns: in particular, a virtuoso style in writing for traditional instruments and a strong reliance on structural principles. A highly chromatic language and a strong rhythmic drive pervade his compositions of the early 1950s, such as *Legend of the Creole Ariel* for cello and piano. He then developed a style of free atonality and unconventional 12-tone technique, the latter being applied for the first time in the String Quartet 'In memoriam Alban Berg' (1957). Subsequent works, culminating with the non-dodecaphonic, virtuoso *Intrata* for orchestra (1972), show an increasing use of polyphony. By the mid-1960s he was gradually abandoning serialism in favour of electronic means, open forms and, eventually, aleatory procedures and graphic scores. Since the 1980s his music has gradually returned to a multi-layered pantonal idiom underlying an intense lyricism punctuated by Cuban melodies and rhythms. From 1974 many of his works have included visual elements: a series of graphic scores in colours (e.g. *Olep ed Arudamot*, *The Infinite Square*, *Astralis*), in which sounds and pictorial forms are mixed, reaches an apogee in *Undici colori* (1981) for solo bassoon and slide projections of geometric drawings by the composer. At the same time de la Vega has continued to develop the instrumental colour and rhythmic vigour of his music. All of his work is expressive, forceful and carefully structured. He is the author of *Arnold Schönberg and the Atonalists* (1947), *The Negative Emotion* (1950), *The New Romanticism* (1951) and many articles on topics such as electronic and avant-garde music.

GERARD BÉHAGUE

Vega, Carlos (*b* Cañuelas, nr Buenos Aires, 14 April 1898; *d* Buenos Aires, 10 Feb 1966). Argentine musicologist and folklorist. He first studied harmony and composition with Gilardi, but soon turned exclusively to musicology. As head of musicology at the Argentine Museum of Natural Sciences (1926) and folklore expert at Buenos Aires University (1933), he dedicated himself to the systematic study of South American traditional music, dances and musical instruments. He founded and directed the Institute of Musicology (1931) under the auspices of the Ministry of Education and undertook a series of field trips throughout Argentina and other South American countries, collecting several thousand items of folk music and dance. He received several grants, including the research grant from the National Commission for Culture (1937) and a UNESCO grant for studies in Europe. In 1947 he was awarded the First National History and Folklore Prize for his publications.

Vega's work was wide-ranging. His first important publication, *La música de un códice colonial del siglo XVII* (1931), incorporated a transcription of the songs of the Dezuola manuscript. From 1936 to the early 1960s he produced comprehensive studies of South American folk music, especially Argentine instruments, folksongs and dances. An active music theorist and music educationist, he was also interested throughout his life in the transcription of European medieval monody, believing that he had found a new key for the interpretation of this music in folk music performing practice.

GERARD BÉHAGUE

Vega Matus, Alejandro (*b* Masaya, 17 Aug 1875; *d* Masaya, 26 Nov 1937). Nicaraguan composer, bandleader and orchestra leader. Son of the composer Pablo Vega Raudes (1850–1919), he received musical training from an early age in Masaya, famed for its musical environment. He triumphed at the age of 18 in the salons of Guatemala City in virtuoso concerts where he played the piano with his left hand and the trumpet with his right. He studied briefly with Aberle in the Guatemalan Conservatory of Music, but remained essentially self-taught throughout his career. In 1894 he returned to Nicaragua and formed the Orquesta Vega Matus, a wind, brass and string ensemble that eventually attracted the nation's best musicians. During its 50-year tenure under his, and later his son's, direction, it reigned as the unrivalled musical performance group of dance and semi-classical music in the nation. The orchestra was also the vehicle for Vega Matus's prolific output. He composed many waltzes, some still performed today, notably *Cascada de perlas*, *Filomena* and *Lila*. He also composed polkas, mazurkas, gavottes, schottishes, one-steps, cuadrillas, blues, *danzas* and foxtrots, the latter including the enduring *Nadie me quiere*. He also wrote many songs, usually together with a lyricist. One of these, *La mama ramona*, has become so embedded in the national consciousness that it is often mistakenly considered part of the anonymous traditional repertory. He wrote a great quantity of religious music: four masses, two requiem masses, 107 funeral marches (many still in use, especially no.41), 109 *sones de pascuas* (villancicos), approximately 300 *Ave Maria* settings and several *cantos a María*, a particular Nicaraguan genre of songs praising the Virgin Mary. Expressly for band he wrote military marches and *sones de toro*, lively pieces that provide accompaniment for religious processions. His larger works, which may total as many as 15, are short pieces for chamber orchestra, the best known of which include: *Obertura Luciana*, described as imitative of Haydn, *Murió de un beso* (1916), *Agonía del crepusculo*, *Noche de Navidad* and *Misterio*. His largest work is the oratorio *En la muerte de Jesús* (1900), which contains many programmatic passages. In his larger works he did not stray far from the homophonic texture and regular phraseology of his shorter pieces. Vega Matus enjoyed recognition of his talents during his lifetime and was repeatedly honoured by succeeding presidents. His recordings for the Victor label received regional distribution and were probably the first ones by a Nicaraguan composer.

T.M. SCRUGGS

Vegezzi-Bossi. *See* BOSSI family.

Veggio, Claudio Maria (*b* Piacenza, ?*c*1510; *d* after 1543). Italian composer. His *Madrigali a quattro voci* was dedicated on 27 August 1540 to his patron, Count Federico Anguissola of Piacenza. 16 of the settings are of poetry by Luigi Cassola of Piacenza and six others mention ladies, one of whom, Ippolita Borromea Anguissola, was the wife of Count Girolamo of Piacenza. Veggio's madrigals are praised in a letter from Antonfrancesco Doni to the sculptor Giovanni Angelo, dated 3 June 1543, which also describes Veggio's activities as a harpsichordist and composer, presumably at the Accademia Ortolana, to which his poets Cassola, Doni and Bartolomeo Gottifredi also belonged. A further letter of 10 April 1544, from Doni to Veggio, requested new madrigals, and Veggio may have complied since four of his pieces appeared in Doni's *Dialogo*, published in that year. The quantity of keyboard and sacred music by Veggio in manuscripts at Castell'Arquato suggest that he held an appointment there, possibly that of church organist.

Veggio's madrigal book is the earliest to indicate by its title the use of the sign C and *note nere*, although it is not the first in which they appear. It includes six such madrigals by Arcadelt and four by Veggio (nos.27, 28, 39 and 40). The 'full and exact musical repetition' (Haar) in Veggio's four madrigals in Doni's *Dialogo* result from the poetry of Gottifredi and Doni, which was influenced by the ballata. Repetition itself occurs quite frequently in the early madrigal, and Veggio's work places him firmly in that tradition.

The Castell'Arquato manuscript containing Veggio's keyboard music, is of exceptional interest. The varying number of staves employed during a given work, the numerous sketches (some quickly abandoned) and the alterations, which are creative revisions and not copyist's errors, all suggest that the manuscript is Veggio's holograph, showing the stages through which the works were composed; this is one of the very few such extant scores from this period. It is also the earliest known direct evidence for the practice of playing from an open score at the keyboard. Veggio's eight ricercares vary greatly in length from 41 to 147 breves. Their alternating contrapuntal and highly figurative sections show strong affinities with the ricercares by M.A. Cavazzoni, in their use of homophonic and sequential rather than motivic imitation, the incorporation of series of parallel 3rds in the left hand and extensive florid passages, and in the employment of registration sequences. Moreover, their melodic range is almost that of Cavazzoni's pieces and far exceeds that in ricercares by Giacomo Fogliano, Jiulio Segni, Girolamo Cavazzoni and Jacques Buus, whose restricted range shows the influence of vocal polyphony on their keyboard writing. Veggio's music represents the stylistic link between the generations of the two Cavazzonis.

Of the other pieces in the Castell'Arquato manuscript, the canzona *La fugitiva* and the two chanson arrangements follow their models closely. *La fugitiva* is a transcription of a now unknown ensemble canzona in four parts, to which Veggio added a fifth part. Although Arcadelt's *Quand'io pens'al martire* and Veggio's *Donna per dio* are both copied on four staves, only Veggio's piece is decorated, usually at the cadences. Arcadelt's *Se per colpa*, however, on two and three staves, is heavily decorated. *Tu es Petrus* receives the most embellishment, initially in the left hand, and is the only arrangement having the parallel 3rds in the left hand so characteristic of Veggio's ricercare style.

It is not known whether the madrigalist Giovanni Agostino Veggio was related to him.

H. COLIN SLIM

Végh, Sándor (*b* Koloszvár [now Cluj-Napoca], 17 May 1912; *d* Freilassing, 7 Jan 1997). Hungarian violinist and conductor, naturalized French. He studied at the Budapest Academy of Music from 1924 to 1930 with Hubay (violin), Leó Weiner (chamber music) and Kodály (composition). He made his début in 1931 with the Hungarian Trio, and toured Europe as a soloist. He became leader of the Hungarian Quartet on its foundation in 1935, a position he relinquished to Székely a few months later when he became second violin. Végh left the Hungarian Quartet in 1938, and in 1940 founded the Végh Quartet, which he led until 1978. He often appeared at Casals' Prades Festival and supervised the summer courses at Zermatt held under Casals' patronage. He also conducted the Berlin PO, the Vienna PO and from 1974 the Salzburg Camerata Academica. Végh had a distinguised career as a teacher, and held professorships at the Budapest Academy of Music (1941–5), the Musikakademie in Basle (1954–64), the Hochschule für Musik in Freiburg (1956–64) and the Hochschule für Musik in Düsseldorf (1964–74); from 1970 to 1987 he taught at the Salzburg Mozarteum. In 1972 Végh founded with Hilary Behrens the International Musicians' Seminar, a series of chamber music courses held in Prussia Cove in Cornwall each spring, and from 1975 additionally in September. Here, and elsewhere, he was an influential and inspirational teacher. As a player Végh was known for the purity and warmth of his tone, and the breadth of his musical understanding. His recordings include the quartets of Mozart, Beethoven and Bartók (with the Végh Quartet), and Bach's complete works for solo violin. He was made an honorary CBE in 1988 and a Chevalier of the Légion d'Honneur in 1992. He played the 1724 'Earl of Harrington' Stradivari.

MARGARET CAMPBELL

Végh Quartet. Swiss-based string quartet of Hungarian origin, founded in 1940 by SÁNDOR VÉGH, Sándor Zöldy, Georges Janzer and Paul Szabó. In 1946 it won the Geneva competition and thereafter embarked on an international career, its repertory ranging from the Viennese Classics to the quartets of Bartók – whom Végh had known – and Kodály, with whom he had studied composition. In 1949 it gave the premières of the second quartets of Karl Amadeus Hartmann and Pierre Wissmer, and in 1962 the Concerto for string quartet and orchestra by Sándor Veress. It was never technically on the level of the Hungarian Quartet (ii) – of which Végh had been a founder member – and as early as 1950 showed signs of slack preparation. Its members lived in four different cities and sometimes gave the impression that they had not met for some time before coming on stage. Its recordings, too, were often mediocre. Time after time its performances were saved by the vivid personality and clear musical vision of Végh, one of the more remarkable re-creative artists of his time. In the early 1970s the ensemble recorded cycles of the Bartók and Beethoven quartets which, while technically flawed, came close to reflecting the illumination of its concerts. A reorganization in 1978 brought in Philipp Naegele as second violinist and Bruno Giuranna as viola player, and another even more short-lived reconstitution in 1980 saw Végh joined by Erich Höbarth, Rainer Moog and Károly Botvay. But these formations were codas to the Végh Quartet's career.

TULLY POTTER

Vehe, Michael (*b* Biberach, nr Heilbronn, *c*1480; *d* Halle, April 1539). German monk and theologian. He entered the Dominican order about 1500 and was made prior of the monastery in Wimpfen. In 1506 he belonged to the monastery in Heidelberg, where he studied and took the doctorate of theology in 1513 and became *regens* in 1515. He represented the Catholics in all the important synods, conferences and Imperial Diets of the Reformation era. In 1520 Cardinal Albrecht of Brandenburg appointed him provost of the newly founded abbey church in Halle and made him Councillor for Religious Affairs and archdeacon, and chancellor of the new Halle University. In various writings from the period 1531–6 Vehe defended the Catholic doctrine against the reformers. In collaboration with the last Catholic mayor of Halle, Caspar Querhammer, the theologian Georg Witzel and the organists Johann Hoffman and Wolff Heintz, Vehe produced the first Catholic hymnbook with music, *Ein new Gesangbüchlin geystlicher Lieder* (Leipzig, 1537/*R*, ed. W. Lipphardt); it was based partly on medieval tradition and partly on the Reformation hymn- and psalmbooks, but also offered some new material, both in the texts and in their musical settings. Thus the volume contained the first Catholic psalm paraphrases. As it was printed in Leipzig, a large part of the edition was lost in 1539 when the city became Lutheran, and the conversion of Halle about 1541 stopped circulation in the area for which the hymnbook had been intended. Not until the second edition (Mainz, 1567), and the use of some of Vehe's material in Johannes Leisentrit's hymnbook (1567), did the songs in Vehe's collection become the basis for all later Catholic hymnaries.

WALTHER LIPPHARDT/CLYTUS GOTTWALD

Veichtner [Feichtner], **Franz Adam** (*b* Regensburg, bap. 10 Feb 1741; *d* Klievenhof, Courland [now Kalnciems, Latvia], 3 March 1822). German violinist and composer. The son of a violin maker, Johann Georg Veichtner, he attended the Jesuit school in Regensburg, where he studied music theory with Joseph Riepel, and studied the violin with Franz Benda at Potsdam. He entered the service of Count Hermann von Keyserling, and in 1763 travelled to Königsberg, where he met and taught the young J.F. Reichardt. In 1765 Veichtner was appointed Konzertmeister to the Courland court of the hereditary prince Peter von Biron at Mitau (now Jelgava), and at this time wrote his first published compositions, including several symphonies, a violin concerto and a series of choral pieces celebrating events at court. The four-movement *Simphonie russienne*, composed in 1770, is the earliest symphonic work on Russian folksong themes to survive complete. He composed three Singspiele for the court's amateur theatre which earned him much praise (*Journal von und für Deutschland*, Ellrich, April 1784, p.460); *Cephalus und Prokris* had its première in Riga in 1779 and was produced in Berlin a year later. Veichtner became one of the leading figures in the musical life of Courland during the late 18th century. Among his pupils was the Courlander K.F. Amenda, later a friend of Beethoven. He probably visited Italy twice (*c*1785 and *c*1795). After Courland lost its independence in 1795 Veichtner settled in St Petersburg, where in 1798 he was engaged as a musician in the first court orchestra. He composed some violin music in Russia, and left in manuscript a *Te Deum*, which was first performed by the St Petersburg Philharmonic Society on 19 March 1818. In 1820 he retired to Klievenhof.

Veichtner's brother Michael Veichtner was also active as a violinist and bass viol player in Mitau. Among his descendants, his son Heinrich Konstantin Veichtner (1785–1816) was a chamber musician in St Petersburg, his daughter Benigma Gottlieb married the Hamburg violinist Johann Gottfried Hartmann, and his grandson Konstantin Veichtner (1808–77) was a chorister in Tartu.

GEOFFREY NORRIS/KLAUS-PETER KOCH

Veiga. Family name of FRANCISCO DE SANTIAGO.

Veiga, José Augusto Ferreira, Visconde do Arneiro (*b* Macau, 22 Nov 1838; *d* San Remo, 7 June 1903). Portuguese composer. A member of a business family, he studied music in Lisbon. His operetta *A questão do oriente* was performed in Coimbra, at the Teatro Acadêmico (1859). In 1866 his ballet *Ginn* was performed in Lisbon with great success, and in 1871 his *Te Deum* was given there. His opera-ballet *L'elisir di giovinezza* (4, J.J. Magne), to an Italian text, was performed at the Teatro de S Carlos on 31 March 1876, but was not popular with the public, and he decided to present it in Italy. Given in Milan, at the Teatro Dal Verme (1877), the work still failed to win public favour. Veiga adapted the music to a new libretto by Rudolfo Paravicini, based on an English novel by Ann Radcliffe. The new version, a *melodrama tragico* entitled *Dina la derelitta* (S Carlos, 14 March 1885), was finally accepted by audiences. Veiga wrote another opera, *Don Bibas*, based on Alexandre Herculano's previously unknown novel *O Bobo*, which drew him into the Portuguese nationalist movement; the opera has never been performed.

LUISA CYMBRON

Veillot [Villot], **Jean** (*d* before Sept 1662). French composer and priest. He was choirmaster at Notre Dame, Paris, from 8 October 1640 to 4 May 1643. His reputation was such that Annibal Gantez (*L'entretien des musiciens*, 1643), after comparing him with Péchon and Aux-Cousteaux, pronounced him 'le plus agréable en la musique' in Paris. While remaining musical adviser to Notre Dame he went on in 1643 to become *sous-maître* at the royal chapel. On the death of Picot in 1657 he took over his post as composer there and also retained his appointment as *sous-maître*, which he shared with Gobert. He was ordained priest in 1646. Also in succession to Picot he was admitted to the ninth canonry in Ste Chapelle du Palais and in 1652 was nominated canon of St Aignan at Notre Dame. He was also abbot of Bois-Aubry and music master to the Benedictine nuns of Montmartre. He figures as composer and director of music in reports in the *Gazette de France* between 1657 and 1660. He must have died shortly before September 1662, for it was then that François Berthod succeeded him at Bois-Aubry.

Most of Veillot's music, including a *Te Deum* composed in 1660 for the double celebration of the Peace of the Pyrenees and the marriage of Louis XIV, has not survived. *Domine salvum fac regem* and a Renaissance-style *Ave verum* were part of the repertory of the Augustinians at Notre Dame des Victoires in Paris. The other motets are for double choir and are in a style which, according to Sauval, Veillot learnt when he came across some works by Formé that Louis XIII had locked in a cupboard after Formé's death in 1638. *Alleluia, o filii* and *Sacris solemnis* show that, like Formé, he was a pioneer of the French classical style in church music. They owe as much to the concertato style as to the austere polyphonic style: they are early examples of the Versailles *grand motet*, with alternating solos, choruses and ritornellos, but they also use liturgical melodies fairly strictly. Veillot was also one of the first to add symphonies to the plan of *grand* and *petit choeur*.

WORKS

in F-Pn unless otherwise stated

Alleluia, o filii, 6vv, 5vv, orch
Angeli, archangeli, double choir, 1644, (inc.)
Ave verum, 5vv
Domine salvum fac regem, 5vv, bc
Sacris solemnis, 5vv, 6vv, orch, ? Oratoire, June 1659
TeD, 1660, lost
Other works, mentioned in *Gazette de France*, 1657–60, lost

DENISE LAUNAY/JAMES R. ANTHONY

Veinert, Antoni. *See* WEINERT, ANTONI.

Veit, Huns (*fl* Naumburg, mid-17th century). German brass instrument maker. Two of his trumpets survive, dated 1646 and 1651 (Berlin, Staatliches Institut für Musikforschung, Musikinstrumenten-Museum, nos.640 and 639 respectively). The latter, pitched in modern E♭, is the only surviving pre-19th-century slide trumpet or *tromba da tirarsi* known. It is of the Renaissance type (*see* SLIDE TRUMPET, esp. fig.2*a*), its bell has an early Baroque flare and its slide is nearly 56 cm long. It may be one of the 'two brand-new slide trumpets' listed in an inventory of 1658 from St Wenzel, Naumburg, whence it came into the Berlin collection in 1890.

EDWARD H. TARR

Veit, Václav (Jindřich) [Wenzel Heinrich] (*b* Řepnice, nr Litoměřice, 19 Jan 1806; *d* Litoměřice, 16 Feb 1864). Czech composer. At ten years old he was already an accomplished player on the piano, organ and violin, and had begun to write church music. While studying philosophy and law at Prague University (1821–8) he subsisted by composing preludes and entr'actes for amateur theatre productions and singing in an opera chorus, and he established himself as a favourite teacher among the city's wealthy families. In 1831 he rejected music as a profession, entering the service of the state legislature. However, after the public première of his First String Quintet (1835), he was also recognized as a leading Prague composer. Within a short time his works were being published, and his renown gradually spread throughout Europe. In 1841 he became musical director in Aachen, but, unable to face the daily demands of directing the popular repertory of the town's opera company, he soon resigned, and returned to Prague and the legal profession. Despite later cultural isolation in Eger (now Cheb; 1854–62), a series of personal misfortunes and frequent bouts of ill-health, he remained active as a composer for the rest of his life.

As one of the first Czech composers who enthusiastically embraced the aesthetic and stylistic ideals of the German Romantics, Veit occupied an important position in the development of Czech music. Although heavily influenced by Mendelssohn and Schumann, his most effective works are characterized by an individual and expressive melodic gift, strong rhythmic sense and a penchant for unexpected turns of harmony and tonality. He pioneered the 19th-century Czech development of chamber music (his quartets were popular in Prague concerts and soirées, and were familiar to Smetana), and his Symphony in E minor (op.49) was one of the most important works in the genre by a Czech composer before Dvořák. Despite some tentative forays into programme music (most notably an overture, op.17, after a verse from Wieland's *Oberon*), he was unable to accept many aspects of neo-romanticism. He criticized Wagner and Berlioz, although his role as their active opponent in Prague musical circles has been overstated.

Veit was also an active supporter of the Czech nationalist cultural movement. He attempted to master the Czech language (having been brought up and educated in German), wrote a number of popular Czech choruses and utilized folksong material and characteristics in some of his instrumental music. His chamber works and choruses were performed well into the 20th century, yet he is perhaps known today only for his *Episoda ze života krejčovského* ('Episode in the Life of a Tailor'), an imaginative pastiche of Berlioz's music. Characteristic of his sensitivity and modesty was his withdrawal of the work soon after its composition, because he felt that such caricature was small-minded.

WORKS

(*selective list*)

many MSS in CZ-Pnm

SACRED VOCAL

Mass, D, 4vv, orch, op.44 (Vienna, 1858)
3 grads, incl. Ave maris stella, op.9 (Prague, 1840); Off, op.42 (Wrocław, 1854); TeD, 1863
Choral-Buch zu den katholischen Gesängen (Leitmeritzer Choralbuch), 1844–5 (Litoměřice, ?1846)

KARL STAPLETON

Vejvanovský, Pavel Josef [Weiwanowsky, Wegwanowsky, Paul Joseph] (*b* Hukvaldy or Hlučín, ?*c*1633 or *c*1639; *d* Kroměříž, bur. 24 Sept 1693). Moravian composer, trumpeter and music copyist. He studied at the Jesuit college at Opava, where he is mentioned in a register of students from 1656 to 1660. At this time he became acquainted with H.I.F. von Biber and P.J. Rittler and started to compose. A letter of 15 June 1661 records his appointment as a trumpeter to the administrator E.F. Castelle, who directed activities at the court of the Prince-Bishop of Olomouc, Leopold Wilhelm (a son of Emperor Ferdinand II), who spent much of his time away from Olomouc. Throughout his life Vejvanovský used the title of Feldtrompeter, although he was not qualified to do so. He remained at Kroměříž and in 1664 entered the service of the new prince-bishop, Karl Liechtenstein-Castelcorno, as principal trumpeter and as Kapellmeister; his duties also included the copying of music, and many sets of parts in his hand survive (in *CZ-KRa*). He possessed his own valuable music collection, and was mainly responsible for the formation of the famous one belonging to the bishop. He seems to have been on very close personal terms with his patron and was one of the highest paid court servants: with a salary in 1690 of 180 florins, he ranked third in the list of the prince-bishop's establishment and is described in various documents as 'Hof- und Feldtrompeter'. He appears also to have been director of the choir at the collegiate church of St Mořice, where many of his works were performed during his 32 years at Kroměříž. The record of his burial states that he was 'about 60 years old' at his death.

All of Vejvanovský's surviving works are found at Kroměříž. Of the 137 works noted in the music inventory from 1695, 127 are complete or in sketches; many doubtful works also exist. Since he played the trumpet it is no surprise to find that he made considerable use of it. In both vocal and instrumental music he wrote for trumpets and trombones in a manner technically superior to that of most of his contemporaries. An exception among them was J.H. Schmelzer, whom Vejvanovský knew and with whom he may well have studied for a time, since his music shows many traits of the school of Schmelzer and others associated with the court of Emperor Leopold I in Vienna. In his trumpet writing he sometimes called for a *tromba brevis*, which was tuned a tone higher than the normal trumpet. The *Missa clamantium* (1683) includes the direction 'two clarinos may be added ad libitum, but they ought to be one tone higher'. In conjunction with information from contemporary German and Italian sources, these specifications can doubtless be interpreted as references to the smaller variety of trumpet known as the *tromba piccola* or *tromba gallica*, which was in D rather than C (the usual tuning for military trumpets). One of Vejvanovský's most exceptional pieces of trumpet writing is the church sonata (IV/43), for solo trumpet, strings and continuo, that bears the reference 'Be mollis', alluding to what for a trumpet was an unusual tonality. As in a number of other instances, Vejvanovský cleverly employed here the lowered 7th harmonic of a natural trumpet and used several non-harmonic notes to score for the instrument in G minor rather than in the more usual key of C major. In many of his works it is possible to detect the influence of old modal music compositions, including the melody of the Austrian Christmas song *Joseph lieber, Joseph mein*, once thought to be a Czech folksong.

Vejvanovský's numerous settings of the Mass for various combinations of voices and instruments represent an interesting if not important step in the evolution of mass settings from the contrapuntally imitative works of the early Baroque period to the more homophonic ones (at least as far as the vocal parts are concerned) of Mozart and his contemporaries. At a time when many other composers were employing fugal devices his vocal writing is frequently syllabic and homophonic, though, perhaps because of the esteem in which polyphony was held in church music, he often made token attempts at writing imitative textures. All his sonatas are of the *da chiesa* type. It is remarkable that he never wrote variations on an ostinato bass, a form popular among his contemporaries.

It is difficult to assess Vejvanovský's influence on other composers, but it may be noted that in a number of works Biber employed motifs and harmonic procedures otherwise found only in Vejvanovský's music. Biber's knowledge of it may well account for the borrowing of trumpet motifs in particular for several sonatas that appeared after he had left for Salzburg. A detailed comparison of the two composers' music might well reveal a number of other similarities. Several works by Biber survive only in copies made by Vejvanovský.

DON SMITHERS/JIŘÍ SEHNAL

Vejvodová, Hana (*b* Prague, 11 July 1963; *d* Prague, 1 Aug 1994). Czech composer. She studied composition with Ilja Hurník and Svatopluk Havelka at the Prague Conservatory and at the Academy of Performing Arts. She graduated in 1993 with her Piano Concerto, playing the solo part in the first performance. In 1990 she studied with Donatoni in Siena, and in 1993 she attended the Congress of Women Composers in Heidelberg. She wrote about 40 works, many of them for piano, including a Sonata for piano duet (1985) composed and published while she was still a student, which was widely performed by the Czech duo of Helena and Radomír Melmuka. Apart from pieces written specifically for children, her music is dramatic and expressionistic.

WORKS

Orch: Serenade, str, 1985–6; Passacaglia, 1986; Deliranda, sym. movt, 1988–9; Arkánum [Mystery], 1990–1; Conc., pf, chbr orch, 1992–3
Chbr: Duetina, fl, vn, 1982; Wind Qt, 1984–5; Elegy, vn, org, 1985; Suite, 3 cl, 1985; Dumka, ob, pf, 1986; Trio, 2 fl, pf, 1987–8; Qt Movt, str, 1987; Brass Qnt, 1988; Dodecaphonic Suite, 2 cl, 1990; Odstíny mládí [Shades of Youth], ob, pf, 1991

Velasco, Nicolás Doizi de. *See* DOIZI DE VELASCO, NICOLÁS.

Velasco, Sebastián López de. *See* LÓPEZ DE VELASCO, SEBASTIÁN.

Velasco Llanos, Santiago (*b* Cali, 28 Jan 1915; *d* Cali 14 May 1996). Colombian composer. He studied with Valencia at the Cali Conservatory (1933–41) and graduated in composition at the University of Chile, where he studied with Domingo Santa Cruz, Pedro Humberto Allende, Humberto Isamitt and Armando Carvajal. On his return to Colombia, he succeeded Uribe Holguín as director of the Conservatorio Nacional de Musica in Bogotá (1950–53) and from 1956–60 he was director of the Cali Conservatory. He played a vital role in the development of musical institutions in Colombia, not least of the Colombia SO, of which he was a founding member. Also a founding member of the National Ballet of Colombia and the Interamerican Music Council (1956), from 1961 he concentrated on his activities as composer, teacher and choral conductor, and as music critic of *El país* in Cali (1981–96). He is one of the most representative nationalist composers, and his most frequently performed works, the Symphony no.2 (1966) and the symphonic poem on a folksong from the Pacific coast, *Tío Guachupecito* (1967), reflect a rich harmonic language and rhythmic flair.

WORKS
(*selective list*)

Vocal: A unos ojos (G. de Cetina), madrigal, SATB, 1938; Dos perrorurín, madrigal, SATB, 1940; Eripe me Domine, motet, chorus, 1940; Kyrie, double fugue for 5, motet, chorus, 1944; Ave Maria, motet, chorus, 1953; 8 villancicos caleños, SATB, 1956–80; Instantes de mi tierra, bambuco, SATB, 1958; O salutaris hostia, motet, chorus, 1959; Allá arriba en aquel alto, bambuco, SATB, 1960; Misa a Santa María de Los Angeles, chorus, 1961; Canción de cuna caleña, madrigal, SATB, 1962; Tío Guachupecito, madrigal, SATB, timp, 1967; Canción de cuna, madrigal, SATB, 1980; Laudate Domino, chorus, 1984

Orch: Danza indígena, 1944; Fugue, d, str, 1944; Sym. no.1 'Breve', 1949; Temas infantiles, 1945–85; El monumento, band, 1958; Sym. no.2, str, 1966; Tío Guachupecito, 1967; Ritmos andinos de Colombia, 1979; Pasodoble Diego Salcedo, band, 1986

Chbr and solo inst: 3 pasillos colombianos, pf, 1930; Valses simples, pf, 1930; Valses sentimentales, pf, 1936; Preludio, E, pf, 1940; 3 miniaturas, pf, 1942; Romanza, vn, pf, 1945; Str Qt no.1, C, 1945; Str Qt, F, 1946; 3 obras, pf, 1958; Adagio, org, 1975; Fugue, org, 1975; Rondó, pf, 1990

SUSANA FRIEDMANN

Velasco Maidana, José María (*b* Sucre, 4 July 1896; *d* Houston, 2 Dec 1989). Bolivian composer and conductor. He was probably a choirboy in the Sucre Cathedral *capilla musical*, directed by Lorenzo Andreotti. Later he studied at the Fontova Conservatory in Buenos Aires. Returning to Bolivia in 1925, he founded the cinema enterprise *Urania*, which he continued to own, and in which he worked as producer, director and actor for silent films, for which he provided the music. He taught music history at the La Paz Conservatory from 1928. In subsequent years several works were performed both in La Paz and abroad, including *Cuento brujo* (1935) and *Los khusillos* (1936), both performed in Buenos Aires by the Radio el Mundo Orchestra in 1937 with the composer conducting.

In 1938 he was invited by the German government to perform *Danza del viento* with the Kurzwellensender RO of Berlin, and his ballet *Amerindia* was performed by Deutsche Tanzbühne in Berlin. The following year he returned to Bolivia and founded the Orquesta Sinfónica de Conciertos, which formed the basis of the National SO, created in 1945. He conducted this orchestra in several of his symphonic works and in *Amerindia* (staged in 1940). From 1943 he gave concerts in Lima, Cali and Mexico City, where he lived until 1956. Finaly he settled in Houston, Texas, where he composed and gave lectures. He returned to Bolivia only once, two years before his death, attending a concert with the National SO and receiving an ovation when the audience noticed his presence.

WORKS
(*known*)

Stage: Amerindia (ballet, choreog. Velasco-Maidana), perf. 1938; Churayna (op-ballet, 4), 1965

Orch: Cuento brujo, sym. poem, 1935; Los khusillos, sym. poem, 1936; Danza del viento, sym. poem, 1938; Estampas de mi tierra, sym. poem, 1941; Los hijos del sol, ov., 1941; Vida de cóndores, 1943; Joyio, 1943; María Asúnsolo, sym., 1944; Chaska Laikha, 1948; Imágines, 1948; Forma y color, 1949; Preludio y Huayño, 1949; Sones de la tierra, 1949

Chbr: Madrigal, vn, pf, 1942; Vieja leyenda, vn, pf, 1942; Suite andina, wind qnt, 1956; Estrella inca, vn, pf, 1957; Canciones indias al amanecer, vn, pf, 1958; Paisaje andino, str qt, 1958; Pensamientos indios, ww trio, 1959; Rio Quirpinchaca, cl, pf, 1960; Wind Qnt, 1965

CARLOS SEOANE

Velásques [Velásquez, Velázquez], **José Francisco** (*fl* early 19th century). Venezuelan composer. He held appointments at the churches of S Mauricio (1812–15, 1817, 1819–21), S Pablo (1812–25) and S Jacinto (1816, 1818 and 1825) in Caracas. In 1816 he took over the music for the feast of 'Naval' from Cayetano Carreño, and a year later he was paid for providing military music. He may possibly be identified with composers of the same or very similar names mentioned in Caracas records around this period. It was probably Velásques's father, also José Francisco Velásques, who was a musician at S Mauricio in 1793–4 and founder of a music school; he was a brother-in-law of the composer J.M. Olivares. Others with similar names (including a Francisco Velázquez Sojo) were employed at S Mauricio, S Rosalia and Divina Pastora between 1827 and 1844.

A substantial body of sacred music by Velásques survives in the archiepiscopal archive at Caracas, where there is also music by other composers of the same name and some music ascribed simply to 'Velásquez'. Information on all these composers is to be found in records in the same archive.

SHARON E. GIRARD

Velásquez, Glauco (*b* Naples, 23 March 1884; *d* Rio de Janeiro, 21 June 1914). Brazilian composer. His formal

education was entrusted to a priest who encouraged him to sing in Neapolitan church choirs. In 1897 he was sent to Brazil and enrolled at the Instituto Nacional de Música where he studied music theory and choral singing. After a short interruption in his studies he went back to the Instituto in 1903 to study harmony under Frederico Nascimento (who also influenced his compositional tendencies) and composition under Francisco Braga. For a time he taught in a private school but tuberculosis prevented him from developing any real professional life. In 1911 he presented some of his works at a public concert which received a favourable review from the music critic Rodrigues Barbosa.

Velasquez began to compose in 1901 but his more mature works were written during the last eight years of his life. Unlike most of his contemporaries, who adhered to either a post-Romantic or a nationalist style, he found close affinity in his later works with the French school of Franck, d'Indy and Debussy, thus breaking away from the prevailing German Romanticism. His works include a string quartet, four trios, two fantasias for cello and piano, a violin sonata, and various piano works and solo songs. He also left an unfinished opera *Soeur Béatrice* and several religious choral works.

Velimirović, Miloš (*b* Belgrade, 10 Dec 1922). American musicologist of Serbian origin. He gained a diploma in the history of fine arts at the University of Belgrade and attended the music academy there. In 1952 he began graduate studies at Harvard, taking the MA in 1953 and the PhD in 1957. At Harvard he studied with Gombosi and Piston; he also worked with Egon Wellesz. After teaching at Yale (1957–69), he was appointed professor of music history at the University of Wisconsin (1969–73); he became professor at the University of Virginia in 1973 and received a Fulbright fellowship to teach in Yugoslavia in 1985. He retired in 1993.

Velimirović's research interests are Byzantine and Slavonic (especially Russian) music and Slavonic chant; as a teacher he specializes in research methods. From 1958 to 1973 he was general editor of *Collegium musicum*. His major contributions to research in Eastern chant include *Studies in Eastern Chant*, which he edited and contributed to (1966–79) and his articles and monograph in the series Monumenta Musicae Byzantine. The book, which grew out of his dissertation, is one of the first studies to explore possible borrowings between Slavonic and Greek chant melodies; his examination of a heirmologion from the Chilandari Monastery indicates borrowings of both music and notational features in the Slavonic heirmoi. His later writings have concentrated on the music of Eastern Southern Slavs.

PAULA MORGAN

Vella, Joseph (*b* Gozo, Malta, 9 Jan 1942). Maltese composer and conductor. He studied with his father, then at the Accademia Musicale Chigiana, Siena, with Donatoni (composition) and Ferrara (conducting); in 1970 he graduated from the University of Durham. In 1958 he composed a suite, *Three Mood Pieces*, for violin and piano, later reworked for orchestra, which introduced him to the public as a composer. Trained as a teacher, he worked alongside the Austrian Verena Maschat to set up the Government School of Music in Valletta (1972). In 1994 he was appointed Associate Professor of Music at the University of Malta.

As a conductor, Vella has a wide repertory and has received invitations to appear in Europe and East Asia. During his long association with the Malta Choral Society (1970–92), the Astra Opera House, Gozo (since 1970), and other organizations, he introduced to the Maltese public choral works by Mozart, Beethoven, Britten, Orff and Bruckner. His continuing interest in early Maltese music led to the revival of significant 17th- and 18th-century works, which he edited and performed. His conducting is respectful of the composer's perceived inclinations and manifests an intuitive feeling for large-scale musical architecture and rhythmic continuity, and an emphasis on the singing line.

Vella's compositions are all cast in a personal idiom which stems mainly from a neo-classicist orientation. Although the Mediterranean influence does emerge in such works as *Seher*, his works are never consciously nationalistic. His language is basically atonal, with a tendency to precipitate towards a central note. His diversity of style ranges from the pungent asperities of his String Quartet to the lyricism of the Canticle Cantata, from the impulsive exuberance of the Violin Concerto to the ascetic flavour of his *a cappella* works (e.g. *Sicut cervus*). Those of his works composed to a Maltese text seek to explore the inherent musicality of the Maltese language, an example being the high soprano cantilena in the second movement of the Sinfonia.

WORKS
(*selective list*)

Orch: Sinfonia 'De profundis', op.11, chbr orch, 1969; Ov. alla concertante, op.23, 1976; Pf Conc., op.41, 1984; Sinfonietta, str, op.36, 1984; Rebbieħa [Victorious], Sym. poem, op.45, 1986 [version of work for wind band, 1983]; Jubilo, ov., op.47, str, brass, perc, 1987; Sinfonia (J. Friggieri), op.48, S, orch, 1989; Elegy, vc, orch, op.66, 1993; Vn Conc., op.65, 1993; Vc Conc., op.75, 1995; Concertino, op.77, vc, orch, 1996; Fl Conc., op.76, 1996

Vocal-orch: Mass, D, op.20, S, T, B, SATB, orch, 1975; Laudate pueri Dominum, sacred cant., op.20b, S, T, B, SATB, orch, 1981; Domine Jesu Christe, op.38, SATB, orch, 1984; Seher [Enchantment] (song cycle, D. Massa), op.39, S, orch, 1984; A Canticle Cant. (*Bible*: Song of Solomon, adapted by Vella), op.42, S, T, SATB, children's choir, orch, 1985; Demm fuq il-Verna [Blood on the Verna] (orat., M. Vella), op.49, S, S, S, A, T, B, SATB, orch, 1989; Il-Belt Rebbieħa [The Victorious City] (orat., O. Friggieri), op.50, S, T, SATB, orch, 1990; Poeżiji tal-Bahrija [The Bahrija Poems] (song cycle, J. Friggieri), op.53, T, orch, 1991; Rewwixta [Revolt] (orat., O. Friggieri), op.54, S, A, T, Bar, SATB, orch, 1992; Nisġiet l-Imħabba [Love Textures] (song cycle, A. Mizzi), op.64, Bar, orch, 1993; Askesis (song cycle, M. Azzopardi), op.72, C, orch, 1994

Other vocal: The Seasons (madrigal cycle, T. Nash, W. Shakespeare), op.31, SSATB, 1980; Missa brevis, op.40, SSAA, 1984; L-Għanja tal-Ħajja [Life's Song] (secular cant., A. Mizzi), op.60, Bar, ob, hp, 1992; Il cantico delle creature (St Francis of Assisi), op.61, S, fl, hp, 1992; Passeggero (song cycle, A. Porta), op.63, T, fl, ob, bn, 1993; Quasi un madrigale (S. Quasimodo), op.67 high v, fl, pf, 1993; Rorate coeli, op.48, SSAA, 1996

Chbr: 3 Mood Pieces, vn, pf (1958) (arr. orch, op.4, 1965); Trio concertante, op.7, vn, hn, pf, 1968; 2 cantilene, op.12, pf qt, 1970; Cl Qnt, op.16, 1973; 5 Miniatures, op.24, pf trio, 1976; Ħaġar Gim [Ballet Music], op.25, fl, ob, perc, 1978; Str Qt, op.33, 1981; Dialoghetti, op.35, va, pf, 1983; Piece for Brass Qnt, op.55, 1992; Capriccio, op.62, vn, pf, 1993; Fantasia, op.86, org, 1996

JOSEPH VELLA BONDIN

Vella, Michel'Angelo [Michaele Angelo] (*b* Senglea, Malta, 7 Nov 1710; *d* Cospicua, Malta, 25 Dec 1792). Maltese composer and teacher. From boyhood, he was intended for the Catholic priesthood. On 14 July 1730 he left Malta for Naples to study at the Conservatorio Pietà dei Turchini with the *primo maestro* Nicola Fago, the *secondo maestro* Andrea Basso, and after 1734 also with Leonardo Leo. He returned to Malta in early 1738, where he undertook the duties of a priest and established himself as a *maestro di musica*. The first truly influential Maltese teacher, he reformed music education, fighting indifference and technical incompetence, and bringing it into line with developments in Naples. His students included Salvatore Magrin, Giuseppe Burlon, Antonio Freri, Francesco Azopardi and Nicolò Isouard. As an organist and *maestro di cappella* he accepted numerous temporary commissions in the most important Maltese churches before obtaining permanent employment in 1762 at the parish church of Cospicua. His extant works reveal contrapuntal craftsmanship, and his concern with the place of plainchant in an era of rapid musical innovation is evident in his sacred works. In the introit *Salve sancta parens*, for example, the tight, fugally-treated three-subject antiphon is followed by the psalm verse and Gloria in the second tone. The antiphon is then repeated. Fétis erroneously gives Vella's name as P. de Vella.

WORKS

SACRED VOCAL
in Cospicua, Parish Church, unless otherwise stated

Sancta et Immacolata Virginitatas, motet, 3vv, db, 1763
Miserere, 4vv, db, 1765

JOSEPH VELLA BONDIN

Vello de Torices, Benito. *See* BELLO DE TORICES, BENITO.

Vellones, Pierre [Rousseau, Pierre] (*b* Paris, 29 March 1889; *d* Paris, 17 July 1939). French composer. He began his musical studies with Jean Hugues Louvier, and then taught himself. His wish to become a professional musician clashed with his father's will, and he was obliged to study medicine; he worked as a doctor until his early death, and was a pioneer in the use of electrotherapy. However, composition was his second profession, and he soon made his mark with works whose originality won him a considerable place in the musical life of Paris between the wars. All his life Vellones showed a lively interest in new timbres and unusual instrumental ensembles; from 1930 onwards he was one of the first composers to write for the ondes martenot. Another of his favourite instruments was the saxophone, for which he wrote a concerto, and which he used in various ensembles including symphonic jazz groups. He was also fascinated by percussion, and he introduced Tibetan instruments into his ballet *Le paradis d'Amitabha*.

His music, spontaneous in inspiration, delicate and sometimes humorous, often shows the influence of jazz. His love of the exotic also finds its way into many of his works. He excelled in the field of the *mélodie* and in pieces for small instrumental ensembles.

WORKS

Stage (all unperf.): Grenade assiégée (ballet, A. Birabeau), op.8, 1918; Le beau ténébreux (ballet, Birabeau and M. Hervieu), op.10, 1919; Au pays du tendre (ballet, R. Kerdyk and G. Arnoux), op.14; Leurs petites majestés (operetta, M. Larrouy), op.43, 1931; Le paradis d'Amitabha (ballet, Vellones), op.97, 1937–9

Orch and ens: Conc., op.65, fl, sax, orch, 1934; 2 Pieces for Columbia, op.67, ondes martenot, ens, 1935; Rastelli, op.82, 4 sax, orch, 1936; Rondo capriccioso, op.88, vn, orch, 1937; A Cadix, op.103, 2 ondes martenot, ens, 1938; Suite cavalière, op.90

Vocal: Prélude et danse indienne, op.16, chorus, orch, 1923; Le cantique des cantiques (J. Lahor), op.18, S, T, B, fl, bn, 1925; 5 poèmes de Mallarmé, op.24, 1v, 4 hp, 2 sax, db, 1929; Préludes et fables de Florian, op.28, 1v, jazz ens, 1929; Cantate de Saint Venceslas (K. Toman), op.45, solo vv, chorus, org, bells, timp, 1931; John Shag (G. de Voisins), op.58, 1v, orch, 1933; La fête fantastique, op.83, B, ens, 1937; Le Roi Salomon (Lahor), op.93, solo vv, chorus, orch, 1938; numerous songs for 1v, pf

Chbr: Cavaliers andalous, op.37, 4 sax, 1930; Impressions d'Espagne, op.68, fl, bn, hp, 1934; Rapsodie, op.92, sax, hp, cel, perc, 1937; Trio, op.94, fl, ob/va, hp, 1938

Pf: Planisphère, op.23, 1928, arr. jazz ens, 1928; Au jardin des bêtes sauvages, op.26, 1929, arr. 4 sax, 1929; Valse chromatique, op.41, 1931, arr. 4 sax, 1931; Ballade, op.42, 2 pf, 1931, arr. pf, orch, 1931; Le bal Binetti, op.60, 1933; Toccata, op.74, 1936

JACQUES TCHAMKERTEN

Velluti, Giovanni Battista (*b* Montolmo [now Corridonia], Ancona, 28 Jan 1780; *d* Sambruson di Dolo, Venice, 22 Jan 1861). Italian soprano castrato. He studied in Bologna, then for six years with Calpi in Ravenna, and made his début at Forlì in 1801. Two years later he was in Naples, singing in the première of P.C. Guglielmi's *Asteria e Teseo* and in Andreozzi's *Piramo e Tisbe*. He appeared in Rome from 1805 to 1808 in Nicolini's *La selvaggia nel Messico* and *Traiano in Dacia* (première), Tritto's *Andromaca e Pirro* and Cimarosa's *Gli Orazi ed i Curiazi*. At La Scala he sang in Nicolini's *Coriolano* (1808), Federici's *Ifigenia in Aulide* and Lavigna's *Orcamo* (1809), and Mayr's *Raùl di Créqui* and Pavesi's *Arminio* (1810). He also sang in Venice and in 1811 he appeared in Turin in Nicolini's *Angelica e Medoro*. The following year he visited Vienna and Munich. Returning to Milan, he created Arsace in Rossini's *Aureliano in Palmira* (1813).

Giovanni Battista Velluti: mezzotint, c1825

Over the next three years he sang in Nicolini's *Quinto Fabio* (1814, Milan), *Carlo Magno* (1814, Sinigaglia) and *Balduino* (1816, Padua), and also sang in Turin in Bonfichi's *Abradate e Dircea*; after a tour of Germany and a visit to St Petersburg, he sang again in Turin in Nicolini's *Eroe di Lancastro* (1821), an opera he repeated in Bergamo. Tebaldo, in Morlacchi's *Tebaldo e Isolina*, which he sang in Venice, Reggio nell'Emilia, Parma and Verona, became his favourite role. In 1823 he returned to Venice to sing in Mercadante's *Andronico*, and in 1824 he created Armando in Meyerbeer's *Il crociato in Egitto* at La Fenice.

Engaged at the King's Theatre, London, he made his début there in 1825, arousing curiosity and, later, enthusiasm. He made his final appearance, in Nicolini's *Il conte di Lennox*, at La Fenice in 1830. The last of the great castrato singers, Velluti was without rival during the greater part of his career; his retirement marked the end of an era in operatic history.

ELIZABETH FORBES

Veloce (It.: 'swift', 'rapid', 'quick'). An adjective used in several musical contexts. Nicola Vicentino (1555) described the quaver (*fusa*) as *veloce*, and several other writers in the 16th and 17th centuries used the word in its purely adjectival sense: for instance, Michael Praetorius twice gave the equation *presto: velociter: geschwind* (1618 and 1621). As a tempo designation it was used by Adriano Banchieri for one of the many changes in 'La battaglia' from *L'organo suonarino* (1611). Clementi used *veloce* in his *Gradus ad Parnassum* (1817), and Chopin for one of the variations in his *Là ci darem* set op.2, with the qualification *ma accuratamente*. Later it was used more for ad libitum passages in quick movements, as, for instance, a scale passage or similar figure in a cadenza. It did not necessarily indicate an increased speed, but a smooth flow lasting evenly until the end of the passage or figure to which it applied. In the majority of cases it was applied to loud passages, as, for instance, in the finale of Schumann's F♯ minor sonata op.11. Chopin, in the slow movement of his Second Concerto, coupled *velocissimo* with *delicatissimo*. *Velocissimo* is also found in Vicentino (1555), who used it to describe a semiquaver (*semifusa*), in Brossard's *Dictionaire* (1703) and in Czerny's *Etudes de la vélocité*. The form *con velocità* also appears.

For bibliography *see* TEMPO AND EXPRESSION MARKS.

J.A. FULLER MAITLAND/DAVID FALLOWS

Velocissimo. *See* VELOCE.

Veloso, Caetano (Emanuel Viana Teles) (*b* Santo Amaro, Bahia, Brazil, 7 Aug 1942). Brazilian songwriter and singer. After early schooling in Santo Amaro he moved to Salvador, where he learned the guitar and sang in local bars with his sister, Maria Bethânia. In 1963 he met Gilberto Gil, Gal Costa and Tom Zé, and together they organized musical shows, notably *Nós, por exemplo*, directed by Veloso for the inauguration of the Vila Velha theatre in 1964. He entered the Federal University of Bahia, but left for Rio de Janeiro in 1965, the same year that his sister made the first recording of a song by him, *É de manha*. In 1967 his song *Alegria, alegria* brought him national attention when presented at the third Música Popular Brasiliera festival; challenging the prejudices of the very modernity of Brazilian popular music, it also included an accompaniment by the Argentine pop-rock group, the Beat Boys.

With the release of the album *Tropicália ou Panis et Circensis* in 1968, he launched the Tropicália movement with Gil, Costa, Zé, Torquato Neto and others, radically rethinking the nature of contemporary Brazilian culture. In the same year, both Veloso and Gil were placed under house arrest by the military government and a few months later left for self-imposed exile in London. On his return to Brazil in 1972 Veloso produced his classic albums, *Araça azul* (1972), *Jóia* and *Qualquer Coisa* (both of 1975), *Bicho* (1977) and *Cinema Transcendental* (1979). During the 1970s and 80s he performed in Europe and the USA, establishing himself as an international star, and in the 1980s and 90s cultivated a more eclectic idiom, incorporating aspects of rock, funk and soul. His most significant albums during this time were *Cores, nomes* (1982), *Velô* (1984), *Totalmente demais* (1987), *O estrangeiro* (1989), *Circuladô* (1991), *Tropicália 2* (with Gil, 1993), *Pura estampa* (1995) and *O quatrilho* (with J. Morenlenbaum, 1996). In 1998 he was awarded an honorary doctorate by the Federal University of Bahia, a recognition unprecedented in Brazilian popular music.

GERARD BÉHAGUE

Velut, Gilet [Egidius] (*fl* early 15th century). French composer. He was a *petit vicaire* at Cambrai Cathedral from 1409 to 1411 (Kügle); in 1411 he travelled to Cyprus as a chaplain in the retinue of Charlotte of Bourbon. It is unlikely that he can be identified with the Egidius Flannel alias Lenfant who sang in the papal choir from 1420 to 1441. The style of the eight compositions with manuscript attributions to Velut indicates that they were written during the early years of the 15th century. *Jusqu'au jour* and *Laissiés ester* still show traces of the complex cross-rhythms and syncopations that characterized much of French secular music at the end of the 14th century; his rondeau, *Je voel servir*, however, with its playful use of hemiola, clearly directed harmonies and frequent cadences, reveals an affinity to the chansons of the early period of Du Fay. Despite these apparent differences, it has been proposed that Velut's songs, notwithstanding his clear technical ability, are rather formulaic in character.

Velut's two sacred motets exhibit a diversity of styles; *Benedicta viscera/Ave mater gratie/Ora pro nobis Deum alleluya* is strictly isorhythmic in all voices and has frequent passages of triadic hocketing, whereas *Summe summy/Summa summy* displays a lyrical quality which approaches that of a song-motet. His three-voice Gloria and Credo are both in a treble-dominated style, the texts being declaimed syllabically. All of Velut's works survive in either *GB-Ob* Can.misc.213 or *I-Bc* Q15.

It has been tentatively suggested that Velut was the composer of all the secular works in the Cyprus Manuscript (*I-Tn* J.II.9).

CRAIG WRIGHT/R

Velvet Underground, the. American rock band. Its founder members were LOU REED (*b* 1942; guitar and lead vocals), John Cale (*b* 1940; electric viola, bass guitar, keyboards and vocals) and Sterling Morrison (1942–95; guitar and vocals); drummer Angus MacLise was replaced early on by Maureen Tucker (*b* 1945; drums and vocals). Influences on the band ranged from rhythm and blues and rock and roll to the avant-garde music of John Cage and La Monte Young, the poetry of Delmore Schwartz, the novels of William Burroughs and the pop art of Andy Warhol, who became their first manager. With the vocalist Nico (Christa Päffgen; *b* Cologne, 16 Oct 1938; *d* 1988) they became the house band at Warhol's arts collective, the Factory, and an integral part of his multi-media show 'The Exploding Plastic Inevitable' (1966). That year they also signed a contract with MGM's Verve label and recorded their first album, *The Velvet Underground and Nico* (1967), which had little commercial success, although its long-term influence was considerable. With songs such as 'Heroin' and 'European Son' it exhibited an intense and abrasive minimalism new to rock music, the sound distinguished by the drones of Cale's electric viola, the metronomic precision of Tucker's drumming and Morrison's rhythm guitar, and the dark irony of Reed's delivery of his own lyrics together with Nico's tomb-like and detached interpretation of his songs. Nico left the group in 1967 and Reed effectively took control. Much of the material for the second album, the savage *White Light/White Heat* (1967), was developed while Reed was ill and owes most to Cale and the other members of the band. The music is groundbreaking in its use of densely layered textures, distortion, white noise and feed-back, and with Reed's lyrics graphically explicit in their references to drugs, sex and drag queens, it is probably the most disturbing rock album ever produced.

In March 1968 friction between Reed and Cale forced the latter to leave the band, his place taken by Doug Yule. The third album, *The Velvet Underground* (MGM, 1969), is very different to its precursors, with mainly restrained and quiet songs. An exception is 'The Murder Mystery', an extended piece characterized by Burroughs-style cut-up techniques, simultaneous spoken texts, obsessive minimalist chord patterns and anarchic piano clusters. In 1970 the group moved record label to Cotillion/Atlantic, and released *Loaded* (1970), the band now functioning largely as a backing to Reed's vocals. By 1971 all the founder members had left the group, but in 1993 they re-formed temporarily; a European tour followed, and a live album, *Live MCMXCIII* (Sire, 1993), was released. After further brief reunions in 1994 and the death of Morrison in August 1995, the group disbanded for a second time.

Despite contempt for the music industry, lack of commercial success, lack of sales promotion and the absence of recognition beyond the avant garde of the time, the Velvet Underground has become one of the most influential bands in the history of rock music. At odds with the prevailing atmosphere in popular music of the late 1960s, the group developed a distinctively hard-edged urban sound, polarized between stripped-back rock and roll and avant garde. The Punk rebellion, the New Wave music of the 1970s, art-rock and the phenomenon of 'cross-over' can all trace their origins to the radical experimentalism of the group's first three albums.

MAX PADDISON

Vencelius. *See* WENTZELY, MIKULÁŠ FRANTIŠEK XAVER.

Venda music. *See* SOUTH AFRICA, §I, 3.

Venedier, Vitalis (*fl* late 15th century). ?Franco-Flemish composer. He is known only through four Masses for four voices in the partbooks (of which only two survive) formerly in Berlin, Preussische Staatsbibliothek, manuscript 40634 (now in *PL-Kj*): *Benedictionum omnium*, *Freuntlich und mild*, *Surge virgo* and *L'homme armé*. Venedier may have been the compiler and copyist of the manuscript. From what remains, it appears that he was an able composer with a style similar to Ockeghem's. Long, complex, interlacing melodic lines with intricate rhythms avoid regular, clear-cut patterns while paraphrasing the borrowed melodies.

BARTON HUDSON

Venegas de Henestrosa, Luis (*b* Ecija, Seville, *c*1510; *d* Taracena, Guadalajara, 27 Dec 1570). Spanish composer and compiler. He was a priest in the diocese of Toledo and served the Cardinal of Toledo, Juan Tavera, between 1535 and the cardinal's death in 1545. He became administrator of the Hospital of San Juan Bautista, Toledo, on 25 July 1570 but retired through ill-health on 22 November in the same year. In his will he asked his heirs to arrange the printing of his work *Armonya de los tres mundos* (lost).

His *Libro de cifra nueva* (Alcalá de Henares, 1557; ed. H. Anglès, MME, ii, 1944) is dedicated to Diego de Tavera, Bishop of Jaén and the cardinal's nephew. It was intended as the first of seven volumes. The book features a new variant of tablature notation in which the ciphers 1 to 7 represent diatonic degrees of a scale. This notation was later employed in Antonio de Cabezón's *Obras de música* (Madrid, 1578). The contents of Venegas's book were intended for keyboard, harp and vihuela and possibly also for instrumental ensemble. The volume contains 138 works, 70 of which are anonymous, and is prefaced with a discourse on musical theory and instrumental practice. The publication brings together works by Spanish composers, including musicians from the Spanish court and from Sigüenza Cathedral. Many of the works are arrangements of pieces from contemporary vihuela or lute collections: Luiz de Narváez's *Delphin de música* (Valladolid, 1538), Francesco da Milano and Perino

Fiorentino's *Intabolatura de lauto* (Venice, 1547) and Diego Pisador's *Libro de musica de vihuela* (Salamanca, 1552). There are over three dozen compositions by Cabezón, and the range of sources for the rest of the music is wide. The music consists principally of fantasias, tientos, settings of hymns and other plainchant melodies and arrangements of secular and sacred music by Josquin, Crecquillon, Clemens non Papa and others. Several tientos draw thematic material from pre-existing vocal music. The *Libro* also contains sets of variations, an instrumental duet based on a Crecquillon chanson and a *fuga* for 40 voices.

LOUIS JAMBOU

Veneri, Gregorio (*b* Rome, 1602/3; *d* after 1631). Italian composer. The dedication of his *Armonia di Venere* (1620) states that he was 17 years old and that this was his first publication; within a year he had produced four more, only two of which are extant. In his op.5 he explained that he had frequently served the dedicatee, Dorotea Delfinoni, as a musician. At the time of his only known later publication, in 1631, he was *maestro di cappella* at Prato (presumably at the cathedral). All except one of his surviving pieces date from before his 21st year. As one would expect, they are on the whole conventional and derivative. The flatness of his *Armonia di Venere* (the last word surely a pun) characterizes several of the 17 pieces in his op.5 too. Even so the 12 strophic arias are melodically among the more appealing written by Roman composers at this time, and two of the five strophic variations (which are all for solo voice) are unusual in being largely in triple time. (J. Racek: *Stilprobleme der italienischen Monodie*, Prague, 1965)

Veneziano [Veneziani], **Gaetano** (*b* Bisceglie, Bari, 1665; *d* Naples, 15 July 1716). Italian composer and teacher. At the age of ten he entered the Neapolitan conservatory S Maria di Loreto, where he studied till 1676. His chief music teacher there was the distinguished Neapolitan composer Francesco Provenzale. While a senior student Veneziano sometimes acted as his teacher's music copyist, as is proved by a manuscript score of Provenzale's opera *Il schiavo di sua moglie* (*I-Rsc*), inscribed: 'Francesco Provenzale fecit Anno Dmni 1671. Gaetano Venetiano allievo di S.M.d.L. di Napoli scrivea 1675'.

During his adult career he held, at one time or another, the important positions of *maestro di cappella* at the Neapolitan court, the Neapolitan church of Carmine Maggiore, and his old conservatory, S Maria di Loreto. His connections with the Spanish-controlled court began in 1678 when he was made supernumerary organist of the court chapel. In November 1686 he became an ordinary (i.e. paid) chapel member with a monthly stipend of four ducats. When Alessandro Scarlatti, court *maestro di cappella*, unexpectedly left Naples in 1703, Veneziano was one of four musicians who competed to succeed him. The examination, involving the composition of a mass, was held in December of that year: Veneziano was declared winner on 25 October 1704 and created court *maestro* with a salary of 30 ducats a month. He did not remain in this position for long, however, for in 1707 the Austrians captured Naples from the Spaniards and on 31 August cancelled the court appointments of Veneziano and other musicians who had been sympathetic to the previous regime.

Veneziano had first become a teacher at the Conservatorio di S Maria di Loreto on 10 July 1684 when he was appointed senior of two new *maestri* in charge of keyboard playing, singing and composition within the institution. The next year he resigned because of the pressure of other business. He was reappointed *maestro* of the Loreto, this time without the help of an assistant, on 5 August 1695. In 1704 the music students of the institution complained to their governors that he was not giving them enough attention (perhaps because of his new duties as court *maestro di cappella*), and a second *maestro*, Giuliano Perugino, was elected on 7 January 1705 to share the teaching with him. He was still working at the Loreto at his death in 1716.

A large collection of Veneziano's compositions (all of which are religious) survives in manuscript parts or score at the Filippini library in Naples. Though there is still doubt as to the total number of his compositions, over 120 have been authenticated and include Passion music, masses, motets, canticles and Latin hymns (all with chorus and instruments), lessons for Nocturns (solo voice and instruments), and solo cantatas. Veneziano's dated autograph manuscripts in the Filippini collection provide insights into the stylistic and compositional changes that took place in Neapolitan church music between 1677 and 1706. Many of his masses and motets for festive court or church occasions, like those of Caresana and Antonio Nola, continue the elaborate polychoral, soli–ripieno tradition of Giovanni Salvatore. His hymn settings, in contrast, tend to be short and simple in texture. By the turn of the century his music exhibited a rhythmically more vigorous and tonally expanded style, with profiled themes and a broader scope of tempo indication (as in the *Lezione prima del primo notturno Mercordi Santo*, dating

from the 1690s). This may well explain why by 1699 the music of his teacher Provenzale was considered to be out of date. Gaetano Veneziano formed an essential link between the 17th- and early 18th-century traditions of Neapolitan church music.

MICHAEL F. ROBINSON/HANNS-BERTOLD DIETZ

Veneziano, Giovanni (*b* Naples, 11 March 1683; *d* Naples, 13 April 1742). Italian composer. He is said to have studied under his father, Gaetano Veneziano, at the Conservatorio di S Maria di Loreto. He was one of three musicians, the others being Francesco Mancini and Domenico Scarlatti, appointed to the salaried position of organist of the Neapolitan court chapel on 26 December 1704; like his father, however, he lost his position on 31 August 1707 when the Spanish regime was ousted by the invading Austrians. In 1716 he was appointed second *maestro di cappella* at the S Maria di Loreto Conservatory, and he held this position for the rest of his life. In 1735, a year after the expulsion of the Austrians from Naples, he applied to the new regime of Charles Bourbon for readmission to the court chapel, claiming that he had been unfairly dismissed by the Austrians in 1707. His petition was successful and he was granted a supernumerary position in the chapel, but he was never readmitted on a salaried basis.

Veneziano is nowadays chiefly remembered as being among the earliest Neapolitan musicians to compose comic operas in the local dialect. These works are *Lo mbruoglio de li nomme*, *Patrò Tonno d'Isca* and *Lo Pippo*. Veneziano's chief extant music appears to be Acts 1 and 2 of a sacred opera *Giuseppe Giusto*, composed in 1733 for performance by the students of the conservatory: it is not a distinguished work, possessing little of the ingratiating lyricism of the best Neapolitan operas of the period and providing no evidence that its composer was an outstanding musical figure. A *Componimento per musica sopra il felice arrivo in Macerata dell'ill.mo ... monsignore Ignazion Stelluti*, for which no score survives, was performed in Macerata on 29 May 1736.

MICHAEL F. ROBINSON (with DALE E. MONSON)

Venezuela, Bolivaran Republic of (Sp. República Bolivariana de Venezuela). Country in South America. It is bordered by the Caribbean Sea to the north, Brazil to the south, Guyana to the east and Colombia to the west. The capital city is Caracas. The majority of the country's *c*24 million inhabitants live along the coast. More than 60% of the population is of mixed ethnic origin, 20% Caucasian, 9% of African descent and *c*2% Amerindian.

I. Art music. II. Traditional music.

I. Art music

1. Before 1830. 2. From 1830.

1. BEFORE 1830. Venezuela was not colonized as fast as other Caribbean or northern South American territories because the area was considered one of the poorest of the continent, and it suffered considerable neglect throughout the period. In the early 16th century Franciscans and Dominicans came to help with various colonization attempts and to pursue missionary work. The earliest towns were Nueva Córdoba (now Cumaná), founded in 1521, and Caracas, founded in 1567 and made the capital in 1587, though Venezuela formed part of the Viceroyalty of Peru until 1739. The earliest reference to musical activity records the establishment of a school in Caracas in 1591 whose curriculum included plainchant; funds were granted in 1593 to Juan de Arteaga to continue the syllabus. In 1591 a Melchor Quintela was organist at Caracas Cathedral. During the 17th century there were several further attempts by Franciscan missionaries to increase the number of missions and towns. The Capuchin Diego de los Ríos (*d* 1670) taught music to Amerindians in the Píritu mission and is known to have written motets and villancicos with texts in the Carib language. The post of *maestro de capilla* at Caracas Cathedral was established and held by Gonzalo Cordero in 1671. Francisco Pérez Camacho (1659–*c*1725) was appointed *maestro de capilla* at the cathedral in 1687 and taught music at the local

seminary; he also held the chair of music at the University of Santiago de León, Caracas, founded in 1725.

The outstanding phase of colonial music occurred during the late 18th century and continued after the country became independent in 1821. The fairly homogeneous school of composers known as the 'Escuela de Chacao' or 'Escuela del Padre Sojo' developed round the composer Juan Manuel Olivares (1760–97) and with the energetic encouragement of Pedro Palacios y Sojo, the most notable patron of music in the colonial period. In 1764 Sojo founded the congregation of the Oratorio S Felipe Neri in Caracas, modelled on the Italian order. He realized his idea of creating a music school in 1783–4, when the Academia de Música opened under the direction of Olivares. Sojo thus enhanced the importance of sacred music and stimulated music education. He was able to gather round him the most significant group of church-music composers in Venezuelan history, including José Francisco Velásques, José Antonio Caro de Boesi, Pedro Nolasco Colón, José Cayetano Carreño, Juan José Landaeta, José Luis Landaeta, Juan Francisco Meserón and Lino Gallardo (*c*1775–1837), director of the academy from 1819 and occasional conductor of the Philharmonic Society. The most celebrated figure of the Sojo school was José Ángel Lamas, whose 35 extant compositions include a famous *Popule meus* (1801), still popular in local choral concerts. The numerous works of these and other contemporary composers make up the important archive of the music school at Caracas. They are mostly for four-part mixed chorus with characteristically Settecento orchestral accompaniment, clearly showing Italian influences, especially that of Pergolesi.

Venezuelan colonial society was divided into whites (Spaniards and creoles) and mulattos (*pardos*), slaves and Amerindians. The majority of the younger composers of the Chacao group were mulattos, whose musical profession gave them freedom and a privileged social position. Notable exceptions were Cayetano Carreño and Lamas.

Most of the Sojo school's production was intended for the Church, but as witnesses of the revolutionary war some of the group wrote patriotic songs. Juan José Landaeta composed the song *Gloria al bravo pueblo*, officially adopted in 1881 as the national anthem of Venezuela, and Gallardo wrote a *Canción patriótica* celebrating the heroism of the liberator Simon Bolívar. These composers also performed in the orchestra of the Teatro El Conde, the chief hall for music drama at the beginning of the 19th century.

2. From 1830. During the mid-19th century the Romantic style predominated in Venezuelan art music, represented by the pianist Felipe Larrazábal (1816–73), José Ángel Montero (1839–81), *maestro de capilla* at Caracas Cathedral and a member of the Academia de Música, and the composer Federico Villena (1835–*c*1900), who besides church and orchestral music wrote numerous zarzuelas and salon music pieces. Montero's opera *Virginia* (1873) was the only one by a native composer to be produced in the 19th century; it was performed at the Teatro Caracas (inaugurated 1854). While opera companies appeared in Caracas more regularly after the opening of the Teatro Municipal (1880), various attempts to create a national opera remained unsuccessful, although composers of the time were prolific writers of zarzuela.

There were attempts to organize music education in the country during the second half of the 19th century. Larrazábal founded (1868–9) an efficient but short-lived conservatory. The Instituto Nacional de Bellas Artes (founded 1877) incorporated an Academy of Music, at first under the presidency of Eduardo Calcaño, a distinguished politician and writer. The institute itself was directed by Ramón de La Plaza, one of the country's first music historians. But a regular Escuela Nacional de Música was not established until the 20th century. During this period two Venezuelan musicians established international reputations: Teresa Carreño (1853–1917), particularly famous as a pianist, and the composer Reynaldo Hahn.

20th-century movements in art music reached Venezuela only at the end of World War I, when musical professionalism became possible with a flourishing economy and political stability. Musicians began to familiarize themselves with the works of Franck, Fauré, Debussy and Ravel, which they had never heard before and which exerted a long-lasting influence. A movement towards the updating and revision of composition in Venezuela was stimulated by Vicente Emilio Sojo, the most influential composer from about 1920 to 1960, Juan Bautista Plaza, a nationalist composer and musicologist who worked on colonial music, José Antonio Calcaño, and Juan Vicente Lecuna. They all cultivated musical nationalism within a post-Romantic idiom, and, in the 1920s, French impressionism. Plaza in particular created a direct national style in his well-known *Fuga criolla* (1931), in his tone poems *Campanas de Pascua* and *El picacho abrupto*, and in his *Siete canciones venezolanas* (1932).

At the end of Juan Vicente Gómez's dictatorship (1936) a new awareness of contemporary European artistic currents took shape. Sojo became the director of the Escuela de Música (later renamed Escuela Superior de Música 'José Ángel Lamas'), from which most composers of the next three generations graduated. The school continued to advocate the refinement of French harmonic practices within a national style, but also proved receptive to the diatonicism of Hindemith and neo-classicism. Sojo's students representing the former tendency include Antonio Estévez (1916–88), whose *Cantata criolla* (1954) is well known, Evencio Castellanos (1915–84), Carlos Figueredo (1909–86), Gonzalo Castellanos (*b* 1926), Inocente Carreño (*b* 1919) and the eclectic José Antonio Abreu (*b* 1939).

There was no further change in stylistic orientation until the 1960s, when even Antonio Estévez involved himself in new developments such as electronic music (e.g. *Cosmogonias 1 & 2*, 1968). The Caracas Music Festival (1966) revealed younger composers who had had little chance to be heard previously. One of the few electronic music laboratories in Latin America was established in Caracas within the Instituto de Bellas Artes and directed for a time by the Chilean composer José Vicente Asuar. Information on new music became readily available, particularly through the efforts of the music critic Eduardo Lira Espejo.

The better-known composers who adopted avant-garde techniques in the 1960s were Rhazés Hernández López (*b* 1918), Alexis Rago (*b* 1930), José Luis Muñoz (*b* 1928) and Yannis Ioannidis (*b* 1930). Hernández López was one of the first to introduce atonal serialism to Venezuela. Rago studied at the Peabody Conservatory, Baltimore,

and his work *Música de sueños y cosmogonía* was first heard at the Fourth Inter-American Music Festival, Washington, DC, in 1968. Muñoz turned to aleatory techniques in some of his works, for example *Móviles* for orchestra. Ioannidis, of Greek origin, came to Venezuela in the 1960s; his work *Metaplassis A*, presented in Washington, DC, in 1971, reveals his skilful treatment of sonic collage in an orchestral context. The fact that he found a suitable working atmosphere in Venezuela indicates the country's musical maturity. Ioannidis taught a number of younger composers, including Miguel Astor, Jorge Benzaquén, Tulio Cremisini, Paul Desenne, Carlos Duarte, Carlos García, Emilio Mendoza, Alfredo Rugeles, Ricardo Teruel, among others. Of these Rugeles (*b* 1949), Duarte (*b* 1957) and Teruel (*b* 1959) have had ample recognition as composers, conductors and performers.

1. AMERINDIAN MUSIC. The majority of indigenous groups living in Venezuela today reside in areas to the south and east of the Orinoco river or in the most southern regions along the upper Orinoco, Casiquiare and Negro rivers. These groups continue to speak a diversity of Carib, Arawakan, Saliban and unaffiliated languages and have demonstrated strong capabilities for reconstituting and transforming cultural identities in rapidly changing social and natural contexts. Venezuela's indigenous peoples suffered massive loss of life and resources during the colonial period through epidemics, the work of the mission, enslavement, ethnic soldiering and forced relocations. They have also endured violent campaigns of forced labour during the rubber boom between approximately 1860 and 1920, and borne the pressure of policies of assimilation as part of national development in more recent decades. Musical practices, both vocal and instrumental, had become an increasingly significant part of the political and cultural strategies of indigenous peoples as they struggled to reconstruct enduring social identities at the end of the 20th century.

Ethnologists have only recently begun to understand how musical sounds, particularly sung and chanted genres of ritual and ceremonial speech, are fundamental elements in the construction of power relations within indigenous societies of Amazonia. In sacred rituals, shamans and other ritual specialists sing and chant the spirit-names of powerful mythic beings, using them as agents of power in healing the sick, socializing the young and regenerating natural and social worlds. These shamanic musical practices are better understood as activities of creating and transforming the powerful forces that govern bodily, social, and cosmic processes than as mere representations of, or discourses about, such forces.

Interpreting shamanic musical practices in this manner is difficult because of the deeply holistic character of ritual processes which have aesthetic, linguistic, medical, social, moral, spiritual, historical and even ecological dimensions. The shaman's singing and chanting, often accompanied by percussive sounds made with gourd rattles, play a crucial role in integrating these diverse layers of situated meanings. The activity of singing connects two different levels of interpretation: the more specialized, verbally encoded meanings of the ritual process; and the more widely understood meanings embodied in the shaman's bodily postures and actions.

Among the Wakuénai, an Arawak-speaking people of the Upper Río Negro region, shamanic singing (*málirrí-kairi*) constitutes a hyperanimate activity of journeying to the houses of recently deceased persons in the netherworld and returning to the world of the living with the patient's soul. These verbally constructed images of movement through the cosmos are directly embodied in the shaman's physical movements of standing up to search the eastern sky for shadow-spirits and sitting down on a small bench next to the patient. The shaman's use of a constant pattern of gently descending melodic contours connects his physical actions and movements to the discursive realms of mythic narrative, song texts and interpretive commentary. However, the shaman's singing is also a hyperanimate journey through various dimensions of musicality. The contrast between loud and soft volume is especially important, since the shaman creates a sense of movement away and back through faintly echoing major phrases of each song. Acceleration and deceleration of tempo through faster and slower shaking of the sacred rattle increases the sense of movement through the cosmos. Within any given ritual, the shaman makes use of a number of different starting pitches and the pitches within each song gradually ascend through microtonal intervals. Thus shamanic curing songs embody a process of journeying or moving through the cosmos by wandering across a variety of pitches, tempos, timbres, rhythms and microtones.

Relatively few studies have given equally detailed attention to the formal features of indigenous musical performances, the multiple contexts in which musical sounds are grounded and the complex interrelations between musical forms and their contexts. Seeger's study of music among the Suyá of Brazil has documented the importance of microtonal rising and other musically dynamic processes. A study by Olsen in 1996 of Warao music includes numerous examples of microtonal rising in shamanic songs, lullabies, and magical love songs.

While these songs were not recorded in their natural context, Olsen (1996) suggests that an upward drift (microtonal rising) in Warao curing songs often indicates direct communication between the transformed shaman and the spirits, while its use in non-shamanistic music occasionally indicates theurgical closeness between the singers and the supernatural world. A more precise comparative analysis of indigenous singing and chanting can emerge only through new studies of musical forms in context.

Far from existing as a residual practice at the margins of colonial and national states in South America, shamanic musical traditions have proliferated as a source of cultural energies through which indigenous peoples have regenerated and transformed their collective identities. Among the Wakuénai and neighbouring Arawak-speaking groups of the Upper Río Negro region, a shaman named Venancio Camico led groups of men and women in collective ceremonial songs and dances on St John's day, 1858. These shamanic performances called for an end to the whites' exploitation of indigenous labourers by musically evoking the fiery destruction of the first mythic creation of humanity and its rebirth in the form of sacred musical instruments. Similarly, shamans led collective singing and dancing as a way of protesting against economic exploitation in the 1980s.

Another impressive illustration of cultural resilience through shamanic musical creativity is the indigenous religion called Hallelujah, an appropriation of Anglican Christianity into indigenous shamanism. The religion first emerged in the mid-19th century in Guyana but has spread widely among the Pemon and other indigenous peoples of eastern Venezuela in the 20th century. At the core of Hallelujah ritual practices are songs which originate in the dreams of religious prophets. Members of different language groups learn about each other's songs, but they must not alter the song texts' original language or the songs will lose their power. Over time, the result of these musical processes is the creation of multilingual 'style pools' of Hallelujah songs within each community, a microcosm of the larger pattern of linguistic diversity organized into regional networks.

Recorded examples of Venezuelan Amerindian music are in the archives of the Instituto Nacional de Folklore, the Fundación La Salle de Ciencas Naturales and the Comisión Indigenista del Ministerio de Justicia, all in Caracas.

2. AFRO-VENEZUELAN MUSIC. African influences are particularly dominant in coastal regions, such as the State of Miranda, especially in the region of Barlovento; the cities of Caucagua, Curiepe, Higuerote and Río Chico on the central Venezuelan coast; and in the states of Yaracuy, Zulia and Federal District where populations are predominantly black. The existing musical characteristics of African influence in Venezuela are of Congolese, Sudanese and Angolan origin. No coherent religious systems were brought from Africa to Venezuela, although isolated vestiges remain. At present, traditional African culture has been diluted within the context of a racially mixed culture. However, Afro-Venezuelan ritual practices and belief systems similar to those in Brazil and the Caribbean are still of special importance to the black Venezuelan. This limited African influence in Venezuela is due partly to a spontaneous process of de-Africanization, and partly to the fact that the slave trade was virtually halted before the War of Independence. During this war, blacks became free citizens and were able to attain higher social status. Thus, when the official abolition of slavery was finally decreed by Congress on 23 March 1854, it merely served to legalize a situation which already existed. From this moment on, Africans underwent a process of adaptation to, and acceptance of, Hispanic culture and Western ways of thinking.

The Catholic Church attempted from the outset to organize indigenous peoples and blacks under its God, its rituals, its saints and religious festivals. However, the indigenous people, in common with black people, refused to give up their own beliefs voluntarily, with some managing to evade European religious influences and continuing to worship their own gods. Given the difficulties encountered by the Church in trying to convert the local population, it was forced to accept, within limits, the rituals and beliefs of both indigenous people and blacks. In order to encourage integration, the Church set up religious brotherhoods for free blacks and slaves, with the aim of stimulating the worship of the Saints. But new generations forgot the practices of their fathers and grandfathers while the black creoles became more predominant, leading to the merger of African religious elements with the worship of the Saints of popular Catholicism. As in other Latin American countries, blacks continued to worship their own deities, but amalgamated them with Catholic saints: thus the ceremonies performed were directed towards the gods of fertility, rain or nature, rather than forming part of a Catholic festival. Because blacks were originally only allowed to have one or two festivals per year, they combined the attributes of various African deities in one saint, i.e. St John, St Peter, St Benedict or St Anthony. At the end of the twentieth century in the villages, festivals in honour of the saints are still organized by the *cofradías* or brotherhoods.

Afro-Venezuelan culture is evident in beliefs, vocabulary, oral traditions and, above all, in instruments, rhythms, dances and songs. The most important African influence is undoubtedly of Congolese origin. For example, the so-called *tambores redondos* or cylindrical drums of Barlovento are similar to those used by ethnic Bantu communities, and the *tambor redondo* dances performed by unattached couples are similar to dances found in Angola. The drums known as *mina* and *curbata*, which form part of the celebrations in Barlovento in honour of St John, are similar to those used in the Mina region of Dahomey by *Ewe/Fon* or *Fanti/Asaante* groups. They may have belonged to other Guinean tribes who embarked through the ports of Mina or San Jorge de la Mina. The Barlovento St John festival coincides with the summer solstice and relates to the fertility of the land and the harvest. In this particular case, St John represents a number of unspecified fertility and plant gods. In Guarenas, *fulías* (songs in responsorial style and *merengue* rhythm) are sung during the dancing. In Ocumare de la Costa, *sirenas* are sung by a solo voice before the image of the saint, in a ceremony performed within the domestic household, while tunes called *sangueos* (in 2/4 with use of the Cuban *cinquillo* rhythm) accompany dances performed by alternating, unattached couples, in which the dancers place themselves in a semicircle. This same tradition is performed by blacks of the central coastal areas and the valleys of Tuy and Barlovento (in the states

of Miranda, Aragua, Carabobo and Yaracuy). The common denominator is the alternation between soloist and chorus accompanied by the *golpe de tambor grande* (song of the big drum) and *golpe de tambor pequeño* (song of the small drum). In the former, the *mina* and *curbata* drums are used, whereas in the latter, the *tambores redondos* (set of three cylindrical drums called *pujao*, *cruzao* and *corrío*), are played. Other drums, such as the *caja*, *cumaco*, *tamunango*, or *burro negro*, are used in other regions of Venezuela.

African traits also predominate in Corpus Christi celebrations, which take place in the central areas of the country. St Anthony is worshipped on 13 June in the states of Lara, Yaracuy and Portuguesa through the performance of a dance called *tamunangue*. Here, black influences are still evident in the responsorial style, refrains and use of the *tamunango* drum. Furthermore, the *tamunangue* combines Hispanic and African influences in the form of an eight-part suite each with its own special music. The melody is sung by men only, in responsorial fashion, to the accompaniment of various types of distinctive local guitars known as *cuatro*, *cinco* and *seis* (Four, Five and Six), the *tamunango* drum and one or more pairs of maracas. St Anthony either begins or ends with a *Salve* (a religious song in honour of the Virgin Mary); this is followed by seven dances (*la bella*, *el yeyevamos*, *la juruminga*, *la perrendenga*, *el poco a poco*, *el galerón* and the *seis figureao*) preceded by a game called *la batalla*. Of these, the only parts which show any African influences are the *calambres* of the *poco a poco*.

The choreography of the *batalla* resembles that of European sword dances, although in Venezuela the dancers use strong clubs, which will not break while fencing. The music accompanying the dance is in duple rhythm. The 'battle' is performed through the streets leading to the town church, in front of which the remaining dances take place. The music of the *seis figureao*, which concludes the *tamunangue*, consists of an instrumental prelude (also serving as an interlude) in eight bars, followed by a longer section for two alternating singers, and finally a coda. The whole is then repeated to a different text. Both music and text are lengthy in order to accommodate the dance, which shows traces of the old European contredanse.

The festival in honour of *San Benito* (St Benedict) celebrated throughout the states of Zulia and Trujillo to coincide with the winter solstice and Christmas, also has African characteristics. The *chimbanguele* drums used in these celebrations are of Congolese origin, as is the procession of banners, skirts, colourful costumes and the saint on his litter who is bounced along happily to the rhythm of the dances.

Secular carnival festivities in Curiepe are a vehicle for a form of popular street theatre called *tango*. It can take the form of mimed dances, such as the *sambarambulé* in which a snake plays the central role within a group of dancers and actors. Recitation and responsorial style are always present, accompanied by a drum, a *charrasca*, maracas and the *cuatro*. Finally, within the carnival celebrations, the *calipso* is worth mentioning: a dance practised in Guïria (Sucre), El Callao (Bolívar) and Tucupita (Delta Amacuro), the responsorial songs and collective dances by young, popular personalities are accompanied by drums, *cuatro*, *charrasca* and steel band (a drum set made out of oil drums).

1. *Tambores redondos (cylindrical drums) at the festival of St John*

The principal characteristics which define Afro-Venezuelan music, according to Ramón y Rivera, are the responsorial structure; short melodic phrases built on repeated combinations of 3rds and 4ths and, to a lesser extent, 5ths and 6ths, as in ex.1; and a vocal line which is often metrically free and melodically independent of the metrically regular accompaniment. Scales may be hexatonic or pentatonic; the latter takes on a particular character in Afro-Venezuelan folk music (ex.2). The accompaniment may be composed of single figures, birhythms or polyrhythms; the first results from the (varied)

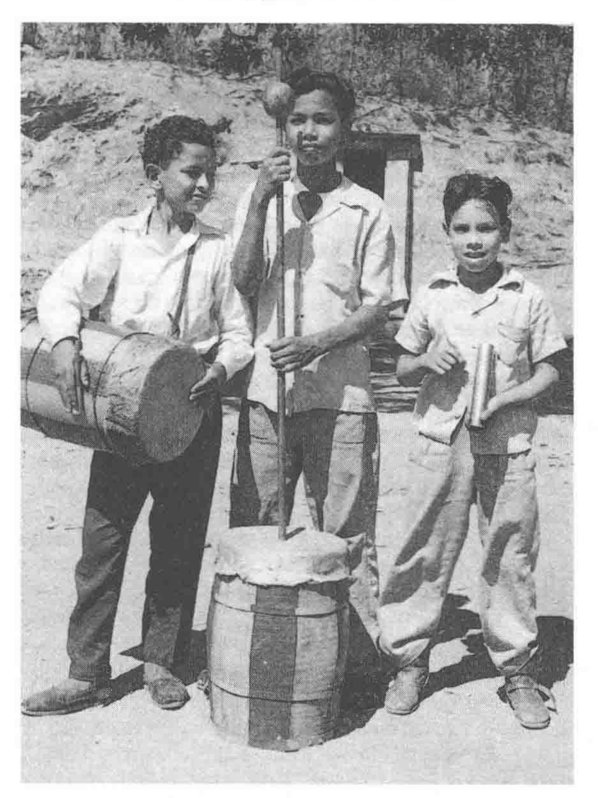
Ex.2 *Ave Maria*, transcr. L. Ramón y Rivera

Ex.3 Afro-Venezuelan rhythms; transcr. L. Ramón y Rivera
(a) Monorhythm

(b) Bi-rhythms

execution of a single rhythmic pattern, binary or ternary (ex.3*a*). Syncopations, cross-rhythms and occasional contrasts of accent (triplets, quintuplets) may be found in this kind of performance, especially when more than two drums are playing, or when further percussion is added by maracas or other idiophones, or when the body of the drum is beaten with small sticks, adding a new element of rhythm and timbre. Bi-rhythmic effects result from the juxtaposition of two different rhythms (ex.3*b*). Polyrhythms result either from the contrast of accents produced by a drum improvising freely against the regularly stressed basic rhythmic patterns of other drums or from the use of different rhythmic formulae within the same bar.



There are several types of idiophone in Afro-Venezuelan music. The *quitiplás* is a percussion instrument made up of four bamboo stamping-tubes which are struck on the ground and vibrate against each other. The largest is known as the *macho* (male) or *pujao*, and the smallest is called the *hembra* (female) or *prima*; the two remaining tubes are called *quitiplás*. The sounds and rhythms produced by the four tubes are characteristic of a dance bearing the same name, which is performed by independent, unattached couples. Maracas are played one at a time, usually by the singers, as an accompaniment for the *golpe de tambor grande* (ex.4) and the *golpe de tambor redondo*. The *charrasca*, also called *carrasca*, *carraca*, *cacho rayao*, *güiro*, *güirio* or *guacharaca*, among other names, can be made of wood, horn, gourd, metal or other materials. Grooves are made in the material which is then stroked hard with a stick. This instrument, played by both blacks and Creoles, is used to accompany *guasas* and *fulías*, together with the *chimbanguele* drums and the *cuatro* when it serves as a *gaita* accompaniment.

Of the membranophones, the tambor redondo (cylindrical drum), also known as *culepuyas* or *culo 'e puya*, is a small, wooden tubular drum, approximately 97 cm in length with a head on either end. It rests on the ground, between the player's legs, and only the upper head is played. The drum heads are held in place by ligatures which extend the full length of the drum and around it. This drum is played either with sticks or with the hands and always in a group of three drums called *corrío*, *prima* or *guía*, *cruzao* and *pujao*; the names of the drums vary according to region. The *corrío* sets the basic rhythm of the *golpe* while the *pujao* and *cruzao* improvise freely. These traditional instruments were brought over from Angolan-Congolese regions by Congolese blacks who disembarked in Barlovento.

The *mina* is a single-headed drum approximately 30 cm in diameter, 2 metres in length, made out of a tree trunk, the drum-head held in place by wooden wedges driven into the main body of the drum. Due to its size it cannot rest on the floor and is therefore supported near the mouth by two crossed sticks in the shape of an X. The player, who sits facing the drum, strikes it with two small, thick beaters called *laures*. Two other players face the body of the drum and strike it with two *laures*. When it is played flat on the ground, this drum is called a *quichimba*. The *curbata* is a drum used together with the *mina* during the Festival in honour of St John. It also has a single head which is attached in the same way as the *mina*. Of normal size, resting on the ground on three feet, it is played

Ex.4 *Golpe de tambor grande*, transcr. L. Ramón y Rivera

2. *Tambora (double-headed drum, left), furruco (friction drum) and charrasca (scraper)*

standing, struck with two beaters acting as the *guía* (guide), by providing the basic rhythm for the players.

The *cumaco* is a tubular, cylindrical drum made out of a tree trunk with a single head which is nailed on. Between one and two metres long and 30 to 50 cm wide, it rests on the floor while the player sits on it. This drum is usually played as a pair to achieve sounds of different pitch. In the state of Lara it is played for the *tamunangue* dance. The *tamunango* is a single-headed drum, the head attached by means of ligatures which extend to the bottom of the drum, where they are attached to a loop of rope or sisal held in place by wedges, before returning back to the drum head. Tuned by inserting wedges in the lower part of the drum, its shape can vary from cylindrical to conical, each shape having its own name: *Juan mayor*, *tambor mayor*, *arriero* or *regañón*, *respuesta* or *respondón* or *tambor de respuesta*, *cantante*, *pujador* or *requinta* duplicated by *requintilla* or *media requinta* and *medio golpe*.

Afro-Venezuelan chordophones include the *carángano*, also known as *marimba*, *tarimba* or *ciriaco*, a beaten chordophone with a separate resonator. Made from a stick or length of bamboo it has a taut string extended along its length which is struck with one or two small sticks. A gourd or a dried, inflated animal bladder with seeds or stones inside is used as a resonator. A second player holds the gourd or bladder on to the string, thus producing a dull, rhythmical sound. A very common instrument among the black population of the states of Aragua and Miranda, it is also made and used by creoles in various villages of the plains and in the states of Miranda and Trujillo. Bantu in origin, it used to be played during the festivals of St John and St Peter. It is normally used during Easter, as an accompaniment to *aguinaldos* and, in the state of Apure, to accompany the *joropo*.

In Afro-Venezuelan music, only two types of aerophone are played together with various types of drums during festivals in honour of St John and St Benedict: the *flauta nasal* (nasal flute) and the *guarura*.

The *flauta nasal* is used in the state of Zulia. Its origins are linked to magical and religious ritual. It accompanies the *chimbánguele* drums and is made out of *orumo* wood or simply out of a length of iron tube, with a mouthpiece at one end for blowing through. In some regions, the *pito* also exists. This is a flute which accompanies the *chimbánguele* drums, and which can be played either by blowing through the mouth or through the nose.

The *guarura* is the Venezuelan name for a sea-shell trumpet, played together with the *mina* and *curbata* during the festival of St John.

3. Hispano-Venezuelan music. European cultural sources became the basis of Venezuela's folk music, in which Hispanic traits clearly predominate. From the early years of the Conquest vihuelas and guitars, scales, harmonies, rhythms, cadential formulae and dynamic conventions of European origin found their way to Venezuela. The more peaceful conditions of the late 17th and the 18th centuries led to the introduction of larger instruments such as the harp and clavichord, extending the repertory and affecting all levels of society.

In the 19th century the Venezuelan War of Independence interrupted the development of Venezuelan art music, which was then among the most promising in Latin America. Folk music, however, did not suffer in the political upheaval: its songs and instruments continued to meet the spiritual needs of field labourer and soldier.

Hispano-Venezuelan music may be divided roughly into genres according to function, such as children's songs, work songs, religious, quasi-religious, festive music and funeral songs.

(i) Children's songs. These are of varying character and structure. Lullabies are generally very simply constructed in eight-bar phrases and duple rhythm (ex.5); some are comparable to the oldest European cradle songs. Dandling songs differ from lullabies in both structure and rhythm, as in function. They are generally livelier, and the text may consist of maternal baby-talk. Play songs still accompany many games, the structure and rhythm depending on the kind of game being played. In the simplest type of play song the melody is generally repeated frequently, the text changing as the game progresses.

Ex.5 Lullaby, transcr. L. Ramón y Rivera

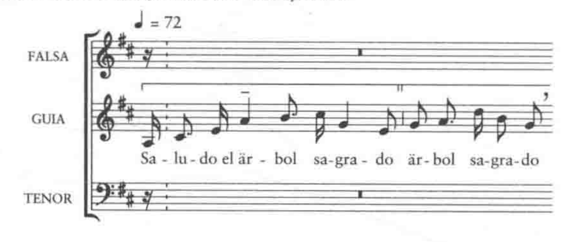
(ii) Work songs. Venezuelan folk music had a great variety of work songs (ex.6). Many of these are no longer practised due to socio-economic changes which have deprived them of their relevance; e.g. the *canto de pilar maíz* (the corn-stacking song), the *cantos de faenas de ordeño* (milking songs), the *cantos de molienda de la caña*

Ex.6 Work song, transcr. L. Ramón y Rivera

de azúcar (sugar-cane grinding songs) also known as *cantos de trapiche*, among others. Other songs are still in use, although they are gradually dying out, such as the *cantos de cafetería* (coffee-harvesting songs), the *cantos de arreo del ganado* (cattle-driving songs, ex.7) and the *pregones callejeros* (songs of street-criers) found in towns and villages. These songs are generally in free metre and of an improvisatory nature. The songs of *pregoneros*, or criers, are usually very short; some proclaim their goods with a definite musical intonation while others merely cry out an appropriate ditty.

(iii) Religious music. This type of music plays a leading role in Venezuelan daily life. At times it is purely devotional in nature, at others a mixture of popular secularism and quasi-religious devotion with a tendency towards the mystical and the superstitious. These ceremonies take place during processions in honour of the child Jesús (Christmas), the Virgin Mary or other saints, and during *velorios* (wakes or vigils) which take place at night.

Velorios are undoubtedly one of the most important features of folk tradition whether they be *velorios de angelito* (a wake for a child under seven), *velorios de santo* (wake for a saint) or *velorios de la cruz* (wake for the cross). These meetings take place either as an expression of faith or to honour a promise made. The *Nacimientos* and *Jerusalenes* are performances which combine popular secular traditions and religious doctrine, the latter being subjected to a certain freedom of interpretation. The Christmas cycle (*ciclo de Navidad*) begins on 16 December, with preparation of nativity scenes, and ends on 2 February, with the celebration of the Virgin of Candlemas. This is the most important festivity in Venezuela, and consequently gives rise to the greatest variety of traditions. The music and songs performed during these festivities include *villancicos*, *aguinaldos*, *gaitas*, *romances*, *estribillos* and *pasacalles*, among others.



Velorios de la cruz take place in the month of May and are associated with the worship of the cross and performed at nocturnal ritual events. Crosses are put up and decorated in various parts of a house and prayers and rosaries are said and sung. The songs performed during these religious occasions when participants come together in a group in front of the cross are called *tonos*. Songs are dedicated to the worship of the Cross, the Virgin Mary, while others deal with human themes: the latter are divided into three categories: *tonos de argumento*, *tonos de flores* and *tonos de amores* (themes of debate, of flowers, of love). Depending on the region in which they take place these celebrations are also known as *Fiesta de la cruz de Mayo*, *Rosario de cruz*, *Velorio de Santo* (the Celebration of the May Cross, the Rosary of the Cross, the Wake of the Saint). In the state of Miranda and on the coast of the Federal District, *fulías* are sung for this celebration instead of polyphonic songs. Creole or Afro-Venezuelan *fulías* have two alternating parts: one consists of an irregular melody of eight or ten bars, sung by a soloist, followed by a reply from a chorus, in irregular phrases of five, six or seven bars, often with partial repetition of the soloist's melody. Occasionally, Hispanic forms are mixed with musical expressions of African origin, with accompaniment from a *cuatro*, *tambora*, metal *charrasca* and maracas. The second part of the *fulía* consists in the recitation of *décimas*.

Tonos de velorio de la cruz (ex.8) are intoned in two parts (in parallel 3rds) or in three parts and constitute the most curious and significant musical manifestation found in certain regions of Venezuela. Sung by three men a cappella in three parts, they are sometimes accompanied by the *cuatro*, at other times by *tiple*, *bandola* and maracas depending on the region. The harp is very occasionally used. The voices proceed as follows: the voice known as

Ex.7 Cattle-driving song, transcr. L. Ramón y Rivera

Ex.8 *Tono de velorio*, transcr. L. Ramón y Rivera

the *guía*, *alante* or *prima*, which guides the song and remembers the text, begins first. After the first verse is sung, the second voice, called the *farsa* (*falsa*) or *contrato* (*contralto*) joins in. This is then followed by the tenor who sings the lower voice. The voice known as the *superior* or *falsa* is sung an octave higher in falsetto. Two verses are sung, and then fully or partially repeated (in the latter case they are completed with sung *ays* or with *bocca chiusa*, that is with wordless humming), until the full text has been sung. Some *tonos* have a very definite harmonic tendency while others are contrapuntal in nature. They are considered either religious or secular, according to the subject.

The *aguinaldo* is described as *de parranda* or *religioso*, depending on its character. The *aguinaldo de parranda* has a festive character associated with Christmas celebrations, although it is not religious, while *aguinaldos religiosos* are thematically related to Christian Christmas themes. Songs have different names in each region, and are also known as *Cantos de Noche Buena*, *versos al niño*, *aguinaldas*, *villancicos*, *romances*, *décimas*, *plegaria del niño* and *alabanzas*. They are sung by a soloist and a chorus, with maracas, *cuatro*, *tambora* and *pandereta* accompaniment.

The maracas are shaken idiophones, played in pairs by Creoles as rhythmic accompaniment to dance and song. Different playing styles exist, known as *oriental*, *tuyero*, *llanero* and *larense*. The *tambora criolla* is also called *tamborete*, *tamborita* and *tambor*. A membranophone with two heads either nailed or held in place by ligatures, it is played with a mallet and a stick and used to accompany all kinds of songs and dances. It is always played in *aguinaldos*, *fulías*, *gaitas*, *pasacalles* as well as *merengues*.

The *pandereta* or *pandero* is similar to the Spanish tambourine, although it is commonly played by rubbing the middle finger across the centre of the head. The instruments which accompany the *aguinaldo* may vary: e.g. in the state of Lara, the *cinco* (five-stringed chordophones) and the *cinco y medio* (slightly larger than the *cuatro* with the same strings as the *cinco* and an additional resonance string called the *tiple*) are used. The *aguinaldo* is written in 5/8 and 6/8 and, sometimes, in 2/4 time.

A *fulía* of clearly European origins is sung in the eastern part of the country (in the states of Anzoátegui, Sucre and Monagas). The melody is in measured time and its distinctive characteristics and rhythm are very similar to the dances imported from Portugal and the Canary Islands. The *galerón*, another type of *fulía*, can also be heard in the eastern states. The song begins after an initial prelude by the accompanying instruments of guitar, *bandolín* and *cuatro*. A descending melody, which corresponds to the Greek hypo-Phrygian scale, is sung, while the harmony progresses from the tonic to the subdominant and dominant with guitar, *bandolín* and *cuatro* accompaniment.

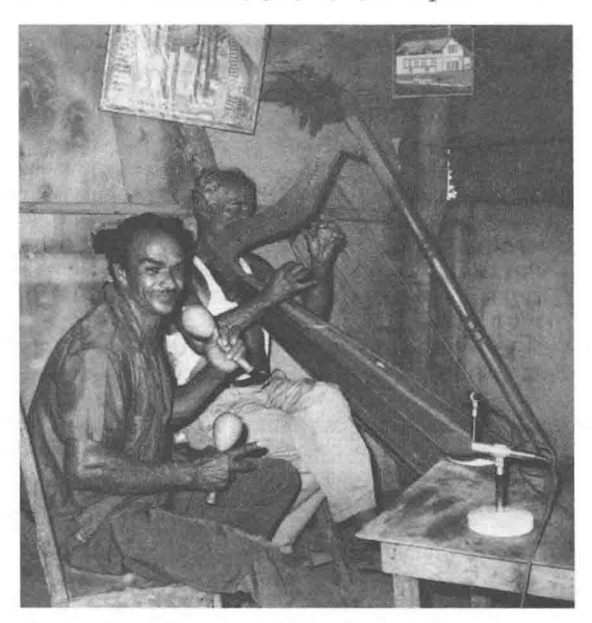
The *bandolín* is similar to the Italian mandolin. It has four orders of double strings and is played with a plectrum as a solo instrument. The *cuatro* is a chordophone of the lute family directly derived from the Spanish Renaissance *guitarrilla* (small guitar), named after its four strings. It is popular at all levels of society for its ease of play; the strumming or *charrasqueo* of the strings is similar to the Spanish *golpe* and adaptable to singing accompaniments and different combinations of instruments. Also used as a solo instrument, its characteristics, in terms of manufacturing techniques, size, number of strings and sonority vary according to the region. In addition to the traditional *cuatro*, there are a number of variants known as *cuatro de cinco cuerdas* (five-stringed *cuatro*), also called the *requinto*, which has a double order in lieu of a single fourth string, and the *cuatro y medio* (four and a half): in the latter, the first string is attached to a peg which is inserted into the lower part of the instrument. The *cuatro tradicional* is tuned in a similar way to the Renaissance *guitarrilla* (or small guitar): from the first to the second string there is an ascending perfect 5th interval, followed by a descending major 3rd and a descending perfect 4th: B–F♯–D–A (the first string, B, is played an octave lower). Excluding romantic songs, which are accompanied by the guitar, the *cuatro* accompanies all Venezuelan creole dances and songs. The larger *quinto* or *cinco* has five strings while the *tiple* has five double or triple courses. The *tiple* (fig.3), derived from the ancient Spanish guitar, is also strummed to accompany songs. Although more typically a Colombian instrument, it is found in the Venezuelan Andean region, bordering with Colombia. The ordinary guitar is also used in Venezuelan folk music.

The quasi-religious genre is often connected with communal dances: saints' feasts and other devotional occasions are celebrated with popular amusements and entertainments. Other types, such as the *fulía oriental* (from eastern Venezuela) and the *tamunangue*, are examples of music of a different character within the quasi-religious genre.

In Venezuela the *fulía* (a name slightly modified from the European folia) is not a dance but a devotional song. There are two types: the first is creole or Afro-Venezuelan and the second European. The latter is sung with a certain

3. *Tiple (guitar, left), cuatros (small guitars) and violin*

Ex.9 *Fulía*, transcr. L. Ramón y Rivera



degree of metrical freedom. A man and a woman may alternate in singing the text, which is religious in tone (*canto a lo divino*). Ex.9 shows an example of *fulía*: the sung melody is repeated many times with different texts and with improvised melodic variants to the accompaniment of the *bandolín* and *cuatro*.

(iv) Social entertainment music. There are many different types of entertainment music: some are traditional and connected with European art dance music; others are derived from music which in Europe served as simple entertainment and which continued to do so in Latin America; and others are relatively modern (*danzas*, *merengues*). Four of these types are the *pasaje*, *golpe*, *corrido* and *punto*. The first two accompany the *joropo*, Venezuela's national dance, which is performed by independent couples: each couple may use different steps, but the dance always starts with the *valseo* (waltz step). More recently the name 'joropo' has been given to a type of composition by academically trained musicians using melodies and rhythms of a creole character.

There are two kinds of *pasaje* (also called *revuelta*), one from the Venezuelan plains, the other sung only in the north-central part of the country. The latter type of *pasaje* consists of four sections, each with its own name, as in European dance suites of the 17th and 18th centuries. The first part (also called *pasaje*) is the longest and most varied, the second (*yaguaso*) may modulate to a neighbouring key, returning to the tonic (sometimes by way of the relative minor) for the third section (the *guabina*), and the final section (*marisela*) is a rhythmic showpiece characterized by syncopations and cross-rhythms of 3/4 and 6/8. Ex.10 gives a general idea of the voice movement, melody and some aspects of the accompaniment of the *pasaje*: the singer accompanies himself with maracas, while a harp provides the musical framework, playing both an accompaniment of chords and arpeggios and melodic introduction; the vocal line is melodically independent; and the quick tempo expresses the lively character of the dance. The themes and technical resources are comparable to the best popular music of 18th-century Europe and the use of counterpoint and variations makes

Ex.10 *Pasaje*, transcr. L. Ramón y Rivera

4. Harp and maracas from the state of Miranda

the *pasaje* unique in Venezuela's folk music. There is a large extant repertory of *pasajes* used to dance the *joropo*.

The Venezuelan harp (fig.4) is directly related to the diatonic harps brought to America from Spain from the 16th century onwards. There are two varieties of harp: the *arpa tuyera* (also known by the names of *aragüeña*, *mirandina* or *central*, which has a wider sound box than the *llanera*, and 34 high-pitched metal strings) and the *arpa llanera* which has 32 nylon strings and is principally used alongside the *cuatro* and the *maracas*, in the dancing and singing of the *joropos llaneros*; for *tuyeros*, the harp is played together with the maracas, in which case, the *maraquero* or maraca-player also sings. Both types of harp have a range of almost four octaves.

The *golpe* is a more common and varied form than the *pasaje*. It is a generic term for a musical piece, whether African in character (played on the drums) or Hispanic (played on the harp or *bandola*, *cuatro* and maracas). The *golpe* usually consists of a melody in eight or 16 bars, sung by one or two voices. More complex structures, with a refrain, occur only in the state of Lara in central Venezuela. The European prototypes may have been waltzes or other short pieces in 3/4 time, such as ländler. The *golpe* may include one or more musical themes in the manner of a creole waltz with the typical syncopations and melodic and rhythmic mixtures of Venezuelan folk music.

The *bandola* is a chordophone of the lute family. It has a pear-shaped sound box and is played with a plectrum. There are three types of *bandola* in Venezuela: the *bandola llanera* which has four single strings, the *bandola central* or *guariqueña* and the *bandola oriental*, both of which have double strings, and the *bandola andina* with a combination of double and triple strings. This instrument also plays a part, together with the *cuatro* and the maracas, in the performance of the *quirpa*, a popular *golpe* among *músicos llaneros* or musicians of the plains.

Whereas the *golpe* and *pasaje* accompany the *joropo*, the *corrido* and *punto* are narrative genres. Many old European ballad themes and types of harmony and accompaniment occur in these forms, sometimes mixed with creole elements and sometimes virtually unaltered. In Venezuela there are three types of narrative song: the *décima* (with special text and music) and the more traditional *corrido* and *punto*. The *corrido* texts derive from the Spanish *romance* (ballad). The term *corrido* denotes both text and music; the occasional use of a variant term, *seis corrido*, implies no difference in content or structure. The song generally begins with a sustained high-pitched note which is followed in the most traditional examples by a descending and syllabic melody (ex.11), sometimes based on a G mode. Hemiola results from the duple rhythm of the melody against the triple rhythm of the accompaniment. Occasionally the melody may move freely against the accompaniment. The text of this example recounts a theme common in Venezuelan folklore, imprisonment the of a revolutionary leader.

The term 'punto' is used in some Central American and Caribbean countries to denote a narrative song genre, but

etc.

Ex.12 *Canto del gritón*, transcr. L. Ramón y Rivera

the Venezuelan *punto* is distinguished by rhythmic and other characteristics. The form is no longer current and modern examples collected in Venezuela are rare, despite the popular references to many kinds of *punto* (e.g. *punto mampó*, *punto y llanto*). The text is religious, as the *punto* was originally connected with the *velorios*. The melody is rhythmically free and resembles Andalusian, specifically flamenco songs in its scale, slurs and characteristic ornaments such as *grupetos*. The accompaniment is sometimes played only by a *cuatro*, but a *bandola* may also add a cantus firmus, and a guitar the bass part.

(v) Galant music. The term 'galant' is applied to a repertory of love-songs, of European origin, in praise of women: mother, wife or beloved. They might be sung before a window at night, like a medieval serenade, or in a salon as entertainment. The earlier examples found in Venezuela are brief, simple melodies, similar to their European prototypes. *Galant* songs were current until the introduction of the Spanish theatre (in the late 18th century) and later the Italian (from the mid-19th century). The guitar accompaniment developed from simple arpeggios to tremolos, altered harmonies, preludes and interludes, following the Italian operatic fashions. The song's structure was also changed by the incorporation of thematic contrasts with modulations to neighbouring keys and da capo. Rubato, fragmented phrases and other Romantic effects characterized this type of song, which was popular for little more than a century, until about 1920. The *galant* style manifested itself in other theatrical forms such as the *polos*, *malagueñas* and *jotas*, clearly derived from the Spanish theatre. Of these only the *polo* survives, very much transformed and apparently unconnected with the flamenco *polo*. Other Venezuelan song types within this genre (e.g. the waltz and *bambuco*) are more recent.

(vi) Funeral genres. The principal types of folk music connected with death are the *tonos*, ballads and refrains of a religious character sung in memory of dead children (*angelitos*). Another funeral genre, *canto del gritón*, is a short melody used in certain parts of the state of Lara to accompany the 'procession of souls' or to end a 'novenary for the dead'. In these cases the occasion is communal and solemn, dedicated not to children but to adults. The unaccompanied melody (ex.12) is sung by a single man at the head of the procession.

Popular shows called *Nacimientos* and *Jerusalenes* were performed in Caracas from the end of the 18th century. The *Nacimientos* were a representation of the Nativity while *Jerusalenes* enacted the passion and death of Jesus. In the 19th century established composers, such as José María Montero, José Lorenzo Montero and Román Isaza, wrote pieces for these plays.

GERARD BÉHAGUE (I), JONATHAN D. HILL (II, 1), WALTER GUIDO (II, 2–3)

Vengerov, Maxim (*b* Novosibirsk, 15 Aug 1974). Israeli violinist of Russian birth. He studied with Galina Turchaninova in Novosibirsk and later at the Moscow Conservatory, and also with Zakhar Bron. He won first prize in the Junior Wieniawski Competition in Poland in 1984, and made débuts in Moscow in 1985, in Germany in 1987 and in London in 1989. In 1990 he won the Carl Flesch Competition, and he has subsequently established an international reputation, appearing with leading orchestras and conductors. He made his début in the USA in 1991 with the New York PO, and appeared at the Proms in 1992 and 1993. Vengerov has made several recordings including virtuoso solo repertory and critically acclaimed accounts of the concertos of Tchaikovsky and Glazunov. His playing combines superb technical command with a lyrical eloquence that can captivate his audience. He plays the 'Reynier' Stradivari of 1727.

MARGARET CAMPBELL

Vengerova, Isabelle [Isabella Afanasyevna] (*b* Minsk, 17 Feb/1 March 1877; *d* New York, 7 Feb 1956). American pianist and teacher of Russian origin. She studied the piano at the Vienna Conservatory with Joseph Dachs, and privately with Theodor Leschetizky; in St Petersburg she studied with Anna Esipova. From 1906 to 1920 she taught at the Imperial Conservatory in St Petersburg and then toured the USSR and Western Europe from 1920 to 1923, when she settled in the USA. In 1924 she helped found the Curtis Institute and in 1933 joined the faculty of the Mannes College. She taught at both institutions until her death and was known for painstaking attention to detail and for psychological insight that brought out the best in each pupil. While her approach was flexible and she denied having a particular method, she drilled all students in certain techniques designed to achieve expressive playing, such as moulding the hand to the keys for evenness and a seamless legato; playing deeply in the keys while using the weight of the forearm and a flexible wrist to achieve a full singing tone without harshness, and controlling tone by higher or lower positions of the wrist. Among her pupils were Barber, Bernstein, Foss, Graffman, Kalish, Kallir, Lateiner and Pennario. She was the aunt of Nicolas Slonimsky.

DAVID WRIGHT

Venice (It. Venezia). Italian city, capital of the Veneto region.

1. To 1600. 2. 1600 to 1750. 3. After 1750.

1. To 1600. That Venice achieved its importance as a musical centre much later than other cities in northern Italy was probably due to several of the factors that contributed to its remarkable political stability: its electoral system for public offices ensured that no individual family achieved overwhelming prominence; appointments to important military and civil offices were often spread among several of the noble families; Venetian customs and sumptuary laws discouraged excessive displays of wealth and power by an individual or family,

Maxim Vengerov

thus limiting private patronage of music. Little is known about music in Venice during the Middle Ages, but there is evidence of the development of a chant based on the liturgy of Aquileia which diverged considerably from the Gregorian. Most of the documents about music from the period up to the late 15th century are related to service at the ducal church of S Marco or to ducal politics. This accounts in part for the fact that until relatively recently the history of music in Venice to the end of the Renaissance has been viewed primarily as a history of music at S Marco. The ducal chapel was undoubtedly the most important musical institution of the city, completely overshadowing the cathedral of S Pietro di Castello, and it was the natural centre of that combination of religion and politics so evident in Venetian pageantry and liturgy.

Research continues to deepen our knowledge of music at other institutions and of private music-making, and a fuller picture is emerging of musical life in Venice, especially for the period beginning in the late 15th century.

The earliest musical document related to music at S Marco is the appointment of a 'Mistro Zucchetto' as organist in 1316. The first mention of a choir is in a document of 1403 recording the establishment of a singing school to provide the choir with trained singers of Venetian birth. Music was certainly performed at important ceremonies and processions well before the 15th century: a liturgical drama was performed for the Feast of the Annunciation in 1267, and there are other sporadic references to music. A tradition of motets celebrating the authority of the doge seems to have been established by the early 14th century, when a motet, probably by Marchetto da Padova, was written for the Doge Francesco Dandolo (1329–39); one anonymous motet was written for the Doge Marco Corner (1365–8), and one, apparently by Landini, was dedicated to the Doge Andrea Contarini (1368–81). Although no motets survive from the last three decades of the 14th century, it is likely that the tradition continued. In the early 15th century motets praising the doge were written by Johannes Ciconia, Antonio Romano (the first known master of the choir school at S Marco), Christophorus de Monte and Hugo de Lantins. These pieces were probably not heard at the doge's inauguration, as previously thought, but their composition was often tied to important ceremonial events early in the doge's reign. Minor figures, such as Johannes de Quadris, can be shown to have been in Venice in the 15th century; but no native composers of distinction worked in the city during the century and no major appointments of Franco-Flemish composers and singers, customary elsewhere, occurred here.

The first surviving list of the singing chapel of S Marco, compiled on 28 April 1486, shows an establishment comparable in size to that of other leading musical centres, with ten adult singers (four of them probably of foreign provenance) and 12 choirboys: the choir was headed by an 'oltramontano', the unknown Alberto *francese*. It is not known how long a choir of this size had been the norm at the church, but it seems that the late 1480s were a time of increased music-making at S Marco: between 1486 and 1490 four new adult singers were added to the choir, and a second organ was built and staffed by an additional organist. Alberto's successor, the little-known PETRUS DE FOSSIS, might have also been a French composer: although no works of his are extant, he was praised by contemporaries for his singing and for his compositional skills. Virtually no sacred music survives from this period, but there are a few frottolas composed by musicians from S Marco, for example by the organist Francesco d'Ana.

Musical performances of sacred music were not restricted to S Marco: the city's *scuole* (the charitable confraternities) were already active musically in the 15th century. Less important churches within Venice, especially monastic churches, also had musical establishments, although of much smaller size than S Marco. The activities of the *scuole* and of the churches of the city became progressively more elaborate in the course of the 16th century. Instrumental music seems also to have flourished in Venice at the turn of the century, establishing a tradition that was kept alive well beyond the Renaissance. In the early part of the 16th century Venetian instrumentalists, especially the members of the *pifferi del Doge* (fig.2), the state instrumentalists, were widely sought: Pope Leo X wrote directly to the doge to obtain the temporary services of Zuan Maria del Cornetto, and King Henry VIII of England recruited several instrumentalists – the most famous among them being the members of the Bassano family – for his court. Silvestro Ganassi, the author of two of the most important instruction books on Renaissance instrumental music (the *Fontegara* of 1535 on recorder playing, and the *Regola Rubertina* of 1542–3 on the viola da gamba), was hired as a member of the *pifferi* in 1517. Little documentation survives as to the repertory of these musicians, but a letter of 1494 from one of the *pifferi* to Francesco Gonzaga discusses instrumental arrangements of motets, a practice that might explain the features of some of the untexted pieces found in the collections printed by Petrucci.

The appointment in 1527 of the Flemish master Adrian Willaert to head the chapel of S Marco (created a basilica in 1520) should be seen as a culmination of the growth of the musical establishment there in the preceding decades. It was also part of a conscious cultural policy of the Venetian government, and especially of its doge Andrea Gritti, that sought to enhance the status of the city through public patronage of the arts. Upon his arrival Willaert found a rather large choir, which included a number of foreign singers, and he apparently felt no need to press for any immediate changes. With Willaert the Venetian government finally had a director of music of international renown; undoubtedly his presence in Venice, and his increasing reputation as a teacher, were important factors – although by no means the only ones – in the growth of the public and private musical world of the *Serenissima*. In addition to his importance as a composer of sacred music, for which he was held up as a model by Zarlino, Willaert helped establish a 'Venetian' madrigal, and his works in the lighter secular genre of the villanella and his instrumental ricercares were imitated in Venice and abroad.

A vital factor in the growth of Venetian musical life was the number of music publishing houses in the city. The first print of polyphonic music was published in Venice, by Ottaviano Petrucci, in 1501, but a more modern and commercially successful music publishing industry was established in the 1530s by the house of Scotto and by the Frenchman Antonio Gardane. By about 1545 Venetian music publishers were by far the most important in Italy, and their activities made a large body of music readily available to local musicians. Scotto and

1. Interior of S. Marco, Venice: painting by Canaletto, c1760 (Museum of Fine Arts, Montreal)

Gardane printed music by nearly every significant composer, and many musicians visited Venice specifically to oversee publication of their works, thus enhancing the international character of the republic's musical life. The music publishing trade also provided an outlet and an incentive for local composers, who were sometimes directly involved in the business as publishers and editors.

Instrument making also flourished in Venice. There were numerous harpsichord makers, organ makers and makers of plucked and wind instruments, many of them of foreign birth. Italian harpsichord makers active in Venice included Alessandro and Vito Trasuntino, G.A. Baffo and Domenico da Pesaro; more of Domenico's keyboard instruments survive than of any other 16th-century maker. Documents from the 16th century show that there were several lute-making shops, whose total output was considerable – the inventory of a single shop lists over 500 lutes – making it likely that much of it was intended for the foreign market.

When Willaert died in 1562 the procurators of S Marco sought to appoint another foreign composer of international fame. Their choice was Rore, a pupil of Willaert, and thus already known in Venice: but after only slightly more than a year in the position, Rore left Venice, apparently dissatisfied with the complicated administrative arrangements originally designed to relieve Willaert of some of his teaching duties. The procurators used the period after Rore's departure to reorganize the chapel, eliminating the division between *cappella piccola* and *cappella grande*, and then appointed as *maestro* another pupil of Willaert, and a native of the nearby town of Chioggia, Gioseffo Zarlino. Zarlino had no great international reputation as a composer, but the publication of his *Le istitutioni harmoniche* in 1558 had already established him as one of the most important theorists of his time. Zarlino does not seem to have been greatly interested in composition, but a number of musicians at S Marco, notably the organists Claudio Merulo and Andrea

and Giovanni Gabrieli, and the singers Giovanni Croce and Baldissera Donato, were composers of distinction. The period of Zarlino's direction saw a gradual expansion of the size and the duties of the chapel. The major change that occurred during Zarlino's tenure (1565–90) was the appointment in 1568 of a permanent group of instrumentalists to assist in the celebration of the most important feast days, a formalization of an existing practice. In subsequent decades the procurators added to this group: some of the instrumentalists were required to support the voices of the choir, others seem to have been hired exclusively to play instrumental music. On all major feast days this nucleus of instrumentalists was supplemented by anything from four to 14 additional players. The size of the choir varied, reaching a low point during the great plague of 1575–6, but often numbering close to 30 singers. The increase in the size of the performing forces, which continued into the early 17th century, mirrored the growing use of polychoral (*cori spezzati*) writing by Venetian composers, an idiom which dominated Venetian sacred compositions from the 1570s until well into the next century. Contrasts of sonority, of tessitura and of instrumental colour among the various groups became a distinctive trait of the Venetian style; Venetian composers also favoured lavish settings of texts found outside the Ordinary of the Mass. The amount of spatial separation between the choirs of instruments and voices used by composers such as Giovanni Gabrieli has often been overstated. Vocal polychoral pieces *a due cori* were generally performed with no spatial separation of the performing forces, but with a division between soloists and *ripieno*; the total number of singers could be as few as 12. Some of the most extravagant late 16th-century performances saw one group in each of the organ lofts, situated on either side of the altar, and a third group on a specially built temporary stage on the main floor of the church, not far from the main altar. This grandiose style, found both at S Marco and at the celebrations of the *scuole*, can be seen as the musical counterpart of the political writings that were establishing the so-called 'myth of Venice', a trend given great impetus by the aftermath of the victory at the Battle of Lepanto in 1571: this major naval defeat of the Ottoman Turks, in which the Venetian fleet played a leading role, was a source of civic pride and spurred the production of literary and artistic tributes.

The other notable presence on the Venetian musical scene was that of the *scuole*. The *scuole grandi*, the largest and most important of these charitable confraternities, employed from the late 15th century a group of singers and instrumentalists to assist in a variety of celebrations. These institutions provided a focus for the civic activities of a large segment of the population that was otherwise excluded from the exercise of political power. Competition among the *scuole* was fierce, sometimes creating heated exchanges over the order of precedence at official processions, and during the 16th century the *scuole grandi* resorted to increasingly magnificent pageantry, which included music commissioned from the best composers and performed by the best singers and instrumentalists in the city. The English traveller Thomas Coryat, visiting Venice in 1608, described a musical performance at the Scuola Grande di S Rocco with a group of 20 singers and 24 instrumentalists, whose music made him feel 'rapt up with Saint Paul into the third heaven'. This was very

2. One of the six 'pifferi del Doge', for whom Gabrieli wrote his canzonas and sonatas (Museo Correr, Venice)

profitable work for Venetian musicians, and the procurators of S Marco used the existence of these opportunities as a recruiting tool: in a famous letter to Alessandro Striggio the younger, written in 1620, Monteverdi estimated that he could earn from commissions received from the *scuole* a sum equal to half of his basic salary as *maestro* at S Marco.

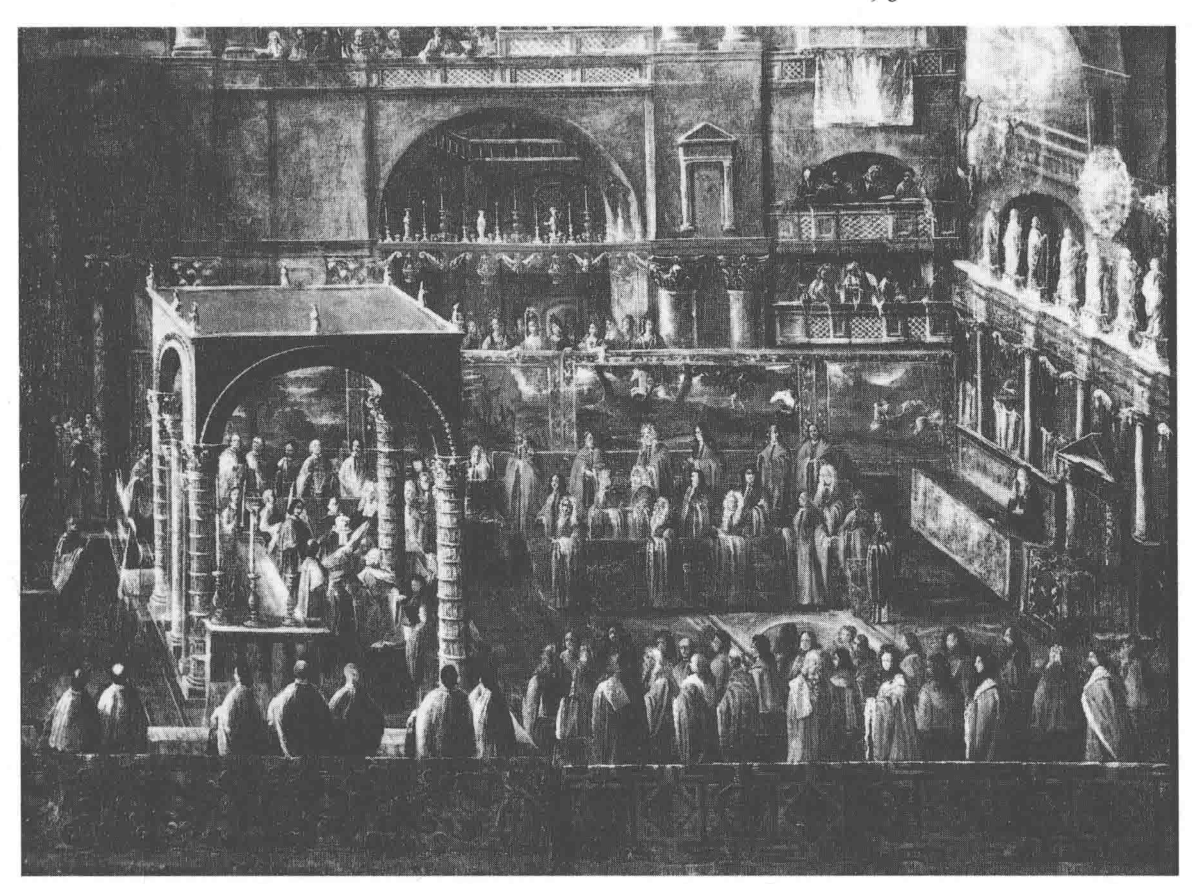
Musical life in the minor churches of the city could not equal the magnificence of that at S Marco or the *scuole grandi*. However, many of the most important churches maintained a musical establishment: among the *maestri di cappella* in the 16th century were Ludovico Balbi at the Franciscan church of S Maria Gloriosa dei Frari (where Monteverdi was later buried) and Ippolito Baccusi at the Augustinian church of S Stefano. The size of their choir was often very small, with no more than four or five singers; but by the late 16th century efforts were made to improve the quality of the establishments, while some emulated S Marco in hiring a small group of instrumentalists to play at important feasts.

2. 1600–1750. Venice in the 17th and early 18th centuries provided one of the richest and most varied environments for music-making of the past millennium. Around 1600 Venice could bask in the glory of its political prestige. A signal event was the republic's stand-off with

the Church of Rome in 1607; in questions of liturgy as in questions of ecclesiastical rule, Venetians did things in their own way. Semi-detachment from Rome had three chief consequences for sacred music in the first half of the 17th century: the (Friulian) rite of Aquileia prevailed in S Marco; the mood of religious piety converged with the new idiom of monody to produce poignantly expressive works for solo voice; and Counter-Reformation pleas for uncluttered settings of liturgical texts were ignored.

The rite of Aquileia varied from that of Rome in such details as the psalm texts prescribed for Vespers. Vespers for certain feasts made elaborate use of music, particularly polychoral psalms utilizing not only the two choirs of professional singers maintained by the basilica but also a choir of young priests. Instrumental works of various kinds may have been interleaved with vocal works, but the practice is better documented at monastic churches, where the Roman rite was in use. The cult of St Mark that took root in Aquileia was a joyous one that celebrated its beliefs in song and dance. The rapt attention paid to music in S Marco was in character with the tradition associated with its name.

It may be because of its retention of this older rite that S Marco so regularly avoided engaging *maestri* from outside the Veneto in the 17th and 18th centuries: Rovetta (1644–68), Cavalli (1668–76), Monferrato (1676–85), Legrenzi (1685–90), Volpe (1690–91), Partenio (1692–1701), Biffi (1702–32), Lotti (1736–40), Antonio Pollarolo (1740–46) and Giuseppe Saratelli (1747–62) all came either from Venice itself or from outlying parts of the republic. Monteverdi was the sole 'foreigner' in this succession; his predecessors Zarlino, Donati (1590–1603), Croce (1603–9) and Martinengo (1609–13) were all Venetians.



3. Visit of the doge to the church of S Giorgio Maggiore for Christmas Vespers: engraving by Giacomo Franco from his 'Habiti d'huomini et donne venetiane' (Venice, c1609)

A curious aspect of Monteverdi's impact on music in Venice is that, while many of those in his charge (Grandi, Berti, etc.) wrote poignant sacred monodies (collected principally in two anthologies – the *Ghirlanda sacra* of 1625 and *Sacra corona* of 1636), his own monodies were confined almost entirely to dramatic works. It was incumbent upon the *maestro* to write for the great mass of personnel employed by the basilica. It is the savouring of the experience of performance itself that emanates from the solo motets of the lesser composers of the time: they abound with runs, passage-work and written-out ornaments, with unexpected harmonies, melismas on key words and a stylistic freedom that stood in contrast to the techniques of paraphrase and formal design in which *maestri* and organists were trained. Monody became a second language for musical expression.

If composers in Venice did not defer to Roman injunctions, they nonetheless set texts with great care. While Monteverdi's influence on the development of monody was immense, the publication of his most celebrated sacred works, the *Vespro della Beata Vergine* of 1610, predated his appointment as *maestro di cappella* at S Marco by three years. The chapel of the court he had vacated in Mantua was much less public than the ducal basilica in Venice, where the adjoining piazza was traversed by Venice's large nobility, by sailors and merchants and by revellers visiting the city during Carnival.

There were, however, foreign influences on music at S Marco in the 17th century. In the 16th century it had fallen to the second organist of the basilica to organize wind music for important ceremonies, and this tradition may well have continued through the following century. An indoor ensemble, modelled on the famous *piffari* who played straight silver trumpets in processions (until the practice was terminated in 1706), was officially added to the church's ranks in 1614, but it is clear that such a group had existed informally since 1568 or earlier. Most of Giovanni Gabrieli's ensemble canzonas, in which trombones are consistently mentioned, seem to have been composed for this group. The works were probably conducted by Gabrieli during his tenure as second organist (1585–1612). The idea of assembling masses of ten or 12 (or 15 or 21) instrumentalists may have blended elements of Venetian and Bavarian ceremonial life, as the Gabrielis and some members of the instrumental group had encountered them at the court in Munich, where they stayed in the 1570s.

Over the course of the 17th century, the composition of the ensemble (originally consisting chiefly of cornettists, trombonists and bassoonists) gradually shifted to include violinists (starting with Rovetta in 1614) and double bass players (also from 1614), cellists (from 1638), viola players (from 1656), trumpeters (from 1691) and players of bowed instruments with sympathetic strings (from *c*1690). It may be assumed that as the ranks of string players increased, those of trombonists decreased. In 1698 the cornett was officially replaced by the oboe. Until 1750 no flutes (which were considered to have lascivious associations) were used in the basilica. Many instrumental works were accompanied on the smaller second organ, while positive organs were used to support multiple

groups in polychoral works. During Monteverdi's tenure several singers who could also accompany themselves on the theorbo were hired. The practice of accompanying the lessons during Holy Week on the harpsichord can be traced back at least to 1615. The use of a violin solo at the Elevation of the Host for masses at Christmas and Easter was instituted at about the same time. Thus did monody make its inroads. Young musicians who wished to pursue the polychoral style after the death of Gabrieli (among them Valentini and Priuli) seem to have found better opportunities in Austria where Monteverdi, through his Mantuan connections, also retained ties.

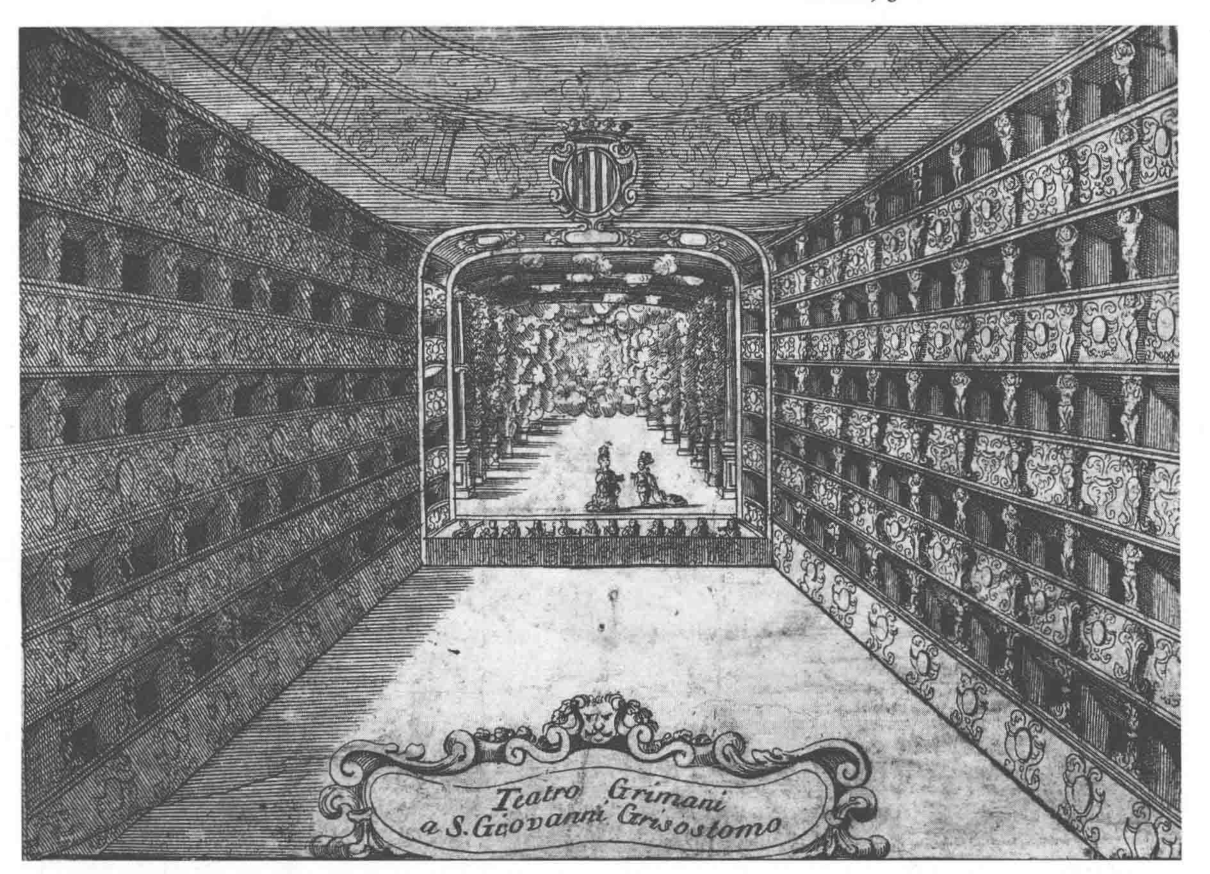
Within its six districts, Venice housed a great range of other venues in which music was produced. These included parish churches, convents and monasteries; *scuole grandi e piccole* (the former confraternities of merchants, the latter clubs of artisans and tradesmen); the *ospedali* which cared for (chiefly female) orphans; the palaces and gardens of the nobility; public and private theatres; gambling casinos; and the canals themselves. By 1750 a different musical genre could be associated with each venue.

Among all of these, it was the theatres that brought the greatest challenges to the stability of Venetian musical culture. Although their activities were severely controlled by government decrees, theatres defied the musical status quo for various reasons. The singers could be women. The audience for opera was less specifically Venetian than it was for other genres. The message of the text could be conveyed through the use of mechanically operated scenery, so that the burden of purely aural communication was diluted. While there was relatively little difference in musical idiom between sacred and secular monodies, the recitatives through which secular texts were declaimed had no analogues in the church repertory. Theatre orchestras were small (usually consisting of five strings and two harpsichords) throughout the century. Venetian operas almost always concentrated on solo singing. In the last three decades there was an increasing use of trumpets in sinfonias and of oboes (or occasionally of theorbos) in obbligatos; simple continuo accompaniments were gradually superseded by orchestral accompaniments in important arias. Choruses were rarely used in Venetian opera. To give a sense of culmination to individual acts, mock battles or imaginative dances were often introduced in the later 17th century. These gave way in the 18th century to other incidental entertainments such as comic intermezzi at S Cassiano or violin solos between acts at S Angelo. Gods and goddesses descended to earth in prologues and returned to heaven in finales with the help of elaborate machinery.

Until the end of the 17th century S Marco managed to hold its own in the general scheme of musical life. It never lacked for gifted performers or for new music from its *maestri*. The international visitors that opera brought to Venice duly noted the basilica's embarrassment of musical riches, and the ranks of the *cappella* were raided over and over by foreign diplomats seeking to fill orders for captivated employers, even though opera singers sang in

5. Musical divertissements on the Grand Canal: engraving by Giacomo Franco from his 'Habiti d'huomini et donne venetiane' (Venice, c1609)

the basilica only (if at all) on Christmas Eve. Many *maestri* (Monteverdi, Rovetta, Cavalli, Legrenzi), nearly all *vicemaestri* starting with Sartorio, 1676–80 (e.g. Legrenzi, 1681–5; Partenio, 1685–91; C.F. Pollarolo, 1692–1723; Antonio Pollarolo, 1723–40; Saratelli, 1740–47; and Galuppi, 1748–62) and several organists (Cavalli, 1639–69; P.A. Ziani, 1669–77; and Lotti, 1692–1736) were also opera composers. The need to create new works for the theatres created unprecedented pressures: a typical opera production lasted from three to five hours, and the ink on the score was often barely dry at the first performance. The composition of new sacred works for S Marco dropped off sharply in the later part of the 17th century, although Rovetta and others began to create Passion settings with choruses.



As a group, the musicians of S Marco were most likely to compose for the Teatro S Giovanni Grisostomo. S Giovanni, which opened with great fanfare in 1678, was the showpiece among Venice's numerous theatres (fig.6). The Grimani brothers, who operated it, catered especially for the tastes of dignitaries visiting from lands important to Venice's political interests. S Giovanni was the most extravagant theatre in matters of staging, the most expensive, the most prestigious and the most conservative in its musical tastes. Pallavicino (1678–88) and C.F. Pollarolo (1692–1722) were among the composers most consistently active at S Giovanni.

Among the other theatres, S Cassiano, which opened in about 1637, enjoyed the distinction of having been the first 'public' theatre. 'Public' meant that the theatre was operated by an impresario for a paying public. Boxes were typically let by the year, and many remained within families for several generations. S Cassiano suffered from several fires, and was eclipsed in the later 17th century by S Salvador (also called S Salvatore or S Luca), which had the reputation of providing excellent singers; by SS Giovanni e Paolo (1639; fig.7), which had many of the aspirations ultimately achieved by S Giovanni Grisostomo; and by S Angelo, which opened in 1677. S Angelo was a theatre that struggled more than most to survive financially, and therefore sought less costly ways of producing operas. In that role it was upstaged at the turn of the 18th century by the small Teatro S Fantin, near the site of the later Teatro La Fenice.

These differences of profile had important implications for the kinds of opera that were presented. Until 1714, when Gian Carlo Grimani died, the most ambitious works (often glorifying some figure from antiquity) were being given at S Giovanni, which presented the stars of the time – Faustina Bordoni, Vittoria Tesi, Santa Stella, Nicola Grimaldi, Domenico Cecchi and, in the late 1720s, Carlo Broschi (Farinelli). According to one critic, Farinelli's musical acrobatics rendered his performances close to solo concerts. But Farinelli's English admirers, prodded in part by the collapse of the Royal Academy in London, followed in his wake and brought fresh (English) patronage to S Giovanni. This did not prevent the lavish scenery from being criticized for depicting situations unrelated to the plots for which it was used. The unity of subject, scene and song which had been sought so rigorously over the past half century disintegrated within a few years.

The revived Teatro S Cassiano relied heavily on the works of Albinoni and Gasparini. It seems to have formed a symbiotic relationship with the Teatro di Via del Cocomero in Florence, for many works enjoyed productions in both places. This connection with Florentine theatre may help to explain S Cassiano's important role in implanting the comic intermezzo, which flourished for three decades from 1706 in Venice. Albinoni's *Pimpinone* (1708) enjoyed a particular success. S Moisè and S Angelo were lower-budget theatres; both seem to have maintained numerous ties with patrons abroad, in the former case with Bohemia and the ruling house of Brunswick, in the latter with Saxony and the Rhineland. Vivaldi had ties to both but was chiefly active at S Angelo. S Angelo was a haven for Bolognese singers; they (as well as Vivaldi and Orlandini) are among the many victims of Benedetto's noted satire on Venetian opera, *Il teatro alla moda* (1720).

Dramatic changes in Venetian comedy resulted from the collapse of the Duchy of Mantua in the first decade of the 18th century. The comedy troupes of S Salvador and S Samuele, which had survived as extensions of *commedia*

6. Teatro Grimani a S Giovanni Grisostomo, built by Tomaso Bezzi for Carlo and Vincenzo Grimani and opened in 1678: engraving, 1709

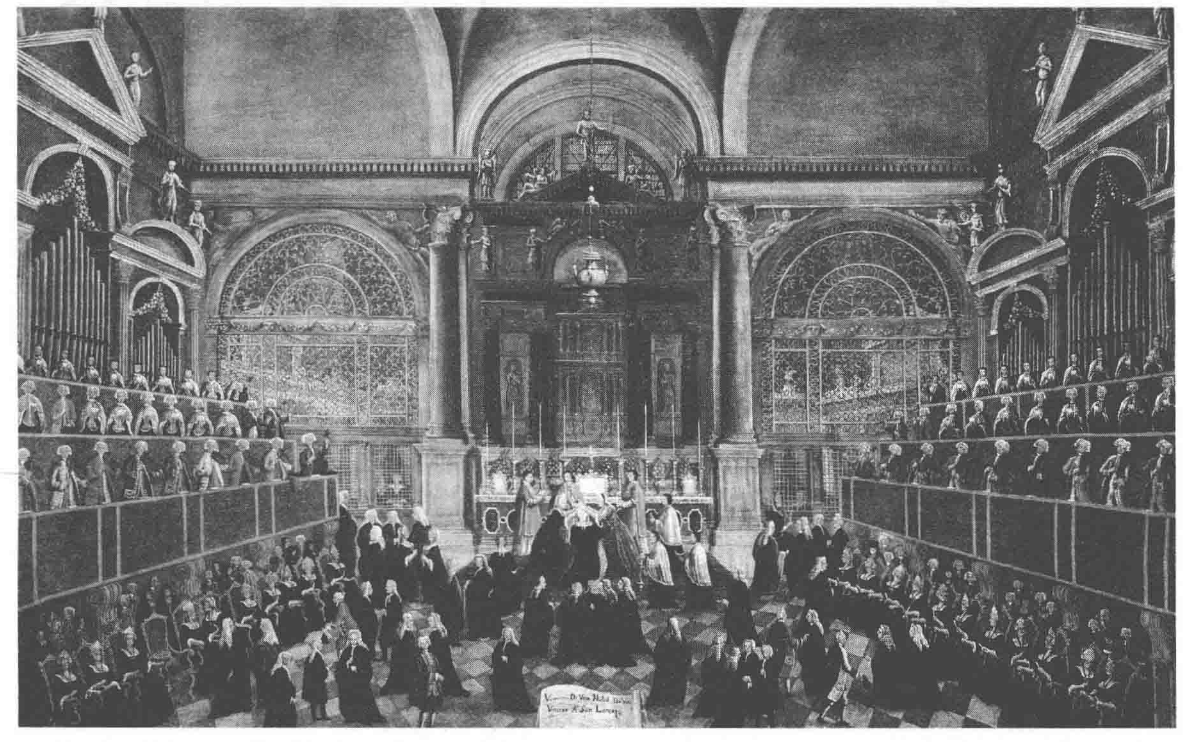
dell'arte since the late 16th century, were forced to adopt new strategies for survival. Troupes became larger and developed stronger skills in singing and dancing. Improvised lines were replaced by scripts. Spoken comedy with musical numbers came into its own in the 1730s. Goldoni elevated comedy to a position of respectability that enabled it to compete successfully with serious opera. Serious operas of the 1730s and 40s rarely involved new libretti but instead relied on recycled texts. The reasons were partly economic: singers' salaries had become so audacious that little was left for sets, costumes, dancers, librettists or composers. Serious opera gave way to pastorales and satirical works, and they in turn gave way to *opera buffa*.

Venice's four *ospedali* – the Incurabili, Mendicanti, Derelitti (or Ospedaletto) and Pietà – all maintained musical chapels in the 17th century. These reached their peak in the early 18th century. Virtuosity was widely cultivated in the *ospedali*, although its promoters would have maintained that its purpose was to encourage devotional thoughts in the listener. The cultivation of organ playing and singing skills was expanded in the late 17th century to include string ensembles. *Piffari* instruments were maintained at the Mendicanti, where music was directed by a series of *maestri* (Monferrato, Legrenzi and Partenio) associated with S Marco. Most of the music written for the Mendicanti, as well as for the Derelitti and Ospedaletto (the latter served by Pallavicino and Pollarolo), is lost.

Proficiency on many more unusual instruments (such as the viola d'amore) was cultivated at the Pietà, from which much music, chiefly by Gasparini and Vivaldi, survives. The paramount musical genre of the conservatories (as the *ospedali* can more accurately be called) was the oratorio. Although in its musical idiom the oratorio was similar to the opera, it was supposed to represent a purer form of communication, one unsullied by commercial motives and unaided by elaborate scenery. Instrumental colour was a substitute for scenery, and composers rose to the challenge. Vivaldi's oratorio *Juditha triumphans* (1716), celebrating Venice's victory over the Turks, shows the genre at its best. Vivaldi's innovations in locating performing groups in the galleries of the church for the performance of instrumental pieces gave impetus to the concerto, a genre to which he contributed abundantly.

The rapid development of orchestras of mixed timbres in Venice in the early 18th century was stimulated in part by the mixture of musical cultures. Woodwind players seem in several cases to have come from France, but the practice of having winds double string parts was cultivated especially in Dresden, which sustained numerous interchanges with Venice through such figures as Schütz and Pallavicino in the 17th century, and through Heinichen, Pisendel and Lotti (as well as Pallavicino's son, the librettist Stefano) in the early 18th century. The idea of framing virtuoso solos (or ensembles) of wind players, however, is one that seems to have originated in Venice itself.

7. Plan (with longitudinal section below) of the Teatro di SS Giovanni e Paolo, Venice, opened in 1639



8. Concert in one of the Venetian ospedali, probably the Pietà: fresco by Francesco Battaglioli, mid-18th century (Sala della Musica, Villa Pisani, Strà)

Despite Venice's many public venues for music, there was no shortage of splendid music for private gatherings. Musical dialogues and instrumental pieces were written for ducal banquets in the 17th century. Nuns formed brass ensembles and wrote and performed in musical plays within convents. On the feast of St Cecilia (22 November), more than 100 members of the musicians' guild would perform a celebratory concert. Pedagogy, like instrument manufacture, flourished. Serenatas and instrumental pieces were written (in many cases by Albinoni and Vivaldi) in the 18th century for diplomatic events of many kinds and for weddings of the nobility. Daughters from noble families were sometimes given tuition by S Marco musicians prior to taking the veil. Marcello's celebrated psalm settings in *Estro poetico-armonico* (1724–6) were set in the vernacular to suit chamber performance. Candlelit serenades were given on the Grand Canal on summer evenings. Strolling ensembles entertained visitors in Venice's numerous casinos. Venetians excelled in every aspect of music-making; yet the Republic's gradual loss of political power during the course of the 18th century led to the disintegration of many of its institutions, causing even its most celebrated musicians to seek their fortunes elsewhere.

3. AFTER 1750. There were clear signs of crisis in the final years of the republic, although there was still a great deal of operatic activity. The Teatro S Giovanni Grisostomo came to be considered too large, and was replaced as the city's leading theatre by the smaller S Benedetto, constructed by the Grimani family in 1768 and rebuilt in 1774 by a new group of box-owners. Following a lawsuit, they abandoned the S Benedetto in 1787 and built the Teatro La Fenice, on a plan by G.A. Selva. The new theatre was the first in Venice to proclaim its status in its elegant façade, and was inaugurated in 1792 with Paisiello's *I giuochi d'Agrigento*. The lesser theatres were mostly devoted to comic opera. However, Venice continued to be a centre of theatrical experiment: the type of *dramma giocoso* which Goldoni devised in the 1750s and 60s became a model throughout Europe, and in the 1780s and 90s librettists such as Giuseppe Foppa, Simeone Sografi and Alessandro Pepoli were responsible for the revival of *opera seria*. The one-act *farsa*, inspired by French models from the Revolutionary and Napoleonic periods, also flourished in Venice.

The situation with the *ospedali* was more serious. When the Incurabili went bankrupt in 1776 it caused the immediate bankruptcy of the others, with the exception of the Pietà, which managed to survive until the early 19th century through private donations. At S Marco a radical reform of the choir and orchestra was carried out in 1765–6, during Galuppi's directorship; standards were raised, and the layout, still tied to 16th-century practice, modernized. The practice of having famous singers perform solos at S Marco during the Christmas festivities continued well into the 19th century.

The succession of occupying foreign powers (France 1797, Austria 1797–1805, France 1805–14, Austria 1814–66) confirmed Venice's status as an economic and political backwater. Many of the minor theatres closed: S Angelo in 1803, S Cassiano in 1804 and S Moisè in 1818, soon after staging the premières of Rossini's first *farse*. Important Rossini premières (*L'italiana in Algeri*, 1813; *Eduardo e Cristina*, 1819) also took place at the S Benedetto (later the Gallo, then the Rossini, and finally converted into a cinema). But, like the S Salvador (later the Apollo and the Goldoni), the S Giovanni Grisostomo (later the Malibran) and the S Samuele (later the Camploy,

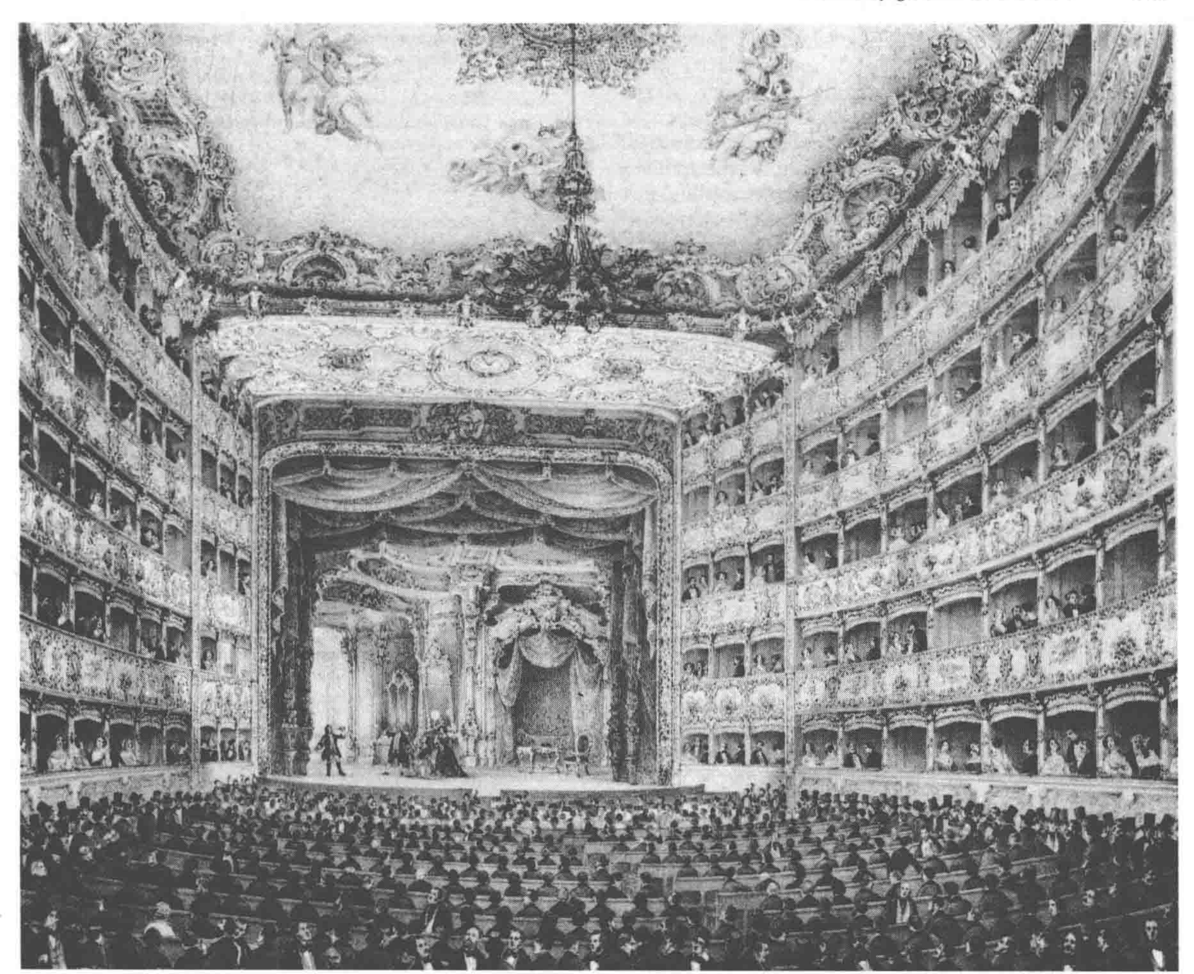
10. Teatro La Fenice, Venice: drawing by Francesco Guardi, pen and ink with wash, c1792 (Metropolitan Museum of Art, New York)



demolished in 1894), the S Benedetto was gradually obliged to produce more popular forms of entertainment. The exception was La Fenice, burnt down and rebuilt in 1837, which managed to remain one of Italy's leading theatres. Librettists such as Gaetano Rossi and Francesco Maria Piave, and designers such as Giuseppe Borsato, Francesco Bagnara and Giuseppe and Pietro Bertoja, were among those employed by the theatre. Many famous premières were given there, including Cimarosa's *Gli Orazi ed i Curiazi* (1796), Rossini's *Tancredi* (1813), *Sigismondo* (1814) and *Semiramide* (1823), Meyerbeer's *Il crociato in Egitto* (1824), Bellini's *I Capuleti e i Montecchi* (1830) and *Beatrice di Tenda* (1833), Donizetti's *Belisario* (1836), *Pia de' Tolomei* (1837) and *Maria di Rudenz* (1838), and Apolloni's *L'ebreo* (1855). Verdi composed five operas for La Fenice: *Ernani* (1844), *Attila* (1846), *Rigoletto* (1851), *La traviata* (1853) and *Simon Boccanegra* (1857), of which the last two were decidedly mixed successes. *Crispino e la comare* by the Ricci brothers, the last successful example of the Italian *opera buffa* tradition, was one of the works which received its première in the smaller theatres (Gallo, 1850). In the final years of Austrian domination (1859–66) La Fenice remained closed as a sign of protest.

The *cappella* of S Marco was directed by Ferdinando Bertoni from 1785, by Bonaventura Furlanetto from 1808 and then, from 1817, by Giovanni Agostino Perotti, a musician and theorist of conservative stamp, and one of the intellectuals associated with the neo-classical circle of the Accademia di Belle Arti of Leopoldo Cicognara. While Perotti was unable to halt the decline of the *cappella* that had begun in the final years of the 18th century, he was responsible for encouraging the protection of its archives and library, a display of a typically Venetian historical awareness. From 1855 the *maestro di cappella* was Antonio Buzzolla, formerly an opera composer in the Rossini mould. His successors included the composer and musicologist Giovanni Tebaldini and Lorenzo Perosi, appointed in 1894 by the Patriarch Giuseppe Sarto, the future Pope Pius X, with whom he had close ties.

Composers such as Simon Mayr, Giovan Battista Perucchini and Buzzolla made 19th-century Venice a centre of *liriche da camera* (chamber songs) to both Italian and dialect texts, in part inspired by the pseudo-folk *canzoni da battello*, or gondola songs, beloved of foreign visitors. Between 1816 and 1818 Andrea Erizzo organized a number of important academies, in the course of which Haydn's late oratorios were performed – with obvious pro-Austrian political implications – as well as Handel's *Messiah*. Haydn's symphonies had been played at amateur academies in the city from the end of the 18th century. The public concerts given in the Piazza S Marco by Austrian military bands played an important role in popularizing music. Lastly, the city's modest instrumental tradition produced at least one able performer and composer, the pianist Antonio Fanna (1792–1845).

During the 19th century no attempt was made to found a quartet society or institute regular orchestral concerts. Because of the city's increasing provincial isolation and the classical prejudices of influential figures such as Perotti, Perucchini, Buzzolla, Luigi Plet (Boito's first teacher) and the critic Tommaso Locatelli, Venice remained behind the prevailing trends in European taste. On the other hand, nostalgia for the glories of the republic prompted some pioneering work in music history from scholars such as Francesco Caffi and Pietro Canal. For much of the 19th century Venice was unable to create a permanent institution for music teaching: succeeding each other with equal lack of success were the Istituto Filarmonico founded by Caffi (1811–16), the Orfanotrofio dei Gesuati, the Scuola di Canto e Ballo del Teatro La Fenice (1831–46), the Istituto Musicale Privato (from 1838) created by the impresario Giuseppe Camploy and directed by the teacher Ermagora Fabio, and a Scuola Comunale di Musica (from 1856).

Italian unification did not draw Venice out of its provincial isolation. Financial difficulties obliged theatres to remain closed for long periods, and also caused an overall lowering of standards. The city where Wagner died in 1883 saw the Italian première of the complete *Ring* in the same year, performed by Angelo Neumann's travelling company, but generally Venice was slow to take on new works both from Italy and abroad. There were few important premières at La Fenice, with the

11. Performance of Petrella's 'Marco Visconti', reopening La Fenice, Venice, after redecoration, 26 December 1854: lithograph

exception of Leoncavallo's *La bohème* in 1897. In 1935 the proprietors of the opera house sold it to the Comune; after restoration La Fenice reopened in 1937 under the management of Goffredo Petrassi.

Music disappeared almost entirely from all the other theatres in the city. However, Venice played a crucial role in the rediscovery of Italian music of the 17th and 18th centuries, from Monteverdi to Galuppi. At the forefront of this activity was the Liceo Musicale Benedetto Marcello, founded in 1876 and made a state conservatory in 1940. Notable directors include Marco Enrico Bossi (1896–1902), Wolf-Ferrari (1903–9), Malipiero (1939–52) and Renato Fasano (1952–60).

In keeping with Venice's new role in the second half of the 20th century as an international tourist and cultural centre, the Teatro La Fenice rose again to the level of the leading Italian opera houses. The Fenice has also played an important role in collaboration with the Festival Internazionale di Musica Contemporanea, later renamed the Biennale Musica. Founded in 1930, it developed after the war into one of the most prestigious festivals of its kind. Under its auspices world premières have been given of works by composers such as Stravinsky (*The Rake's Progress*, 1951, *Canticum sacrum ad honorem Sancti Marci Nominis*, 1956, *Threni*, 1958), Britten (*The Turn of the Screw*, 1954), Prokofiev (*The Fiery Angel*, 1955), Nono (*Intolleranza 1960*, 1961, *La fabbrica illuminata*, 1964, *Prometeo*, 1984), Maderna (*Hyperion*, 1964), Bussotti (*The Rara Requiem*, 1969–70, *Lorenzaccio*, 1972), Ferneyhough (*Firecycle Beta*, 1976), Sciarrino, Castiglioni, Manzoni, Rihm, De Pablo, Guarnieri and others. Performances by the Fenice and the Biennale Musica have occasionally been held in other locations, such as the Teatro Malibran (reconstructed in 1919) and the Teatro Goldoni (restored in 1974 and generally used for straight theatre). On the night of 29 January 1996 La Fenice was completely destroyed by fire, depriving the city of its most important musical venue. The theatre was in the process of being rebuilt at the turn of the century.

The last three decades of the 20th century saw a spectacular growth in musicological research in Venice, due to the expansion of the university and the activities of private institutions which promote conferences, publications and major research projects: the Fondazione Giorgio Cini (which includes the Istituto per le Lettere, il Teatro e il Melodramma, the Istituto per la Musica and the Istituto Italiano Antonio Vivaldi) and the Fondazione Ugo e Olga Levi. There is important musical material at the Biblioteca Nazionale Marciana (including the 17th-century operas in the Contarini collections and the librettos of A. Zeno's collection), the Fondazione Cini (librettos from the Rolandi collection, source material on

Boito, Respighi, Milloss, Casella, Malipiero and Rota), the Fondazione Levi (which also houses the Archivio Storico del Teatro La Fenice and the archive of the *cappella* of S Marco), the conservatory (housing the material belonging to the Museo Correr), the Istituti di Ricovero e di Educazione (IRE), which holds the archives of the ospedali, the Casa Goldoni (librettos), the Biblioteca Querini-Stampalia, the Archivio Storico delle Arti Contemporanee della Biennale and the Archivio Luigi Nono.

GIULIO ONGARO (1), ELEANOR SELFRIDGE-FIELD(2), LUCA ZOPPELLI (3)

Veni Creator Spiritus (Lat.: 'Come Creator Spirit'). A hymn for Whitsuntide in the Latin rite; outside the Pentecost

season it was and is also used for liturgical and non-liturgical solemnities. It first appears in manuscripts dating from the 10th century and its earliest recorded use was at the Council of Rheims (1049). The text has been attributed variously to St Gregory, St Ambrose, Charlemagne and, more plausibly, to Hrabanus Maurus, and it has been suggested that the melody (*LU*, 885) may predate the text, having served originally the Ambrosian hymn *Hic est dies verus Dei*. The hymn is found in several Anglo-Saxon manuscripts, in one case (*GB-Ccc* 391) with a tune (in unheighted neumes) that is clearly a version of the usual one. The melody was used also in the Sarum rite for the hymn *Salvator mundi*. Keyboard settings based on the melody survive by 16th-century composers including Bull and Byrd, as does a vocal setting by Tallis, *Adesto nunc* (the second stanza of *Salvator mundi*). Occasionally the text and music of *Veni Creator Spiritus* and those of the sequence *Veni Sancte Spiritus* were combined simultaneously in one composition (e.g. by Dunstaple and Heinrich Finck). *Veni Creator Spiritus* was also set in the *alternatim* manner by Costanzo Festa and has served as the basis of masses by many composers, including a six-voice one by Palestrina.

□

Venier, Jean Baptiste (*fl* 1755–84). French music publisher. He lived in Paris, and his first privilege for music publishing dates from 1755. At that time he apparently had no premises of his own, but in 1760 the address of his firm is given as rue St-Thomas-du-Louvre. After September 1778 he moved to rue Traversière-St-Honoré, where he was active until about 1784, when Charles-Georges Boyer acquired his stock.

Venier published mostly instrumental works – symphonies, concertos and chamber music. His catalogues give a picture of the international character of Parisian musical life at that time as well as the different influences on the development of the French symphony. At first he published Italian symphonies by Castrucci, Galuppi, Jommelli and Giuseppe Sammartini and, later, works by contemporary German, Bohemian and Austrian composers, including J.C. Bach, J.J.C. Bode, Hasse, Kammel, Mysliveček, Dittersdorf and G.C. Wagenseil. The Mannheim school is richly represented in his catalogues with works by Franz Beck, Christian Cannabich, Anton Fils, Ignaz Fränzl, Holzbauer, F.X. Richter and Johann Stamitz. He also published many works by Boccherini, and he was the first to publish a symphony by Haydn, *Sinfonie a più stromenti composte da vari autori*, no.14 (1764; H I:2).

CARI JOHANSSON

Veni Sancte Spiritus (Lat.: 'Come Holy Spirit'). The sequence for Pentecost (*LU*, 880); it was one of the four sequences retained by the Council of Trent (1545–63). The text has been ascribed to Pope Innocent III (*d* 1216) and Stephen Langton (*d* 1228); its ten stanzas are set as five double versicles. There are settings by Du Fay, Josquin, Willaert (two), Palestrina (two), Lassus and Victoria, among others (*see* SEQUENCE (i), §11). The text, though not the melody, was incorporated by Dunstaple into his famous motet *Veni Sancte Spiritus et emitte/Veni Sancte Spiritus et infunde/Veni Creator/Mentes tuorum*. Here the top part sets the sequence text, while the second voice sings an otherwise unrecorded paraphrase of it. The borrowed melodic material of this motet, however, is drawn exclusively from the Office hymn *Veni Creator Spiritus*. Another combination of these two texts, this time using both melodies, is Heinrich Finck's *Veni Creator* (HAM, no.80).

JOHN CALDWELL

Venite (Lat.: 'Come'). In the Roman rite, the opening chant of Matins, properly *Venite exultemus Domino* (Psalm xciv [xcv]), sung in alternation with an antiphon (*see* INVITATORY). In the Anglican liturgy, *Venite* ('O come let us sing unto the Lord') is the first canticle of Matins (*see* SERVICE).

Veṅkaṭamakhin (*fl c*1630). South Indian poet, musician and musical scholar. The son of Govinda Dīkṣita, a minister of the Nāyak rulers of Thanjavur, he became the minister of the king Vijayarāghava Nāyak (reigned 1633–73) and wrote the Sanskrit music-theoretical treatise *Caturdaṇḍīprakāśikā* at his bidding. The title of this work, which survives only in part, refers to a system of four divisions of composition, namely *ālāpa* (rhythmically free exposition of a rāga), *ṭhāya* (melodic inflection), *gīta* (vocal composition in a rāga) and *prabandha* (a compositional structure). The work uses a scheme of 19 *mela*, classificatory scales under which the current south Indian rāgas could be accommodated. The system closely resembles that of Rāmāmātya in his *Svaramelakalānidhi*, though not in every detail. Veṅkaṭamakhin is credited (perhaps erroneously) with the invention of the system of 72 *melakartā*, much as was in use in Karnatic music of the late 20th century and became current from the late 17th century. The system is worked out in a text appended to the Madras edition of the *Caturdaṇḍīprakāśikā*. It seems that Veṅkaṭamakhin considered only a limited number of these scales to be practically useful in classifying rāgas.

JONATHAN KATZ

Vennard, William (*b* Normal, IL, 31 Jan 1909; *d* Los Angeles, 10 Jan 1971). American singer and voice science researcher. He studied English at Taylor University, Upland, IN (AB 1930) and music at Northwestern University, Evanston, IL (BM 1941) and at the American Conservatory, Chicago (MM 1943). After teaching at the Chicago Evangelistic Institute, DePaul University and the American Conservatory, he became a member of the faculty of music at the University of Southern California

(1946), chairing its voice department (1950–71). Among the associations to which he belonged are the National Association of Teachers of Singing, which he served in several capacities, including national president. He was awarded an honorary doctorate from Pepperdine University College, Malibu, CA in recognition of his outstanding contributions to singing and the science of singing (1970).

As a singer, Vennard was active in opera, oratorio and solo song; as a teacher of singing, his students, among them Marilyn Horne, achieved worldwide success. His renowned text, *Singing, the Mechanism and the Technique*, is a constant resource for teachers and researchers alike. Vennard's collaboration with Janwillen van den Berg resulted in his film *Voice Production: the Vibrating Larynx*. Winning several awards, including best medical research film from a festival in Prague in 1960, it shows the anatomy and physiology of voice production in the excised larynx. He was a pioneer in the science of singing and in voice pedagogy and was instrumental in fostering collaborative efforts between singers, physicists, psychologists and voice scientists.

TOM CLEVELAND

Vent (Fr.). Wind, as in *instruments à vent*, wind instruments.

Vent, Jan. *See* WENT, JOHANN.

Ventapane, Lorenzo (*fl c*1800–*c*1840). Italian violin maker. His instruments date from soon after 1800 until after 1830. It seems certain that he was a pupil of one of the Gaglianos, possibly of Giovanni, or of his son, Nicola Gagliano (ii), whose work his own very much resembles. In the varnish and in many details Ventapane's instruments are identical to those made by the Gaglianos, usually being distinguished by a certain flatness towards the edges, where a Gagliano would often be rather full in model. Like the later members of the Gagliano family, Ventapane was variable in the quality of his work. Visually some of his instruments are dull, even crude, though others are attractive and carefully made; all, when well adjusted, have that Neapolitan character of tone which makes Ventapane an important name among players. He is one of the best-known Neapolitan violin makers outside the Gagliano family. (*LütgendorffGL*; *VannesE*)

CHARLES BEARE

Vente, Maarten Albert (*b* Nieuwerkerk aan de IJssel, 7 June 1915; *d* Utrecht, 13 July 1989). Dutch musicologist. He studied history and geography at the University of Utrecht and, being interested in the history of musical instruments, especially the organ, he made a close study of organ building in the Netherlands and Belgium. In 1942 he took the doctorate under Albert Smijers with a dissertation on 16th-century organs in the Low Countries. From 1939 to 1958 Vente taught history and geography at secondary schools at Leeuwarden, Zwolle and Utrecht. Attached to the institute of musicology at the University of Utrecht from 1958, he became curator in 1959 and, in 1965, lecturer in organology; shortly before his retirement in 1980 he was made professor there. His main area of study was the history and construction of the organ, especially in the Low Countries. Vente was often consulted for the restoration of historical organs or the construction of new ones, in the Netherlands and abroad.

Vento, Ivo [Yvo] **de** (*b* between *c*1543 and 1545; *d* Munich, 1575). Composer and organist possibly of Flemish birth, active in Germany. He was taken from Antwerp to Munich to be a choirboy at the Bavarian court, probably in September 1556. Suggestions by scholars that he was of Spanish origin or that his name was a Latinized form of 'De Winde' have been abandoned; there is as yet no proof of Huber's hypothesis that he belonged to a family originally from Limoges and was related to (though not the same person as) Ivo Barry and to Leonardo Barré, singers in the papal chapel in the second quarter of the 16th century. A Johannes de Vento was connected with the Antwerp printer Plantin in the 1550s; since Lassus was in Antwerp at this time and left for Munich at about the time that Vento seems to have done, it is possible that he took Vento with him. Vento joined the Bavarian Hofkapelle at a time of reorganization during which Flemish singers were newly in fashion. Records show that his father was paid for the boy's service over a three-year period ending in September 1559. In 1560 he was sent at Duke Albrecht's expense to Venice, presumably to study the organ with Claudio Merulo. Evidence that he learnt Italian musical ways and had joined the circle of musicians round Merulo may be seen in pieces he contributed to Venetian anthologies of the 1560s, including a six-part *battaglia* in a volume of *greghesche* of 1564. During these years he may also have written four pieces – three motets and a madrigal – whose texts had previously been set by Ivo Barry; these works have led to much confusion and

speculation about the identity or possible relationship of the two composers.

On his return to Munich, Vento, now considered an Italian and an instrumentalist, a combination perennially in fashion at Munich, was appointed third organist in the Hofkapelle (the first two organists were both Italian). Though he is not mentioned in Lassus's correspondence, he may have studied with Lassus; his masses, surviving in manuscript copies of the 1560s and 1570s, show Lassus's influence, and a number of the motets in his five-part *Latinae cantiones* (1570) are to texts previously set by Lassus. In style, however, his works, whether to Latin or German texts, are not very close to Lassus. By 1568, the year of the splendid wedding ceremonies for the marriage of Duke Wilhelm, Albrecht V's heir, Vento had achieved a certain reputation; he is mentioned in Massimo Troiano's account of these festivities and is included among the 'virtuosi' of the court chapel in a collection of madrigals that Troiano assembled in 1569. After Wilhelm's marriage he followed him to his court at Landshut, where he served as choirmaster for a year. He resumed his post at Munich in 1569 and held it, sometimes as sole organist, until his death. The last years of his life were marked by a steady stream of publications, comprising 98 motets and 112 German songs in 11 volumes, most of them dedicated to members of the Wittelsbach ducal family.

Vento's motets apparently did not create a lasting impression, nor have they yet been seriously studied. His songs, which were often reprinted, exerted a considerable influence on Lechner and even Hassler and figure as representative pieces in many 19th- and 20th-century collections of Renaissance lieder. He was conservative in taste, choosing texts from the early 16th century rather than from the Italianized poetry of his own time, and avowing a 'Pythagorean' preference for pure music over madrigalian conceits (see the preface to his *Neue teutsche Lieder* of 1570/71). The lieder are thus less strikingly individual than those of Lassus, but they are attractive and expertly written, with an orderly texture and some harmonic colouring, perhaps of Venetian origin, which distinguishes them from lieder of the generation of Senfl. Two manuscripts in Perugia (*I-PEc* 431, 322) contain respectively a canon and a set of *Regole del contrapunto* ascribed to 'ecc.mo Ivo'. Whether these rules are by Ivo de Vento or Ivo Barry is unclear; whoever wrote them knew only eight modes and appears not to have read Zarlino.

JAMES HAAR

Vento, Mattia [Matthias] (*b* Naples, 1735; *d* London, 22 Nov 1776). Italian composer. A student at the Conservatorio di S Maria di Loreto in Naples, he achieved his first operatic successes in Italy. His *Le deluse accortezze* (1756) and *La finta semplice* (1759) were given at Rome; *L'egiziana* was produced both in Venice and Milan in 1763. Late in 1763, at Giardini's invitation, Vento went to England, where he was active as a composer and harpsichord teacher until his death. For the London opera he first produced the pasticcio *Leucippo e Zenocrita* on 10 January 1764, which was repeated later the same month in a command performance for the wedding of Princess Augusta (sister of George III). In the following seasons Vento produced *Demofoonte* (1765), *Sofonisba* (1766), and *La conquista del Messico* (1767), as well as contributions to pasticcios. His aria 'Caro amor' was inserted with great success in London performances of Piccinni's *La buona figliuola* (1766). After a lapse of some years he produced *Artaserse* (1771) for the Harmonical Meeting, Soho Square, set up by Giardini and others in competition with the King's Theatre. In the 1775–6 season, during which Vento was listed as a director at the King's Theatre, he produced both comic and serious operas: *Il bacio*, the favourite of the season, *La vestale* and further pasticcios. During this period he also served as conductor at public concerts including those at the Pantheon.

Vento's music was popular in England; in 1776 a visitor from Germany listed him among the several major composers then in London. Burney's enthusiasm, however, was tempered. He described *Demofoonte* as 'natural, graceful and pleasing, always free from vulgarity, but never very new or learned'. In answer to criticism that his music (*La vestale*) was too simple for great singers, Vento replied, 'God forbid I should ever compose difficult music' (*Rees's Cyclopaedia*, 1819–20). Burney also found Vento's published duets 'trivial and uninteresting'. Nevertheless, individual songs from both the operas and the published sets were widely performed and reprinted in anthologies.

Another side to Vento's London activity is shown in his 11 collections of keyboard sonatas, most with subordinate violin accompaniments. Burney described these as 'flimsy and so much alike, that the invention with respect to

melody and modulation, may be compressed into two or three movements'. It must then have been their 'graceful, easy, and flowing melody' which caused them to be reprinted in Paris and to be retained in publishers' catalogues for half a century. There is some truth in Burney's allegation of sameness, but the 65 sonatas, spanning from 1764 to 1776, mirror subtle stylistic changes taking place at the time – for example, towards pianistic dynamics, greater symmetry and periodization, and stronger metricality.

Torrefranca advanced a case for Vento's having played a special role in the formulation of the Classical style. While he did bring to London the latest operatic style from Naples, the subtle changes noticeable in the sonatas suggest that Vento also responded to the pre-Classical synthesis of German, Italian and English elements taking place around him.

Most early posthumous accounts of Vento, probably derived from Burney, specially noted that Vento, who had every reason to die wealthy, instead left his widow in penury; apparently this mystery has never been solved.

WORKS

STAGE

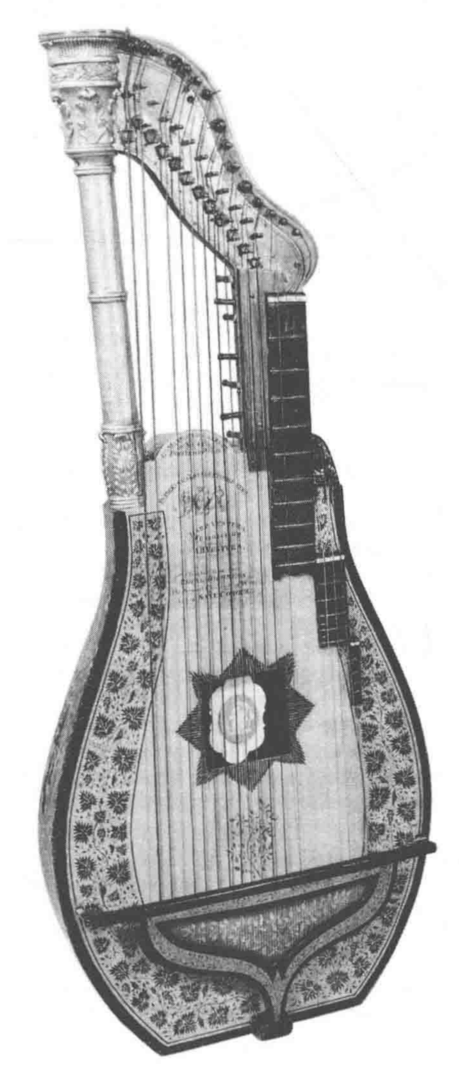
arias from London productions published in Favourite Songs

Le deluse accortezze di Don Gianserio (int), Rome, 1756
La finta semplice (op, ? C. Goldoni), Rome, 1759
L'egiziana (dg, F. Ronzi), (Venice, 1763), *A-Wn*; arr. F.L. Gassman as Zingara, Vienna, 1769
Demofoonte (op, 3, P. Metastasio), London, King's, 2 March 1765
Sofonisba (op eroica, 3, G.G. Bottarelli), London, King's, 21 Jan 1766, *US-Wc*; as pasticcio, 1772–3
La conquista del Messico (La conquista del vello d'oro) (op, Bottarelli), London, King's, 4 April 1767; ov., arias *GB-Mp*
Artaserse (op, ?Metastasio), London, 1771
Il bacio (comic op, 3, C.F. Badini), London, King's, 9 Jan 1776
La vestale (serious opera, Badini), London, King's, 6 Feb 1776
Music in: Leucippo e Zenocrita (1764); Ezio (1764); Berenice (1765); Daphne and Amintor (1765); Solimano (1765); [The Revenge of] Arthridates (1766); Love in the City (1767); Lionel and Clarissa (1768), rev. as School for Fathers (1770); The Captive (1769); La sposa fedele (1775); Antigono (1776); The Castle of Andalusia (1782)

OTHER VOCAL

La musica e la poesia (cant.) (London, 1768)
6 Canzonets (London, *c*1770)
A Second (–Fourth) Book of 6 Canzonets (London, *c*1770–72)
Threnodia augustalis (cant., Goldsmith) (London, 1772), in memory of Augusta, dowager Princess of Wales
A Collection [from Pantheon concerts] of Favourite Italian Songs and a Duet (London, 1774)
9 duets and 16 Ariette veneziane, *GB-Lbl*
Numerous songs pubd singly and in 18th-century anthologies

INSTRUMENTAL



6 Sonatas, hpd, vn/fl (London, 1764)
6 Sonatas, 2 vn, bc (London, *c*1764)
6 Sonatas, hpd, vn/fl ['2d sett'] (London, *c*1765)
A Third (–Tenth) Book (Sett) of 6 Sonatas, hpd, vn/fl (London, 1766–76); bks 7–11 for hpd/pf, vn/fl; bk 9 for hpd/pf solo
6 Overtures in 8 Parts (London, *c*1774)
A Last Sett of 5 Sonatas, hpd/pf (London, 1777)
Other works in *GB-Lbl*

RONALD R. KIDD

Ventura, Angelo Benedetto (*b c*1781; *d* 1856). Inventor, composer and teacher. He worked in London from at least 1813 and taught Princess Augusta Charlotte from that year until her death in 1817. This opportunity, and an early partnership with Edward Light, enabled him to create and market eight harp-lute-guitar hybrids, for which he gave lessons and published simple song arrangements and 16- or 32-bar compositions, mostly in binary form.

Harp Ventura by Angelo Benedetto Ventura, London, c1828 (Victoria and Albert Museum, London)

His most important invention was the 'Harp Ventura', patented in 1828, a 17–19-string harp-lute, measuring about 83 × 33 × 13 cm, and apparently tuned diatonically from *e* to *b′*, with three notes on the fingerboard: *c″*, *c‴* and *a‴*. This was perhaps the most flexible harp-lute for song accompaniments with awkward modulations, or in unusual keys. Its seven pushstops (later levers) raised the open strings by a semitone, using forks similar to Erard's *fourchettes* of the 1780s. An attractively decorated example (see illustration) is displayed in the Victoria and Albert Museum, London (no.248).

Ventura's other inventions were the single-fingerboard 12-string Imperial *ottavino*, measuring 66 × 30 × 13 cm; the 13- or 14-string Imperial harp-lute (first announced in 1814); three lyre guitars (the 'Imperyal' lyre and 'Ventura' lyre, both with 12 strings, and the nine-string 'New British Ventura'); and two guitars (the *venturini*, a seven-string, easily modulated guitar patented in 1828, and the *venturine*, a small – 51 × 16 cm – four-string guitar). All appear to have been intended mainly for such elegant ladies as those to whom his compositions are liberally dedicated.

WORKS

all published in London

Duetto con variazioni, harp-lute, gui (1813)
12 ... Ariettes, harp-lute acc. (1813–14)
6 ... Ariettes, gui acc. (1814)
A Collection of 6 Beautiful Minuets, March, Waltz &c, 2 gui (1814)
A New & Elegant Collection of Waltzes Minuets & Marches, Imperial harp-lute/Imperial lyre, gui acc. (1814)
Thema with 6 Variations, Imperial harp-lute/Imperial lyre, pf/gui acc. (1814)
A Collection of 12 Favorite Italian Canzonetts, Harp-Ventura/gui acc. (1832)
Periodical Amusements, 1/2 gui

STEPHEN BONNER

Ventura, Giuseppe (*b* Naples, ?1702; *d* after 1751). Italian composer. He provided one of the settings for Pietro Trinchera's earliest dialect comedy, *Prìzeta correvata*, an adaptation from an unknown author. The other setting, *Li 'nnamorate correvate* (Angri, near Salerno, August 1732), was composed by 'Jacovo d'Ambrosio', probably Giacomo d'Ambrosio, the principal *buffo* singer at the Naples Teatro dei Fiorentini between 1728 and 1741; it is not known which performance was first. In collaboration with Nicola Logroscino, Ventura also wrote the comedy *Amore figlio del piacere* (A. Palomba; Naples, Nuovo, Carnival 1751). The intermezzo *Le deluse accortezze di Don Gianserio* (Rome, 1756), sometimes attributed to him, was written by Mattia Vento.

WORKS

Prìzeta correvata (dialect comedy, P. Trinchera), Aversa, nr Naples, Nuovo, aut. 1732
Il Sisara (azione sacra, D. Ravizza di Lanciano), Fermo, 1740, L'Aquila, 1745
Debora e Giaele vincitrici di sisara (azione sacra, Ravizza di Lanciano), Chieti, 1744
Il sacrificio di Abramo (componimento sacro), Chieti, 1744

JAMES L. JACKMAN (work-list with ROSA LEONETTI)

Ventura, José (María de la Purificación) (*b* Alcalá la Real, 2 Feb 1817; *d* Figueras, 24 April 1875). Catalan composer. He was familiarly known as 'Pep Ventura', 'L'avi Pep' or 'En Pep de la Tenora'. The son of an infantry sergeant, he grew up in Figueras, where he was apprenticed to a tailor and learnt the rudiments of music from Juan Llandrich and to play the instruments of the popular Catalan band known as the *cobla*. In 1840 at Perpignan he met the instrument maker Antoine Toron, who awakened his interest in the *tenora*, a member of the shawm family (*see* SHAWM, §5), which he soon mastered and added to the woodwind quartet comprising the *cobla*. After making Barcelona his base in 1860, he increased the size of the *cobla* to 12 instruments; during the next 15 years he dominated Catalan popular music. Apart from numerous ephemeral dances and songs he composed approximately 200 *sardanas*, of which the most enduring include *A Font Romeu*, *Ay de l'amor*, *El cant dels aucells*, *El toc d'oració*, *En aquell temps*, *La barretina vermella*, *La Carmela*, *L'anyorança*, *Les noietes de Figueras*, *Per tu ploro*, *Totes volen hereus* and *Una mirada*. He also wrote Christmas carols, *Goigs a Sant Josep* (Gozos a San José) and settings of the *Miserere* and *Te Deum*.

ROBERT STEVENSON

Venture, Jo. a la (*fl* ?*c*1500). Composer. A four-voice passion setting elsewhere attributed to Obrecht, La Rue and Antoine de Longueval (edns in J. Wolf: *Werken van Jacob Obrecht*, Amsterdam, 1908–21, xxviii, repr. 1968, viii; *New Obrecht Edition*, xviii, 1999; and Reich, 1990) is attributed to him in *E-Tc* 23 and *I-Rvat* C.S.42. It has been suggested that he may be identifiable with Longueval, and that 'a la Venture' may be a French translation of the latter's name (the Flemish word 'ongeval' means 'misfortune'). This seems unlikely, however, since Longueval was himself French (his surname should probably be connected with the village of Longueval on the Somme), and his first name was not Johannes but Antoine. Identification with the Italian singer Ventura detto Musini who sang at Mantua Cathedral between 1509 and 1511 is also unlikely.

ERIC JAS

Venture, Johannes à la. *See* LONGUEVAL, ANTOINE DE.

Venturelli, Giuseppe (*b* Rubiera, nr Modena, 1711; *d* Modena, 31 May 1775). Italian composer. He studied composition with Riccardo Broschi, probably while the latter was touring north Italy from 1728 to 1734 with his younger and more celebrated brother Carlo (the castrato singer known as Farinelli). Venturelli's exact professional status has not been discovered; he may have been an organist as well as a composer (as suggested in *SchmidLD*), but a libretto of 1735 names him as 'dilettante'. Although he wrote two works for the comic theatre, the opera *Il matrimonio disgraziato* (Modena, Teatro Rangoni, carn. 1741) and the intermezzo *La moglie alla moda* (the same, carn. 1755), his principal compositions were for the church. A mass for four voices and orchestra was performed in Modena Cathedral in 1733; two later settings of the *Stabat mater* were unsuccessful; around 1735 the Duke of Modena commissioned Venturelli to write *La passione di Gesù Cristo Signor Nostro* (Metastasio). According to Fétis, who described Venturelli as a skilful composer rather than a man of genius, much of his music survived in manuscript: arias, psalm settings, hymns, motets, masses, cantatas, symphonies, and concertos for various instruments (*FétisB*). None of this music has been located in modern catalogues.

JAMES L. JACKMAN

Ventures, the. American pop instrumental group. Its members include Bob Bogle (*b* Portland, OR, 6 Jan 1937; bass guitar), Don Wilson (*b* Tacoma, WA, 10 Feb 1937; guitar), Howie Johnston (*b* Washington DC, 1938; drums) and Nokie Edwards (*b* Oklahoma City, OK, 9 May 1939; guitar). Over the decades numerous session musicians augmented the line-up for recording but the only substantive changes were the replacement of Johnston by Mel Taylor and the addition of Johnny Durrill (keyboards). Since the late 1960s, Jerry McGee has on occasion temporarily replaced Edwards as principal lead guitarist.

The Ventures was among the most popular of guitar instrumental groups in the early 1960s, with neatly arranged versions of such tunes as Johnny Smith's *Walk don't run* and Alberto Dominguez's *Perfidia*. After further hits with *Ram-Bunk-Shush* and *Lullaby of the Leaves*, they became less prominent, although with the producers Bob Reisdorff and Joe Saraceno they recorded over 50 albums (1960–76) on which they adapted tunes from new pop trends such as surf and psychedelic music to their own style. The group's largest following was in Japan where they toured frequently from the mid-1960s onwards, sold over 40 million records and inspired numerous imitators. In the USA their instructional records, *Play with the Ventures*, initiated thousands of teenagers into popular music performance.

DAVE LAING

Venturi, Pompilio (*b* Siena; *fl* 1569–1583). Italian composer and poet. He was a dilettante who claimed acquaintance with a number of prominent Roman families. His second book of villanellas, dedicated to Cleria Farnese Cesarini, contains 52 compositions in praise of various Roman noblewomen and others, all of whom he claimed to know either 'by sight or reputation'. Cesarini is the subject of six pieces, the ladies of the Colonna family four, and the Orsini (including the musician, Isabella de' Medici Orsini) three. A bilingual comic song describes the author's encounter with 'una Thodesca' in a Viennese tavern. His couplet-based doggerel poems, described as 'canzonelle', frequently open with puns on the ladies' names. A highly declamatory style, parallel 5ths, and strict homophonic textures characterize the musical style.

WORKS

Il primo libro delle villotte alla napolitana, 3vv (Venice, 1569)
Il secondo libro delle villanelle ... fatte in lode di molte signore et gentildonne romane, 3vv (Venice, 1571)
Il terzo libro delle villanelle, 3vv (Venice, 1583)

DONNA G. CARDAMONE

Venturi del Nibbio, Stefano (*fl* 1592–1600). Italian composer. He was in Venice when his first two publications appeared in 1592, but by May 1594 he had moved to Florence. Various scholars have assumed that he was a member – even a founder-member – of the Accademia degli Elevati, which Marco da Gagliano established in Florence in 1607, but this is not substantiated by any known documents relating to the academy; indeed it is not even known that he was still in Florence in 1607. There is likewise no evidence for the assertion that he was an active supporter of the new monodic music in Florence; all his known music is vocal polyphony, and there is no indication whatever that he composed monody or wrote in the *stile rappresentativo*. The truth seems to be that, like Luca Bati, he was on friendly terms with the circle of progressive musicians in Florence at the turn of the century but was regarded as a polyphonist and a master of ensemble vocal music. His published works consist almost entirely of madrigals, of which he produced at least five books between 1592 and 1598. Two of those in his first 1592 book were adapted to English words and published in London. One of them, *Quell'aura che spirand'a l'aura mia* (as *As Mopsus went hir silly flock foorth leading*), appeared in the *Madrigals to Five Voyces* (RISM 1598[15]) of Morley, who, in his comments on it (1597), praised 'the excellency of his judgment in expressing and gracing his ditty' and recommended him as a model composer in the genre. From the *Descrizione* (1600) by the younger Michelangelo Buonarroti of the festivities for the wedding of Henri IV of France and Maria de' Medici in Florence, it is known that Venturi composed a chorus and a 'gran musica delli Dei simili a coro' for Caccini's *Il rapimento di Cefalo*, which was presented on 9 October 1600; these pieces were never published and are now unknown.

WORKS

published in Venice unless otherwise stated

Il primo libro de madrigali, 5vv (1592) [two pubd with Eng. texts 1597[24]; 1598[15], ed. C.A. Murphy, *Thomas Morley Editions of Italian Canzonets and Madrigals* (Tallahasee, FL, 1964)]

EDMOND STRAINCHAMPS

Venturini, Francesco (*b* ?Brussels, *c*1675; *d* Hanover, 18 April 1745). German composer and violinist of uncertain extraction, possibly Walloon. Despite the modish Italian form of his name he seems to have originated from France or the Low Countries: the record of his marriage in Hanover to Anna Maria Ennuy, a resident of that city, on 13 January 1697 describes him as 'gallus'. Baptismal records of their children go further, adding 'Bruxellensis' to the father's name. It is also significant that documents from the Hanoverian court, to which he was attached from Easter 1698 or earlier, until his death, always list him with the French musicians. The court orchestra was directed by J.-B. Farinel (alias G.B. Farinelli), a native of Grenoble, and performed a repertory entirely in the French style, whereas it was left to the chamber musicians to cultivate Italian music. Having sometimes deputized for Farinel (whose pupil he was, according to Walther), Venturini became official Konzertmeister in 1713. His sole extant publication, a set of 12 richly scored orchestral suites misleadingly entitled 'concerti', was probably composed soon afterwards in token of his new appointment, being dedicated to the elector. Whatever credit he gained thereby, he incurred Georg Ludwig's displeasure (if Mattheson's report is reliable) by the composition of a vocal piece to the New Testament text *Herr, gedenke mein, wenn du in dein Reich kommst* ('Lord, remember me when thou comest into thy kingdom') on the elector's departure for England in 1714 to become George I. The presumption must have been forgiven, however, for Venturini later became Kapellmeister at Hanover, a post which passed on his death to a pupil, J.B. Lutter.

Several other musicians by the name of Venturini are known to have been active in Hanover and other German cities at the same time. Some were relatives (including a son, August, and a presumed son, Georg), but others – including two who shared his first name, to the further confusion of biographers – were apparently not. A Franciscus Venturini served in the Württemberg court orchestra at Stuttgart from 1700 to 1745 as a violinist, while Francesco Maria Venturini, a Venetian singer, was engaged by the Bavarian court in 1715.

Venturini's very attractive *Concerti da camera* op.1 (Amsterdam, *c*1714), for four to nine parts, consists of a series of dance movements (allemanda, gavotte, passepied etc.) often mingled with 'novelty' movements (aria, canon, Furies); a tripartite *ouverture* opens the odd-numbered works, and a *concerto* (a fast movement, repeated after – in one case, together with – a slower section) the even-numbered ones. Some of the dances include an alternate movement, called 'trio' in the frequent cases where the instrumentation is reduced to a pair of oboes and a bassoon. A solo violin, a bassoon, a pair of flutes and a pair of solo cellos are variously added in certain movements, increasing the number of parts from eight to a maximum of 11. The better-known op.5 (1719) of Dall'Abaco closely resembles Venturini's op.1, though the similarities may merely reflect the predominantly French orientation of south German court orchestras of the time. A manuscript concerto by Venturini, possibly one of the above, for two violins, strings and continuo, is in the University Library, Uppsala.

MICHAEL TALBOT

Veprik, Aleksandr Moiseyevich (*b* Balta, nr Odessa, 11/23 June 1899; *d* Moscow, 13 Oct 1958). Russian composer and musicologist. He went to school in Warsaw, then studied the piano under Wendling at the Leipzig Conservatory until 1914; he then continued his studies with N.A. Dubasov (piano, 1914–17) and A.M. Zhitomirsky (composition, 1917–20) at the St Petersburg Conservatory. He was a pupil of Myaskovsky at the Moscow Conservatory (1920–23), where he then taught orchestration (1923–41), and was made a professor in 1930 and head of faculty from 1938. He was later professor at conservatories in Sverdlovsk and Saratov (1942). On his return to Moscow in 1943 he resumed composition and research.

Veprik was a reformer of musical education in the 1920s, when he joined a faction of 'Red Professors'. In 1925 he initiated the invitation to Arnold Schoenberg to head the composition class at Moscow Conservatory (which he refused); in 1927 he travelled to Austria, Germany and France where he studied methods of teaching orchestration and where he met Schoenberg, Hindemith, Ravel and Honegger. He was an editor of the St Petersburg *Melos* journal (1917–18) and of the periodical *Muzïkal'noye obrazovaniye* ('Music education') (1925–9); from 1929 he was a member of the State Academy for Art Research (GAKhN) and the State Academy of Knowledge of Art (GAIS). During the 1936 controversy surrounding Shostakovich's *Lady Macbeth*, Veprik was among the leaders of the Union of Composers, and he strongly supported the work. In 1938 he received a commission from the Kirghiz State Theatre for the opera *Toktogul*, which was completed the following year. Under the Stalinist regime he was sent to a prison camp (1950–54). Veprik's works are written in an emotional, ornamented manner, and while they clearly show his inclination to the Jewish school, some have distinctly modernist tendencies.

WORKS

(*selective list*)

Toktogul (op, 4, D. Bokombayev), 1938–9, rev. (5, K. Malikov), collab. A. Maldïbayev, 1949–50

Vocal orch: Cant. (A. Blok), solo vv, chorus, orch, op.2, 1921–2; Dyevushka i smert' [A Girl and Death] (A.M. Gor'ky), spkr, solo vv, pf, 1925; Na barrikadakh (1905 god) [On the Barricades (1905)], chorus, orch, op.18, 1932–4; Stalinstan (I. Kharik), chorus, orch, op.19, 1932–4, arr. 1 solo v, chorus, pf, 1932;

Toktogul, suite from the opera, solo vv, chorus, orch, 1942; Proklatiye fashizmu [A Curse on Fascism], cant., 1944; Narod–geroy [The People–the Hero] (cant., A. Mashistov, chorus, orch, 1950–5
Orch: Plyaski i pesni getto [Dances and Songs of the Ghetto], op.12, 1927; 5 malenkikh p'yes [5 Little Pieces], op.17, 1930, rev. 1958; Sym. no.1, 1931; Traurnaya pesnya [Funeral Song], op.20, 1932, rev. 1958; Pyesnya likovaniya [Song of Rejoicing], op.20, 1934–5, rev. 1959; Sym. no.2, 1937–8; Pastoral 1945–6; 2 poėmï, 1956–7; Improvizatsiya, 1958

INNA BARSOVA/DETLEF GOJOWY

Vera, Edoardo [Odoardo] (*b* Rome, Feb 1821; *d* Rome, March 1889). Italian composer. He studied music with his mother, the singer Charlotte Häser, and appeared as a pianist in concerts in London and Paris. His first opera, *Anelda da Messina*, was given at La Scala on 17 October 1843. He went to London, where he published a quantity of vocal music, including songs dedicated to Pauline Viardot. His sister, the soprano Sofia Vera-Lorini (*d* Livorno, 8 January 1882), was much admired for her interpretations of Gluck, Mozart and Beethoven; his other operas were both written for her. *Adriana Lecouvreur* (dramma lirico, 4, A. de Lanzières) was first given during the carnival season at Florence in 1859, and *Valeria* (tragedia lirica, 4, A. Ghislanzoni) opened at the Teatro Comunale, Bologna, on 16 March 1869. Adriana and the dual roles of Valeria/Licisca (a Greek courtesan) require a singer capable of both coloratura and dramatic declamation. With their sextet finales in two sections modelled on those of Donizetti, Vera's operas must have seemed old-fashioned even in the 1860s. *Valeria* contains a mad scene for the emperor, Claudio (baritone), created by Antonio Cotogni.

PATRICK O'CONNOR

Veracini, Antonio (*b* Florence, 17 Jan 1659; *d* Florence, 26 Oct 1733). Italian violinist and composer, uncle of Francesco Maria Veracini. He presumably had his early training from his father Francesco di Niccolò, a noted violinist with whom Antonio frequently performed in his youth. For example, they played regularly at the opera performances produced for Grand Prince Ferdinando de' Medici at Pratolino, 1677–85. Veracini entered the service of Grand Duchess Vittoria of Tuscany on 3 March 1682. After her death in 1694 he received a pension of half pay. At the death of Pietro Sammartini in 1700, he became *maestro di cappella* at S Michele Berteldi (now S Gaetano) in Florence, and he provided music to other churches of the city on at least an occasional basis. Veracini was an important freelance musical director, providing oratorios for the company of S Marco (1703–5), S Jacopo del Nicchio (1720) and S Niccolò del Ceppo (1702–30). From at least 1718 he was a member of the musicians' company in Florence, serving at various times as councillor and sexton. Around 1708 Veracini assumed direction of his father's music school, in which he trained his nephew Francesco Maria. Unlike his nephew, he rarely travelled. He visited Rome twice, where he seems to have met Corelli, whose portrait he owned. In 1720 he made a brief visit to Vienna, but he was certainly at home at least every Easter from 1685 to 1733 since his name is in every parish census from those years.

Only Veracini's printed violin music survives. The treatment of tonal harmony in it is not as clear as Corelli's. But the music generally possesses grandeur, derived from the unusually long phrases extended by frequent deceptive suspensions at cadences and broad melodic contours, and strength resulting from energetic and emphatic, often fanfare-like, rhythms and triadic motifs. The extensive use of repetition in place of sequences and an expanded rhythmic vocabulary were taken up by his nephew, who established these among the features of the *galant* style of the early 18th century. Veracini's occasional singing melodies recall G.M. Casini's statement about him and his nephew, that 'the heart, rather than cleverness, guided and accompanied the finger and bow of these virtuosos'.

WORKS

ORATORIOS

all performed Florence; only published librettos extant

Il figliuol prodigo, 1693
La caduta de' Filistei nella morte di Sansone (G.P. Berzini), 1695
I trionfi di Giosuè (Berzini), 1703; incl. music by other composers
Assalon punito (D. Canavese), 1708
Giosuè in Gabaon (Berzini), *c*1710 [? the same as I trionfi di Giosuè]

CHAMBER MUSIC

[10] Sonate a tre, 2 vn, vle/archlute, bc (org), op.1 (Florence, 1692)
[10] Sonate da camera, vn, op.2 (Modena, *c*1694)
[10] Sonate da camera a due, vn, vle/archlute, bc (hpd), op.3 (Modena, 1696)

JOHN WALTER HILL

Veracini, Francesco Maria (*b* Florence, 1 Feb 1690; *d* Florence, 31 Oct 1768). Italian composer and violinist. Veracini was born into a family of musicians and artists. His grandfather was one of the first violinists of Florence; his uncle ANTONIO VERACINI was that and a fine composer as well. Francesco Maria's father Agostino was, ironically, one of the few Veracinis who did not play the violin even as an amateur; he was a druggist and undertaker. Veracini's early training was provided by his uncle Antonio with whom the promising boy often performed in public. His other instructors in Florence were G.M. Casini and his assistant Francesco Feroci. In particular, Casini, the organist at Florence Cathedral and composer of church music in a highly individual, neo-Palestrinian style, left his mark upon Veracini's subsequent works. His last teacher was apparently G.A. Bernabei, with whom he may have studied in 1715 when he was in southern Germany. There is no solid evidence that he studied with Corelli, as is sometimes asserted.

Veracini left Florence before Easter 1711. On 24 and 25 December 1711 he was a soloist at the Christmas masses at S Marco, Venice, but was never a regular member of the chapel orchestra (as Caffi claimed). On 1 February 1712 he played at the church of S Maria Gloriosa dei Frari in Venice during a Mass in honour of the new Holy Roman ambassador (the concerto he played is in *A-Wn*). Although he returned to Florence in spring 1712 for a performance of his oratorio *Il trionfo della innocenza patrocinata da S Niccolò*, his centre of activity remained Venice, where he played again for the Christmas masses at S Marco in 1712. Evidence suggests (but *see* TARTINI, GIUSEPPE) that on 10 March 1712 Tartini heard Veracini play in Venice and was so impressed that he fled to Ancona to study the better use of the bow in imitation of the older player. A letter of 1764 from Domenico Palafuti of Florence to G.B. Martini states that Pietro Locatelli studied with Veracini; this was probably in Florence, before the publication of Locatelli's first sonatas.

From 23 January to 24 December 1714 Veracini appeared in a series of benefit concerts, and as soloist between the acts of operas, at the Queen's Theatre in London. The year 1715 appears to have been spent in Düsseldorf at the court of Elector Palatine of the Rhine Johann Wilhelm. There Veracini played violin sonatas by Antonio Bonporti and dedicated his setting of an oratorio, *Mosè al mar' rosso*, to the elector.

On 26 July 1716 Veracini was again in Venice, where he dedicated a set of 12 solo sonatas to Prince Elector Friedrich August of Saxony. Though knowing that a violinist was not needed at the Dresden court, and that he risked friction with J.B. Volumier, the established director of the orchestra there, the prince persuaded his father to retain Veracini. After another oratorio performance in Florence, 25 January 1717, Veracini travelled to Dresden where he was transferred from the prince's private employment to the regular court payroll on 20 November 1717. His salary was equal to Heinichen's, Volumier's and Johann Schmidt's, and far exceeded those of the other composers, J.G. Pisendel, Christian Pezold and J.D. Zelenka. In February 1719 Veracini was entrusted with hiring more singers for the court while he was in Bologna and Venice. He returned to Dresden where he remained until 1722, when on 13 August he leapt from a third-storey window in a fit of madness brought on by too much application to music and reading of alchemy, according to Mattheson. Veracini's treatise hints that there was a plot against his life inspired by jealousy, however.

Having left Dresden before February 1723, Veracini returned to Florence, via Prague, before Easter of that year. That he re-established his reputation as a performer on his return to Italy we learn from Burney's amusing story in which he arrogantly showed Girolamo Laurenti 'the way to play the first fiddle'. Nevertheless, the documents from this time (1723–33) most often reveal Veracini as composer and performer of religious music, principally of oratorios produced by lay religious companies, but also of a mass and *Te Deum* in celebration of the election of the Florentine Pope Clement XII, 20 and 21 July 1730. He also played the violin at private concerts.

Between 9 and 27 April 1733 he made his way back to London, where he began to play so often that Burney reported: 'There was no concert now without a solo on the violin by Veracini'. Perhaps he began immediately to play for the Opera of the Nobility, Handel's rival, which presented his first opera, *Adriano in Siria*, for a run of 20 performances beginning on 26 November 1735, with the composer leading and playing. The same company gave his second opera, *La clemenza di Tito*, its four performances, 12–23 April 1737, as well as his third, *Partenio*, 14 March–6 June 1738.

There being no opera in London for the season of 1738–9, Veracini returned briefly to Florence where his uncle, wife and mother had died in his absence. Charles de Brosses heard him play there in 1739, and reported that 'his playing is just, noble, knowledgeable and precise, but a little lacking in grace'. Burney concurred, writing (also from first hand) that 'the peculiarities of his performance were his bow-hand, his shake, his learned arpeggios, and a tone so loud and clear, that it could be distinctly heard through the most numerous band of a church or theatre'. All agreed that he was the first, or at least one of the first, violinists of Europe (see illustration).

On 28 February 1741 Veracini was back in London, playing a concerto between the acts of Handel's *Acis and Galatea*. Nine days later he gave a concert of his own compositions including 'A New Eclogue' of 12 vocal duets entitled *Nice e Tirsi*. In spring 1741 he appeared at two more benefit concerts, and during autumn 1742 he played concertos as entr'acte music at 21 dramatic performances at Drury Lane. A run of ten performances of his last opera, *Rosalinda*, an Italian adaptation by Paolo Rolli of Shakespeare's *As You Like It*, began on 31 January 1744. Veracini's inclusion of the popular ballad tune *The Lass of Paties Mill* in this opera greatly annoyed Burney, who condemned Veracini's own arias as 'wild, aukward, and unpleasant; manifestly produced by a man unaccustomed to write for the voice, and one possessed of a *capo pazzo*'. Though he may have been mad, Veracini

Francesco Maria Veracini playing the violin: engraving by J. June after Ferdinand Richter

was certainly not inexperienced in vocal music. At least half of his known output is for the voice.

In the same year, 1744, Veracini published his finest sonatas, the *Sonate accademiche* op.2, which also use a ballad tune, *Tweed's Side*. The title of this collection suggests that the sonatas were of the sort to be played at private concerts (*accademie* in Florentine parlance) rather than in theatre, church or chamber; they are not academic in the modern English sense. Burney must have heard them when he attended one of Veracini's concerts in 1745. It was his last in England, since Burney reported that shortly after it Veracini was shipwrecked crossing the Channel. The composer himself tells us he lost a manuscript at sea.

We next hear of Veracini in a letter of 8 May 1750 from the British envoy, Horace Mann, who heard him play the sonata with *Tweed's Side* in Florence. On 7 June 1750 the Marquis d'Orbessan heard him in a performance of Galuppi's *La vittoria d'Imeneo* in Turin. Back in Florence, Veracini dictated his first will, 8 March 1751, in favour of an English widow, Mary Jane Atkinson.

Veracini once again became a church musician during his last years in Florence. From 1755 until his death he served as *maestro di cappella* for the Vallambrosan fathers in the church of S Pancrazio, and from 1758 he filled the same post for the Theatine fathers in the church of S Michele Berteldi (now S Gaetano). In the many accounts of his church performances, Veracini is described as conducting or beating time, but he also continued to play the violin in his old age. On 6 October 1765 and on 15 November 1766 he performed at the grand-ducal court. His last years were therefore active.

A parish priest who knew him characterized Veracini as one who left several good positions because he valued independence more than wealth. The reports of diarists and journalists reveal him as an eccentric and at times even a seeming madman. Burney stressed his arrogance. Hints of all these traits can be found in his treatise, *Il trionfo della pratica musicale*, which he wrote during his last years in Florence.

Burney remarked that 'by travelling all over Europe he formed a style of playing peculiar to himself'. The same might be said of his style of composing. His later concertos, when compared to his first (1712), clearly reveal the influence of Vivaldi's concertos op.3 (1711) which he certainly heard during his years in Venice. His sonatas of 1716 are somewhat like Corelli's, but use no fugues or imitation, frequently employ repetition in place of sequence, display symmetrical phrasing and show a strong preference for tonic recapitulations. In a word, they seem as modern as those of Tartini and Locatelli published in the 1730s. But the op.1 sonatas of 1721 are more contrapuntal, perhaps owing to the influence of the German composers at Dresden, from whom he certainly got the idea of beginning a suite of dances with a French overture (unheard of in Italian solo sonatas).

Veracini's operas resemble those of his Italian colleagues in London as to general musical style, but contain more strongly expressive arias (as do Handel's). The op.2 sonatas clearly show the influence of opera arias in places, but in other places become even more elaborately contrapuntal than those of op.1. Veracini's increasing interest in the thorough application of fugue, canon, inversion and imitation can be traced in his revisions of Corelli's op.5 sonatas, in his revisions of his own music, and in his treatise, both in the musical examples (containing revisions of Corelli and Geminiani) and in the text. Having begun as a fashionable progressive, Veracini, in his customarily independent manner, deliberately pursued an eccentric course and eventually expressed his contempt for the homophonic style he once cultivated, equating it with ignorance, laziness and the same immorality which he felt led Handel and others to plagiarism; Veracini himself was original and independent.

WORKS

librettos published unless otherwise stated

OPERAS

all produced London, King's Theatre

Adriano in Siria (A.M. Corri, after P. Metastasio), 26 Nov 1735, *GB-Mp*; arias, *Lbl*, *I-Rsc* (London, 1736); 2 interludi, *Rsc*

La clemenza di Tito (Corri, after Metastasio), 12 April 1737

JOHN WALTER HILL

Veränderungen (Ger.). VARIATIONS, as in *33 Veränderungen über einen Walzer von Anton Diabelli für Klavier*, the full title of Beethoven's Diabelli Variations op.120 (1823). The word *Variationen*, however, is a much commoner designation for variations in German.

Vera-Rivera, Santiago (*b* Santiago, 2 Nov 1950). Chilean composer. He received instruction in composition from Carlos Botto, Alfonso Letelier, Juan Lemann, Cirilo Vila and Juan Amenábar. He attended the University of Chile (teaching degree in music, 1974; licentiate in composition, 1977–84). He has taught harmony at the University of Chile, other courses in the Santa Elvira Institute for the Arts at the University of Tarapacá and at the Inter American Institute of Music Education sponsored by the Organization of American States.

His compositions include works for soloists and orchestra, chorus and orchestra, chorus, electro-acoustic music, and chamber music for ensembles, voice, and solo instruments. The ISCM selected his *Apocaliptika II* (1988) for piano and string orchestra for performance by the Norwegian Chamber Orchestra in Oslo on 24 September 1990.

LEONARDO MANZINO

Veras, Ph(ilippe) F(rançoi)s (*fl* 1740). French organist and composer. He is known only by his *Pièces de clavecin ... premier livre* (privilege dated 1740/*R*) and the mention of a *second livre* in a catalogue of 1751. According to the title-page of his *premier livre*, Veras was organist of St Maurice at Lille in Flanders. He was one of the very few composers to take over François Couperin's term, *ordre*, for suite. The older composer's influence – and perhaps that of Dandrieu – shows also in the titles and general style of the pieces, though there is little real imagination or variety. The writing is mostly in two parts. One piece, *La volliante, dans le goût italien*, has a *Trommelbass* accompaniment.

DAVID FULLER

Veray, Amaury (*b* Yauco, 14 June 1922; *d* San Juan, 30 Oct 1995). Puerto Rican composer. His formal studies in music began as a piano student of Olimpia Morel Campos and Emilio Bacó Pasarell in Ponce. After graduating from the University of Puerto Rico with a general arts degree (1943) he served in the US Air Force. Following this military service he enrolled in the New England Conservatory of Music, Boston, studying composition with Carl MacKinley and graduating in 1949. He also studied at the Manhattan School of Music in New York City and with Pizzetti at the Accademia di S Cecilia in Rome. Returning to Puerto Rico in the early 1950s, he composed a number of film scores for the new Division of Community Education of the government of Puerto Rico. In 1960 he joined the faculty of the Puerto Rico

Conservatory of Music as a teacher of theory and composition, remaining in that post until his death.

Veray also served as an advisor to the Institute of Puerto Rican Culture, established in 1955, and developed there an archive of Puerto Rican music which since 1966 has formed an important part of the holdings of the Puerto Rico general archive. In recognition of this and other contributions to music in Puerto Rico, Veray was elected to membership in the Puerto Rico Academy of Arts and Sciences.

Veray's compositions of the 1950s and 1960s, especially in the fields of film, ballet and song, contributed to a strong nationalist movement in Puerto Rican music, which especially drew upon native rhythms and melodic turns. His later work displayed a broader approach, with polytonality occasionally evident. Veray wrote extensively on Puerto Rican music.

DONALD THOMPSON

Verazi, Mattia (*b* ?Rome, *c*1730; *d* Munich, 20 Nov 1794). Italian librettist. Librettos refer to him as 'Romano'. Niccolò Jommelli composed the music for his first known opera libretto, *Ifigenia in Aulide*, for Rome in 1751. The work initiated a lifelong friendship and a series of collaborative efforts spanning 20 years. In *Ifigenia* Verazi already showed innovatory tendencies that challenged the conventions of Italian *opera seria*: Iphigenia's main aria without subsequent exit, Eriphile's suicide, the extensive final ensemble, an emphasis on horror and terror, and moves towards strong climaxes at the end of each act all break with mid-century practice. In 1755, Verazi was called to Stuttgart to provide two French-inspired operas, *Enea nel Lazio* and *Pelope*, for Jommelli, who had become *maestro di cappella* there in 1754. Catering to Duke Carl Eugen's taste for French spectacle, these works, based on mythological subjects and involving deities, machine spectacle, chorus, pantomime and possibly dance, antedate similar works by Traetta in Parma (1759) and Gluck's *Orfeo* for Vienna in 1762. In *Enea* his first big ensemble, a quintet near the end of Act 3, replaces the traditional succession of exit arias, and the opening scene complex with chorus replaces the usual intimate scenes for a few characters.

A year later Verazi became court poet for the Palatinate at nearby Mannheim, and by 1762 he had also become private secretary to the Elector Carl Theodor. He held both posts until the court moved to Munich in 1778, when he retired. After his début libretto, *Le nozze d'Arianna* (1756) for Holzbauer, Verazi wrote no new *opere serie* for four years. His correspondence with Jommelli and with the Württemberg court in the 1770s (D-Sl) suggests that he was revising existing librettos for Jommelli as well as Holzbauer and others in Mannheim. Two librettos Verazi revised for J.C. Bach in 1772 and 1774 acknowledge such services. Verazi's reworking of Metastasio's *Temistocle* for Bach was designed to tighten the action and direct it towards new ensemble finales. Operas for both Mannheim and Stuttgart (or Ludwigsburg) during the 1760s and 70s typically have ensembles at the close of Acts 1 and 2 some 20 years before these became common in Italian theatres.

Verazi provided new librettos at two-year intervals for a succession of three guest composers, beginning in 1760 with the formally conventional *Caio Fabrizio* for Jommelli. Verazi's operas for Mannheim contain the spectacular staging, choruses and ballets associated with French opera, but at the same time, depict only natural phenomena and human activities in accordance with principles of the Italian Arcadian reform that proscribed anything supernatural. The engagement of Traetta from Parma, where early efforts at Italian opera reform had taken place, must have inspired Verazi to undertake unique and bold challenges to conventional Italian dramaturgy. In their collaborative effort, *Sofonisba* (1762), Verazi introduced several characteristic innovations: the opera opens with a programmatic sinfonia accompanying a battle pantomime, and later a pantomime and chorus depict gladiatorial games. Fragments of recitative invade Sofonisba's declamatory aria, 'Crudeli, aimè! Che fate?', and footnotes specify extensive actions. Act 2 ends with an action ensemble of diminishing forces – a trio that becomes a solo when two of the participants leave the stage. Most significantly, Verazi challenged the dramaturgical laws of verisimilitude by staging Sofonisba's tragic suicide rather than contriving a conventional happy ending.

Verazi's *Ifigenia in Tauride*, set by Majo two years later, continued the advances of *Sofonisba*. Typically, Verazi emphasized the tormented and terrifying aspects of the plot. (Guillard borrowed the programmatic 'shipwreck' sinfonia for Gluck's Paris opera on the same subject.) Verazi suspended the exit-aria convention to produce lengthy scene complexes that incorporate spectacle, obbligato recitative, cavatina, aria and programmatic battle music. An unconventional duet for two men contains another novelty, an interjection from a third character (*pertichino*). The chorus functions both as supernumeraries and as characters in the drama. In the final scene the tyrant Thoas dies in his burning temple.

In 1766 Verazi again collaborated with Jommelli, providing new and revised operas for Duke Carl Eugen's new theatre at Ludwigsburg, which had been constructed to accommodate French spectacle. He revised *Enea nel*

Lazio and substantially reworked Zeno's *Lucio Vero* as *Vologeso* (which Jommelli considered among his most emotionally compelling operas.) Two years later they mounted the most radical opera of Jommelli's career, *Fetonte*, a tour de force combining a complex italianate plot with spectacle based on French models, which C.F.D. Schubart extolled for the perfect blending of music, drama, stagecraft, poetry and dance and for its impact on the audience. Formally, Verazi made use of cavatinas and ensembles of diminishing personnel to avoid the traditional succession of recitative and exit arias, and the opera's impressive and tragic conclusion takes place within the first action ensemble finale ever appended to an *opera seria*.

In 1778 Verazi was called to Milan to provide spectacle operas for the opening of La Scala. In prefaces to *Europa riconosciuta* (Salieri) and *Troia distrutta* (Mortellari), he claimed to have reformed longstanding abuses and added variety, verisimilitude and action in his librettos, which he termed *drammi in azione*. In *Europa* and *Troia* Verazi abolished the hierarchy of roles and drastically reduced the number of exit arias, replacing them with introductions, ensembles, action finales and cavatinas embedded in extensive scene complexes incorporating chorus, pantomime, and machine spectacle. The librettos contain detailed, almost line-by-line footnotes specifying action and even giving instructions to the composer regarding instrumentation and musical effects. Aegisthus is slain on stage in *Europa* and *Troia* ends tragically. Public outrage over these two works led Verazi to present a revival of his *Calliroe* and a far less controversial *Cleopatra*. Here all spectacle has disappeared, and arias remain free of action. Of Verazi's innovations only the ensembles and the tragic ending remain. Calliroe returns to life when the potion she has drunk proves harmless, but events in *Cleopatra* are allowed to proceed to a staged double suicide.

Verazi returned to Germany without hope of finding a favourable reception for his innovations in his native land. But during the early 1780s composers and librettists began cautiously to incorporate them into conventional works, and by the 1790s a new genre of opera had supplanted the old.

DAVID FALLOWS

Verbesselt, August (*b* Klein-Willebroek, 22 Oct 1919). Belgian composer and flautist. At the Antwerp Conservatory he studied flute with Louis Stoefs, who also encouraged his interest in new music; his other teachers at the conservatory included Lode Ontrop (harmony) and Karel Candael (counterpoint and fugue). In 1963 he was appointed to teach analysis and aesthetics at the conservatory, and in 1965 he became principal of the Music School in Niel. From 1942 he played first flute at the Royal Flemish Opera for about 40 years.

Though not a prolific composer he has written for a great variety of combinations. Throughout his career a gradual detachment from traditionalism and classical conception has taken place. Initially he wrote in a free atonal style, for example in his Concerto for flute and percussion and orchestra (1952), *Ballade* (1956), Concerto for Orchestra (1959) and earlier chamber-music works. Since 1964, however, his music has evolved from bitonality and polytonality towards atonality and strict 12-note technique. In more recent years his music has shown more intense instrumental colouring and greater compression.

DIANA VON VOLBORTH-DANYS

Verbey, Theo (*b* Delft, 5 July 1959). Dutch composer. He studied at the Royal Conservatory in The Hague (1978–85) with Diderik Wagenaar, J. van Vlijman and Schat, among others. In 1982 he visited the Darmstadt summer course and participated in a Stockhausen project at the Royal Conservatory. In 1987 he received the Amsterdam Arts Fund's incentive award for young composers for *Aura*, after which commissions came from the Royal Concertgebouw Orchestra, the London Sinfonietta, the Nieuw Sinfonietta Amsterdam and the Residentie-Orkest, The Hague. In 1992 and 1997 Verbey was a juror for the Queen Elisabeth Composition Competition in Brussels and in 1997 began teaching composition at the Amsterdam Sweelinck Conservatory.

His compositions show his striving for clarity and richness in harmony and rhythm. He has also a special feeling for instrumental colour and harmonic nuance, and consistently uses self-generating musical phenomena. The inevitability of already chosen processes particularly fascinates Verbey, as is shown in complex scores such as *Tegenbeweging* ('Contrary Motion', 1986), *Inversie* (1987), *Expulsie* (1990) and *Produkt* (1992), which was first performed at the Donaueschinger Musiktage of 1992. Verbey has also written apparently tonal and easily intelligible music that is based on proportional ratios. His music is also naturally rooted in the significant developments of Western music. *Triade* (1991, revised 1994), which uses Mozart's 'Prague' Symphony as a point of reference for phrasing, structural proportions and the relationships between harmonies and melodies, has changing metres in a ratio of 1:2:3:4. In *Conciso* (1996) Verbey uses the ratio of 4:5:3:6, which he borrowed from Beethoven's Piano Sonata op.101. At the same time, the harmonic contour of *Conciso* is largely determined by Skryabin's Piano Sonata no.8. Like most composers of his generation, Verbey is conscious that it is impossible to be impervious to a music history that has permeated our thought.

LEO SAMAMA

Verbonnet, Johannes. *See* GHISELIN, JOHANNES.

Verbrugghen, Henri (*b* Schaerbeek, Brussels, 1 Aug 1873; *d* Northfield, MN, 12 Nov 1934). Belgian violinist and conductor. He studied the violin with Hubay and Ysaÿe at the Brussels Conservatory from 1886, winning a *premier prix* in 1889. In 1893 he joined the Scottish Orchestra in Glasgow, becoming its leader in 1903, and also played with the Lamoureux Orchestra in Paris and at the London Promenade Concerts (1902–5). He gave the British première in 1907 of Sibelius's Violin Concerto. He conducted the Glasgow Choral Union from 1911 until 1915, when he went to Australia to direct the State Conservatorium in Sydney, and conducted its orchestra (from 1916) and the NSW State Orchestra. He settled in the USA in 1923 and was conductor of the Minneapolis SO until 1931.

D.C. PARKER/R

Verbunkos (Hung., from Ger. *Werbung*: 'recruiting'). A traditional Hungarian dance music originally used for recruiting, of 18th-century origin and sometimes simply called a *hongroise*, or *ungarischer Tanz*. Before the Austro-Hungarian imperial army instituted conscription in 1849, recruiting presentations involving music were used in order to fill the ranks with Hungarian village recruits. About a dozen hussars (members of the Hungarian light cavalry), led by their sergeant, would be involved: first, the sergeant would dance slow and dignified figures, then the subordinate officers would join in and the music and dancing became increasingly energetic, until finally the youngest soldiers engaged in virtuosic leaps and spur-clicking. The accompanying music was usually played by Gypsy musicians. Although the *verbunkos* is sometimes considered Gypsy music, it was actually Hungarian, often derived ultimately from the song repertory, but played in a fashion characteristic of the Gypsy musicians. Its use as recruiting music ceased in 1849, by which time it was already evolving into the Hungarian national dance, the CSÁRDÁS. The two forms share many characteristics.

In the late 18th and early 19th centuries, a *verbunkos* art music for middle-class consumption began to evolve, largely through the performances of such virtuosos as János Bihari (1764–1827), one of the earliest and most celebrated Gypsy bandleaders, and the demands of the amateur market. Scores of *verbunkos* music were published from 1784 onwards in Vienna and elsewhere, and the number of such publications listed in Papp's bibliographies suggests that they were quite popular. Composers such as Mozart and Schubert would therefore have needed no particular contact with Hungary or Hungarians, as is often implied, to encounter this music: it was all around them in Vienna.

Verbunkos had both slow (*lassú* or *lassan*) sections and fast (*friss* or *friska*) ones (ex.1); these could either form a

Ex.1 *Magyar tántzok klávikordiomra valók* [Hungarian dances for clavichord] (Vienna, 1790), p.128

pair or alternate at greater length. *Lassú* sections often featured a characteristic dotted rhythm, such as that in

the opening violin figure in the first movement, 'Verbunkos', of Bartók's *Contrasts* (1938). The virtuoso running notes of the faster sections became central to the so-called STYLE HONGROIS, the evocation of Hungarian Gypsy repertories and performance styles by (primarily) Austro-German composers. *Verbunkos*-derived passagework is found in Mozart (e.g. the finale of the Violin Concerto K219, and Haydn (e.g. the 'Rondo all'ongarese' of the Piano Trio H XV:25), but is more common in 19th-century chamber music, including the finales of Schubert's String Quintet D956 and Brahms's Piano Quartet no.1 op.25.

JONATHAN BELLMAN

Verbyts'ky, Mykhaylo (*b* Ulyuchi, Galicia, 1815; *d* Mlyny, 31 Dec 1870). Ukrainian priest, composer and writer on music. As a composer he helped lay the foundations for the development of modern Ukrainian music. His works are formally unsophisticated, often strophic, and usually in the minor mode; but his stage works (notably *Prostachka* ('The Simpleton'), 1870) are representative of a popular folk genre that was melodically fluid, singable, pictorial and emotionally evocative. His instrumental writing does not extend far beyond the simple development of folktunes. Nevertheless, he composed 12 so-called symphonies (really overtures), on the sixth of which Stanislav Lyudkevich based an orchestral piece and a piano trio. He also composed *Zapovit* ('Testament', 1868), a setting of Shevchenko's poem for bass solo, double choir and orchestra, the operetta *Podgoryane* (Lemberg (now L'viv, 1864), sacred and secular choral works and songs. He is best known as the composer of the Ukrainian national anthem *Shche ne vmerla Ukrayina* ('The Ukraine has not Perished'), which in 1917 was adopted by the new Ukrainian republican government.

ANDRY V. SZUL

Verchaly, André (*b* Angers, 4 Dec 1903; *d* Marseilles, 12 Sept 1976). French musicologist. He studied the piano with Isidore Philipp and composition with Paul Vidal (1924–30) in Paris, where he attended Masson's musicology lectures at the Sorbonne (1942–6), taking the diplôme d'Etudes Supérieures in history. After a career as a pianist and accompanist (1925–39) he became technical adviser in music at the Ministry for Youth, where he worked from 1945 to 1968, except for four years devoted to research at the CNRS (1955–9). In 1949 he was appointed general secretary to the Société Française de Musicologie. He specialized in the study of secular vocal music under Henri IV and Louis XIII (late 16th and early 17th centuries), and in this field developed the work begun by Gérold (e.g. *L'art du chant en France au XVIIe siècle*, Strasbourg, 1921/*R*); he also contributed to the major French and foreign music dictionaries and encyclopedias. He combined rigorous scholarship with an elegant style.

CHRISTIANE SPIETH-WEISSENBACHER

Vercoe, Elizabeth Walton (*b* Washington DC, 23 April 1941). American composer and writer on music. She was educated at Wellesley College (BA 1962), the University of Michigan (MM 1963) and Boston University (DMA 1978), where she studied composition with Gardner Read. She was a fellow at the Charles Ives Center (1984, 1992) and at the Cité Internationale des Arts in Paris (1983–5) and has received grants from the Artists Foundation and the NEA. She was director of the Women's Music Festival/85 in Boston and was a member of the boards of the International League of Women Composers (1980–87) and the Artists Foundation (1985–90). Her writings include articles and reviews about music by women composers. She has been a member of the music faculty of Regis College since 1997.

Read has described Vercoe as 'a composer with a fine technical command and keen sensitivity to sound materials'. These qualities have enabled her to produce highly contrasting works, ranging from the powerful, disturbing *Herstory* series to the spare and suggestive *Changes* for orchestra. Several of her works, including *Herstory II*, *Herstory III*, *Fantavia* and the satirical yet elegant *Irreveries from Sappho*, have been recorded.

SHARON MABRY

Vercore, Mathias [Matthias] **Herman.** *See* WERRECORE, MATHIAS HERMANN.

Verdalonga, José (*b* Guadalajara; *fl* late 18th century and early 19th). Spanish organ builder. Little is known of his activity, but he must have been of considerable importance, judging by the organs which he either built or repaired. In 1797 he constructed an organ in Toledo Cathedral; he also built instruments for the cathedral of S Isidro in Madrid and Soria Cathedral. At the beginning of the 19th century he rebuilt and modified the two organs in the choir at El Escorial, and restored the 'Emperor's' organ in Toledo Cathedral. His work as an organ builder was carried on by his son and pupil, Valentín, and his son-in-law Leandro Garcimartín.

JOSÉ LÓPEZ-CALO

Verdehr Trio. American ensemble. Founded in 1972, its members are Walter Verdehr, violin (*b* Kočevye, Slovenia, 31 Aug 1941), Elsa Ludewig-Verdehr, clarinet (*b* Charlottesville, VA, 14 April 1936) and Gary Kirkpatrick, piano (*b* Manhattan, KS, 7 Aug 1941). With the assistance of Michigan State University, where all three members are on the faculty, they have commissioned over 100 new works for their unusual instrumental combination. Composers who have written for them include Leslie Bassett, William Bolcom, Peter Dickinson, Ida Gotkovsky, Alan Hovhaness, Karel Husa, John McCabe, Menotti, Thea Musgrave, Ned Rorem and Gunther Schuller. The Verdehr Trio has undertaken many European and world tours, appearing not only as a chamber ensemble but as soloists in several triple concertos written for them.

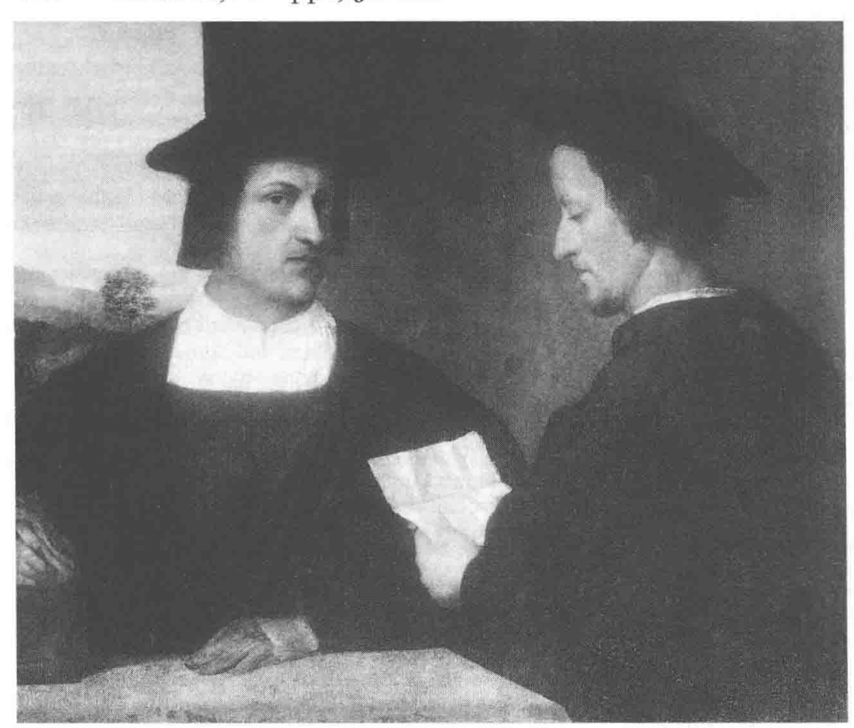
PAMELA WESTON

Verdelot [Deslouges]**, Philippe** (*b* Verdelot, Les Loges, Seine-et-Marne, *c*1480–85; *d* ?Florence, ?1530–32, before 155). French composer. He was the most important composer of Italian madrigals before Arcadelt, and one of the pioneers of the genre.



1. LIFE. Practically nothing is known of Verdelot's early career; it was presumably spent in northern France before he went to northern Italy at a fairly early stage. He may have been in Venice as early as the first decade of the 16th century. According to Vasari (*Le vite*, 2/1568, later followed by Vincenzo Borghini in *Il riposo*, 1584), shortly before leaving Venice for Rome in 1511 the artist Sebastiano del Piombo painted 'Verdelot franzese musico eccellentissimo' together with 'Ubretto suo compagno cantore'. Despite much research this painting has not yet been identified and dated with certainty, nor has any light been shed on the identity of Verdelot's companion.

Some (including Freedberg and Slim, later questioned by Pirrotta and by Hirst) believe that Vasari was referring to a painting (once housed at the Kaiser-Freidrich Museum in Berlin, but destroyed at the end of World War II) that portrays Verdelot at a little over 40 years old (30 according to Amati-Camperi) in the company of the younger composer Hubert Naich (fig.1). Others (from Friedeberg to Ramsden), however, believe the painting is the famous *Concerto* at the Palazzo Pitti in Florence, variously attributed to Giorgione and Titian and dating from *c*1505, in which Verdelot and Jacob Obrecht are depicted together with a younger, anonymous person.

Yet there is still no concrete documentary evidence to support these and other hypotheses (e.g. by Prunières; Ravaglia; Einstein, 1949; Quitin, Sidona). In particular, these two attempts to identify Ubretto are hardly plausible: Obrecht, too well-known and influential to be named after Verdelot and simply as 'cantore', died of the plague at Ferrara in the summer of 1505 at the age of 52, while Naich, born around 1505–10, seems to have been active in Italy only from the 1530s and outside Venetian circles. It is more likely that the companion in Vasari's picture is a third and less well-known figure, perhaps Verdelot's future colleague in Florence, listed with him in the *Libri di cassa* of the Opera of S Maria del Fiore as 'Bruet' (1 July 1523) or 'Urbech' (28 June 1527); later Verdelot himself mentioned his inseparable companion 'Bruett' in one of the conversions recalled by Antonfrancesco Doni in *I Marmi* (1552).

If he was in northern Italy in the first decade of the century, he seems to have moved south by the 1520s. Two of his madrigals (*Torela mo vilan* and *O singular dolcezza*) may indicate that he was in Venice and spent some time at Bologna; his music first appears in sources from the Veneto dating from the early 1520s (Fenlon and Haar). The provenance and dating of the manuscript motet *Beati qui habitant*, however, suggest that he was already in Rome between 1510 and 1513 (Böker-Heil, and the presence of *Non pò far morte 'l dolce viso amaro* in a printed fragment (the 'Fossombrone fragment', *c*1520, see Haar, 1981) points to another sojourn in Rome around 1520.

Verdelot arrived in Florence in May of 1521; he may have taken part in meetings at the Orti Oricellari, where he would have met Machiavelli and other republican intellectuals. It is unlikely, however, that he would have participated in the Oricellari's anti-Medicean plots against his first and most important Florentine patron, Cardinal Giulio de' Medici. He was probably offered service at Cardinal Giulio's court before attaining two of the most prestigious musical positions in the city: *maestro di cappella* at the baptistry of S Maria del Fiore (from 24 March 1522 at the latest to 7 September 1525) and at the

1. Painting possibly portraying Verdelot and his singer companion Ubretto: by an artist of the Venetian School (perhaps Sebastiano del Piombo), before 1511 (ex-Kaiser-Friedrich Museum, Berlin)

cathedral (2 April 1523 to 28 June 1527). In this period Verdelot seems to have been away from the city at least twice, once between 4 December 1523 and 16 January 1524, when he was chosen together with two singers of the cathedral to accompany Giulio de' Medici to Rome on the occasion of the latter's elevation to the papacy (as Clement VII). In the *Dialogo della musica* (1544) and *I marmi*, Antonfrancesco Doni showed Verdelot's assimilation into Florentine social, artistic and political life in the 1520s, citing two seven-part madrigals and a frottola (all of which are now lost), and noting that Verdelot's name was a byword for superior musicianship.

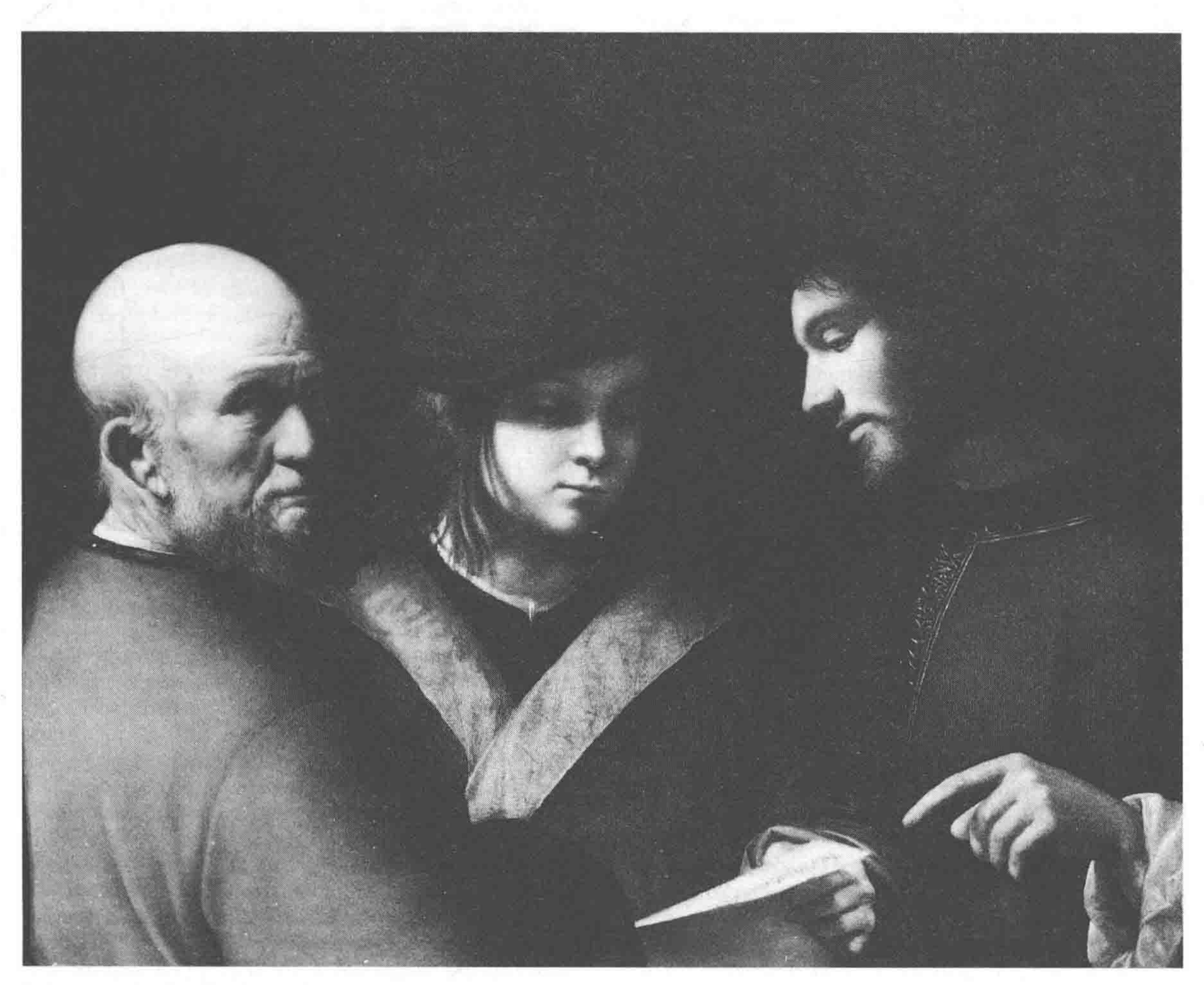
During the Florentine republic (1527–30) Verdelot probably allied himself against papal and imperial forces seeking to return Florence to the Medici. Doni observed in *I marmi*: 'I know that Verdelot did not willingly suffer these praises given to the Spanish, as the partisans quickly discovered!'. Several of Verdelot's motet texts refer to the war, famine and pestilence which afflicted the last republic. Like Michelangelo, Verdelot was apparently forgiven, perhaps posthumously, for his anti-Medici position: the staunch supporter of the Medici, Cosimo Bartoli, in his *Ragionamenti* of 1567 described Verdelot as 'amicissimo' (probably referring to the period before 1527, when Bartoli fled Florence).

It is not known whether Verdelot was in Florence during the siege (1529–30), whether he survived it and, if so, whether he remained in Florence afterwards or went elsewhere. It has been suggested (Hersh, 1963) that the madrigal *Italia, Italia, ch'hai sì longamente* refers to Rome under Paul III (1534–49), although like *Italia mia benché 'l parlar* and *Trist'Amarilli mia* it could equally well refer to the sack of Rome in 1527. There is no evidence for dating any other of Verdelot's music after about 1530. He was definitely dead some time before 1552 for Ortenzio Landi (*Sette libri de cathalogi*, 1552) wrote: 'Verdelot, the Frenchman, was singular in his time'.

A passage in Doni's *Dialogo della musica* seems to imply that by 1544 Verdelot's music (at least his celebrated setting of Petrarch's *Passer mio solitario*) was already regarded as old-fashioned; but other 16th-century commentators testify that it was still performed and highly appreciated throughout the 1550s and 60s. His madrigals continued to be reprinted almost without interruption until 1566. In 1534 Pietro Aretino wrote approvingly of a performance of four singers and a lutenist of *Divini occhi sereni* which, although first published in 1533, did not appear in an arrangement for lute and voice (by Willaert) until 1536. Andrea Calmo (*c*1544, in 1548, and *c*1560) mentioned Verdelot among great madrigal composers, including Arcadelt, Willaert, Rore and Perissone Cambio. Around 1549 Antonfrancesco Grazzini ('il Lasca') spoke of young people, presumably in Florence, who were singing 'certain five-voice madrigals by Verdelot and Arcadelt'. Lodovico Guicciardini (*Descrittione*, 1567) included Verdelot among those composers between Josquin and Clemens non Papa 'who restored music to its true perfection', while Bartoli (*Ragionamenti*, 1567) believed Verdelot's madrigals capable of expressing the 'propriety of words' with impressive faithfulness and power.

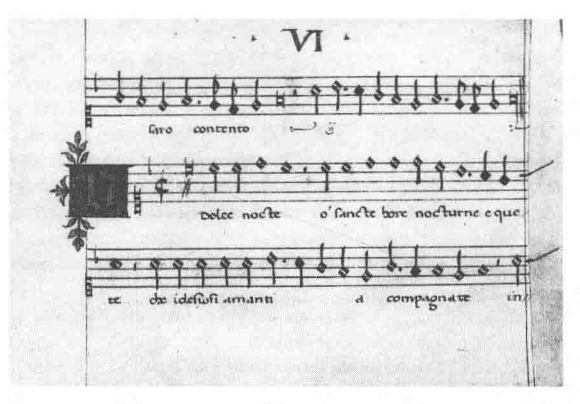
2. Works. Both of Verdelot's extant masses are related to Richafort's four-voice motet *Philomena praevia*. The *Missa 'Philomena'* parodies it and quotes its opening point of imitation as a head-motif in the superius at the beginnings of the Kyrie, Gloria, Credo and Sanctus, and the motet's opening motif appears in the tenor of the five-voice Agnus Dei. The other mass borrows for its Kyrie several motifs from the *secunda pars* of *Philomena praevia*. (Böker-Heil conjectured that the scribe may have

added Verdelot's name to the piece in the belief that he was copying *Missa 'Philomena'*.)



Verdelot wrote about 58 motets, displaying the early 16th-century preference for this genre. Böker-Heil proposed three main stylistic phases. In the earliest he included *Sancta Maria succurre miseris* and *Gaudeamus omnes in Domino*; their melodic style with conjunct progressions, considerable melismas, narrow-range and short, closed phrases resembles that of Mouton (particularly his *Non nobis Domine* and *Ave fuit prima salus*, both composed around 1510) and led Böker-Heil to suggest dates for Verdelot's early style period as from about 1510 to about 1520. *Tanto tempore vobiscum sum* honours Verdelot's name saint, Philip, and its opening motif, *re re sol*, corresponds to the vowels in 'Verdelot'. *Gaudete omnes et letamini* is also written in this 'early' style. Dunning believed that it was written in celebration of Giulio de' Medici's election as Pope Clement VII in November 1523.

The motets of Böker-Heil's 'middle' period (*c*1520–25) reveal a more declamatory style and a concern that the melody should adequately express textual rhythms. Examples of this later style are *Ad Dominum cum tribularer* and *Gaudent in celis*.



A final mature phase is evident, chiefly in motets for more than four voices, including *O dulcissime Domine Jesu Christe* and *Si bona suscepimus* and particularly the motets such as *Congregati sunt* and *Letamini in Domino* which celebrate Florentine revivals of Savonarola's theological and political doctrines during the last republic or relate to the plague, famine and strife that beset Florence between 1527 and 1530. All are characterized by fewer rhythmic contrasts and melismas in non-imitative passages, longer note values, short phrases often emphasizing one note and rarely exceeding a 5th or a 6th in compass, and close attention to the unifying of text and music, both accentually and symbolically.

Although not as prolific as Josquin, Mouton, Gombert, Clemens non Papa or Willaert, Verdelot nonetheless influenced his contemporaries and later motet and mass composers. Among others, Arcadelt, Palestrina, Gombert, Lassus and Morales parodied his motets. *Si bona suscepimus* appeared frequently in 16th-century sources: it is found in at least six printed anthologies, 27 manuscripts and 11 intabulations. In 1545 it even served as theatrical music in a German play.

The surprisingly small number of chansons by Verdelot seems to confirm his early departure from France. *Seule demeure et despourvue* is closer stylistically to Josquin than to the later Parisian chanson and *Qui la dira la peine*, a virtuoso quadruple canon (8 ex 4), resembles the work of Mouton. The addition by Verdelot of a voice to

2. Concerto: the three figures possibly represent Verdelot and Obrecht with an anonymous companion, c1505 (Palazzo Pitti, Florence)

3. *Opening of the cantus part of the canzona 'O dolce nocte' (text by Machiavelli) from the Newberry-Oscott partbooks (US-Cn)*

an existing work, Janequin's chanson *La guerre*, is also a retrospective trait.

Verdelot's most important contribution is as a pioneer of the genre of the madrigal. His partial setting of Petrarch's sonnet *Non pò far morte 'l dolce viso amaro* appeared in the first printed book of madrigals (the 'Fossombrone fragment') around 1520. The piece bears the hallmarks of the earliest madrigals: largely homophonic texture and syllabic text setting with a heavy reliance on melodic and rhythmic repetition. In these features Haar (1981) saw traces of the frottola, the improvisatory tradition and also the French chanson of the early 16th century (as represented in the early Petrucci prints) – all genres that have been thought to be sources for the early madrigal style. Two Florentine manuscripts (*I-Bc* Q21, copied *c*1526, and the Newberry-Oscott partbooks, *c*1528), both copied by Giovanpietro Masaconi, together with a single alto partbook of Northern Italian provenance (*US-NH* Misc.Ms179, *c*1525), contain many other early settings for four to six voices. Many were composed in Florence and Medicean Rome around 1520–27, although called madrigals only in collections printed from 1530.

Occasions and composition dates can be conjectured for several of the madrigals. The homophonic setting of Panfilo Sasso's strambotto *Quando madonna io veng' a contemplarte* may have been composed as early as around 1520: not only are some of its stylistic features typical of strambotto settings in Petrucci's and Antico's early books, but its cantus part is included together with a lira da braccio in a female portrait (Rome, Spada Gallery, no.52) by an unidentified artist of north central Italy, perhaps Paolo Morando ('Il Cavazzola') who died in 1522 (Slim, 1988). *Haymè ch'abandonato* and *Mandàti qui d'Amor* may have been carnival songs for Florence, and if so, would date from about 1522–7. *Ardenti miei sospiri* and *Non mai donna più bella*, naming the courtesan Tullia d'Aragona, and *Tu che potevi sol* may have been inspired by Verdelot's visit to Rome in 1523–4. *Amor io sento l'alma*, a setting of Machiavelli's ballata to his mistress Barbera Salutati, dates from about 1523–7.

Five madrigals in the Newberry-Oscott partbooks have texts by Machiavelli, four of them setting canzoni from his plays, *La Clizia* and *La Mandragola*, first performed with their canzoni in 1525 and 1526 respectively. (Machiavelli, in a letter of 3 January 1526, mentioned that the canzoni of *La Mandragola* had already been set to music.) Verdelot also set choruses to two Florentine tragedies, Orfeo's lament by Poliziano and *Tullia* by Ludovico Martelli; Slim (1983) suggested that the latter chorus, *Quante lagrime, aimè, quanti sospiri*, was probably composed 'in the mid-1520s when Martelli and Verdelot were both in Florence'. Three pieces (*Italia, Italia, ch'hai sì longamente*, *Italia mia benché 'l parlar'* and *Trist'Amarilli mia*) date from after the sack of Rome in 1527.

There are many problems in the attribution of these pieces to Verdelot. Out of a corpus of about 147 madrigals, ten bear unsolved conflicting attributions to leading contemporaries and another 48 appear anonymously in printed and manuscript collections in which, admittedly, Verdelot is the best represented composer. Of the anonymous works, six survive only in manuscript (three uniquely in the Newberry-Oscott partbooks), 29 are mostly in printed anthologies of various genres, and the remaining 13 are unique in the so-called *Primo libro a cinque*, of which only two parts are extant (without frontispiece, index or attributions) and only seven pieces of 21 can be confidently attributed to Verdelot based on concordances with other sources. Similarities of style among the early madrigalists make definitive ascriptions difficult, but it is possible to be reasonably certain about authorship in some cases.

The madrigals are set to a wide variety of poetic forms: ballatas, canzoni and their derivatives, 16th-century madrigals, sonnets (sometimes shortened), *ottave rime*, Trecento-like madrigals and villottas; there is one capitolo (*O pessimo destino*), one hybrid form similar to that of a *canto carnascialesco* (*Haymè ch'abandonato*) and two works are in prose (*O singular dolcezza* and *Chi bussa?*). The early madrigal was sometimes strophic. Five canzoni and two ballatas have more than one stanza in their poetic sources; *La bella donna a cui donasti' il core* requires its ensuing stanzas in order to make grammatical sense. The majority of the poetic texts are of a clear petrarchist bent and are dedicated to the sufferings of love, they make generous use of antithesis, oxymoron and more or less obvious sexual metaphor.

It is possible to identify two opposing tendencies in Verdelot's musico-poetic exegesis: one formalist and little interested in a deep 'reading' of the poetic text, and the other more experimental and already modern in expression. (These two approaches cannot, however, be associated with distinct 'phases' of a linear stylistic development like that reported by Böker-Heil in regards to the composer's sacred production.) In many ways Verdelot's compositional practice is not very different from that of his contemporaries active in Florence and Rome. Homophonic chordal writing, sometime with textual declamation lightly staggered, is employed with the same frequency as imitative counterpoint, with ample display of florid melismatic figuration and decorated cadences (especially in the five- and six-voice madrigals); not infrequently the two types of writing alternate in the same setting. Each poetic line is set by a single musical phrase, delimited more or less clearly by cadences; similar cadential figures, or cadences on the same pitch, are often used to emphasize textual assonance (*Dentr'al mio cor* is one of the most notable examples). A high degree of tonal coherence, a tendency towards a restricted melodic ambitus, a straightforward harmonic language, substantial rhythmic uniformity and the recurrence of small rhythmic and melodic fragments (or even entire phrases and sections, which in

some pieces give a semi-strophic character) are among the expedients adopted to assure unity of form and affect. Also typical is the adoption of cadential extensions in a function of closure, a technique already found in the motet and chanson of the period, but used here to expressive as well as structural ends. The use of musical pictorialism, dissonance and false relations is still contained and usually involves only a few key words, never seriously disturbing the unity of the overall affect. While usually showing an acute sensibility to the poetic text, Verdelot does not always demonstrate an interest in preserving its intelligibility. The text of *Donna la fiamma sete*, for example, is obscured by the pervasive superimposition of different verses. Indeed, he sometimes seems little interested in the poem's content, as, for example, in the unusually restrained settings of two laments, *Occhi infelici* and *La dolce vista e 'l bel sguardo soave*. Often the demands of superficial formal symmetry or textual metre and prosody take precedence over expressive considerations.

Elsewhere Verdelot experimented with every possible compositional technique to exegetical and expressive ends. He had at his disposal a rich cadential vocabulary – innovations such as the deceptive and 'evaporated' cadence as well as the established plagal, phrygian and half cadences – which he used in a highly expressive manner. He also made extensive use of contrasting textures, especially in the five- and six-part madrigals. Even in the four-voice works, sudden reductions to a three-voice quasi-fauxbourdon texture are used in a way that looks forward to the madrigals of Rore and even Monteverdi. Also forward-looking is his treatment of syllabic declamation with an attention to the text that approaches the later 'recitative' style, most evident in the four-voice works (*La bella man mi porse* is a good example).

Like his motets, Verdelot's madrigals were widely known throughout the 16th century. In the *Intavolatura* of 1536, Willaert edited personally the arrangement for lute of 22 pieces from the *Primo libro*; Claudio Merulo, in the last, 1566 edition of Verdelot's first two four-voice collections, tried to adapt them to later taste. Parody by other madrigalists, including Arcadelt, Berchem, Scotto, Gero and Doni, was also frequent. Razzi used *Quanto sia lieto il giorno* for several laudi. There are parody masses by Berchem, Guerrero, G. Alberti and Monte and A. Rosso.

WORKS

Editions: *Philippe Verdelot: Opera omnia*, ed. A.-M. Bragard, CMM, xxviii/1–3 (1966–79) [B]

Treize livres de motets parus chez Pierre Attaingnant en 1534 et 1535, ed. A. Smijers and A.T. Merritt (Paris and Monaco, 1934–64) [SM]

Theatergesang und darstellende Musik in der italienischen Renaissance, ii, ed. W. Osthoff (Tutzing, 1969) [O]

H. COLIN SLIM/STEFANO LA VIA

Verdi, Giuseppe (Fortunino Francesco) (*b* Roncole, nr Busseto, 9/10 Oct 1813; *d* Milan, 27 Jan 1901). Italian composer. By common consent he is recognized as the greatest Italian musical dramatist.

1. INTRODUCTION. A month after Verdi's death, a solemn procession through Milan accompanied by hundreds of thousands of mourners assisted the transfer of his remains to their final resting place. The procession was sent on its way by a rendition of 'Va pensiero', the chorus of Hebrew slaves from one of Verdi's earliest operas, *Nabucco*.

It is easy to see why this event has captured the imagination and assumed significance. By the time of his death, Verdi had established a unique position among his fellow countrymen: although many of his operas had disappeared from the repertory, he had nevertheless become a profound artistic symbol of the nation's achievement of statehood. Parts of his operatic legacy had entered into a kind of empyrean, divorced from the checks and balances of context and passing fashion. The fact that 'Va pensiero', written some 60 years earlier, could express contemporary Italians' feelings for their departed hero demonstrated the extent to which Verdi's music had been assimilated into the national consciousness.

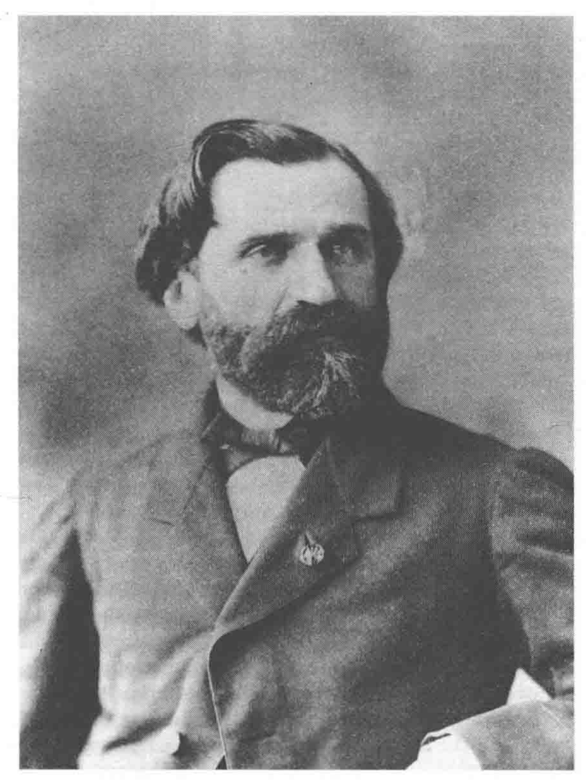
However, 100 years after Verdi's death, such an event is likely to take on other meanings, and it can serve as a cautionary note on which to introduce an account of the life and works. To begin at the end of Verdi's long life is a reminder of our present perspective. Verdi's story has continually been written backwards, the early events and achievements accruing narrative force and meaning through the powerful attraction of our sense of their ending. Such is of course true of all biography, but the extent to which it has influenced our perception of Verdi nevertheless makes his an exceptional case. In an attempt to revalue (rather than evade) that perspective, the present survey will follow much recent scholarship in attempting to place Verdi's operas more firmly in the context of their time; and, perhaps more important, it will treat their reception as a separate historical phenomenon, so far as is possible disentangled from present-day views of the composer.

After an outline of Verdi's early years, his life and works will be discussed within three unequal periods. This particular grouping of works is unusual, though as defensible as any other on artistic grounds; it is, however, made primarily for practical reasons and should not be taken to imply the kind of hierarchy of value traditionally signalled by subheadings such as 'youth' or 'maturity'. The first period takes in the 19 operas from *Oberto* (1839) to *La traviata* (1853). Claims are frequently made for a qualitative leap to a 'second period', beginning some time in the late 1840s or early 1850s, with *Macbeth*, *Luisa Miller* or *Rigoletto* as the watershed; but the entire period is probably best seen as a gradual unfolding within the Italian operatic tradition. A second period, during which the influence of French grand opera is of great importance, includes the operas from *Les vêpres siciliennes* (1855) to *Aida* (1871). After the *Messa da Requiem* and the compositional hiatus of the 1870s, a final period, that of Verdi's last style, includes the revisions to *Simon Boccanegra* and *Don Carlos*, the operas *Otello* (1887) and *Falstaff* (1893), and the final religious works.

2. LIFE AND WORKS, 1813–39. Verdi was born in Roncole, a small village near Busseto in the Duchy of Parma. His exact birth date is uncertain. The baptismal register of 11 October records him as 'born yesterday', but as days were sometimes counted as beginning at sunset, that could mean either 9 or 10 October. The birth register describes his father Carlo (1785–1867) as an 'innkeeper', his mother Luigia Uttini (1787–1851) as a 'spinner': both belonged to families of small landowners and traders, certainly not the illiterate peasants from which Verdi later liked to present himself as having emerged.

In typically middle-class fashion, Carlo Verdi was energetic in furthering his son's education. Before the age of four, Verdi began instruction with the local priests, probably in music as well as other subjects; his father bought him an old spinet when he was seven, and he was soon substituting as organist at the local church of S Michele, taking the position permanently at the age of nine. In 1823 he moved to Busseto, and at the age of 11 he entered the *ginnasio* there, receiving training in Italian, Latin, humanities and rhetoric. In 1825 he began lessons with Ferdinando Provesi, *maestro di cappella* at S Bartolomeo, Busseto, and director of the municipal music school and local Philharmonic Society. The picture emerges of youthful precocity eagerly nurtured by an ambitious father and of a sustained, sophisticated and elaborate formal education – again something Verdi tended to hide in later life, giving the impression of a largely self-taught and obscure youth.

In 1829 Verdi applied unsuccessfully for the post of organist at nearby Soragna. He was becoming increasingly involved in Busseto's active musical life, both as a composer and as a performer. As he later recalled:



> From the ages of 13 to 18 I wrote a motley assortment of pieces: marches for band by the hundred, perhaps as many little *sinfonie* that were used in church, in the theatre and at concerts, five or six concertos and sets of variations for pianoforte, which I played myself at concerts, many serenades, cantatas (arias, duets, very many trios) and various pieces of church music, of which I remember only a *Stabat mater*.

In May 1831 he moved into the house of Antonio Barezzi, a prominent merchant in Busseto and a keen amateur musician. Verdi gave singing and piano lessons to Barezzi's daughter Margherita (*b* 4 May 1814; *d* 18 June 1840) and the young couple became unofficially engaged.

At about the same time, it became clear that the musical world of Busseto was too small, and Carlo Verdi applied to a Bussetan charitable institution (the Monte di Pietà e d'Abbondanza) for a scholarship to allow his son to study in Milan, then the cultural capital of northern Italy. The application, bolstered by glowing references from Provesi and others, was successful; but no scholarship was available until late 1833. However, Barezzi guaranteed financial support for the first year and in May 1832, at the age of 18, Verdi travelled to Milan and applied for permission to study at the conservatory. He was refused entry, partly for bureaucratic reasons (he was four years above the usual entering age and was not a resident of Lombardy-Venetia), partly on account of his unorthodox piano technique; it was an 'official' rejection that Verdi felt until the end of his life. Barezzi agreed to the added expense of private study in Milan, and Verdi became a pupil of Vincenzo Lavigna, who had for many years been *maestro concertatore* at La Scala.

According to Verdi's later recollections, his lessons with Lavigna involved little but strict counterpoint: 'in the three years spent with him I did nothing but canons and fugues, fugues and canons of all sorts. No one taught me orchestration or how to treat dramatic music'. This insistence was probably a further attempt to fashion his image as a 'self-taught' composer. Contemporary evidence suggests that Lavigna encouraged Verdi to attend the theatre regularly, and his letters of recommendation specify study in 'composizione ideale' (free composition) as well as in counterpoint. Lavigna also helped his pupil into Milanese musical society; in 1834 Verdi assisted at the keyboard in performances of Haydn's *Creation* given by a Milanese Philharmonic Society directed by Pietro Massini, and a year later co-directed with Massini performances of Rossini's *La Cenerentola*.

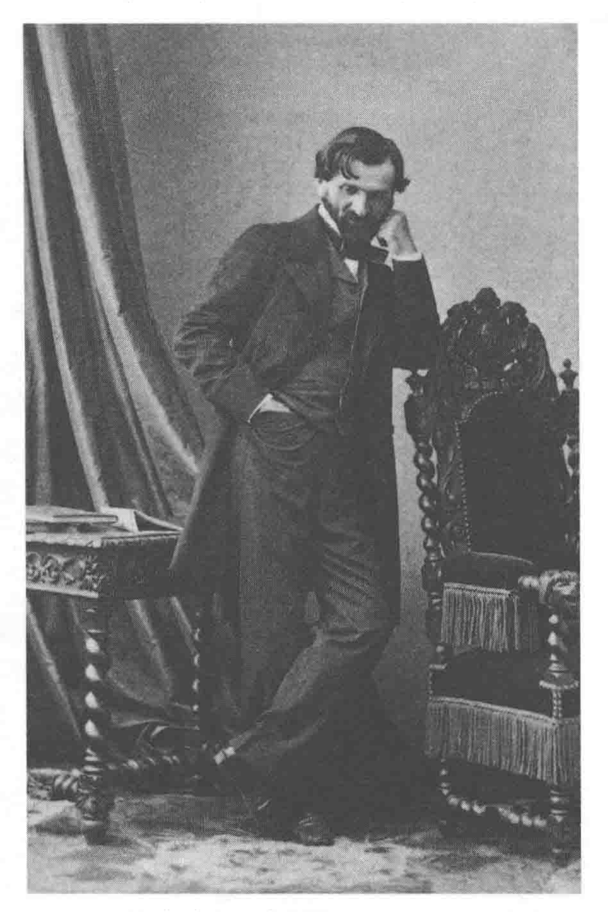
By the time Verdi had completed his studies with Lavigna, in mid-1835, Busseto had again claimed his attention. Provesi had died in 1833, leaving open the post of musical director there; by June 1834 one Giovanni Ferrari had been appointed organist at S Bartolomeo but, encouraged by Barezzi, Verdi was eventually appointed *maestro di musica* (that is, to the secular portion of Provesi's post) in March 1836, though not before a prolonged struggle between rival factions in the town. On 4 May 1836 Verdi married Margherita Barezzi and settled in Busseto, directing and composing for the local Philharmonic Society and giving private lessons. He held the post for nearly three years, during which time he and Margherita had two children, Virginia (*b* 26 March 1837; *d* 12 Aug 1838) and Icilio Romano (*b* 11 July 1838; *d* 22 Oct 1839).

1. Giuseppe Verdi

2. *Autograph MS of the opening of Verdi's aria 'Io la vidi', probably written during his student years in Milan, ?1832–5 (US-NYpm)*

Verdi's provincial existence is best seen as an irritating delay in his professional career, and there is evidence that he was actively pursuing more ambitious plans. In April 1836 he renewed contact with Massini's Milanese society by composing for them a cantata, to words by Count Renato Borromeo, in honour of the Austrian Emperor Ferdinand I. A series of letters to Massini informs us that during 1836 Verdi composed an opera entitled *Rocester*, to a libretto by the Milanese journalist and man of letters, Antonio Piazza. During 1837 he tried unsuccessfully to have the opera staged at the Teatro Ducale in Parma. But eventually, again with Massini's help, Verdi arranged for a revised version of the opera, now entitled *Oberto, conte di San Bonifacio*, to be performed at La Scala. In October 1838 he resigned as *maestro di musica* of Busseto and in February 1839 left for Milan. Nine months later his first opera received its première in the Lombard capital's most famous theatre.

Little remains of Verdi's music from this period, though some of the liveliest pieces were perhaps recycled in his early operas. What has come down to us are mostly *pièces d'occasion*, written either for the church or for the Bussetan Philharmonic Society and other local groups. The influences are predictable, with Rossini much in evidence in the pieces that approach the operatic. A collection of songs, entitled *Sei romanze*, was published by the Milanese house of Giovanni Canti in 1838.



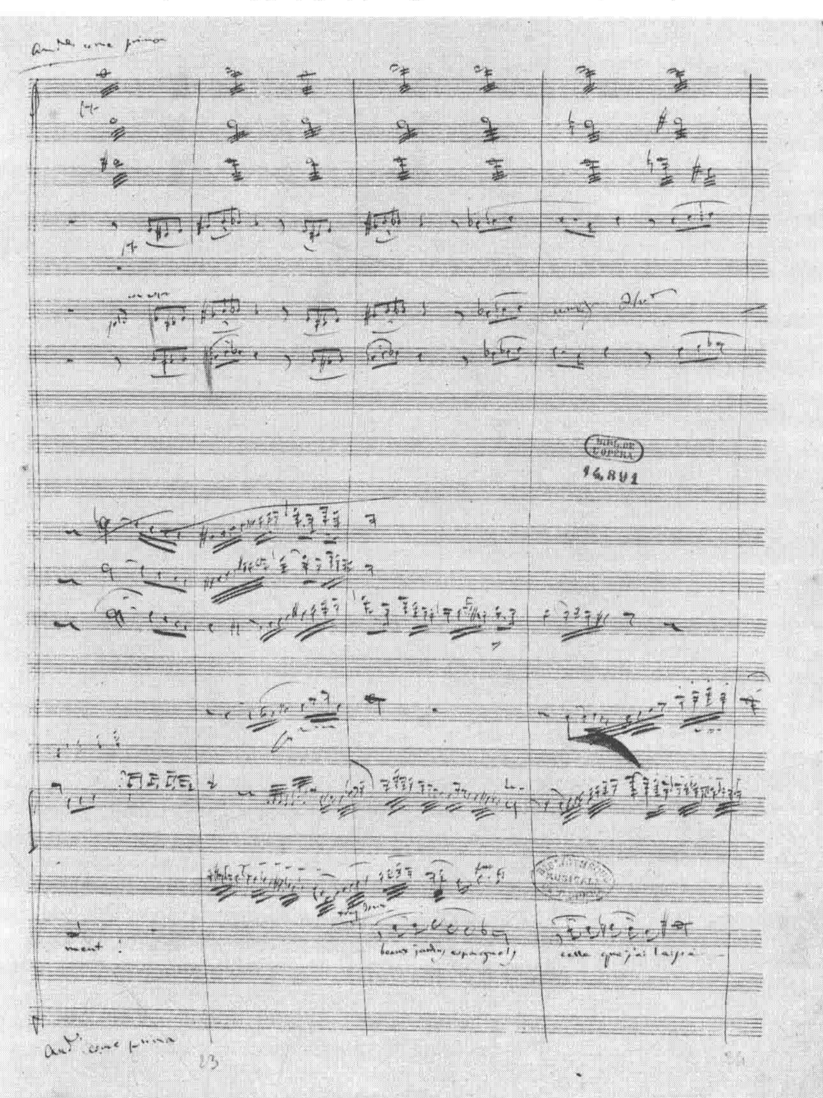
3. Life, 1839–53. From the première of *Oberto* until at least the midpoint of his long career, the outward progress of Verdi's life is inseparable from that of his professional activities: a continual round of negotiations with theatres and librettists, of intense periods of composition, arduous travel, and exhausting preparations for and direction of premières and revivals.

The success of *Oberto* apparently encouraged Bartolomeo Merelli, impresario at La Scala, to offer Verdi a contract for three more operas, to be composed over two years. The first was the comic opera *Un giorno di regno*, which failed disastrously on its first night in September 1840. Verdi's later autobiographical glosses on this period (which are notoriously unreliable) state that this professional failure, together with the tragic loss of his young family (his wife Margherita died in June 1840; they had lost their two children in the previous two years), caused him to renounce composition. This may be partly true: his next opera, *Nabucco*, appeared some 18 months later, an unusually long delay. However, Verdi certainly continued a level of professional activity by writing new music for, and supervising several revivals of, *Oberto*.

After *Nabucco*, whose public success in Milan was unprecedented, the round of new operas was virtually unremitting: in the 11 years from March 1842 (the première of *Nabucco*) to March 1853 (the première of *La traviata*), Verdi produced 16 operas, an average of one every nine months. He also supervised numerous revivals, on occasion writing new music to accommodate a star performer. Although this rate of production was positively torpid by the standards of a Pacini or a Donizetti (the latter produced some 70 operas in 25 years), Verdi nonetheless found himself constantly moving from one

operatic centre to another, dividing what time remained between Milan and Busseto. The years 1844–7 were particularly arduous (eight operas appearing in less than four years); his health broke down frequently, and more than once he vowed to renounce operatic composition once he had achieved financial security and fulfilled outstanding contracts. His gathering fame did, however, have its advantages. He was soon able to charge unprecedentedly high fees for supplying a theatre with a new opera, and even though copyright protection was not fully established, he would supplement this income with rental fees and sales of printed materials. As early as 1844 he began to acquire property and land in and around Busseto. The success of *Nabucco* opened doors in Milanese society, and Verdi soon made some longstanding friendships, notably with Countess Clara Maffei, whose salon he frequently attended. It is likely that during these early years of success he formed a lasting attachment to the soprano Giuseppina Strepponi, who was to become his lifelong companion.

Apart from a brief visit to Vienna in 1843, Verdi remained within the Italian peninsula until March 1847 when he undertook a long foreign expedition, initially to supervise the premières of *I masnadieri* in London and *Jérusalem* in Paris (his first operas to be commissioned from outside Italy). He set up house with Strepponi in Paris, staying there about two years, although with a visit to Milan during the 1848 uprisings, and a trip to the short-lived Roman Republic to supervise the première of *La battaglia di Legnano* in early 1849. Verdi returned with Strepponi to Busseto in mid-1849, still unmarried and causing a local scandal; in 1851 they moved to a permanent home in the nearby farm of Sant'Agata, land once owned by Verdi's ancestors.



3. Giuseppe Verdi: photograph, 1850s

4. Operas: 'Oberto' (1839) to 'La traviata' (1853).

(i) Composition. The genesis of a Verdi opera of this period follows a fairly predictable pattern, one that can teach us a good deal about the composer's artistic priorities and aims. The first step almost always involved negotiations with a theatre, an agreement of terms (the theatre would typically buy the rights to a first performance) and deadlines. Unlike most of his Italian predecessors, Verdi was reluctant to deal through theatrical agents, preferring to negotiate fees for the première directly with the theatre management. As his career progressed, Verdi's publisher (almost always the Milan firm of Ricordi) took an active part in commissioning new works. The eventual contract with the theatre often included stipulations about the cast of the première, and Verdi chose operatic subjects with a direct eye to the available performers. The subject itself was then decided upon either by Verdi or his librettist, although – as success brought a new level of artistic freedom – Verdi became increasingly likely to reserve for himself this crucial decision. He favoured works that had proved their worth as spoken dramas, and he had a fondness for foreign subjects, in particular Romantic melodramas set in the Middle Ages, by Byron, Schiller and Hugo, or by their more obscure contemporaries. In searching for new subjects he constantly stressed the need for unusual, gripping characters, and for what he called 'strong' situations: scenes in which these characters could be placed in violent confrontation.

The first stage in fashioning an opera from the source text would typically involve a parcelling of the action into musical 'numbers' such as arias, duets and ensembles, the location of a convincing central finale (the so-called *concertato*) often proving a crucial first step in deciding on the overall structure. This was often done by annotating a prose summary of the source, and would typically be a collaborative effort between Verdi and his librettist. Once the work's essential formal outlines had been fixed, the librettist would prepare a poetic text in which the configuration of verse forms would reflect in detail the various musical forms agreed upon, and in which the individual dispositions of characters would often be inflected by the personalities and capabilities of the singers engaged as their 'creators'.

Verdi's relationships with his librettists varied considerably. In the early operas written in collaboration with Temistocle Solera (*Nabucco*, *I Lombardi*, *Giovanna d'Arco*), he tended by his own admission to alter the text very little, possibly because Solera was himself a powerful personality, and had as much theatrical experience as Verdi. With other figures he respected, such as Salvadore Cammarano (*Alzira*, *La battaglia di Legnano*, *Luisa Miller*, *Il trovatore*), the author of some of Donizetti's most famous librettos, he sometimes negotiated for changes and was usually – not always – accommodated. But with his favoured collaborator in this period, Francesco Maria Piave, he became ever more dictatorial and exigent, so much so that the dramatic shape of operas they created together was sometimes more the work of the composer than his 'poet'. More than this, Verdi might require certain sections to be cut down (he was in general

4. *Page of the 'skeleton score' (i.e. with vocal line and some of the instrumentation) of Carlos's monologue originally intended to open Act 5 of 'Don Carlos' with the words adjusted when Verdi decided to assign the music to Elisabeth; it was never completed (F-Pn A.619.suppl., f.15r)*

anxious to avoid long passages of recitative), might ask for changes of poetic metre in fixed forms, and even for line by line rewording to clarify the dramatic effect.

Finally came composition of the score, which typically occurred in stages. After miscellaneous jottings, with or without words, Verdi drafted the opera in short score, usually on just two or three staves (only a few of these so-called 'continuity drafts' – those for *Rigoletto*, *Stiffelio* and *La traviata* – are currently available, although we can infer from the structure of Verdi's autographs that similar documents existed at least from the time of *Nabucco*). Although the libretto was almost always complete before this stage began, we know that on several occasions Verdi rejected the words he had before him, and composed arias (and even recitative passages) without text, relying on his librettist to furnish suitable verses after the event. In writing this short-score draft, Verdi differed from predecessors such as Rossini and Donizetti, who typically moved from the 'jotting' phase straight to the autograph; the practice perhaps gives an indication of the care and time he was willing to spend on each new work. The second stage of composition involved transferring the draft to the autograph (a loose gathering of fascicles of orchestral-score manuscript paper), adding essential instrumental lines (usually the first violin and bass) to create what has been termed a 'skeleton score' (fig.4). From this skeleton score, vocal parts would be extracted by copyists and given to the singers of the première. Pressure of time dictated that only when Verdi arrived at the venue of the first performance, and had heard his singers in the theatre, would he complete (often in extreme haste) the orchestration. Verdi's contracts often stipulated that he would 'direct' the first three performances: this rarely meant 'conduct' in the modern sense (that co-ordinating function was shared between the principal violin and the *maestro al cembalo*); but he would certainly be near at hand, ready to appear before the audience and accept their applause after successful numbers.

(ii) Dramatic forms. It is clear from the preceding summary that various fixed forms were at the basis of Verdian musical drama; and these forms, geared as they mostly were to the individual expression or patterned confrontation of the major characters, arose from an awareness of the overwhelming importance of the

principal performers in the success of an operatic event. The basic forms, inherited by Verdi from his Italian predecessors, are fairly simple to outline. The normative structure was the solo aria, called 'cavatina' if it marked the first appearance of a character, and typically made up of an introductory scena and recitative followed by three 'movements': a lyrical first movement, usually slow in tempo, called 'cantabile', 'primo tempo' or (preferably) 'adagio'; a connecting passage, often stimulated by some stage event – the entrance of new characters or the revelation of new information – and called the 'tempo di mezzo'; and a concluding cabaletta, usually faster than the first movement and requiring agility on the part of the singer. The grand duet was identically structured, though with an opening block before the Adagio, commonly employing patterned exchanges between the characters and termed by Abramo Basevi, one of Verdi's earliest commentators, the 'tempo d'attacco'. Large-scale internal finales followed the pattern of the grand duet, though often with a more elaborate *tempo d'attacco;* the Adagio in ensembles was often called the 'largo' or 'largo concertato', and the final movement was called a 'stretta'. Ranged around these large, multi-sectional units were shorter, connecting pieces, notably various choral movements and shorter, one-movement arias, often called 'romanza'. There is a close parallel between musical and poetic forms, each 'movement' tending to be in a different type of *versi lirici* (rhyming stanzas of fixed line length and syllable count) while recitative is almost always in *versi sciolti* (unrhymed successions of seven- and eleven-syllable lines). Given the nature of the opera's genesis, this parallel is of course unremarkable; the fact that it has occasioned so much detailed discussion of late is perhaps as much due to the possibilities it furnishes for formal abstraction as to the insights it occasionally offers.

The demands of principal singers ensured that, at the start of this period, the overall structure of an opera had many essential ingredients. If there were three principals (increasingly the norm), each would require a multi-movement entrance aria; and each would expect to appear in at least two grand duets. Particularly important singers would expect a further solo (often a one-movement piece such as a *romanza*) later in the action. The rest of the numbers (there were usually between ten and 14 in total) would comprise the inevitable central *concertato*, one or two choruses (sometimes front-of-tabs numbers to allow changes of scene), and perhaps a brief solo for a secondary character. The action was preceded by an instrumental movement: sometimes a full-scale overture (either of the 'potpourri' type or of more 'symphonic' construction), but more frequently an atmospheric prelude.

In discussing Verdi's individual approach to these fixed forms, there has been a tendency to paint a romantic picture, one that equates release from formal 'constraints' with 'progress', and that celebrates the composer's gradual emancipation from formal 'tyranny'. According to this interpretation Verdi is a formal revolutionary, constantly striving towards a more naturalistic mode of musical drama. A few of Verdi's letters, in particular some often-quoted ones to Salvadore Cammarano about the libretto of *Il trovatore*, seem to support this, with Verdi sometimes showing a fondness for adopting a 'revolutionary' epistolary pose:

> If in the opera there were no cavatinas, duets, trios, choruses, finales, etc., and if the whole work consisted . . . of a single number I should find that all the more right and proper.

There is some truth in this image: as the 19th century progressed, opera in all countries turned to looser, less predictable musical forms. However, Verdi is perhaps better seen as a conservative influence within this broad trend, especially in the context of his immediate predecessors in Italy. The operas up to *La traviata*, while they show a progressive trend away from formal fixity, are for the most part at least as easy to codify in formal terms as those, for example, of Donizetti. As for statements such as the one quoted above, it is well to remember that, whatever his aesthetic pronouncements, Verdi declared himself well satisfied with the resolutely number-based libretto of *Il trovatore* that Cammarano eventually produced.

True, Verdi sometimes radically altered or ignored traditional forms. There are classic examples: the introduction of Macbeth by means of an understated duettino, 'Due vaticini', rather than a full-scale cavatina; the curious Act 1 duet between Rigoletto and Sparafucile, which is a kind of free conversation over an instrumental melody; the stretta-less grand finales of *Nabucco* Act 2, *I due Foscari* Act 2, *Attila* Act 1, *Luisa Miller* Act 1 and *Il trovatore* Act 2; the complete absence of a concertato finale in *I masnadieri* and *Rigoletto*. Other moments are less often mentioned: the duets of *La battaglia di Legnano* Act 1 and *Stiffelio* Act 3 follow the fluctuations of character confrontation so minutely that they are extremely difficult to parcel out into the traditional four 'movements'; the Act 1 duet in *Alzira* moves from *tempo d'attacco* straight to cabaletta, a process repeated in the Act 1 finale of *Il trovatore*.

However, much more often Verdi chose to manipulate forms from within, preserving their boundaries but expanding and condensing individual movements as the drama dictated. Famous examples include the Violetta-Germont duet in *La traviata* Act 2, which boasts a vastly expanded and lyrically enriched opening sequence, so much so that Basevi's single term *tempo d'attacco* seems inadequate to encompass its complexity; and Leonora's aria in *Il trovatore* Act 4, in which the usually transitional *tempo di mezzo* expands to become the famous 'Miserere' scene. Equally important in this enrichment is Verdi's tendency to focus musical weight on ensemble numbers and to concentrate in these numbers on the opposition between characters. In this respect the rarity in his works of the so-called 'rondò finale' (a favourite Donizettian form in which a soloist, usually the soprano, closes the opera with an elaborate, two-movement aria) is significant, as is its replacement by ensemble finales such as those of *Ernani* or *Il trovatore*. The lyrical movements of Verdi's ensembles, particularly of the grand duets, tend to establish at the outset a vivid sense of vocal difference, and often retain that sense until the last possible moment. The extended passages in parallel 3rds or 6ths so well-known in Donizetti and Bellini are rare, such vocal 'reconciliation' is usually reserved as coda material.

Certain operas of this period, particularly those written in collaboration with Temistocle Solera, are notable for a dynamic new use of the chorus. While choruses in the earlier 19th century had typically served a neutral, scene-setting function, Verdi's chorus frequently appears in the vocal forefront, offering sonic enrichment and a considerable presence in ensemble numbers, and even intruding into the soloists' domain. *Nabucco* offers many early examples, from the dramatic incursion of the chorus in

both the Adagio and cabaletta of Zaccaria's Act 1 aria, their climactic appearance in the Act 2 canonic ensemble, 'S'appressan gl'istanti', and of course 'Va pensiero' in Act 3, where the chorus sings mostly in unison, with a directness and simplicity of emotional appeal that had traditionally been heard only from soloists.

(iii) Lyric prototype. In attempting to summarise the smaller-scale level of Verdi's lyrical movements, many critics have again appealed to a traditional norm, though one more abstractly analytical than the set-piece forms and one whose limitations and partiality need to be remembered. This is the 'lyric prototype', a four-phrase pattern usually represented by the scheme *AA′BA″* or (its common variant) *AA′BC*. Such a model could also include subscript numbers to indicate phrase length – the normative phrase would be four bars – and poetic lines can also be incorporated, as the usual consumption of text exactly parallels the musical periodicity, with two poetic lines matching one four-bar period. The prototype does, however, ignore harmonic movement, which can vary significantly within pieces that would have an identical phrase scheme. What is more, in its 'pure' form the scheme appears only rarely, usually as one character's solo statement in an ensemble movement: in solo arias, some level of expansion, typically in coda material, is clearly necessary to achieve adequate length. These limitations notwithstanding, the prototype has proved the most reliable and flexible method of codifying Verdi's basic lyric shapes.

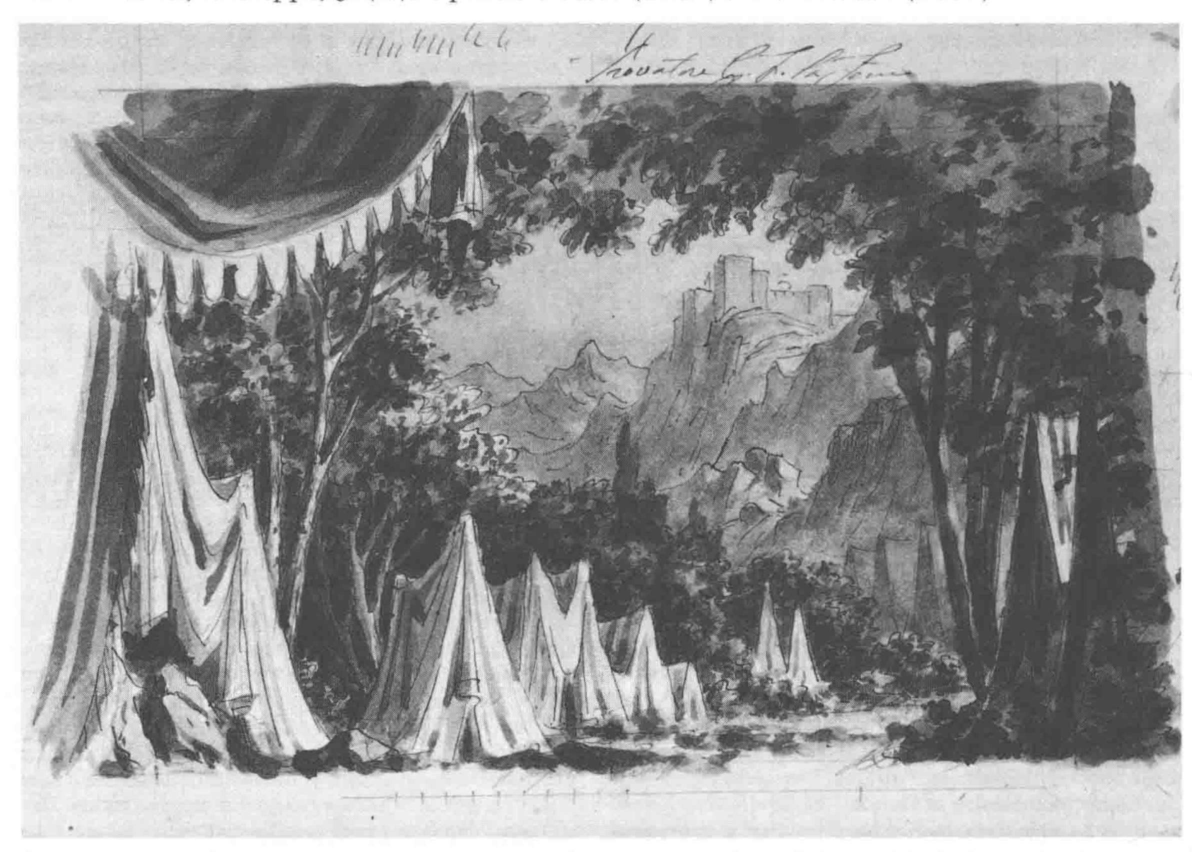
A very early example of the model, close to its basic form, comes in the cabaletta of the protagonist's aria in Act 2 of *Oberto* (ex.1). Even at this early stage, a Verdian novelty can be discerned in the comparative restriction of the formal scheme. In the hands of Verdi's predecessors, the prototype tends to be less useful: many of Donizetti's or Bellini's arias start with 'open' declamatory phrases, finding a regular pattern only in the latter stages; and many others (particularly cabalettas) start periodically but dissolve after the *B* section into looser periods of ornamental vocal writing and word repetition. Verdi did occasionally write arias of the latter type: for Riccardo in Act 1 of *Oberto*, or – significantly as the part was expressly written for the 'old-fashioned' virtuosa Jenny Lind – for Amalia in both Acts 1 and 3 of *I masnadieri*. However, his typical practice, even when writing a bravura aria, was to bind the ornamentation strictly within a periodic structure, even as an aria reached its final stages.

As with his conservatism in larger formal matters, this self-imposed restriction had the effect of channelling Verdi's invention into manipulations of the prototype from within, into expansions, contractions and enrichments of the lyric form. Elvira's Andantino in Act 1 of *Ernani*, for example, sees a dramatic expansion of the *B* section that injects a new sense of dialectic tension into the aria. More than that: far from 'dissolving' into ornamental writing at the end, the aria continues to subordinate, or rather harness, the ornamentation, containing it within a strictly controlled periodicity (ex.2). Such examples, which could easily be multiplied, demonstrate at least a part of how that energy so typical of Verdi's early operas is created, essentially through a tightening of form coupled with an expansion of expressive content.

['But you, proud youth, you will not exhaust me! For one of us, this day will be the last. From my corpse, a war-like cry will be heard: the dying Oberto, cursing the Salinguerra!']

Ex.2 *Ernani*, Act I

Lyric prototype: a_4



['Ernani!...Ernani, spirit me away from this horrible embrace. Let us fly... if love allows me to live with you, I will follow you through caves and barren lands. Those caves will be for me an Eden of delights.']

As the 1840s unfolded, Verdi's lyrical forms increasingly showed the influence of French models, especially after his prolonged stay in Paris in 1847–9. *Il corsaro*, for example, starts with two slow arias that, if in very different ways, are both organized in two strophes. Later, more famous examples include the *couplet* forms (so-called because of the shorter refrain line that ends each stanza) found in Rodolfo's 'Quando le sere al placido' (*Luisa Miller* Act 2) and Germont's 'Di Provenza il mar, il suol' (*La traviata* Act 2). However, none of these examples entirely abandons the lyric prototype; indeed, in one sense it is more pervasive, tending to appear in miniature in each stanza. As we move to the early 1850s, the variety of internal structures proliferates, giving rise to such startling experiments as Gilda's 'Caro nome' (*Rigoletto* Act 1), in which the second half of an initial *A A′B A″* form, remarkable for its simplicity, is subjected to an elaborate series of surface variations.

(iv) Harmony, tinta, local colour. Verdi's small-scale harmonic language is for the most part simple and direct, following general patterns that can easily be summarised within the lyric prototype. The opening *A* sections concentrate on tonic and dominant harmonies, sometimes ending with a modulation to a near-related key; the *B* section is comparatively unstable; the final *A* (or *C*) section returns to a stable tonic. Secondary modulations within an aria are frequently to keys a 3rd apart, thus allowing new harmonic underpinning for important vocal sonorities. In large set pieces, notably in the Largo concertato, there is often a dramatic plunge into a distant key near the end, one from which Verdi occasionally found some difficulty in extricating himself. A few 'character' pieces show that Verdi was fully capable of an advanced, colouristic chromaticism – the 'Salve Maria' from *I Lombardi* Act 1 is an early example, the openings of the preludes to Acts 1 and 3 of *La traviata* a later, more persuasive one; but for the most part his liking for strict periodic structures made elaborate chromatic effects difficult to employ except at moments of high relief.

The extent to which organized, directed tonality may be traced at a larger level is still a matter for debate. Like most of his contemporaries and immediate predecessors, Verdi seemed indifferent to tonal closure at the level of the multi-movement 'number' (something that had been important only a few decades earlier): most arias, duets and ensembles begin in one key and end in another; nor do individual acts, let alone entire operas, often display any obvious tonal plan. It seems likely that Verdi chose the tonalities of movements within set pieces primarily with a view to the vocal tessituras he wished to exploit, and various last-minute transpositions he effected to accommodate individual singers would seem to support this theory. There is, though, evidence in some operas of an association between certain keys or tonal regions and certain characters or groups of characters. *Il trovatore* is an obvious example: the flat keys are linked with the 'aristocratic' world of Leonora and Count di Luna, while sharp keys tend to accompany Manrico, Azucena and the world of the gypsies. *Macbeth* shows a similar binary divide (Macbeth and Lady Macbeth on the flat side, the witches on the sharp side). Such associations may also attend other harmonic recurrences, such as the occasional repetition of large-scale tonal progressions (so-called 'double cycles'). But these rather loose juxtapositions – by no means rigidly maintained – probably represent the ultimate point of tonal organization in Verdi: there have as yet been no convincing demonstrations of 'directed tonal motion' across large spans of Verdian musical drama, nor evidence that the composer considered such motion a desirable aesthetic goal.

More important than harmony as a means of establishing what Verdi called the *tinta* or *tinte* (identifying colour or colours) of a given opera are various recurring melodic shapes. These should not be confused with recurring motifs, which Verdi occasionally used to great effect by

5. Act 3 scene i (the encampment of Count di Luna) of Verdi's 'Il trovatore', La Fenice, Venice, 1853–4: set design by Giuseppe and Pietro Bertoja, pen and ink with wash (Museo Correr, Venice)

association with an important element in the drama (the horn call in *Ernani* is a classic early example), and which gain their effect by means of a straightforward semantic identification and a sense of isolation from the basic musical fabric. Nor are they connected with the proto-leitmotivic experiment of *I due Foscari*, in which the main entrances of certain characters or groups are marked by the repetition of a 'personal' instrumental theme (an interesting case in that the curiously undramatic tone of these recollections illustrates, as Carl Dahlhaus has suggested, that leitmotivic technique is basically incompatible with Italian opera's tendency to create a vivid sense of the affective present). On the contrary, these recurring shapes will tend to hover on the edge of obvious reminiscence, thus contributing to a sense of musical cohesion without accruing semantic weight: their very vagueness is essential, as it precludes their needless and tautological mirroring of the opera's narrative thread. The rising 6th that begins so many lyric pieces in *Ernani*, the 'bow shape' of *Attila*, perhaps even the stepwise rising line of *Oberto* are possible examples, ones that could cautiously be multiplied.

At least until the later part of this period, the fixing of an opera within a specific ambience, the use of what is often called 'local colour', was sporadic and often routine. The single gesture towards the exotic ambience of *Nabucco* (the chorus that opens Act 3) is probably the opera's least inspired number, and one reason why *Nabucco* is more successful than *I Lombardi* (Verdi's next opera, and one that resembles *Nabucco* in many ways) is that the later opera's frequent changes of locale and ambience necessitate a larger amount of this rather pallid, 'colouristic' music. By the end of the 1840s, however, and after his exposure to the French stage, Verdi's attitude changed. In *Luisa Miller* the Alpine ambience is an important element of the opera's *tinta*, joining with certain recurring shapes (in this case as much rhythmic ideas as melodic ones) to give the work a pronounced individuality. This merging of local colour with other recurring elements is also evident in *Il trovatore*, where the 'Spanish' atmosphere is intimately bound to the musical sphere inhabited by Azucena. It reaches a pinnacle in *La traviata*, in which much of the opera moves in telling refractions of the waltz-laden social world so vividly depicted in the opening scene.

(v) Influences. When Verdi first began to make an operatic career, his main stylistic influences were undoubtedly those of his immediate Italian predecessors. Rossini, the inevitable point of reference a decade earlier, was now rather outdated in the field of serious opera (as *Un giorno di regno* shows, his idiom remained sovereign in the declining genre of *opera buffa*). There are, however, definite echoes of the Rossinian model in certain full-scale overtures (*Giovanna d'Arco* and *La battaglia di Legnano*); and the 'oratorio-like' style of Verdi's first successes (*Nabucco* in particular) owes something to Rossini's *Mosè*. The influence of Bellini, who had died in 1835 but whose operas were by the 1840s at the height of their fame, is sometimes heard, but it has a significant impact only in *Oberto* (in Riccardo's Act 1 cavatina and,

especially, in the *Straniera*-like declamation of Leonora's rondò finale). Perhaps Bellini's 'trademark' melodic style – close attention to melodic detail within arias that are often loosely structured at the individual phrase level, seemingly constructed out of declamatory fragments – was simply too caught up in nuances of sentiment: what Verdi was later to describe as Bellini's 'melodie lunghe, lunghe, lunghe' were thus unsuited to the younger composer's directness of approach and easily graspable periodic structures. Possibly more significant (though more research is needed) was the example of Mercadante, whose elaborate, rather academic manner left several traces in the earliest operas, not least in their occasional displays of contrapuntal expertise.

The most important of Verdi's first influences was undoubtedly Donizetti, by far the most successful composer then active in Italian opera. Charting the details of such influence is problematic, in particular because the relative fixity of Italian prosody and its relation to musical rhythm makes it inevitable that melodic profiles will recur across this broad repertory. Rather than such fleeting 'echoes', it is safer to locate moments of larger musical-dramatic similarity. One occurs in Act 1 of *Giovanna d'Arco*, in which the usual progression from lachrymose Andante to energetic cabaletta is reversed in Giacomo's cavatina, producing a moderate-paced, unusually touching, 'Donizettian' cabaletta, quite lacking in Verdian rhythmic drive. Another much grander example occurs in the Act 1 concertato finale of *Alzira*, 'Nella polve, genuflesso', which is modelled on the famous sextet in *Lucia di Lammermoor*, sharing the key of D♭ major and several melodic and harmonic ideas. However, the differences are also instructive. The *Lucia* sextet is a classic 'frozen moment' in which the principals, albeit at a moment of maximum interpersonal conflict, join in a long, lyrical sweep that enwraps all their accumulated tension. Verdi, on the other hand, fragments the moment, highlighting the sense of conflict that was so important to his operatic style; and Verdi's ensemble is set in a dynamic harmonic context, as if the conflict, far from being encased in a lyrical idea, is developing before our ears.

As already mentioned, the late 1840s saw the gathering influence of French models on Verdi's aria forms. But this was not the only level on which the lure of Paris is felt. The remaking of *I Lombardi* into *Jérusalem* for the Paris Opéra (1847) put in the clearest context the effect that French grand opera was beginning to have, in particular in expanding Verdi's harmonic and orchestral imagination, and in broadening his conception of local colour. However, the influence of Meyerbeerian dramaturgy was mostly a thing of the future. More important at this stage was the impact of non-operatic French theatre, in particular the *mélodrame* tradition he was able to sample at first-hand during his long stay in Paris between 1847 and 1849. The final scene of *Stiffelio*, for example, which is directly derived from a contemporary *mélodrame*, all but dispenses with lyrical vocal expression in favour of the atmospheric orchestral background, tense declamation and telling visual images so typical of French boulevard theatre. This may be an extreme example, but melodramatic effects can be found in several other operas of the period, most famously at the start of the final scene of *La traviata*, in which Violetta reads Germont's letter to the sentimental strains of a solo violin reminiscence motif.

(vi) Singers and musical characterization. During his early career, Verdi was of his time in the care he took to mould individual roles to the skills of the singers who would 'create' them. It was completely in his interests to do so, both because the success of a first performance was often important to the speed of a work's subsequent dissemination, and because singers were themselves influential in a theatre's choice of repertory. A good case in point is his treatment of the soprano Antonietta Ranieri Marini, who created the leading female roles in his first two operas: Leonora in *Oberto* and the Marchesa del Poggio in *Un giorno di regno*. In both cases Verdi took care to exploit the peculiarities of Ranieri Marini's voice, in particular what we would now call her 'mezzo' range; and in the case of *Oberto* his efforts were rewarded – nearly all of the early revivals of the opera featured her in the cast, and we can assume that she was instrumental in each decision to revive the work.

It is sometimes suggested that this attitude to performers changed once Verdi's fame assured him a degree of artistic independence. In support of this come anecdotes such as his refusal to write German soprano Sophie Loewe a rondò finale in *Ernani*; or his withering scorn when asked to accommodate another soprano with an additional aria for Gilda to *Rigoletto* ('Had you been persuaded that my talent is such that I could not have done better than I did in *Rigoletto*, you wouldn't have asked me for an *aria* for that opera'). However, there is on balance little evidence that Verdi's eagerness to suit roles to the skills of his first interpreters diminished greatly with time. Often his decision to set one subject rather than another was strongly inflected by the available cast: a typical example is his wavering between various operatic subjects in the summer of 1846 (to fulfil a contract with the Teatro Pergola, Florence), and his decision to tackle *Macbeth* only after he knew of the engagement of Felice Varesi, one of the finest actor-singer baritones of the day.

What is more, Verdi's knowledge of the strengths and limitations of his cast often profoundly affected the vocal character of a given opera. A case in point concerns the strongly contrasting roles he created for two very different early sopranos, Loewe (he probably wrote Abigaille with her in mind, and she created Elvira in *Ernani* and Odabella in *Attila*) and Erminia Frezzolini (Giselda in *I Lombardi* and Giovanna in *Giovanna d'Arco*). Loewe's voice had power rather than beauty, but was extremely flexible and boasted an impressive chest register. Frezzolini, on the other hand, excelled in delicacy and beauty of tone, and in ornamental passages; but she had little power below the staff. In some cases – Loewe as the sword-wielding Odabella, or Frezzolini as anxious Giselda – the singer-type seemed to suit the character-type very well; but in others – particularly the casting of Frezzolini as Joan of Arc – Verdi and his librettist used considerable skill to tailor the role to the 'creator', making sure that the gentler side of the character was whenever possible emphasized.

Within this framework of accommodation, however, there is no doubt that vocal style was gradually changing, and that a 'modern' type of singer came to be associated with Verdi: in all voice ranges robustness and sheer volume began to make inroads into vocal flexibility, and a new immediacy and 'realism' in acting style went hand-in-hand with a tendency to indulge ever more intensely in vehement declamato rather than seamless bel canto. We can see this change most obviously in the emergence of

the 'Verdian' baritone; characterized by the consistency of high tessitura and the relative absence of ornamental writing – a very different animal from the 'basso cantante' of 20 years earlier. Of course Verdi was in no important sense responsible for what was, after all, a pan-European shift. Exploit it magnificently though he did, he was merely one element in a complex symbiotic process involving changes in theatre architecture, in the socio-economic make-up of audiences, in ideas about 'realism', in the range of repertory that a singer would be required to tackle, in the power of orchestral instruments, and in a host of other factors.

Though Verdi's close attention to singers' capabilities would continue throughout his long life, towards the end of this period we can perhaps locate a change of attitude, one that found him less willing to 'tailor' his roles so specifically. Again this shift made practical sense – his fame now virtually assured his operas a wide dissemination – and it may also reflect his gathering sense of an 'international' singing style, a levelling out of peculiarities among the leading singers brought on by the emergence of a fixed Italian repertory. On the other hand, we can see in Gilda (*Rigoletto*) and Violetta (*La traviata*) a new type of role, one in which radical changes in the character's attitudes, brought on by developments in the plot, are articulated through radically altering vocal personae. Thus the pleasure-loving Violetta of Act 1 sings very differently from the passionately intense Violetta of Act 2, or again from the invalid of Act 3. This was a daring experiment, one not much followed up in the later operas, and one that has continued to present difficulties for performers. It reflects, though, something of the intensity of Verdi's relationship with the human voice, and the manner in which his vision of drama was always projected principally through these fragile vessels.

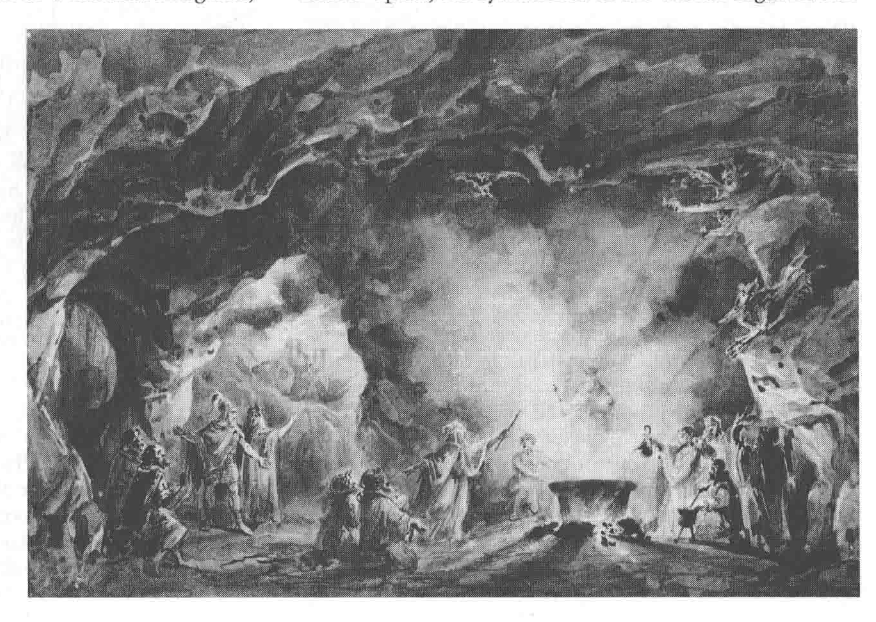
(vii) Individual operas. The foregoing discussion has mostly involved 'synchronic' matters – the way in which Verdi's operas can be summarised as a coherent group. Many aspects, in particular on the formal level, benefit from such an approach. But an important feature of this, and indeed every period in Verdi's life, is the manner in which he continued to experiment, in particular on the broadest levels of operatic articulation, where he was very rarely content to repeat himself even when a formula had proved its success with the public.

Little of this is, however, evident in the first two operas: *Oberto, conte di San Bonifacio* is hampered by a curiously sprawling structure, even if individual moments powerfully anticipate his later manner; and *Un giorno di regno* explores a Rossinian *opera buffa* vein that was never to reappear. But with *Nabucco* an important strand of the Verdian style was immediately established: a grandiose, oratorio-like vein, with a directness of vocal effect and a rhythmic vitality, together with an unusually prominent role for the chorus. What is more, numbers such as the 'Coro e Profezia' in Act 3 show how Verdi could bind these elements into compelling scenic units: the highly novel, aria-like choral writing of 'Va pensiero' is violently countered by the energetic prophesy that follows, but the two halves of the scene are intimately linked by shared rhythmic and melodic motifs. So successful was *Nabucco* that Verdi's next opera, *I Lombardi alla prima crociata* constitutes one of the few times in which he was content to repeat himself, producing another oratorio-like opera with impressive choral effects, although one whose overall character was certainly softened by the presence of a less forceful leading soprano.

These first four operas had been written with the comparatively large stage of La Scala, Milan, in mind. But Verdi's next opera, *Ernani*, written for the more intimate context of Venice's La Fenice, broke new ground. True, elements of the *Nabucco* style remain, but the overall effect is far more subdued, and the drama of individual characters is brought to the fore. What is more, in Act 3 Verdi extended to an entire act the kinds of musical continuities previously encountered only at scene level. Set in subterranean vaults containing the tomb of Charlemagne at Aix-la-Chapelle, the act charts King Carlo's gradual coming of age, his acceptance of the responsibility of power. The action unfolds in a continuous musical arc, one given direction by the development of various musical devices, some rhythmic, some melodic, some timbral: from the dark instrumental colours that begin the act, to Carlo's great turning point in the aria 'O de' verd'anni miei', to the conspirators' chorus 'Si ridesti il Leon di Castiglia', to the magnificent finale in which Carlo forgives all and, with his closing peroration to Charlemagne, 'Oh sommo Carlo', draws everyone into his musical orbit. Throughout we see Verdi's gathering sense of musical drama's larger rhetoric, the third act of *Ernani* setting an imposing standard of coherence that is rarely equalled until the operas of the early 1850s.

The achievement of *Ernani* ushered in a period of more restless innovation, of operas that often differed substantially in their modes of experimentation. As mentioned earlier, in the first of them, *I due Foscari*, Verdi used a system of recurring themes to identify the principal characters, suggesting that he was anxious to find new ways of binding together the musical fabric; perhaps to the same end, he also made repeated attempts to remind the audience musically of the geographical venue of the drama. Both devices, particularly the recurring themes, are here applied somewhat mechanically; but in doing so Verdi could explore ways in which characters' vocal personae might differ from their orchestral surroundings; and this was a valuable lesson for the future. In *Alzira*, written the following year, the articulation swings wildly between extremely economic closed forms and a much freer, 'declamatory' style, often triggered by narrative: Zamoro's Act 1 aria 'Un Inca . . . eccesso orribile!', for example, starts off conventionally, but breaks into angry declamation, and closes switching wildly between this style and tender recollections of his beloved Alzira, never settling on the lyrical synthesis we expect of a closed form aria. In this and other moments, Verdi seemed intent above all on mirroring a psychological process, responding to each nuance of the words rather than developing a rounded musical statement; he was experimenting with a type of 'realism' in which attention to the individual meanings of words and phrases would substitute for the catharsis of the well-turned tune.

Attila addresses very different issues. As many have pointed out, it started life as a further example of the grandiose, 'oratorio' vein, but as the opera develops the focus turns to individuals, so much so that the closing scenes have minimal choral participation. This may in part be due to the fact that Solera, the great architect of Verdi's 'oratorio' style, deserted the project before it was completed, and that Piave had to finish the libretto. But it may also reflect an attempt on Verdi's part to reconcile



his two 'styles' – find new ways of grafting a drama of individuals (such as *Ernani* or *I due Foscari*) onto one that is essentially public (such as *Nabucco* or *I Lombardi*).

Macbeth is often considered a watershed in Verdi's early career, much being made of the fact that it is based on Shakespeare, an author for whom Verdi frequently voiced great admiration. There is a new level of attention to detail in orchestration and harmony, and another melding of the public and personal manner. But what also singles the opera out is an element that recent commentators have found troublesome: its exploitation in the witches' music of the 'genere fantastico' (the fantastic or supernatural genre). There are early attempts in this vein in *Giovanna d'Arco*, but in *Macbeth* this alternative 'colour' is vividly explored, and placed in juxtaposition to the dark, personal world of Macbeth and his wife, thus expanding the range of the opera by centring it around a violent conflict between two musically distinct worlds. (Incidentally, this experiment might also be linked to Verdian interest – never very strong – in the trappings of Romanticism, which tended to be more a style than a fully-fledged movement in Italy, in spite of periodic importations from France and elsewhere.)

I masnadieri and *Il corsaro*, although they continue to explore new formal solutions, in the latter case ones borrowed from France, do not break significant new ground on larger levels of dramatic articulation, possibly because both were essentially conceived before *Macbeth*. The subject matter and public circumstances of *La battaglia di Legnano* might have made it the apotheosis of Verdi's 'oratorio' manner, but instead it again melds this style with one focussing on personal expression, and again shows the increasing influence of French formal models and orchestral sophistication. But the next opera, *Luisa Miller*, once more made a radical break, marking a new type of Verdian opera, albeit one he was to use only sparingly in the years to come. This was recognized early on, Abramo Basevi announcing that the opera initiated Verdi's 'second manner' in its reliance on Donizetti rather than Rossini. Certainly the relationship to Donizetti's *Linda di Chamounix* is evident in many places, but the debt is less to a specific composer or work than to a genre, that of *opera semiseria* – a 'mixed' genre that partook both of comic and serious elements. Again this called for stylistic expansion, a broader musical canvas on which to play out the drama, one enriched by extensive attention to depiction of the Alpine setting so typical of *semiserie*.

Although extravagant claims have recently been made for *Stiffelio*, it is best seen as a consolidation of previous models. Commonplace though it may be to say so, it is the next opera, *Rigoletto*, that breaks decisive new ground. One could mention many levels: a new 'expansion' of genres, which saw further use of comic opera styles within a serious context; a daring appropriation of Hugolian character types, in which the outwardly disfigured baritone father claims more sympathy than the romantic tenor lead. But even more important is that, for the first time, the differences between the main characters are articulated through the manner in which they are defined formally, through the very nature of their musical discourse. In this sense it is telling that Rigoletto, the emotional centre of the drama, has no formal aria but instead typically sings in the declamatory style that Verdi had experimented with in *Alzira*. The Duke, on the other hand, perpetually inhabits highly conventional formal numbers, both his charm and superficiality projected through this relative predictability. Caught between these two pronounced styles, forever responding to one and then the other, is Gilda, whose formal discourse moves from the most simple to the most fragmentary as she grows painfully through the drama. This new level of dramatic articulation was as much a technical as an emotional conquest: it entailed a mature acceptance of conventional discourse, and an acutely developed perspective on precisely when the traditional forms could be ignored, when exploited.

Il trovatore clearly started life as a sequel to *Rigoletto*, this time with an outcast female protagonist (the gypsy Azucena) claiming sympathy. But the drama's operatic manifestation proved very different, almost a contradiction of the 'advances' made in the earlier opera. There is no 'fusion' of genres, indeed all the main characters express themselves in the traditional forms of serious Italian opera, the symmetries of the overall organization

6. Apparition scene (Act 3, the witches' cavern) from Verdi's 'Macbeth': sepia drawing presented to Verdi by Countess Clara Maffei after the first production, Teatro della Pergola, Florence, 14 March 1847

(four acts, each divided into two) echoed in their patterned confrontations. But in fact the achievement of the opera lies precisely in this restriction of formal discourse, the emotional energy of the drama being constantly channelled through the most tightly controlled formal units. The success of *Trovatore* should remind us that it is dangerous to see Verdian development in too simple a line, still less tie it unthinkingly to a gradual 'emancipation' from formal restrictions: in spite of its celebration of traditional forms, the opera is anything but a throw-back to earlier achievements.

The last opera of this period, *La traviata*, is again anomalous, again a new adventure. It gestures towards a level of 'realism' very rare in earlier operas (perhaps *Stiffelio* is its nearest cousin): the contemporary world of waltzes pervades the score, and the heroine's death from disease is graphically depicted in the music – from the first bars of the prelude to the gasping fragmentation of her last aria, 'Addio, del passato'. Within this radically new atmosphere there are, however, many surprising continuities: a reliance on conventional formal models, for example, even when – as in the case of Germont's double aria in Act 2 – their presence seems to interrupt the focus of the drama. But this should not surprise us. One of Verdi's greatest strengths was his ability to balance formal and other continuities – his conservatism of attitude – against his desire always to try new dramatic solutions.

(viii) Reception and politics. By the 1850s, Verdi had become the most famous and frequently performed Italian opera composer in Europe, having wrested the former epithet from Rossini, the latter from Donizetti. He commanded unprecedented fees for new operas (although he lagged some way behind the most famous singers in earning potential), could choose more-or-less freely which theatres were to launch his latest works, and had begun to acquire substantial assets in farm lands and buildings. Admittedly, Verdi's 'noisy' orchestration (perhaps in particular his favouring of the middle to low register of the orchestra), his often extreme demands on singers and his taste for extravagant melodramatic plots had on occasions brought him criticism in the press during the 1840s; and several of his operas failed to find a place in the 'repertory' that was rapidly forming during this period. But by the early 1850s, and despite the occasional public failure such as that which initially greeted *La traviata*, opponents of Verdi (at least within Italy) were an eccentric minority. Resistance was greater and more prolonged elsewhere: although France was largely won over by the early 1850s, neither England nor Germany would be wholeheartedly enthusiastic until much later in the century.

The vast majority of Verdi's premières thus remained within the Italian peninsula, and on occasion it seemed that the composer's most serious opposition came from those elaborate and multifarious organs of state censorship that policed artistic expression in all parts of Italy. Librettos could be subject to modification on religious, moral or political grounds; and in Milan and Naples (perhaps elsewhere) the censor would also attend the dress rehearsal, to ensure that the music and staging produced no improprieties. However, severity varied greatly from state to state, and because censorship in the northern states (in which Verdi concentrated his early career) was far more easygoing than that in Rome or Naples, the composer encountered few difficulties with his early operas. Religious scruples were most easily offended; but at least until the eve of the 1848 revolutions political matters were largely ignored. The Zaccaria of *Nabucco*, for example, ended his Act 1 cabaletta with the words 'Che dia morte allo stranier' ('That gives death to the foreigner') without censorial interference in a huge number of early productions, and even the 'revolutionary' *Ernani* encountered only minor obstacles in the north. After 1848 the situation worsened, and it is significant that Verdi's most severe bouts with the censor occurred in the austere, counter-revolutionary atmosphere of the late 1840s and 1850s, over the religious subject matter of *Stiffelio* and over many aspects of both *Rigoletto* and *Un ballo in maschera*.

The business of government censorship inevitably leads to a consideration of Verdi's political status during this period and of the extent to which his operas served to heighten the Italian people's national consciousness. Although Verdi's – or any one else's – operas were far from 'popular' in the modern sense, only a tiny elite having the financial resources to attend such places as La Scala, it is true that the theatre fulfilled an important social function, being almost the only place in which large gatherings of people were permitted. What is more, there is no doubt that Verdi himself was a staunch patriot, as can be seen from many of his letters, and from his return to Milan during the 1848 uprisings. The 1848 revolutions also inspired him to attempt an opera in which the theme of patriotism would be overt: *La battaglia di Legnano* saw its première in a beleaguered Roman republic in January 1849, by which time Milan and many other northern cities were long back in Austrian hands.

However, before 1846 there is hardly any evidence that Verdi's operas were regarded as especially dangerous politically or that they excited patriotic enthusiasm in their audiences. In the period between the liberal reforms of Pius IX in 1846 and the revolutions of 1848, the theatre sometimes became a focus of political demonstrations, but Verdi's operas seem to have accompanied such outbursts no more often than those of other composers. It is also significant that during the months of mid-1848 when the Milanese governed their own city, neither the newly-liberated theatrical press nor the public seemed especially interested in Verdi or his music. What is more, when the Austrians returned to Milan, in the midst of an extreme clamp-down on any expression that could lead to further civil unrest, the 1848–9 La Scala season staged revivals of *Ernani* and *I due Foscari*; *Attila* and *Nabucco* followed in the next full season. It seems inconceivable that any of these operas had been actively associated with the failed revolutions. This is not to deny the stirring force of Verdi's early music, in particular his treatment of the chorus (i.e. 'the people') as a dynamic new expressive power; but connections between his music and political events were largely made later in the century, some considerable time after the revolutionary atmosphere had cooled.

5. Life, 1853–71. After the première of *La traviata* in March 1853, the pace of Verdi's operatic production slowed considerably. The 11 years up to *Traviata* had produced 16 operas; the 18 years that followed saw only six new works: *Les vêpres siciliennes*, *Simon Boccanegra*, *Un ballo in maschera*, *La forza del destino*, *Don Carlos* and *Aida*. Admittedly, such a comparison gives a slightly exaggerated picture. Two of the operas (*Vêpres* and *Don*

Carlos) were written for the Paris Opéra; they are thus both considerably longer than any other of Verdi's scores and required the composer's presence in Paris during extended rehearsal periods. Furthermore, Verdi devoted much time and creative energy to revising various works: there were relatively minor adjustments to *La traviata* and *Simon Boccanegra* after unsuccessful first performances (the latter would undergo further and more important alterations later), and to *Il trovatore* for its Paris version; a thorough overhaul of *Macbeth*, again for Paris; the refashioning of *Stiffelio* as *Aroldo*; and substantial revisions to *La forza del destino* for a series of performances at La Scala. Such efforts notwithstanding, however, Verdi now spent an increasing amount of time away from the theatre, and on at least one occasion – in the more than three-year gap between finishing *Un ballo in maschera* (early 1858) and starting *La forza del destino* (mid-1861) – he seems to have decided to stop composing altogether.

His three most extensive foreign expeditions were all related to professional engagements: a two-year period in Paris (1854–5) saw the completion and performance of *Les vêpres siciliennes*; *La forza del destino* required two trips to Russia, with interim visits to Paris, London and Madrid (1862–3); and the production of *Don Carlos* kept him in Paris for nearly a year (1866–7). When not travelling, Verdi divided his time between periods of intense activity on his farmlands at Sant'Agata (he added substantially to his estate in 1857, and supervised extensive renovations in the 1860s) and visits to friends in other cities, notably Naples and Venice. In 1859, after more than ten years together, Verdi and Giuseppina Strepponi were secretly married in the village of Collange-sous-Salève, near Geneva. In 1866 they set up permanent winter quarters in Genoa, finding the climate of Sant'Agata too hostile.

Verdi entered briefly into public political life, becoming in 1861 – after personal urging from none other than Cavour – deputy for Borgo San Donnino (now Fidenza) in the first Italian parliament, a post he retained until 1865, though attending sessions only sporadically after the first few months. For reasons that remain obscure, he lost touch with friends in Milan, his centre of professional operations and social milieu through most of the 1840s; after his dramatic return during the 1848 revolutions, he seems hardly to have visited the city for 20 years. (As early as 1845 he had quarrelled with the directors of La Scala over what he considered the unacceptable production standards, but this could not have been the whole story.) But the late 1860s saw a rapprochement. In 1868 he returned to the city to visit Clara Maffei, and to meet for the first time Alessandro Manzoni, whom he had long revered. A year later he re-established contact with La Scala, supervising there the première of the revised *Forza del destino*. On hearing news of the death of Rossini (in November 1868), Verdi suggested to Ricordi that a commemorative *Messa per Rossini* be written jointly by a team of the most prominent Italian composers of the day. The Mass was duly completed, Verdi supplying the final 'Libera me', but there was much bitter wrangling over administrative problems and the work was never performed.

6. Operas: 'Les vêpres siciliennes' (1855) to 'Aida' (1871).

(i) Expansion. If one had to encapsulate in a single term the key difference between Verdi's works of this period and those of the previous one, 'expansion' would be a strong contender. Almost all the operas are far longer than any up to *La traviata*, and added length routinely brought an expansion of the cast-list – rather than the classic 'love triangle', more principals and secondary characters vie for attention – and often a broadening of the geographical sweep of the plot, with more opportunities for (increasingly, obligations to provide) orchestral depiction of changed ambience and *couleur locale*. The sheer volume of sound also increased: voices, particularly male voices, tended to be heavier and so less agile, coloratura passages becoming an almost exclusively female domain; and these vocal changes were linked to the increasing size of orchestras, and the extra power of individual instruments, in particular the lower brass. Generic boundaries also broadened, with a mixture of comic and serious styles within the same work becoming common. With the advent of new technologies, particularly in lighting, staging practices became more elaborate (and sometimes more cumbersome), and detailed *disposizioni sceniche* (production books, after the fashion of French *livrets de mise en scène*) began to appear, offering an exhaustive account of stage movement and scenic effect. In short, more and more performers crowded on to ever more elaborately bedecked stages; and they sang louder and louder, at greater and greater length. Theatres expanded their auditoriums and stage space whenever possible, increasing the numbers of people that could attend a performance.

Of course, these changes echoed a general shift in Italian opera, indeed in European opera as a whole. The reasons behind such changes will always be complex, but in the case of Italy, which became a modern nation state in 1861, one of the most powerful was an increasing desire, in both creators and audiences, to feel 'international', to enter the 'modern' world. The most important musical model in attaining this desire was the type of grand opera associated with that most cosmopolitan of European cities, Paris. So Italian opera, perhaps for the first time in its history, began to fashion itself along 'foreign' lines. But there were other, perhaps equally important reasons. One was the development of an operatic 'repertory', a body of works that continued to be revived even after they became old-fashioned in style. Rather than having constantly to produce new works, composers could now invest greater time on each creation; what is more, increased copyright protection (particularly after 1865) ensured that they could earn substantial amounts from revivals of such 'repertory' operas.

Verdi was actively involved with these fundamental changes, indeed such was his primacy in Italian opera that he almost inevitably led the way. But he was nevertheless aware that progress came at a price. In a famous letter of the late 1860s to the Parisian librettist and opera director Camille Du Locle, he voiced serious doubts about the Parisian way:

> Everyone wants to express an opinion, to voice a doubt; and the composer who lives in that atmosphere of doubt for any length of time cannot help but be somewhat shaken in his convictions and end up revising, adjusting, or, to put it more precisely, ruining his work. In this way, one ultimately finds in one's hands not a unified opera but a *mosaic*; and, beautiful as it may be, it is still a *mosaic*. You will argue that the *Opéra* has produced a string of masterpieces in this manner. You may call them masterpieces all you want, but permit me to say that they would be much more perfect if the *patchwork* and the adjustments were not felt all the time.

28

TUTTI

Suo padre!

AMNERIS

In poter nostro!...

AIDA (*abbracciando il padre*)

Tu! Prigionier!

AMONASRO (*piano ad Aida*)

Non mi tradir!

IL RE (*ad Amonasro*)

Ti appressa...

Dunque... tu sei?...

AMONASRO

Suo padre — Anch'io pugnai...
Vinti noi fummo e morte invan cercai.

(*accennando alla divisa che lo veste*)

Questa assisa ch'io vesto vi dica
Che il mio Re, la mia patria ho difeso;
Fu la sorte a nostr' armi nemica...
Tornò vano dei forti l'ardir.
Al mio piè nella polve disteso
Giacque il Re da più colpi trafitto;
Se l'amor della patria è delitto
Siam rei tutti, siam pronti a morir!

(*volgendosi al Re con accento supplichevole*)

Ma tu, o Re, tu signore possente,
A costoro ti volgi clemente...
Oggi noi siam percossi dal fato,
Doman voi potria il fato colpir.

29

AIDA, PRIGIONIERI, SCHIAVE

Si: dai Numi percossi noi siamo;
Tua pietà, tua clemenza imploriamo;
Ah! giammai di soffrir vi sia dato
Ciò che in oggi n' è dato soffrir!

RAMFIS, SACERDOTI

Struggi, o Re, queste ciurme feroci,
Chiudi il core alle perfide voci.
Fur dai Numi votati alla morte,
Si compisca dei Numi il voler!

POPOLO

Sacerdoti, gli sdegni placate,
L'umil prece dei vinti ascoltate;
E tu, o Re, tu possente, tu forte,
A clemenza dischiudi il pensier.

RADAMÈS (*fissando Aida*)

(Il dolor che in quel volto favella
Al mio sguardo la rende più bella;
Ogni stilla del pianto adorato
Nel mio petto ravviva l'amor.)

AMNERIS

(Quali sguardi sovr' essa ha rivolti!
Di qual fiamma balenano i volti!
E a tal sorte serbata son io?...
La vendetta mi rugge nel cor.)

IL RE

Or che fausti ne arridon gli eventi
A costoro mostriamci clementi;
La pietà sale ai Numi gradita
E rafferma dei Prenci il poter.

7. Libretto of 'Aida', Act 2 scene ii, with Verdi's annotations for its staging (US-NYpm)

The letter places the blame squarely on staging conditions in Paris, in particular the collaborative nature of the enterprise; Verdi goes on to say that the situation in Italy was, at least for someone of his reputation, different – there the composer was assured of absolute control. But the problem was at least as much internal – within the very nature of 'modern' opera – as it was external; opera had become too complex to be under any single person's jurisdiction. Verdi's works, whether created in Italy or elsewhere, were no exception.

(ii) Composition. The genesis, and thus to a certain extent the aesthetic premises, of a Verdi opera of this period had changed a little from those in the earlier period, the principal difference being that the composer's burgeoning reputation now allowed him greater artistic freedom. He was besieged by offers from the major theatres of Italy, Europe and beyond, and could choose the venue and subject of any new opera. He was also free to refuse commissions much more often than he had been in the hectic 1840s, as he could live from accumulated wealth for long periods. But when he did work the old patterns remained. Although with the rise of the repertory system singing style was becoming more homogenous, Verdi was still wary of committing himself to a subject before the principal singers had been engaged, refusing to sign a contract for *La forza del destino*, for example, before the company had been fixed. He still composed by way of a prose scenario to clarify the musical forms, a libretto that reflected those forms, a continuity draft and then a 'skeleton score', and finally an orchestration of that score, this last stage still often completed near to the date of the première. He continued to compose with great facility and, allowing for the vastly increased length of several of these operas, probably took no longer drafting the operas than he had when writing his earlier works.

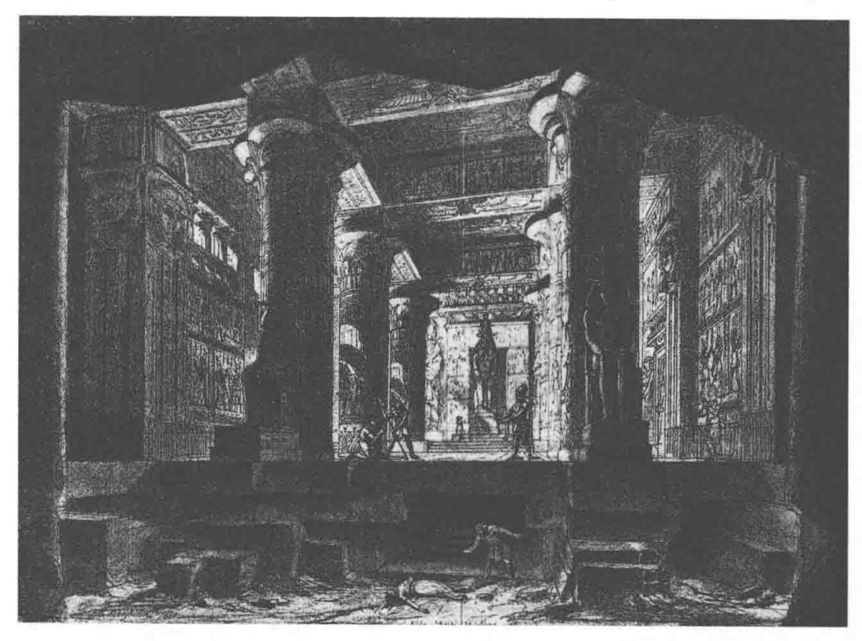
On the surface at least, the type of subject he chose was also unchanged: he remained loyal to Schiller and also to the greater and lesser lights of Romantic melodrama. Towards the end of the period, however, there is evidence of a decisive move away from melodramatic extremes. In revising *Macbeth* in 1865, for example, he replaced the final, onstage death scene with a Victory Chorus; more telling still, in the 1869 revision of *La forza del destino*, he replaced the bloody dénouement (in which the tenor flings himself from a precipice) with an ensemble of religious consolation. This move away from melodrama is part of a larger change in the dramatic and stylistic scope of his operas. Verdi now repeatedly called for more variety in his operatic subjects, and he castigated his earlier operas as one-dimensional. He strove to blend or juxtapose comic and tragic scenes and genres (notably in *Un ballo in maschera* and *La forza del destino*) and to explore greater extremes of both musical and dramatic ambience.

In his dealings with librettists Verdi became if anything more exigent. Even from French librettists he demanded important revisions (Scribe, his collaborator on *Les vêpres siciliennes*, did not always comply). In his Italian operas he sometimes reduced the task of the librettist to that of a versifier. For example, Piave set to work on *Simon*

Boccanegra according to precise instructions: Verdi supplied a complete prose sketch of the action, one so detailed that he insisted that it (rather than a libretto draft) be submitted to the censors for approval. In the case of *Un ballo in maschera* and *Aida*, Antonio Somma and Antonio Ghislanzoni (both inexperienced in libretto-writing) received a huge volume of advice on every aspect of the task.

(iii) Dramatic forms. Were we to judge solely from Verdi's correspondence, it would seem that this period saw the composer seeking radical alternatives to the fixed dramatic forms that had characterized his early operas. In negotiations over a possible setting of *King Lear*, for example, he more than once voiced his need for entirely new structures, and in discussing *Un ballo in maschera*, he warned the Neapolitan impresario Torelli that Scribe's libretto (on which the opera would be loosely based) 'has the conventional modes of all operas, a thing that I have always disliked and now find insufferable'. However, these radical epistolary statements are better taken as hortatory rather than prescriptive: a way of encouraging his librettists not to lapse into the merely routine. When it came to the discussion of concrete detail, Verdi often continued to think along traditional lines, and the eventual librettos for *Re Lear* and *Un ballo in maschera* are largely constructed in the conventional manner. As in the earlier period, the bulk of Verdi's operatic music remains definable within traditional formal types, although his tendency to manipulate these types according to the particular dramatic situation became ever more extreme.

The most fragile unit of the old, multi-movement structure was the cabaletta (which, in its ensemble form as stretta, had already disappeared from certain finales in the 1840s). When Verdi revised *Macbeth* in 1865, one of the most prominent casualties was Lady Macbeth's Act 2 cabaletta, and a similar fate would greet Amelia's 'Il palpito deh frena' (*Simon Boccanegra* Act 1) when that opera was revised in the 1880s. Verdi was also inclined to shorten cabalettas (for example in the Henri-Montfort duet of *Les vêpres siciliennes* Act 3) making them nothing more than a fast coda section with no independent thematic ideas, or even omitting them entirely, ending the number with some stage action or declamatory passage (as in the Boccanegra-Fiesco duet in the prologue of *Simon Boccanegra*), or with a final, climactic melody (as in Riccardo's aria in Act 3 of *Un ballo in maschera*). But, in particular with the earlier movements of set pieces, his usual practice was to continue those complex expansions and manipulations found in Leonora's aria-with-Miserere in Act 4 of *Il trovatore*, or the Violetta-Germont duet in *La traviata* Act 2; the multi-movement form became extremely flexible, and was thus able more powerfully to articulate important stages in the dramatic development. A magnificient example is the 'seduction' duet between Amelia and Riccardo in Act 2 of *Un ballo in maschera*, which charts the rising passion of the lovers in a succession of contrasting 'dialogue' movements before closing with a cabaletta *a due*; and there are several classic illustrations of this internal renewal of form in the last opera of this period, *Aida*, which boasts a magnificient series of grand duets, each traceable to traditional patterns but each offering a profoundly individual solution to the dramatic situation it underpins.



It is entirely in keeping with Verdi's ambivalent position towards formal conventions that, even as the various 'movements' of set pieces became less and less predictable, he sought ever more vivid ways of using the moments of transition between one movement and the next to articulate dramatic turning points. One outward manifestation of this search was his coining of the term 'parola scenica', a 'scenic utterance' (typically a few short words) that would be declaimed immediately before a lyrical set piece, making verbally manifest the key issues of a dramatic situation (he described it to Ghislanzoni as a device that 'sculpts and renders clear and evident the situation'). Utterances such as Amonasro's 'Dei Faraoni tu sei la schiava!' in his Act 3 duet with Aida signal with a violent injection of musical prose that a new stage of the dramatic conflict, and a new lyrical stage of the set piece, is to ensue. Although the technique clearly owes something to the already well-established aesthetics of melodrama, it also makes manifest the way in which Verdi's operatic aesthetic was becoming more dependent on isolated verbal effects to articulate an increasingly 'prosaic' musical drama.

Although examples in which traditional structures can still be found constitute the main stylistic line, there are, especially in the French operas, passages where a new aesthetic emerges. Arias such as Philip II's 'Elle ne m'aime pas' (*Don Carlos* Act 4) show comparatively little tendency to formal partition, and are better regarded as descendants of the great ariosos of Verdi's youth, especially those for Macbeth and Rigoletto. Some duets go in the same direction: the Henri-Montfort confrontation in Act 3 of *Les vêpres siciliennes* departs strikingly from Italian formal practice. In numbers such as the Elisabeth-Don Carlos duet in Act 2 of *Don Carlos* it may even be nugatory to search for remnants of traditional forms: the musical discourse follows in minute and constantly changing configuration the ebb and flow of the confrontation, creating a kind of 'musical prose' (or, as Verdi would call it, musical *Dramma* – the capital D important) that was rapidly becoming the norm in European opera.

(iv) Lyric prototype. The proliferation of lyric types towards the end of the previous period continues into this one, with the influence of French operatic forms increasingly evident. While solo statements within duets and ensembles frequently retain the old *AA′BA″* form, full-scale aria movements commonly show a typically French ternary form, with larger *A* sections (often themselves based on the old 'lyric prototype') flanking a looser, declamatory *B* section. Amelia's 'Come in quest'ora bruna' (*Simon Boccanegra* Act 1) is a fine example of this form at its most extended; the classic condensed example is Radames's 'Celeste Aida' (*Aida* Act 1), which brings back elements of the *B* material to fashion a delicate coda.

When Verdi chose to retain the old-fashioned Italian model, he usually did so for characters in old-fashioned melodramatic situations: Posa's 'C'est mon jour' in *Don Carlos* Act 4 is an obvious example. And frequently he made telling changes, ones indicative of a general shift in his lyric language. In Don Carlo's 'Urna fatal' (*La forza del destino* Act 3), the harmonic openness at the start of each lyric segment undermines the *AA′BC* form, encouraging us to hear the first two sections as one limb, and thus as the first part of a larger, ternary structure.

While the move towards larger, looser periods underlies much of Verdi's music during this period, he also continued to experiment in the opposite direction:

8. Closing scene (Act 4 scene ii, the temple of Vulcan with a vault below) of Verdi's 'Aida' in a production at the Paris Opéra (Salle Garnier), 22 March 1880: engraving after the design by Philippe Chaperon

following the example of 'Caro nome', he was occasionally encouraged by the dramatic situation to construct lyric movements of extreme formal simplicity. The final section of the Aida-Radames duet (*Aida* Act 4) is a most telling example (ex.3). This passage, first sung by Aida, is repeated literally by Radames and then repeated again by both characters in unison. The energy is, as it were, turned inwards, the extreme angularity and sheer difficulty of the vocal line forming an uncanny complement to the well-nigh obsessive formal repetition.

(v) Harmony, tinta, local colour. In comparison with that of his French and German contemporaries, Verdi's harmonic language remained for the most part within a firm diatonic framework. However, the musical surface of operas became increasingly complex. Devices seen only exceptionally in the early operas – passages of rootless chromaticism, sudden shifts into remote keys (notably by way of unprepared 6-4 chords), a tendency to add surprising harmonic colour to much-used vocal sonorities – now become the norm. Nor are such devices so frequently subordinate to a firmly diatonic melody. Even in conventional arias such as Posa's 'C'est mon jour', the vocal line may now be co-opted into a colouristic chromatic shift, creating a melody that makes little sense without its harmonic underpinning (ex.4). The effect, out of context, may sound wildly empirical; but, unlike some parallel moments in the earlier operas, these daring harmonic shifts are often prepared locally. In the present case the slideslip onto a 6-4 chord of G major halfway through the third bar (G minor would have been conventionally lachrymose) is foreshadowed by a tonicization of G minor in the preceding *B* section).

The 'preparation' of such moments may spread further still. For example, in 'C'est mon jour' the shift up a semitone to an unexpected major-mode sonority can be traced back through the preceding recitative and, by means of motivic transformations there, ultimately linked to the solemn chanting of the monks that begins Act 2 ('Charles-Quint, l'auguste Empereur'), which is recalled orchestrally at the start of Act 5, and ends the entire drama. On a more local but more immediately perceptible level, the unusual harmonic span in the first limb of 'Celeste Aida', which moves from B♭ major to D major, only to shift back to B♭ at the start of the next limb (ex.5), is anticipated by unmediated juxtapositions between and around these chords in the preceding scene, first in the recitative between Ramfis and Radames that begins the action, and then in Radames's recitative immediately before the aria.

These moments (and there are many more) contribute to the *tinta* of an opera, its overall sense of musical identity; but there remains little evidence of more purposeful and wide-ranging harmonic organization, still less of long-range 'goal direction'. Indeed, the relative broadness of dramatic scope and looseness of construction among these operas (what Verdi might have called their *mosaic* tendencies) works against even that patterned juxtaposition of tonal regions or melodic types found in operas such as *Macbeth* or *Il trovatore*. Occasionally a key centre or progression may briefly shoulder the burden of semantic weight: the key of D♭ in *Un ballo in maschera*, for example, is persistently associated with the death of the protagonist, and the opera also makes much of juxtapositions between the major and minor mode; but the continuing formal fixity of Verdi's musical language militates against programmatic use of such devices, and they never approach an important level of 'structural' significance.

There is no doubt, however, that recurring motifs become an increasingly vital aspect of Verdian *tinta*, though one should again be cautious in making claims for their centrality – certainly nothing like a Wagnerian leitmotif technique is ever attempted. A case in point is *La forza del destino*, in which the presence of recurring themes, in particular the main theme of the overture, frequently dubbed a 'destiny' or 'fate' motif, is sometimes advanced to exemplify the score's 'musical unity'. Perhaps this is so, but one could also see such elements as giving a degree of musical connectedness to a score that in other respects conspicuously lacks the cohesion Verdi so surely

achieved in his middle-period works. The most thoroughgoing use of recurring themes is in *Aida*, but even there thematic appearances sharply diminish towards the end of the opera. Far from emerging through developmental chains to become centrally expressive of the drama (as they can in Wagner's later operas), these themes have a fixity that tends to restrict them to the expository stages of the plot: they are points from which the musical drama develops and rarely become implicated in the great turning-points and clarificatory moments.

The use of local colour also becomes an ever more important connective device, perhaps as a necessary corrective to the expansion of dramatic scope and mood. The final act of *Les vêpres siciliennes* begins with three 'atmospheric' numbers (the chorus 'Célébrons ensemble', Hélène's *sicilienne* 'Merci, jeunes amies', and Henri's *mélodie* 'La brise souffle au loin') in which the plot is barely advanced but local colour is richly explored; the last act of *Aroldo* seems as much concerned with its startling new ambience as with the dénouement of the plot. What is more, several of the operas take on a particular colour intimately associated with its setting – the sea images of *Simon Boccanegra* and the exotic Iberian character of *Don Carlos*. Again, the climax comes in the exoticism of *Aida*, arguably the first Italian opera in which depiction of geographical location becomes an essential aspect of the musical atmosphere. This added dimension is intimately bound up with Verdi's increasingly sophisticated use of the orchestra. This period saw the rise of more disciplined, conductor-led orchestras in Italy and, particularly after his experience with the young Angelo

Ex.3 *Aida*, Act 4
Lyric prototype: a_2

['Farewell, earth; farewell valley of tears, dream of joy that vanished in sorrow. Heaven opens to us, and our wandering spirits to the beams of eternal day.']

Mariani at the première of *Aroldo*, Verdi was quick to exploit the opportunities this development provided for more complex instrumental effects. By the time of *Aida*, he was capable of setting up a classic 'nature' scene such as the prelude to Act 3, in which the elements of harmony,

9. Carlos draws his sword on Philip II (Act 3 scene ii) in the original production of Verdi's 'Don Carlos', Paris Opéra (Salle Le Peletier), 11 March 1867, with sets by Charles-Antoine Cambon and Joseph Thierry, and costumes by Alfred Albert: engraving by Charles Maurand after Alphonse de Neuville from 'L'univers illustré' (1867)

Ex.4 *Don Carlos*, Act 4

['Death has its attractions, oh my Carlos, for one who dies for you.']

melody and rhythm are all subsumed under a mantle of evocative orchestral colour.

(vi) Influence. One might assume that the primary influences on the young Verdi, namely his Italian predecessors, would now have faded; and clearly his new musical style was very different from anything in Donizetti or Bellini. However, this period offers some striking 'reminiscences': the opening bars of the orchestral introduction to Ulrica's 'Re dell'abisso (*Un ballo in maschera* Act 1) is virtually identical to that of Essex's 'prison' scene in *Roberto Devereux* Act 2; *La favorite* and *La forza del destino* share several ecclesiastical effects; and the famous triumphal scene in *Aida* is anticipated by a similar moment in *Poliuto*. These similarities (and there are others) are probably less acts of deliberate homage than evidence that Verdi was still ready to draw on the lingua franca of Ottocento opera, in particular when 'characteristic' effects were called for, as in all these cases. Rather different, though, is an aria such as Leonora's 'Pace, pace, mio Dio!' from *La forza del destino* Act 4, which sounds like a distant homage to Bellini, whose 'long, long, long melodies' Verdi had so admired but found antithetical to his rhythmically direct early manner. He could now on occasions achieve Bellinian length and, perhaps more significantly, enrich the vocal line with those declamatory asides and harmonic shifts for which Bellini was so justly famous.

However, the most important new influences came from France, in particular from Meyerbeer, the acknowledged master of the grand Parisian manner. This debt is most obvious in *Les vêpres siciliennes*, Verdi's attempt to meet Meyerbeer on his own ground, which shows a tendency towards the German composer's 'musical prose' in a lengthening and fragmenting of melodic lines. On the other hand, this tendency can also be seen in the Italian

operas, *endecasillabi* and other lengthy verse lines becoming more common in lyrical numbers; and there the Meyerbeerian tone is harder to locate. Undoubtedly the new level of orchestral detail was in part inspired by Parisian models, although even at his most elaborate Verdi never attempted those minute nuances of detail for which Meyerbeer was so famous. Nor was grand opera the only reference. *Un ballo in maschera* demonstrates that Verdi also took a lively interest in the *opéra comique* tradition, and found ways of using this very different style as a foil for his more serious inspirations.

(vii) Individual operas. Verdi's first creative period was earlier characterized as striking a balance, sometimes precarious, between conservatism in formal matters and a continual desire to experiment with dramatic types. The same could be said of this period, although with changed emphasis. Formal continuities certainly remain, but the manner in which each opera strikes new ground is more thoroughgoing, biting deeper into the dramatic and musical fabric and embracing further aspects of style. Verdi's operas certainly had 'individuality' in the 1840s, but they were also part of a close-knit family; now each work creates its own world, forming its own terms of communicative reference with the audience.

In many ways the first opera, *Les vêpres siciliennes*, constitutes the most the radical break with the past, being difficult to compare with any of the earlier operas. It was verging on a pastiche experiment for Verdi, an attempt to write a different kind of opera, one that would compete in the arena of Parisian grand opera. This entailed aspects as large as the five-act structure typical of the genre, with a corresponding weakening of concentration on individuals; but it also engaged stylistic traits as basic as adaptation to French prose rhythms – not only in recitative but in lyric forms, where the relative weakness of French accentuation encouraged Meyerbeerian diffuseness, a slackening of the characteristic rhythmic incisiveness of Verdi's early manner. There were of course continuities, not least in moments of individual contemplation such as Montfort's 'Au sein de la puissance', in which Verdi's earlier experiments with French lyric form are powerfully wedded to the arioso style of his most famous baritone protagonists.

With the next opera, *Simon Boccanegra*, we find yet another radical departure, both from *Vêpres* and the last Italian opera, *La traviata*. There is little trace of the Gallic mode, whether the salon-like one of *Traviata* or the more grandiose explorations of *Vêpres*, but instead an exploration of the gloomy side of the Italian tradition. This is above all striking in the cast-list: there are no secondary female roles, but a preponderance of low male voices. Most important, however, after the lyricism of *La traviata* and the extended 'musical prose' of *Vêpres*, *Boccanegra* is characterized by an extreme economy of vocal writing, with the declamatory mode more prominent than ever before. This is most obvious in the music of the baritone protagonist: Boccanegra could be compared to Rigoletto in having no solo arias, instead expressing his inner thoughts through declamatory ariosos; but Rigoletto was depicted thus to emphasize his 'otherness', surrounded as he is by the lyricism of Gilda and the Duke. Boccanegra's spare language is, on the other hand, the standard discourse of the opera, to which the secondary male characters so important to the opera's atmosphere all tend.

After the interlude of *Aroldo* comes another volte-face. If *Simon Boccanegra* is characterized by a single-mindedness of tone and purpose, *Un ballo in maschera* is a masterpiece of variety, of the blending of stylistic elements. What is more, after Verdi's experiment with a 'pure' version of French grand opera in *Les vêpres siciliennes*, in *Ballo* the gestures are predominantly towards the lighter side of French opera, in particular the *opéra comique* of Auber and his contemporaries. The juxtaposition of this style with a newly intense, interior version of Italian serious opera is extremely bold, particularly in sections such as the finales of Act 1 or Act 2 (the so-called 'laughing' chorus), in both of which the styles meet head on with little mediation. Just as important, this new stylistic breadth brings with it a corresponding balance of musical personalities. At the outer limits lie two extremes: Oscar is throughout cast in an unambiguously Gallic mould of light comedy; Ulrica's musical personality is drawn from the darkest and most austere vocabulary of Italian melodrama. Between these extremes lie Renato and Amelia, characters cast in the Italian style, fixed in their emotional range, but from time to time inflected by the influence of their surroundings. And at the centre is Riccardo, who freely partakes of both worlds, and who mediates between them so movingly and persuasively. In this sense the clash of styles in *Ballo* is intimately written onto the key confrontations of the drama.

Like *Ballo*, *La forza del destino* attempts boldly to incorporate a variety of styles, but the mixture is far less controlled, with little of the previous opera's balance. The famously episodic plot and extended geographical and temporal span is matched by an extraordinary range of operatic manners: frankly post-Rossinian *buffa* with Fra Melitone; frankly *opéra comique* with Preziosilla; Meyerbeerian scenes of religious grandeur; and at the centre a classic love-triangle in the best Italian tradition. The opera is undoubtedly Verdi's most daring attempt at *mosaic* drama, and is, unusually for Verdi, fuelled by an abstract idea – the 'fate' (*destino*) of the title – as much as by the progress of individual characters. In spite of the liberal recurring themes, we will look in vain for the unifying colours of a *Rigoletto* or *Il trovatore*, or even the patterned juxtaposition of *Un ballo in maschera*. It is surely significant that when Verdi decided to revise the opera in the late 1860s he rearranged certain sequences in the action, even – in Act 3 – transferring passages from one part of the action to another. And the revision's radical alteration of the dénouement, replacing the *fatalità* of the original melodramatic ending with a trio of religious consolation, is, rather than a clarification of the drama, merely the replacing of one possible stylistic strand with another.

Don Carlos, Verdi's second and final attempt to write a French grand opera, both tends towards the *mosaic* and has a famously unstable text, the work changing shape significantly during its rehearsal period and then over several years after its first performance. After the experiences of the previous three Italian operas, Verdi was more secure in his handling of the large French canvas, particularly in matching his lyrical gifts to the French language. However, difficulties remained in establishing the comparative weight of the various principal characters. Philip and Eboli are perhaps the most successful and well-rounded portraits, though arguably Elisabeth achieves her proper sense of importance by means of her

magnificent fifth-act aria and duet. Posa's musical physiognomy is strangely old-fashioned: his music almost all dates from the earliest layers of the score, and even then recalls the Verdi of the early 1850s (or 1840s). On the other hand, it could be argued that this sense of anachronism is in keeping with Posa's dramatic position – as a nostalgic look at youthful days of action within the context of sterner political realities. With Carlos, however, few would deny an unsolved problem: his musical portrait never seems to find a centre, a true nexus of expression such as each of the other principals achieves. It is perhaps an indication of our changing views and tastes that, in spite of these difficulties, *Don Carlos* has become one of the best-loved and most respected of Verdi's operas.

Lastly there was yet another change, again in a surprising direction: the outward structure of *Aida* is remarkably conservative. We return to the classic love triangle of Verdi's first manner and – just as important – a return to earlier ideas of musical characterization. In common with the characters of *Il trovatore* and many earlier works, the principal roles in *Aida* – with the partial exception of Amneris – hardly develop, tending to remain within their conventional vocal personalities as the plot moves their emotions hither and thither. As mentioned earlier, *Aida* also shows a consistent attempt to renew (rather than discard) the standard forms of Ottocento opera, with very few essays into the 'musical prose' found elsewhere. On the other hand, there is one important aspect in which *Aida* remains the most radical and 'modern' of Verdi's scores to date: in its use of local colour. *Aida*, constantly alluding to its ambience in harmony and instrumentation, is an important indication of the influence local colour would have over *fin-de-siècle* opera, and an object lesson in the delicacy and control with which this colour could be applied to the standard forms and expressive conventions of Italian opera.

(viii) Reception and politics. As the 1850s unfolded, Verdi's pre-eminence in Italian music, and his international reputation, became ever more secure; although many of the early operas had been forgotten, *Rigoletto*, *Il trovatore* and *La traviata* quickly became cornerstones of the newly-emerging Italian operatic repertory. This did not, however, stop a continuation of the composer's occasional clashes with the operatic censor; indeed, the revolution-shy 1850s created more obstacles than ever. *Les vêpres siciliennes* caused continual difficulties in Italy, and was often performed in a bowdlerized version (as *Giovanna de Guzman*). More troublesome still was *Un ballo in maschera*. As soon as a synopsis reached the Neapolitan censors, it became clear that the assassination of a head of state would not be permitted, and even when this aspect was altered, there was still the problem of Amelia's adultery (the censor suggested she should become a sister rather than a wife of Riccardo). Negotiations broke down, and the opera eventually saw its première at Rome's Teatro Apollo, even then not without a change in locale being enforced.

Despite these irritations, each new Verdi opera generated enormous interest, both in Italy and in the international press. By the mid 1860s, however, it gradually became clear that Verdi's more recent works were not duplicating his successes of the early 1850s. Neither *Les vêpres siciliennes* nor *Don Carlos* established themselves at the Opéra, and both had difficulties in transplanting to the Italian stage. *Simon Boccanegra* was poorly received and *Un ballo in maschera* and *La forza del destino* made their way comparatively slowly. Part of the problem undoubtedly lay in the seeming conservatism of Verdi's new creations. Although operas such as *Il trovatore* had quickly attained 'classic' status, a new generation of Italians was emerging, with young artistic revolutionaries such as Arrigo Boito calling for an end to the insular, 'formulaic' musical dramas of the past, and in 1864 announcing that Meyerbeer had 'caused Italian operas to collapse by the hundreds like the bricks of the walls of Jericho'. Italian intellectuals began to read Wagner, and Italian theatres began to open their doors to French (and later to German) operas.

The paradox of this uncertain reaction to Verdi's 'new manner' was that it went hand-in-hand with his institution as a national figure beyond the operatic world. In 1859, his name was briefly taken up as an acrostic message of Italian nationalistic aspirations ('Viva VERDI' standing for 'Viva *V*ittorio *E*manuele *R*e *D*'*I*talia') and by the late 1860s certain pieces of early Verdi had begun to be canonized through supposed association with the revolutionary struggles of the 1840s. This was particularly true of the chorus 'Va pensiero', whose rapidly achieved iconic status was encouraged by the composer, who reserved for it a central, revelatory role in the 'official' story of his early career he allowed to be disseminated. Such myth-making was perhaps made more urgent by the economic collapses and social tensions of the newly-formed Italian state, engendering as it did a nostalgia for a past age in which Italians had been united against a 'foreign' enemy.

In the face of these momentous cultural and political developments, and despite periodic bursts of professional and social activity, Verdi chose strategic withdrawal: physically behind the walls of Sant'Agata; mentally into an image of himself as a rough, untutored man of the soil, the peasant from Roncole, the self-made man, an 'authentic' Italian willing to set himself against the tide of cosmopolitan sophistication he saw washing around him. It was overwhelmingly this image that he offered to those interviewers who now began to pester him for his pronouncements on cultural matters and for biographical tidbits; the resulting self-portrait was one he sedulously cultivated (along with his farm lands) for the rest of his long life.

7. INTERREGNUM: THE 1870S AND THE 'REQUIEM' (1874). After *Aida* in 1871 there was to be no Verdian operatic première for 16 years. The creative stagnation was not, of course, quite so complete. In 1873, while supervising performances of *Aida* at the Teatro S Carlo in Naples, Verdi wrote and had privately performed the String Quartet in E minor. And in 1874 came the *Messa da Requiem*, composed in honour of Alessandro Manzoni. But the fact remains that the 1870s and early 80s, years in which we might imagine Verdi at the height of his creative powers, saw no new operas. The reasons for this silence are of course complex: his increasing financial security no longer made work a necessity; more of his energies went into the development of substantial land holdings, and – increasingly – into various charitable causes. He also spent considerable time supervising and directing performances of *Aida* and the *Requiem*, in 1875 undertaking a mini-European tour (Paris, London, Vienna) with the latter work. At the same time, his personal life underwent an upheaval brought about through a continuing public scandal that caused much private

anguish between him and his partner. The reason was his relationship with the soprano Teresa Stolz, who had been the first Leonora in the 1869 version of *La forza del destino*, the first Aida in the Milanese première of that opera (1872), and for whom Verdi wrote the soprano solo in the *Requiem*. Matters between her, Strepponi and Verdi came to a crisis in 1876 but eventually resolved with the status quo intact, Stolz remaining a close friend of Verdi, perhaps also of Strepponi, for the rest of their lives.

But surely the most serious obstacle to continued creative activity was an increasing sense of disenchantment with the direction of newly-cosmopolitan Italy. Early in the 1870s Verdi was asked for advice about a revised curriculum for the reformed Italian conservatories. His suggestions were austere in the extreme: students should submit to daily doses of fugue and study only the old Italian masters; budding composers 'must attend *few performances* of modern operas, and avoid becoming fascinated either by their many beauties of harmony and orchestration or by the *diminished 7th* chord'. On many other occasions he voiced his discontent at the cosmopolitan direction Italian music was taking, in particular its newest 'fascination' for the Germanic and 'symphonic'. It is easy to see how such a reaction further fuelled the reluctance to compose which Verdi had already shown in the 1860s. It would take all the ingenuity of his closest friends to coax him from this self-imposed retirement.

The 1870s did, though, produce the *Requiem*, and that is no small achievement. As already mentioned, the origins of the piece began in 1868 with Verdi's suggestion for a composite *Requiem* in honour of Rossini, to be written by 'the most distinguished Italian composers'. This was duly completed but plans to perform the piece came to nothing; in April 1873 Verdi's contribution, the 'Libera me' movement, was returned to him. It seems likely that about that time he decided to write an entire *Requiem* himself, a decision perhaps precipitated, perhaps strengthened, by the death in May of Alessandro Manzoni, to whom the work was dedicated.

In the circumstances, it is probably inevitable that the theatrical nature of the *Requiem* should be a principal matter for debate: Hans von Bülow famously referred to it as an 'Oper in Kirchengewande' (opera in ecclesiastical dress) even before its first performance. Such sentiments can only be strengthened by the knowledge that a duet for Carlos and Philip, discarded from *Don Carlos* during rehearsals in Paris, formed the basis of the 'Lacrymosa' section of the Dies irae. More operatic still is the manner in which the soloists occasionally take on what can only be called 'personalities'. This is most noticeable in the final 'Libera me', in which the soprano, isolated from the other soloists, seems in active dialogue with both the chorus and the orchestra, for all the world like a beleaguered heroine trying finally to make sense of the world in which she has been cast.

On the other hand we should not exaggerate. The main theme of the 'Lacrymosa' may have originated in an opera, but it develops in a markedly different fashion, without the vocal contrasts that almost invariably fuel Verdian musical drama. In fact, none of the ensemble scenes or choruses (of which there is an unoperatic preponderance) remotely resembles the texture of their operatic equivalents, in particular by their frequent employment of contrapuntal writing and by the relative lack of differentiation between individuals. What is more, the levels of purely musical connection (particularly in motivic and harmonic gestures) are far greater than Verdi would have deemed appropriate in a drama, where contrast and tension between characters is so important a part of the effect.

But the presence of that counterpoint may perhaps recall those admonitions to future conservatory pupils, to study fugue rather than 'modern [i.e. foreign or foreign-influenced] operas', which might in turn recall that Verdi's original idea for a composite Requiem was as a celebration of Italian art and artists during a period he thought of as in cultural crisis: as he said in his first letter about the project, 'I would like no foreign hand, no hand alien to art, no matter how powerful, to lend his assistance. In this case I would withdraw at once from the association'. In that sense, the decision to write a Requiem, and thus to celebrate through counterpoint a glorious era in Italy's musical past, makes the work as 'political' as any of the composer's operas.

8. Life, 1879–1901. In June 1879 Giulio Ricordi and Arrigo Boito mentioned to Verdi the possibility of his composing a version of Shakespeare's *Othello*, surely a canny choice given Verdi's lifelong veneration for the English playwright, and his attempts after *Macbeth* to tackle further Shakespearean topics, notably *King Lear*. Verdi showed cautious enthusiasm for the new project, and by the end of the year Boito had produced a draft libretto, one full of ingenious new rhythmic devices but with an extremely firm dramatic thread. After almost ten years without an operatic project, Verdi again started to create musical drama.

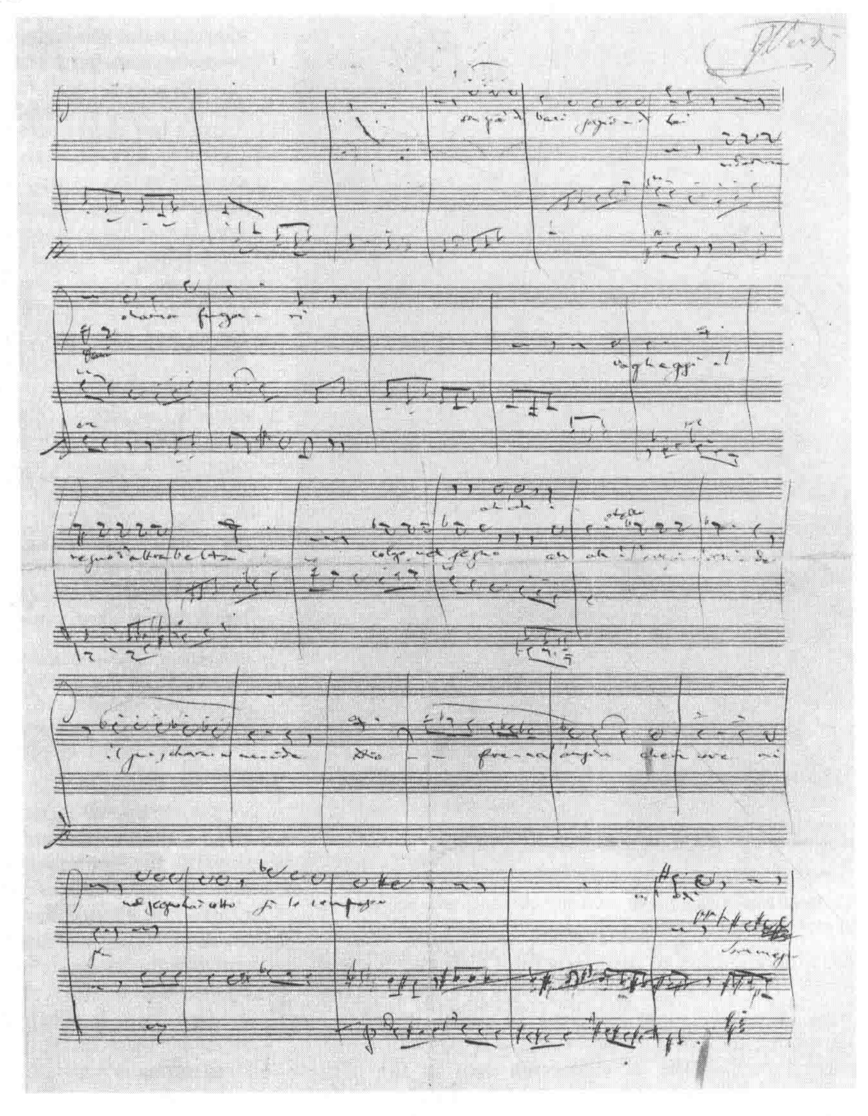
The project was long in the making. First came two other tasks, extensive revisions to *Simon Boccanegra* (effected with the help of Boito) and to *Don Carlos*, both of which can be seen in retrospect as trial runs for the new type of opera Verdi felt he must create in Italy's new artistic climate. After many hesitations and interruptions, *Otello* was finally performed at La Scala in February 1887. Some two years later, Boito suggested a further opera largely based on Shakespeare's *The Merry Wives of Windsor*. Verdi was immediately enthusiastic about the draft scenario Boito concocted, made relatively few structural suggestions, and by August 1889 announced that he was writing a comic fugue (quite possibly the fugue that ends *Falstaff*). Composer and librettist worked closely together during the winter 1889–90, and by the spring of 1890 the libretto of *Falstaff* was complete. As with *Otello*, composing the opera took a considerable time, or rather involved short bursts of activity interspersed with long fallow periods. The opera was first performed, again at La Scala, in February 1893. These years also saw the appearance of various sacred vocal pieces, some of which were later collected under the title *Quattro pezzi sacri*.

Verdi continued to divide his life between Milan, Genoa and Sant'Agata, where he oversaw his lands and added to his property. In his last years, he devoted a considerable amount of money and energy to two philanthropic projects: the building of a hospital at Villanova sull'Arda Piacenza and the founding of a home for retired musicians, the Casa di Riposo, in Milan. In November 1897 Strepponi died at Sant'Agata. In December 1900 Verdi made arrangements for his youthful compositions (including, one assumes, those 'marches for band by the hundred')

10. Verdi (seated) in the garden of Sant'Agata with (from left to right) Giulio Ricordi, the artist Leopoldo Metlicovitz and Giuseppina Strepponi

to be burnt after his death, and left Sant'Agata for Milan. On 21 January he suffered a stroke from which he died on 27 January. He was buried next to his wife in Milan's Cimitero Monumentale; a month later, amid national mourning, their bodies were moved to the Casa di Riposo. Before the procession left the Cimitero, Arturo Toscanini conducted a massed choir. They sang, of course, 'Va pensiero'.

9. THE LAST STYLE: 'OTELLO' (1887) AND 'FALSTAFF' (1893).



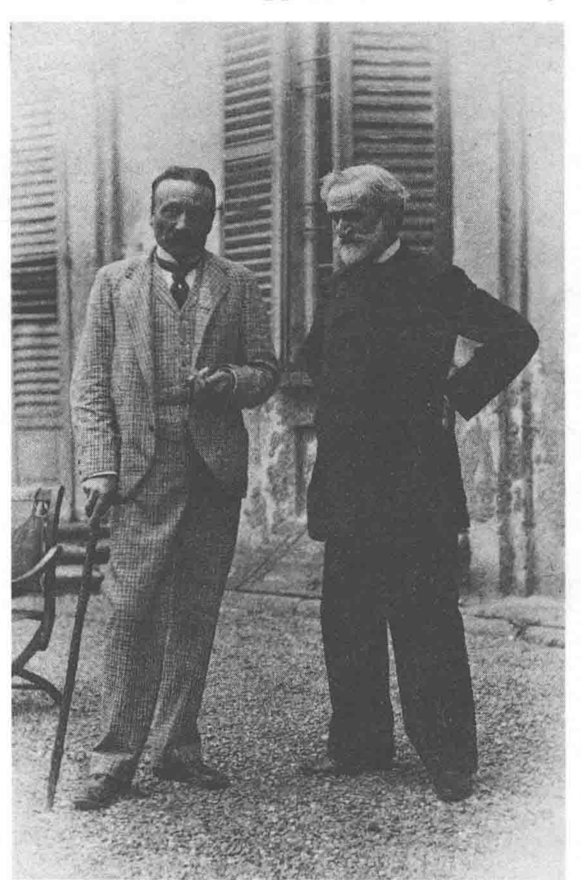
(i) An intangible divide. In spite of the chronological gap, critics have tended to see Verdi's last two operas as a logical continuation (and almost always as the 'culmination') of his previous work, thus stressing stylistic continuity across his entire career. There is much to be said for such an approach. Although Verdi was now firmly established as an international figure who could – and did – dictate his own terms, he continued to compose in the old manner: from sketches to continuity draft to 'skeleton score' to full orchestration. He also continued to pay careful attention to the singers at his disposal, and was willing to adjust passages to accommodate them: the Act 2 quartet in *Otello* was transposed down a half-step in the passage from continuity draft to autograph, clearly to ease its tessitura; and the role of Quickly in *Falstaff* was amplified at a late stage after Verdi had heard (and approved of) the singer destined to create the role. Verdi also continued his unshakable allegiance to the grandest of the traditional Ottocento set pieces, the Largo concertato, examples of which occur in the revised *Boccanegra*, *Otello* and *Falstaff*.

However, the strain and difficulty with which a suitable concertato was eventually accommodated into *Otello* indicates a fundamental change in Verdian dramaturgy. At some time during the fallow period between *Aida* and *Otello* we might hazard that Verdi passed an intangible divide, and now saw the basis of his musical drama residing in continuous 'action' rather than in a patterned juxtaposition of 'action' and 'reflection'. (It was the difficulty of embedding comprehensible 'action' into the Act 3 concertato of *Otello* that continued to pose problems, even causing Verdi to revise the number for the opera's Parisian première in 1894.) The long Act 2 duet between Otello and Iago is a good example of how the new hierarchy worked. The duet itself cannot usefully be parsed as a set piece in contrasting 'movements'; and the true set pieces – the Credo, Homage Chorus, Quartet and *Racconto* – are embedded within the larger structure, acting as interruptions rather than points of arrival.

The dynamics of this change, this crossing of the 'intangible divide', are intimately linked to Verdi's relationship with his last librettist.

(ii) Verdi and Boito. It seemed at first an unlikely collaboration, though it started smoothly enough in 1862, when Verdi and Boito worked together briefly on the *Inno delle nazioni* for the Great London Exhibition. But in the cultural context of the 1860s a more likely exchange occurred a year later. Boito, a leading figure in the *scapigliatura*, a nascent Italian branch of the bohemian movement, improvised an ode 'All'arte italiana' that described the 'altar' of Italian art as 'defiled like the wall of a brothel'. Not surprisingly, Verdi took this personally. Perhaps, though, the acrimony Boito's comment generated holds a key, in that one of the most significant aspects of the Verdi-Boito collaboration was precisely that they came from different generations, and thus had sharply divergent attitudes to the Italian operatic tradition. That the collaboration happened at all is in part thanks to the patient and sensitive manoeuvering of Verdi's publisher Giulio Ricordi; but it also reflects the fact that Boito had mellowed by the late 1870s. His magnum opus, the opera *Mefistofele*, had failed disastrously at La Scala in 1868, and when he restaged it seven years later, he toned down many of its most radical aspects, replacing them with more traditional operatic solutions. Here was rapprochement of a kind.

But the generational gap remained, and it is hardly surprising that the early days of work on *Otello* were punctuated by some remarkably basic differences of opinion about the structure of the opera. In Verdi's first



11. Autograph sketch for the Cassio-Iago-Otello trio from Act 3 of Verdi's 'Otello', first performed 1887 (US-NYpm)

letter commenting on Boito's draft libretto, the composer suggested that the 'dramatic element' was missing after the Act 3 concertato in which all on stage react to Otello's striking of Desdemona. His solution was a radical departure from Shakespeare in which, true to the theatrical conventions of his past, an external event (a resurgence of the warlike Turks) would lead the musical drama onwards. Boito strongly disagreed: for him *Otello* was above all a modern, claustrophobic, psychological drama, one that took place essentially within the psyche, in the realm Wagner liked to call that of the 'inner drama', a place of dense symbolic meaning in which characters are trapped, deprived of autonomy. To have Otello heroically rally his troops would have shattered the spell. But what is most striking about the difference of opinion is that, as on many other occasions, Verdi – earlier a veritable tyrant in his dealings with librettists – gave way to Boito, trusting the younger man's perception of what modern drama needed. This trust obliged him to do nothing less than re-invent his operatic language, to find a newly flexible mode of musical expression.

(iii) Technical features. This need for the music to react minutely and spontaneously to constant changes typical of spoken dialogue brought about a loosening of the traditional links between prosody and music. Boito was particularly adept at constructing verses that, although obeying the rules of Italian prosody, could simultaneously be read in a variety of verse metres, thus offering something like the flexibility of a prose libretto. There was also an inevitable decrease in periodic structures, and when aspects of the 'lyric prototype' can be found, they are usually placed in a dynamic harmonic context that obscures their origin in Verdi's earlier style. Vestiges of the old Ottocento forms are – with the exception of the Largo concertato, which continued even into Puccini's last works – equally hard to locate. Some have found shards of the old four-movement structure in the Act 1 love duet between Otello and Desdemona; but the divergences and anomalies are apt to make such demonstrations of continuity a little desperate.

On rare occasions, Verdi may have sought to replace these losses with purely musical structures: the sonata-form subtext of the opening scene in *Falstaff*, or its closing comic fugue, are likely examples, although both forms are, as it were, placed in inverted commas, ironically

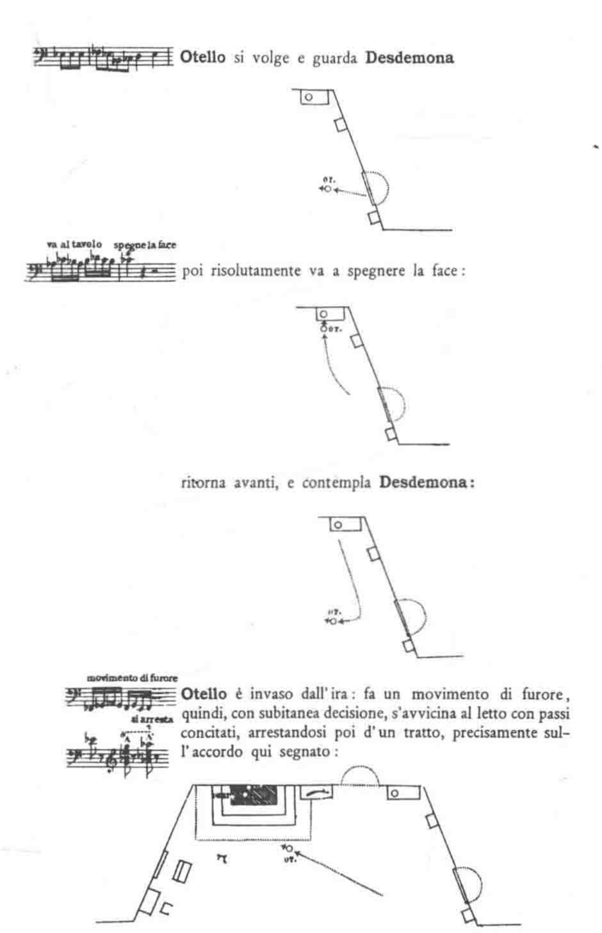
12. Verdi with Arrigo Boito

drawing attention to their structural difference from the norm. The necessary level of purely musical coherence was, however, often supplied by local increases in harmonic, motivic and orchestral activity, all of which carried further the developments seen in the period between *Les vêpres siciliennes* and *Aida*. Passages such as the Act 3 orchestral prelude to the revised *Don Carlos* (1884) show how a short motivic fragment is now sufficient to construct large spans of music, so extensive is Verdi's control over orchestral nuance and chromatic detail.

Clearly, recurring motivic and harmonic aspects are sometimes found on a larger level. The so-called 'bacio' theme in *Otello*, which first occurs near the end of the Act 1 love duet and then appears twice in the final scene of the opera, has a function difficult to compare with previous recurring themes: unlike those in *Aida*, which fade away as the drama reaches its climax, the final statement of the 'bacio' theme seems like a musical summing-up of the dénouement, thus having more in common with famous Puccinian endings, in spite of its restraint. More than this, the 'bacio' theme's harmonic character, with its typical late Verdian device of a pre-dominant pause on a tonally distant 6-4 chord, also casts an influence over earlier confrontations between Otello and Desdemona. Other motifs can approach a level of Wagnerian density over shorter spans: the Act 3 prelude to *Don Carlos* has already been mentioned; the 'jealousy' motif that winds through the prelude to *Otello* Act 3, and the 'dalle due alle tre' motif that underpins Ford's famous monologue in Act 2 of *Falstaff*, are further instances.

(iv) Meanings for the last works. A common view of Verdi's last works sees them as divorced from everyday concerns, a trope often used in discussing an artist's final creative stage: as one commentator put it, *Otello* and *Falstaff* are 'the old man's toys'. The image chimes well with those famous pictures of Verdi in the 1880s and 90s: the felt hat, the simple frock coat, the all-knowing, gentle smile. So far as *Falstaff* is concerned, Verdi himself encouraged such interpretations, frequently reiterating in letters and interviews that 'in writing *Falstaff* I haven't thought about either theatres or singers. I have written for myself and my own pleasure'. It may be comforting to nurture this picture of serene old age, and it is indeed true that neither of Verdi's last operas much resembles any other work, whether by Verdi or by anyone else. However, there is much evidence suggesting that the composer was far from serene about the political and artistic direction his country was taking, and that the last operas in some ways reflect this dissatisfaction.

Perhaps a key to *Otello* in this regard is offered in a late letter by Verdi himself:



> Desdemona is a part in which the thread, the melodic line, never ceases from the first note to the last. Just as Jago has only to declaim and laugh mockingly, and just as Otello, now the warrior, now the passionate lover, now crushed to the point of baseness, now ferocious like a savage, must sing and shout, so Desdemona must always, always sing.

Taking up the terms of this interpretation, we might suggest that Verdi managed to channel Boito's tendency towards the symbolic and the interior to his own ends, making the conflicts between the main characters in *Otello* into a story about the violent upheavals of Italian *fin-de-siècle* musical drama. The opera's principals vocally embody the violently conflicting demands of the lyrical and the declamatory, the old style and the new. Iago, the modern man, is constantly in the declamatory mode – when he sings beautifully, it is merely to deceive; and Desdemona is a symbol of that lost time when bel canto was at the centre of theatrical communication. Otello, like Verdi himself, is caught between the new and the old; but, despite or even because of this, the composer managed to renew himself, perhaps in part by symbolically recreating his creative struggle within the very fabric of the opera's central concerns.

Falstaff, an opera that begins with a mock sonata form and ends with a fugue, is in one sense easier to decode, gesturing as it so vividly does to those admonitions for young Italian composers to study counterpoint and avoid the 'symphonic' at all costs. Needless to say, the further we move from large formal units to more detailed technical observations, the less easy it is to fashion such neat parallels. For example, *Falstaff* is more highly chromatic than any other Verdi opera, but equally it is obsessed by cadence, forever punctuated by unequivocal gestures of closure. Related to this, but on a larger level, is the contrast between the work's enormous variety of expression and looseness of form on the one hand, and on the other its many periods of massive closure, its huge orchestral climaxes that seem to overwhelm what precedes them. Perhaps these matters can cautiously be related to Verdi's complex reaction to musical modernity, to his desire to progress from his own past, harmonically and

formally, but also his need aggressively to counter what he saw as the disastrously dispersive tendencies of his younger contemporaries.

Whatever the case, the story does not quite end with *Falstaff*. During this last period, Verdi wrote a number of religious choral works, some of which were collected under the title *Quattro pezzi sacri*. It is certainly no accident that in these pieces Verdi made gestures to two figures from the Italian past that he considered central to the cultural unity of the country. Most obviously there are texts by Dante. But in pieces such as the so-called 'Laudi alla Vergine Maria', the musical gestures – both in contrapuntal treatment and word painting – are to Palestrina, the composer whose style should in Verdi's view have remained an essential point of departure for Italian musical art. This last, 'antique' style might well suggest an old man's retreat from the world; but on another level it speaks yet again of Verdi's passionate concern for the national traditions into which he had been born, and with which he had so constantly engaged.

13. Page from the disposizione scenica (production book) for the original production of Verdi's 'Otello' showing part of the instrumental prelude to the final scene of Act 4: the music examples are included owing to the absence of sung text. Phrase 1: Otello turns and looks at Desdemona. Phrase 2: he goes to the table and puts out the torch; he returns to front stage and contemplates Desdemona. Phrase 3: consumed by anger, Otello makes a furious gesture, after which with sudden decision, he approaches the bed with agitated steps; he stops suddenly, precisely on the chord indicated *(see also* OPERA, *fig.22)*

14. Costume designs by Alfredo Edel for Desdemona (Romilda Pantaleoni) and Otello (Francesco Tamagno) in Act 4 of Verdi's 'Otello', La Scala, Milan, 5 February 1887

10. Scholarship, dissemination, Verdi in the 20th century.

(i) Scholarship and editions. Although there continue to be pockets of resistance, it is rare these days to meet with easy dismissals of Verdi's art. One reflection of this new standing is that scholarly attention to his music is now fully respectable. During Verdi's lifetime there were of course many valuable critiques of his work, almost all initially appearing in periodicals. The most influential has been Abramo Basevi's *Studio sulle opere di Giuseppe Verdi* (1859), which deals in technical detail that, although unusual for the period, chimed well with the analytical concerns of our recent past. 19th-century biographies of Verdi were all of the 'anecdotal' kind, the most influential being Arthur Pougin's, which in its Italian translation contained annotations by 'Folchetto' (the journalist Jacopo Caponi) that included a – highly unreliable – 'autobiographical sketch' supposedly dictated by the composer himself.

The first 60 years of our century saw an indispensable series of epistolary and biographical publications, among them the *Copialettere* of 1913 and volumes by Gatti, Luzio, Abbiati and Walker. Since the 1960s the most important stimulus has come from the Istituto Nazionale di Studi Verdiani in Parma, which has assembled a considerable archive and has published a vast amount of biographical and critical writing. In the 1970s, an American Institute for Verdi Studies was founded at New York University. Much of this activity was brought to a larger audience, and magnificently synthesized, by Julian Budden's three-volume commentary on the operas; the most recent full-scale biography is by Mary Jane Phillips-Matz. The Istituto Nazionale has inaugurated a multi-volume edition of Verdi's correspondence.

The librettos of almost all Verdi's operas were first sold in printed form to those who attended performances, and were usually custom made, containing a cast-list, details of the orchestral and other executants, and the exact literary text performed; towards the end of the 19th century 'generic' librettos (not tied to a particular performance) began to replace these valuable documents. No critical edition of Verdi's librettos exists, and the most satisfactory editions remain those published by Ricordi,

15. *Cover of 'Verdi e il Falstaff' (1893), a special issue of 'L'illustrazione italiana': illustration by Giuseppe d'Amato*

in particular the (incomplete) series issued recently under the editorship of E. Rescigno. Most modern printings of the texts obscure important information by ignoring the lineation, verse forms and indentations of the original. *Tutti i libretti di Verdi* (ed. L. Baldacci, Milan, 1975), which contains Italian librettos of all the operas with the exception of *Stiffelio*, has some useful facsimile pages and other illustrations, but also ignores details of the verse layout.

Vocal scores remain the primary means by which the musical text of Verdi's operas is disseminated. First editions usually appeared near the time of the first performance (an exception is that of *Un giorno di regno*, which appeared *c*1845). Most were first published by Ricordi, the exceptions being *Attila*, *I masnadieri* and *Il corsaro* (by Lucca); *Stiffelio* (by Blanchet) and the French operas *Jérusalem*, *Les vêpres siciliennes* and *Don Carlos* (by the Bureau Central de la Musique/Escudier). Vocal scores of the more popular operas were translated into many languages as Verdi's international reputation grew. Another enormously important avenue of dissemination were the numerous published arrangements of the operas (for piano, piano duet, many solo instruments, brass band, etc.) which brought Verdi's music into new domestic and public spaces during the 19th century. This considerable industry was gradually replaced by the gramophone in the 20th century.

Performance material (parts and full scores) at first circulated in manuscript copies. During the latter half of the 19th century Ricordi began to print full scores and (sometimes) parts. The first printed full score (*La traviata*) appeared in about 1855, and later in the century or during the first half of this century all the operas except *Oberto*, *Un giorno di regno*, *Alzira*, *I masnadieri*, *Jérusalem*, *Il corsaro* and *Stiffelio* appeared in this format. These editions were, however, for hire only, although some of them have subsequently appeared for sale in 'pirated' editions. The first printed full score on public sale was Del Monaco's *La traviata* (Naples, *c*1882). In 1913–14, Ricordi published 'study scores' of *Rigoletto*, *Il trovatore*, *La traviata*, *Un ballo in maschera*, *Aida*, *Otello* and *Falstaff*; in the 1980s a study score of *La forza del destino* appeared. A complete critical edition of the composer's works is in progress, published jointly by the University of Chicago Press and Ricordi under the general editorship of Philip Gossett.

(ii) Reception and posthumous reputation. By the time Verdi wrote his last operas, he had become a national monument: the premières of *Otello* and *Falstaff* were cultural events of almost unprecedented importance, occasioning a flood of publicity all over Europe. Both works, inevitably in the circumstances, were heralded as brilliant successes, but – like so many of the operas after *La traviata* – neither established a place at the centre of the Italian repertory. The operatic times had changed and, in an era when Wagner and the Italian *veristi* were making the headlines, *Otello* and *Falstaff*, for all their 'modernity', were seen as *sui generis*, unsuitable for the common round of smaller theatres in particular.

So far as performances and purely musical reputation were concerned, the years around the turn of the century represented a low point in Verdi's fortunes. In the increasingly sophisticated, cosmopolitan atmosphere of *fin-de-siècle* Italy, it became commonplace to find Verdi's musical personality too simple and direct. Although *Rigoletto*, *Il trovatore* and *La traviata* remained the staple of smaller opera houses, they were rarely granted the prestige of important revivals. The situation was little different in other major European centres at the turn of the century. In both England and France, for example, a decisive shift away from Italian opera came in the wake of regular Wagner stagings in the 1880s and 90s. Nor did Verdi have much noticeable influence on younger generations of composers. The case of Puccini is instructive: although by his own admission an early experience of *Aida* was crucial to his development, Puccini's first operas show very few traces of the Verdian style, deriving predominantly from French models; the influence he struggled to overcome (we can see the struggle at its most intense in the second act of *Manon Lescaut*) was overwhelmingly that of Wagner.

Although there was some renewed attention to Verdi in his centenary year of 1913, the crucial change in his fortunes began in Weimar Republic Germany. This so-called 'Verdi Renaissance' is sometimes traced to the first production of Franz Werfel's version of *La forza del destino* (Dresden, 1926), or to the publication of Werfel's novel *Verdi: Roman der Oper* in 1924, but in fact the movement was far too widespread to be attributed to just one figure, with numerous restagings of 'forgotten' operas, a considerable periodical literature and several important monographs. As was recognized at the time, the 'return' to Verdi had much to do with an awareness that opera was in 'crisis' – that new works were not taking their place in the repertory – and also with a widespread reassessment (in some cases outright rejection) of the

Wagnerian aesthetic. In the latter guise, as noble antithesis to Wagner, Verdi was even taken up by the avant garde: some of the most innovative stagings of the period involved Verdi revivals and an arch modernist such as Stravinsky could praise his achievement and even pay him veiled homage in works such as *Oedipus Rex*.

By the 1930s the 'Renaissance' had spread, with revivals of 'forgotten' works springing up all over Europe and America. Appropriated by fascists and anti-fascists alike, Verdi's music managed to survive World War II relatively untarnished, as did his reputation as 'vate del risorgimento', the bard of Italy's achievement of statehood. In the 1950s and 60s his operas became the core repertory of the global opera industry, and since then the boom shows no signs of losing momentum. 'Forgotten' works continue to be revived, and today more Verdi operas are in the repertory than ever before. Verdi continues to inspire performers and audiences to fresh interpretations and renewed energies. It is now hard to imagine an operatic world in which they will cease to do so.

WORKS

Edition: *The Works of Giuseppe Verdi*, ed. P. Gossett and others (Chicago and Milan, 1983–) [V]

OPERAS

Genre and librettist (when not in square brackets) are as stated on the libretto of the first performance (except for 'I masnadieri', which the London libretto describes as a 'tragic opera' and 'Macbeth', 'Il corsaro', 'Stiffelio', 'La traviata', 'Simon Boccanegra' and 'Aroldo', in which the libretto gives no genre).

Title	*Genre, acts*	*Libretto*	*First performance; remarks*	*V; autograph*
Oberto, conte di San Bonifacio	dramma, 2	T. Solera, from A. Piazza's lib. *Rocester*	Milan, Scala, 17 Nov 1839	*I-Mr*
Un giorno di regno [Il finto Stanislao]	melodramma giocoso, 2	F. Romani, [? rev. Solera], from Romani's lib. for A. Gyrowetz's Il finto Stanislao (1818), after A.V. Pineu-Duval: *Le faux Stanislas* (play, 1808)	Milan, Scala, 5 Sept 1840; alternative title first used 1845	*Mr*
Nabucodonosor [Nabucco]	dramma lirico, 4 pts	Solera, after A. Anicet-Bourgeois and F. Cornu: *Nabuchodonosor* (play, 1836) and A. Cortesi: *Nabuccodonosor* (ballet, 1838)	Milan, Scala, 9 March 1842	1/iii; *Mr*
I Lombardi alla prima crociata	dramma lirico, 4	Solera, after T. Grossi (poem, 1826)	Milan, Scala, 11 Feb 1843	*Mr*
Ernani	dramma lirico, 4 pts	F.M. Piave, after V. Hugo: *Hernani* (play, 1830)	Venice, Fenice, 9 March 1844	1/v; *Mr*
I due Foscari	tragedia lirica, 3	Piave, after Byron: *The Two Foscari* (play, 1821)	Rome, Argentina, 3 Nov 1844	*Mr*
Giovanna d'Arco	dramma lirico, prol., 3	Solera, in part after F. von Schiller: *Die Jungfrau von Orleans* (play, 1801)	Milan, Scala, 15 Feb 1845	*Mr*
Alzira	tragedia lirica, prol., 2	S. Cammarano, after Voltaire: *Alzire, ou Les Américains* (play, 1736)	Naples, S Carlo, 12 Aug 1845	1/viii; *Mr*
Attila	dramma lirico, prol., 3	Solera [and Piave], after Z. Werner: *Attila, König der Hunnen* (play, 1808)	Venice, Fenice, 17 March 1846	*Gb-Lbl*
Macbeth	opera, 4	[Piave and A. Maffei], after W. Shakespeare (play, 1605–6)	Florence, Pergola, 14 March 1847	*I-Mr*
rev. version	opéra, 4	Piave, from 1847 lib.; Fr. trans. by C. Nuitter and A. Beaumont	Paris, Lyrique, 21 April 1865	*F-Pn* (part autograph)
I masnadieri	melodramma, 4 pts	[Maffei], after Schiller: *Die Räuber* (play, 1781)	London, Her Majesty's, 22 July 1847	*I-Mr*
Jérusalem	opéra, 4	A. Royer and G. Vaëz, from Solera's 1843 lib. *I Lombardi alla prima crociata*	Paris, Opéra, 26 Nov 1847	*F-Pn*
Il corsaro	opera, 3	Piave, after Byron: *The Corsair* (poem, 1814)	Trieste, Grande, 25 Oct 1848	1/xiii; *I-Mr*
La battaglia di Legnano	tragedia lirica, 4	Cammarano, after J. Méry: *La bataille de Toulouse* (play, 1828)	Rome, Argentina, 27 Jan 1849	*Mr*
Luisa Miller	melodramma tragico, 3	Cammarano, after Schiller: *Kabale und Liebe* (play, 1784)	Naples, S Carlo, 8 Dec 1849	1/xv; *Mr*
Stiffelio	opera, 3	Piave, after E. Souvestre and E. Bourgeois: *Le pasteur, ou L'évangile et le foyer* (play, 1849)	Trieste, Grande, 16 Nov 1850; autograph used for Aroldo, 1857	*Mr*
Rigoletto	melodramma, 3	Piave, after Hugo: *Le roi s'amuse* (play, 1832)	Venice, Fenice, 11 March 1851	1/xvii; *Mr*
Il trovatore	dramma, 4 pts	Cammarano [and L.E. Bardare], after A. García Gutiérrez: *El trovador* (play, 1836)	Rome, Apollo, 19 Jan 1853	1/xviii; *Mr*
La traviata	opera, 3	Piave, after A. Dumas *fils*: *La dame aux camélias* (play, 1852)	Venice, Fenice, 6 March 1853	1/xix; *Mr*

Title	Genre, acts	Libretto	First performance; remarks	V; autograph
Les vêpres siciliennes	opéra, 5	E. Scribe and C. Duveyrier, after their lib. *Le duc d'Albe* (1838)	Paris, Opéra, 13 June 1855	*F-Pn*
Simon Boccanegra	opera, prol., 3	Piave [and G. Montanelli], after García Gutiérrez: *Simón Bocanegra* (play, 1843)	Venice, Fenice, 12 March 1857	*I-Mr*
rev. version	melodramma, prol., 3	Piave [rev. A. Boito], from 1857 lib.	Milan, Scala, 24 March 1881	*Mr*
Aroldo	opera, 4	Piave, from his lib. *Stiffelio* (1850)	Rimini, Nuovo, 16 Aug 1857	*Mr*
Un ballo in maschera	melodramma, 3	A. Somma, from Scribe's lib. for Auber's Gustave III, ou Le bal masqué (1833)	Rome, Apollo, 17 Feb 1859	*Mr*
La forza del destino	opera, 4	Piave, after A. de Saavedra, Duke of Rivas: *Don Alvaro, o La fuerza del sino* (play, 1835) with a scene from Schiller: *Wallensteins Lager* (play, 1799), trans. by Maffei	St Petersburg, Imperial, 10 Nov 1862	*Mr*
rev. version	opera, 4	Piave [rev. A. Ghislanzoni], from his 1862 lib.	Milan, Scala, 27 Feb 1869	*Mr*
Don Carlos	opéra, 5	Méry and C. Du Locle, after Schiller's dramatic poem (1787)	Paris, Opéra, 11 March 1867	*F-Pn*
rev. version, Don Carlo	opera, 4	[rev. Du Locle] from Méry's and Du Locle's 1867 lib.; It. trans. by A. de Lauzières and A. Zanardini	Milan, Scala, 10 Jan 1884	*I-Mr*
Aida	opera, 4	Ghislanzoni, from A. Mariette's scenario	Cairo, Opera, 24 Dec 1871	*Mr*
Otello	dramma lirico, 4	Boito, after Shakespeare: *Othello, or the Moor of Venice* (play, 1604–5)	Milan, Scala, 5 Feb 1887	*Mr*
Falstaff	commedia lirica, 3	Boito, after Shakespeare: *The Merry Wives of Windsor* (play, 1600–01) and *King Henry IV* (plays, 1597–8)	Milan, Scala, 9 Feb 1893	*Mr*

For alternative or additional numbers in *Oberto*, *Nabucco*, *I Lombardi*, *Ernani*, *I due Foscari*, *Giovanna d'Arco* and *Attila*, see D. Lawton and D. Rosen: 'Verdi's Non-definitive Revisions: the Early Operas', *Studi verdiani III: Milan 1972*, 189–237.

Verdier [Werdier], **Pierre** (*b* Paris, ? 6 Sept 1627; *d* Stockholm, 20 Sept 1706). French composer and musician active in Sweden. His probable relationship with one or more known French musicians of the time with the same surname has not been conclusively established. It seems likely, however, that he is identifiable with the Pierre Verdier (*b* 1627) who was a son of the musician Robert Verdier. Pierre Verdier arrived in Sweden late in 1646 or early 1647 as one of a group of six French violinists brought to Stockholm by the Swedish Count Magnus Gabriel de la Gardie. They were allotted salaries at the royal court from March 1647. Verdier was apparently the outstanding member of this band: in 1650, for instance, he was awarded 100 ducats by Queen Christina. During the early 1650s the band gradually dissolved. Several of its members left Sweden, but Verdier stayed behind and for the rest of his life was a member of the German–Swedish court chapel under the leadership of the Düben family. His ability as a musician can be tentatively inferred from a study of his position in the yearly accounts relating to the musicians of the court chapel: in the 1680s, for example, he is listed third (or second) out of some 15 musicians. As a member of the chapel he participated in several royal events, including the coronation of Carl XI in Uppsala in 1675. The presence in Sweden during the second half of the 17th century of another composer and musician called Pierre Verdier, said to have been a son of his, has been tentatively suggested by Cotte, but this is unambiguously contradicted by several documents of the period relating to Verdier, in various Swedish archives.

In his first appointment Verdier composed dance music in the French style, which was highly valued at the court during Christina's reign (1644–54); his known output from this period – suites and separate dances for instrumental ensemble – is in a unique large tablature volume of such music that very likely formed the repertory of the French band. Among the several known works from Verdier's later years are a four-part instrumental lament and sonata and a motet.

WORKS

Edition: *17th-century Instrumental Dance Music in Uppsala*, ed. J.J.S. Mráček, MMS, viii (1975)

in S-Uu unless otherwise stated

6 suites, 9 dance movts, a 4, compiled 1651–62
Sonata, a 4; Lament, a 4
Christus är mitt lijf, motet, 2vv, 4 str
Several inc. inst works
2 arias, 4vv, a 4, possibly by Verdier
Gavotte, *S-Sk*

ERIK KJELLBERG

Verdina [Verdi, Värdi, Vardina], **Pietro** (*b* Verona, *c*1600; *d* ?Vienna, July 1643). Italian composer. In 1618, the year when his only published music appeared, he is recorded as a student of the acolytes' school in Verona and as a pupil of Stefano Bernardi, *maestro di cappella* at Verona Cathedral. Stefano Pasino (in the dedication of his *Sonate*, Venice, 1679) said that at one time Verdina lived at Lonato (also in northern Italy) – he presumably went there from Verona. By 1630 at the latest he was Kapellmeister to the King of Bohemia and Hungary and was also in the service of his father, the Emperor Ferdinand II. When, on the latter's death in 1637, the king succeeded him as Ferdinand III, Giovanni Valentini retained the office of imperial Kapellmeister, and Verdina had to content himself with being vice-Kapellmeister at the same court. Antimo Liberati, in his *Lettera* (Rome, 1685), named Verdina, with Valentini and Antonio Bertali, as one of the most famous Italian musicians at Ferdinand III's court, and Pasino's praise of him in 1679 testifies to his reputation nearly 40 years after his death. His canzonas are among the earliest examples of the genre.

WORKS

Missa Theophili, 8 solo vv, 8vv, 4 trbn, 2 cornettinos, 6 solo str, org, *A-KR*
Missa crucificationis, 6vv, 6 viols, bc, *D-Lr*
Missa longa et brevis, 8vv, bc, *Lr*
Nunc, 5vv, 2 vn, 4 viols, bc, *Lr*
Motets: Ave regina, 5vv, bc; Cum invocarem exaudivit, 5vv, 2 vn, bc; Ecce nunc benedicite, 5vv, 2 vn, bc; In te domine speravi, 5vv, 2 vn, bc; Laudate dominum, 8vv, 2 vn, 2 va, 1 viol, bc; Qui habitat in adjutorio altissimi, 5vv, 2 vn, bc; Te lucis ante terminum, 5vv, bc: all in *D-Lr*; 2 motets, 3vv, bc, 1618[5]; 2 motets, *A-KR*
2 canzonas, a 3, 1618[5]
Messa S Jacobi; Salmi per il vespero, 1v, insts; Messa, 5vv; Messa, 6vv; Messa 'Justus non timebit', 5vv; Messa, 8vv; Letanie, 5vv: all lost, listed in an inventory of music belonging to Archduke Leopold Wilhelm, see Koczirz

HELLMUT FEDERHOFER

Verdon, Gwen [Gwyneth Evelyn] (*b* Culver City, CA, 13 Jan 1926; *d* Woodstock, VT, 18 Oct 2000). American actress, singer and dancer. With careers on both stage and screen, Verdon is one of the most versatile musical performers of the 20th century. Her Broadway roles include Claudine in *Can-Can* (1953), Lola in *Damn Yankees* (1955, including 'Whatever Lola Wants'), Anna Christie in *New Girl in Town* (1957), Essie Whimpole in *Redhead* (1959), Charity Hope Valentine in *Sweet Charity* (1966, including 'If my friends could see me now') and Roxie Hart in *Chicago* (1975), the last of which was choreographed by her husband Bob Fosse. Film credits include *On the Riviera* (1951) and *Damn Yankees* (1958). As a senior citizen she has appeared in a number of non-musical films, including *The Cotton Club* (1984), *Cocoon* (1985), *Cocoon II: The Return* (1988) and *Marvin's*

Room (1966). Verdon's singing voice reflected and grew out of her speaking voice, allowing her to project her stage persona to the audience. Well established as a popular-style singer, Verdon's simple and clear voice has given her the opportunity to maximize its effectiveness as a dramatic vehicle.

WILLIAM A. EVERETT, LEE SNOOK

Verdonck [Verdonch, Verdonk, Verdoncq], **Cornelis** (*b* Turnhout, 1563; *d* Antwerp, 5 July 1625). Flemish composer and singer. According to Sweerts, he spent his earliest years in the house of Cornelis Pruenen, treasurer and senator of Antwerp; he was to enjoy Pruenen's protection for many years. Verdonck was undoubtedly a choirboy at Antwerp Cathedral under Geert van Turnhout, when in 1572 he was enrolled by Turnhout as a chorister at the Madrid court of Felipe II. Among his fellow choristers were Peeter Cornet and Philippe Rogier. When their voices changed, Felipe wrote to his nephew Alessandro Farnese on 16 February 1580 requesting that Verdonck and two other choristers be enrolled at Douai University or elsewhere. Verdonck then became a pupil in Antwerp of Séverin Cornet, who included one work of the younger composer in each of his three publications of 1581. In 1584 Verdonck returned to Madrid as a singer in the royal chapel; he remained there until 1598. The dedication of his 1599 chanson print confirms that he had returned to Antwerp by April of that year. Later in 1599 he took an active part in the preparations for the triumphal entry of Archduke Albert and Archduchess Isabella into Antwerp; his motet for the occasion, *Prome novas, Hymenae*, was performed by an ensemble of boys riding atop an artificial elephant. Verdonck's madrigal book of 1603 suggests that he was then in the service of Pruenen's nephew, Johannes Carolus de Cordes, governor of Wichelen and Serskamp, to whom he dedicated his book. He also held a prebend at Eindhoven until 1622. He died at the age of 62, according to the inscription on his memorial dedicated by his patron. Several writers have supposed there were two musicians by this name, one active in Madrid, the other in Antwerp.

Verdonck's six-voice *Prome novas, Hymenae* is well-crafted in its rhetorical expression. Two sacred works, appearing in copper engravings of the Virgin by Marten de Vos, are predominantly imitative; one of these, a *Magnificat* for five voices, features a strict canon derived from the tenor. *Amor Jesu dulcissime* (RISM 1629^{2}) is an early example of the *cantiones natalitiae*.

Secular works dominate Verdonck's output. His chansons are typically northern in their contrapuntal textures and large voicings, though they make use of madrigalisms as well. *Helas quel jour* (RISM 1594^{5}) makes brief reference to the Lassus setting of the same text. Along with his mentor Séverin Cornet, Verdonck is an important exponent of the madrigal in the north. Both composers set Italian texts by local northern poets: Verdonck set one by his patron Cornelis Pruenen. Verdonck's four-voice *Donna belle e gentile* appears as *Lady your look so gentle* in Nicholas Yonge's *Musica transalpina* of 1588. Sweerts described Verdonck in 1628 as 'renowned in music' claiming that 'if we believe Jan Pieterszoon Sweelinck ... he could match any Italian composer'.

WORKS

SACRED

Ave gratia plena, 4vv (Antwerp, 1584, copper engraving); ed. in Musica Sacra, xxi (Regensburg, 1880) and Seiffert (1918–19)
Magnificat, 5vv (Antwerp, 1585, copper engraving); ed. in Trésor Musical, musique sacrée, ii (Brussels, 1866/*R*) and Seiffert (1918–19)
3 motets, 1581^{1}, 1609^{1}, 1629^{2}
1 motet, 6vv, in J. Bochius: Historica narratio profectionis et inaugurationis serenissimorum Belgii principum Alberti et Isabellae (Antwerp, 1602); ed. in Trésor Musical musique sacrée, ii (Brussels, 1866/*R*) and Wind
1 motet, lost (formerly *D-KAu*)

Vereshchahin, Yaroslav Romanovich (*b* Kiev, 8 Dec 1948; *d* Kiev, 8 Aug 1999). Ukrainian composer. In 1973 he graduated from the Kiev Conservatory (class of M.M. Skoryk) and then worked as editor and later deputy chief editor of the publishers Muzichna Ukraïna (1975–9 and 1985–7). From 1979 to 1983 he was executive secretary of the Ukrainian Union of Composers, in 1980 became a Laureate of the N.A. Ostrovsky Prize and since 1987 has composed full-time. His music is notable for its subtle and innate refinement; although he continues the lyrical traditions of Stepovy and Kosenko, Vereshchahin's nationalist roots are combined with a large measure of rationalism that originates in his interest in Webern and

Stravinsky's chamber works. One scholar noted the coexistence and interlinking of lyrically warm and heartfelt writing with a distinctively intellectual approach (Lavrichenko, p.19). He integrates classical and contemporary techniques with a significant degree of impressionism. Like his Ukrainian precursors mentioned above, Vereshchahin conceives his music with chamber forces in mind; his achievements in the genre of the chamber cantata are significant (he is one of the pioneers of this trend in Ukrainian music). His preference for the pastoral is reflected in *Peysazhi* ('Landscapes'), *Musica rustica* and *Bukolicheskaya stsena* ('Bucolic Scene').

NINA SERGEYEVNA SHUROVA

Veress, Sándor (*b* Kolozsvár [now Cluj-Napoca], 1 Feb 1907; *d* Berne, 4 March 1992). Swiss composer of Hungarian origin. The first half of his life was spent in Hungary; the second, from 1949, in Switzerland, of which he became a citizen in the last months of his life. His father was a historian and his mother a singer. In 1923 he began studies with Emanuel Hegyi (piano) and Kodály (composition) at the Budapest Academy of Music; he completed his piano studies under Bartók, taking a teacher's diploma in 1932. From 1928 to 1933 he worked as an assistant to Lajtha at the Budapest Ethnographical Museum. A year later Bartók chose Veress as his research assistant in his work at the Hungarian Academy of Sciences classifying folksongs, a position Veress retained until 1949. He became an excellent researcher into Hungarian folk music, and, as professor of ethnomusicology at Berne University, would later show himself to be a follower of the teachings of Bartók and Kodály. Veress's most important folk music collection was that of 1930, the *Moldvai gyűjtés* ('Moldovian collection'), which was published in Budapest in 1989.

In 1933 in Budapest he made his début as a composer in a concert organized jointly with Kadosa and Farkas; the programme included his Piano Sonatina, which he played himself, and his First String Quartet. For a short while he taught the piano before going to Berlin in 1934 to study music teaching methods. During the 1940s, back in Budapest, he organized music education seminars with Erna Czövek. At this time his work as a writer on music began to expand.

He achieved international recognition through performances at ISCM Festivals: of the First Quartet in Prague in 1935, and the Second Quartet in Paris two years later. The première of his Divertimento in 1939 by the BBC Orchestra under Lambert and the performance of the Second Violin Sonata by Sándor Végh at the Venice Biennial festival (1941) were also important in this regard. He spent a considerable time in London, and also visited Amsterdam and The Hague (1938–9), giving concerts with Végh. Between 1941 and 1942 he was in Rome, where he wrote the ballet *Térszili Katicza* ('Katicza from Térszil'), and in 1943 he became professor of composition at the Budapest Academy of Music; his students there included Ligeti and Kurtág. After the war he was appointed to the Hungarian Artistic Council, which he served until 1949. By this time he had completed such major works as the Violin Concerto, the First Symphony and *Szent Ágoston psalmusa az eretnekek ellen* (Sancti Augustini psalmus. . .). Other compositions of this period include *Billegetőmuzsika* ('Fingerlarks'), a piano tutor based on his pedagogical ideas, and a song cycle to verse by Attila József in which he aligned himself with progressive Hungarian poetry.

In the postwar years Veress's journeys abroad became more regular: in 1947 he spent some time in London, and in 1948 took part in the IFMC conference at Basle; in 1948–9 he stayed in Rome and travelled to Stockholm for the first performance of *Katicza from Térszil*, which was also later given in Florence and Vienna. He was living in Rome when he had news of the political changes in Hungary. Unable to reconcile himself to these, he emigrated. In autumn 1949 he was invited to Berne University as a guest professor and this time settled permanently in the city. In 1950 he was appointed to teach theory and composition at the Berne Conservatory, where his students included Holliger, Peter Schneider and Wyttenbach. By this stage several important performances of his newer works had been given, some of which were inspired and conducted by Paul Sacher. While retaining his chair at the conservatory, he accepted guest appointments at institutions in the USA and Australia: at the Peabody Conservatory (1965–6), Goucher College, Baltimore (1966–7), Adelaide University (1967) and the University of Portland (1972). From 1968 to 1977 he taught musicology and ethnomusicology at Berne University. He also continued his work as a jury member, notably, from 1948, at the Llangollen International Eisteddfod, of which he was made vice-president in 1974.

Veress was an outstanding representative of the Hungarian generation which followed Bartók and Kodály. His work combined several contemporary trends while adhering to the Hungarian musical heritage: Kodály gave

him lasting respect for melodic craftsmanship and a passion for teaching, and he followed Bartók in his restless innovatory spirit and stubborn consistency. He reached a new level of achievement in the early 1950s when in works such as the Second Symphony and the String Trio he arrived at a 12-note serial technique that was of his own making. In the 1960s he entered a new, freer phase of serialism with works such as the Piano Trio and Wind Quintet. At the centre of his later works is the choral poem *Das Glasklängespiel* (1977–8); other important works include *Orbis tonorum* (1986), the Clarinet Concerto (1981–2), the *Tromboniade* Concerto (1989–90), *Concertotilinkó* and the chamber works *Memento* and the Trio for bartitone and strings.

Veress was awarded the Kossuth Prize in 1949 in Hungary (though as an émigré he was unable to collect this award) and the Bartók-Pásztory Prize in 1985; in Switzerland he received the Berne canton prize in 1976.

JÁNOS DEMÉNY/MELINDA BERLÁSZ

Veretti, Antonio (*b* Verona, 20 Feb 1900; *d* Rome, 14 July 1978). Italian composer and music critic. He studied at the Bologna Liceo Musicale with Guglielmo Mattioli and Alfano, and graduated in 1921. Also in Bologna, he was introduced by Riccardo Bacchelli, librettist of some of his operas, to the circle associated with the literary journal *Ronda*. He began to compose in 1926 in Milan, where he was also music critic for *La fiera letteraria*. Subsequently settling in Rome, he founded the Conservatorio Musicale della Gioventù Italiana, where he taught until 1943. Later he was director of the conservatories in Pesaro (1950–52), Cagliari (1953–5) and Florence (1956–70). He was a member of the Accademia di S Cecilia and the Accademia Filarmonica in Rome, the Accademia Filarmonica di Bologna and president of the Accademia Luigi Cherubini in Florence. He also wrote film music.

An exponent of what Mila defined as the 'follow-up generation', Veretti shared in both the revival of 16th- and 17th-century Italian traditions characteristic of Italian composers in the first half of the 20th century, and in the acquisition of the formal and linguistic innovations of the European modernism. He was influenced particularly by Pizzetti and Casella and assimilated the typical manners of neo-classicism in his early work in an idiom of great formal balance and considerable sobriety both in instrumental music (e.g. the *Sinfonia italiana*) and vocal and operatic output. In the last (e.g. *Il favorito del re* and *Una favola di Andersen*) he introduced forms from instrumental music in an attempt to find new solutions to go beyond *verismo* opera. In the 1950s, from the Piano Concerto onwards, 12-note technique became a fixed part of his style. He had arrived at it by way of a natural stylistic evolution, moulding its procedures to suit his own expressive idiom in characteristically linear writing (*I sette peccati*) before reaching, in *Prière pour demander une étoile*, the compositional process of Webernian serialism.

WORKS
(*selective list*)

Stage: Il medico volante (farsa, 3, R. Bacchelli, after Molière), 1923, unperf.; Il favorito del re (comic op, 3, A. Rossato), Milan, Scala, 17 March 1932, rev. as Burlesca (opera-ballet, 1), Rome, 29 Jan 1955; Il galante tiratore (azione coreografica, 1, Bacchelli, after C. Baudelaire), Sanremo, Casino, 11 Feb 1933; Una favola di Andersen (azione mimo sinfonica, Veretti), Venice, 1934; I sette peccati (mistero musicale e coreografico), Milan, Scala, 24 April 1956

Vocal: Il figliuol prodigo, orat., solo vv, chorus, orch, 1942; Sinfonia sacra, male chorus, orch, 1946; 4 poesie di Vigolo, 1v, orch, 1950; L'allegria (Ungaretti), 1v, pf, 1957; Elegie (Friulan text), 1v, vn, cl, gui, 1964; Prière pour demander une étoile, chbr chorus, 1966, rev. chorus, orch, 1967

ALBERTO PIRONTI/ROBERTA COSTA

Verger, Giovanni Battista [Giambattista] (*b* Rome, 1796; *d* ?Palermo, after 1840). Italian tenor. After studying in Rome, he made his début at the Royal Theatre, Malta, prompting a critic to predict accurately Verger's place among the *primi tenori* of Italy. On 26 December 1819 he created Carlo in Donizetti's early *Il falegname di Livonia* in Venice. He appeared in Trieste during Carnaval 1822–3 in Mercadante's *Elisa e Claudio*, and his career took off in 1824 with roles in operas by Pacini and Carafa among others. His last collaboration with Donizetti took

place in 1828, with the role of Seide, written specially for him, in *Alina, regina di Golconda*. Other significant role-creations came with the premières of Coccia's *Rosamunda*, Generali's *Francesca da Rimini* (1829) and Mercadante's *I Normanni a Parigi* (1832). His agility and nuanced expression was within an almost baritone tessitura, similar to that of García. His repertory included works by Paer, Meyerbeer, Bellini and especially Rossini, who particularly admired his talents. A *tenore serio*, he excelled in *Maometto II*, *La donna del lago*, *Tancredi*, *Semiramide* and *Otello*. However, his significance lies in his impact on the transformation of the tenor voice, reflected in parts written for him by Donizetti, Mercadante and others. His last known appearance was in 1839. He later settled in Palermo, where he became an impresario organizing engagements in Spain.

His wife, Amalia Brambilla-Verger (1811–80), daughter of composer Paolo Brambilla (1786–1838), was a contralto of distinction, creating Osvino alongside him in Mercadante's *I Normanni a Parigi*. Their son Napoleone Verger (*b* Palermo *c*1840; *d* Madrid 1907) had a distinguished career as a baritone, and their daughter Maria Verger enjoyed an important career as a mezzo-soprano.

RICCARDO LA SPINA

Vergil. *See* VIRGIL.

Verhaar, Ary (Gerardus Petrus) (*b* The Hague, 23 April 1900; *d* The Hague, 5 March 1994). Dutch composer and pianist. It was not until after he had trained as a teacher and a lecturer in calligraphy and drawing (Academy of Plastic Arts in The Hague) that Verhaar devoted himself completely to music. As a self-taught musician, he developed into a skilled pianist, earned his spurs in both jazz and classical music and was a much sought-after lecturer. Verhaar published small biographies of Schubert (1950), Debussy (1951), Bartók (1951) and Ravel (1953) and for a short time was the music correspondent of the *Haagsch dagblad* (1961–64).

Verhaar was also self-taught as a composer. His more than 100 works in many genres are for the most part composed in a moderately modern idiom. Although he was a traditionalist, the influence of Schoenberg is not absent, as in the fugue of the Third Piano Sonata, for which he received the Visser-Neerlandia Prize in 1959. This prize was awarded to him again in 1962, partly for the String Quartet no.1. His best-known works also include the oratorios *Ichnaton's Zonnehymme* and *Spiegel van het menschelijk bedrijf*, based on etchings of craftsmen by the 17th-century Dutch poet and artist Jan Luyken. In 1968 Verhaar wrote music for the film *Elektronen mikroskopie*.

WORKS
(*selective list*)

Vocal: Ichnaton's Zonnehyme, op.5, solo vv, chorus, orch, 1933; Spiegel van het menschelijk bedrijf, op.28, solo vv, chorus, orch, 1944; Mouvements chimériques, op.45, chorus, orch, 1951; Simples prières (3 songs, A. Maurel, P. Verlaine, F. Jammes), op.70, v, pf, 1975; Salut au monde (W. Whitman), op.81, vv, 1985

Orch and inst: Divertimento, fl, str trio, 1937; Symfonietta, op.26, Opus A, 8 vc, orch, 1953; Sonata, pf, 1959; Arcangeli, op.58, org, 1960; Str Qt no.1, 1962; Priamel, op.62, str, perc, 1964; Conc., ob, str, 1964; Str Qt no.2, 1965; Monoloog, op.61, vn, 1971; Monoloog, op.61, b, 1971; Monoloog, op.68, rec, 1974; Clarina Suite, op.77, 4 cl, 1981; Silvester Trio, op.78, vn, va, vc, 1981

Film music: Elektronen mikroskopie, op.65, 6 inst, tape, 1968

EMILE WENNEKES

Verheyen, Pierre (Emmanuel) (*b* Ghent, 1750; *d* Ghent, 11 Jan 1819). Flemish composer and singer. As a choirboy at St Baaf Cathedral, Ghent, he took his music lessons with the organist J.J. Boutmy. Later he studied composition with Ignaz Vitzthumb, a director of the Théâtre de La Monnaie, Brussels, and with F.-J. Krafft, the music director at St Baaf Cathedral, Ghent. As a singer, he was employed at churches in Bruges and Ghent and by several lyric theatres; he was also a conductor in Maastricht. His first compositions, which are church music, date from the year 1778; in 1786 he was appointed *compositeur ordinaire* to Prince Ferdinand Lobkowitz, the Bishop of Ghent. Having lost his voice, Verheyen obtained an administrative post under the French regime and was appointed organist at the Temple de la Raison in 1793 and later at the Ursuline Convent. He was one of the founders of the Société des Beaux-Arts in Ghent. Verheyen admired Haydn and composed a Requiem in his memory; he imitated Haydn's style in his piano sonatas, which are in a single movement. He left an extensive output, which for the most part remains unpublished and awaits rediscovery.

WORKS
most unpublished; MSS in B-Bc, Gu, D-Bim

Sacred: 27 masses, vv, insts/orch, some unacc.; Requiem; 3 TeD; 6 Laudate pueri; 4 Dixit Dominus; 3 Confitebor; 2 Beatus vir; 4 Audite caelii; 4 Salve regina; 5 Alma mater; 3 Ave regina; 3 Regina caeli; 50 élévations, 9 lamentations; La mort de Jésus-Christ (orat, Le Boeuf)

Stage: Les chevaliers, ou Le prix de l'arc (op), Ghent, 20 Jan 1779; De jagtparty van Hendrik IV (op), 1794; Le jardin d'amour, ou Les noces d'Alexis, 1794

Other vocal: La journée de Waterloo (cant., P. Lesbroussart), 1816; airs, romances, songs

Inst: 4 sonatas, 2 andantes, march, pf/org, 1813, all ed. A. Carideo (Bologna, 1998); ariettes, arr. kbd; 5 str qts

HENRI VANHULST

Verhulst, Johannes (Josephus Hermanus) (*b* The Hague, 19 March 1816; *d* Bloemendaal, 17 Jan 1891). Dutch composer and conductor. He was one of the first pupils at the Koninklijke Muzijkschool in his native city, where he studied the violin and theory with J.H. Lübeck and C.J. Lechleitner. From 1832 he was a church organist and also played in the orchestras of the royal chapel and the Théâtre Français, whose conductor, C.-L.-J. Hanssens, taught him orchestration. After receiving Mendelssohn's praise in 1836 for his Overture op.2 he decided to continue his studies in Leipzig. He went first to Cologne, studying briefly with Josef Klein, and in early 1838 arrived in Leipzig, where he became a close friend of Schumann and conducted the Euterpe orchestra (1838–42) in programmes even more progressive than those of the Gewandhaus orchestra. After returning to the Netherlands in 1842 he became music director at the court of Willem II, and conductor of the Rotterdam Toonkunst choir (1843–4, 1848–63). He achieved international fame as director of the 1854 Rotterdam festival held to celebrate 25 years of Toonkunst's existence. During the 1860s he assumed virtual control of Dutch musical life, becoming director of the Diligentia concerts in The Hague (1860), the choir of the Amsterdam section of Toonkunst and the

Caecilia orchestra (both 1864) and the Felix Meritis orchestra (1865). His antipathy to the New German School (although he introduced Bruckner's Third Symphony to the Netherlands in 1885) forced his resignation from the Diligentia concerts in 1886, and he withdrew completely from public life shortly afterwards.

The stylistic influence of Schumann and Mendelssohn pervades Verhulst's instrumental works, although he experimented with chromaticism in the Symphony in E minor and introduced a recognizably New German flavour with his declamatory treatment of Dutch song texts while adhering to classical formal principles. His choral music is weak, and only in the hymn *Clemens est Dominus* and the Kyrie of the Mass op.20 are original traits to be found.

WORKS
(*selective list*)

JAN TEN BOKUM

Verio, Juan. Musician probably identifiable with JOANNE VERIUS.

Verismo (It.: 'realism'; Fr. *vérisme*). A movement in Italian literature, and subsequently in opera, which developed in the 1870s. Its major literary representatives are the Sicilian writers Giovanni Verga (1840–1922), Luigi Capuana (1839–1915) and Federico De Roberto (1861–1927).

Although sharing certain characteristics with naturalism – an impersonal narrative style, an interest in the lower social strata, a true-to-life approach in dealing with contemporary reality – *verismo* developed distinctive traits. The *veristi* gave a markedly regional character to their works; they reassessed the link between art and reality, established by Zola as a fundamental aesthetic premise, to allow greater freedom to the imagination; and they arrived at an objectivity that implied total consistency of form and content.

Verismo entered opera through 'scene popolari', such as Verga's *Cavalleria rusticana* (1884), which was the first text to be turned into an opera. In 1888 the publisher Edoardo Sonzogno advertised a competition for a one-act opera by a young Italian composer. Mascagni had no innovatory intentions in his choice of Verga's popular one-act play. The libretto preserved the vivid dialogue and the rapid pace but the operatic version was distanced from the veristic play by a distortion of its social characteristics and a dilution of its down-to-earth language with traditional high-flown libretto jargon. The opera's success, however (1890, Rome), led to *Cavalleria rusticana* becoming the prototype of a new genre. The term *verismo* was adopted, to designate the subject of the libretto and the work's musico-dramatic structure. The 1890s witnessed a brief flowering of operas on veristic subjects, both in Italy and abroad.

A 'Neapolitan' brand of operatic *verismo* was launched with Giordano's *Mala vita* (1892, Rome). The libretto marked an appreciable advance on the *Cavalleria* prototype: Nicola Daspuro treated Di Giacomo's 'scene popolari' with scrupulous respect for layout, characterization and environment. The sordid conditions prevailing in the alleys of a big city and the *mala vita* ('wretched life') of a prostitute were transposed without softening their crude reality. The work was, however, a failure in Naples (1892), where the display of the miseries of the urban proletariat raised outraged protests. The second most famous veristic opera was Leoncavallo's *Pagliacci* (1892, Milan), a sensational and more complex work. Leoncavallo wrote both libretto and music. The operatic 'slice of life' he so skilfully contrived is the result of a subtle blending of various ingredients: a village murder, the device of the play-within-a-play with *commedia dell'arte* masks, the Pierrot pantomime as revived in Paris in the 1880s, and the open-air revels associated with a religious festival as exemplified by the Easter celebrations in *Cavalleria*.

In the following years, the customs of Italy's poor regions were exploited by the opera industry for the production of plebeian stage works, and there was a tendency to lapse into picturesqueness and sensationalism, inherent in the veristic theatre. Popular songs accompanied by guitars and mandolins, tarantellas, saltarellos or other local dances, drinking songs, litanies and religious hymns, were inserted on the slightest pretext. The vocal style and the musico-dramatic structures had three main references: the scrapyard of romantic opera, the contemporary 'veristic' manner of the *giovane scuola*, and the drawing-room song style. Feeble stories with colourful vignettes were inflated and sustained by violent vocal outbursts, heavy orchestration, big unison climaxes, agitated duets and mellifluous intermezzos, a tendency that culminated in Wolf-Ferrari's *I gioielli della Madonna* (1911, Berlin).

The veristic fashion spread. In France, Massenet composed *La Navarraise* (1894, London), a two-act opera closely modelled on *Cavalleria*. In Germany, Eugen d'Albert wrote *Tiefland* (1903, Prague), a two-act opera set in Catalonia. Frédéric d'Erlanger composed *Tess*, a four-act 'dramma' by Illica after Hardy's novel *Tess of*

the D'Urbervilles (1906, Naples). Bretón's *La Dolores* (1895), Janáček's *Jenůfa* (1904) and Smyth's *The Wreckers* (1906), should also be mentioned. The constant presence of low-life subjects and the high concentration of quotations (popular songs, dances, street cries) in Italian operas following *Cavalleria* have been taken to justify the general designation 'operatic *verismo*' for this genre. The genre itself petered out in the early years of the 20th century, leaving *Cavalleria* and *Pagliacci* as its best contributions to the musical theatre.

Verismo is misleading and inadequate as a term for turn-of-the-century Italian opera. It may, however, serve as a general description of the musical style of the *giovane scuola* as characterized by a new emotional rhetoric influenced partly by Massenet and, to some degree, by Wagner: passionate tension alternates with sentimental languor, and delicacy with violence, especially in the vocal lines; recitatives, solo pieces and ensembles enjoy equality of status, textural cohesion being supplied by the use of orchestral motifs; and there is a total absence of bel canto coloratura. Such features need to be viewed in the context of a steady trend in late 19th-century opera towards dramatic continuity, in which the canons of musical and spoken drama draw closer, allowing the possibility of *Literaturoper* such as Mascagni's *Guglielmo Ratcliff* (1895), Montemezzi's *L'amore dei tre re* (1913) and Zandonai's *Francesca da Rimini* (1914), settings respectively of plays by Heine, Sem Benelli and D'Annunzio; hence, too, a new rapidity of action, especially notable in Act 1 of Giordano's *Fedora* (1898) and in Mascagni's *Il piccolo Marat* (1921). It was left to Puccini in his operas from *Manon Lescaut* (1893) onwards to achieve the most satisfactory synthesis and, by enriching a highly personal idiom with elements derived from his younger European contemporaries, to lead Italian opera into the 20th century.

M. SANSONE/R

Veritophilus. *See* RAUPACH family, (1).

Verius, Joanne [? Verio, Juan; van Vere] (*fl* *c*1560–86). Flemish composer. He was probably the 'Juan Verio de nacion flamengo' described by Cerone as the *kapelmeester* to Margaret of Parma (daughter of Charles V and half-sister to Philip II), who served in Brussels as regent of the Low Countries from 1559 to 1567. According to Pietro Cerone, Verio helped and advised him on musical matters when Cerone was in the service of the Bishop of Cività-Ducale in Abruzzi-Molise. This may have been between 1583 and 1586, when Margaret and her chapel returned to Italy from the Low Countries and resided in Aquila in the Abruzzi. Five chansons (three for four voices; two in lute intabulations) survive, ascribed to 'Verius' in French and Flemish anthologies (RISM 1568²³, 1571¹⁶, 1578⁶, and 1578¹³). One of these, *Que pleust a Dieu*, appears set for lute in two Phalèse anthologies and for voices in a Le Roy and Ballard collection. Senn has further identified two books of chansons, now lost, by Joanne Verius, published in Leuven in 1560 (for four and five voices) and 1566 (for four to six voices) and listed in a 1577 inventory prepared by lutenist Sixt Kargel of books belonging to the Bishop of Strasbourg. Verius is not to be confused with the 15th-century musician Jean Cornuel who was nicknamed Verjus or Verjust.

HOWARD MAYER BROWN/KRISTINE FORNEY

Verjus (i) [Cornuel, Jean; Tribot, Sot, Saupicquet] (*b* Boulonnais, *c*1435; *d* Cambrai, Aug 1499). French singer. According to a laudatory poem by his friend Molinet (*Regime de Verjus, vicaire de Cambray*), he was known under different names wherever he lived: 'Tribot' at Tours, 'Sot' at Milan and Thérouanne (where he presented farces, thereby earning the name), 'Saupicquet' at Saint

Quentin and 'Verjus' at Cambrai. Molinet's poem also refers to visits by Verjus to Hungary and the Rhineland. From March 1465 to 1467, 'Jo. Cornuel, contratenorista' was a singer at S Pietro, Rome, and in 1474 he was a member of the chapel of Galeazzo Maria Sforza in Milan. Early in 1475 he became *petit vicaire* at Cambrai Cathedral, with duties that included the singing of the Office. In March 1499 he resigned his post, and he died in August of that year.

Verjus (ii) [Verjeust, Verjust; Guillot, Estienne] (*b c*1450; *d* Paris, summer 1518). French singer and composer. An early period of service in Anjou, before he joined the French royal chapel, is suggested by his death notice which refers to 'le feu prevost d'Anjou Verjust'. He is recorded in the accounts of the royal chamber of 1490–91 as 'Estienne Guillot, dit Verjeust, chantre et varlet de chambre'. In Crétin's *Déploration* for Ockeghem (*d* 1497), 'Prevost Verjust', along with other presumed chapel singers, is called upon to sing for their colleague. His presence in the royal chapel is noted during the visit of Philip the Fair and his court to Blois in 1501. The royal chapels of Philip and Louis sang together at mass, and an anonymous chronicler remarks that a singer of Louis's chapel named Verjus 'was the second master after Alexander [Agricola] and is well liked by the King and everyone'. In the winter of 1506–7, when Verjus was *curé* of St Nicolas at Blois, Louis heard him sing mass 31 times in the private chapel of the royal château. 'Le prevost Verjust' is listed among the singers of the royal chapel in 1517–18 and his death is noted in the summer of 1518.

The three-voice rondeau *An hault de la roue de fortune* is attributed to 'Verjeust' in *F-Pn* f.fr.2245 (ed. in Droz), a manuscript probably compiled for Louis XII when he was crowned in 1498. Although Droz identifies the composer as Verjus (i), the latter, in view of Guillot's association with the French royal court, is by far the more likely composer (see Bonime). Verjus is sometimes confused with the later VERIUS, Flemish *kapelmeester* of Margaret of Parma.

MARTIN PICKER

Verlaine, Paul (*b* Metz, 30 March 1844; *d* Paris, 8 Jan 1896). French poet. 'De la musique avant toute chose': the first line of his *Art poétique* announced the principle that underlies most of Verlaine's work. He brought back to French poetry the musical qualities which had not been cultivated so consciously since the Renaissance – euphony, elegance of rhythm, metric virtuosity and compact formal perfection – and drew much of his imagery from music, particularly in the *Fêtes galantes*. In this collection, which has attracted more settings than any other, he created a world of Watteauesque artifice and *commedia dell'arte* disguise, a mask of sophistication that half-conceals deeper emotions. Both aspects, the musical finesse and the exquisite ambiguities, appealed to the young Debussy, who was the first composer of any importance to set Verlaine. The best of Debussy's early work is that based on Verlaine: the songs of 1880–92, the *Suite bergamasque* for piano and the *Petite suite* for piano duet. His lead was soon followed by Fauré, notably with the song cycle *La bonne chanson* op.61 (1892–4), and Hahn, and then by many others, to the extent that Verlaine has probably received more settings than any other French poet of his time. Verlaine wrote librettos for two *opéras bouffes* by Chabrier: *Fisch-Ton-Kan* (1863–4) and *Vaucochard et fils 1er* (1864). Chabrier finished neither.

PAUL GRIFFITHS

Verlit [Verlith], **Gaspar de** (bap. Mons, 22 May 1622; *d* Brussels, 19 Dec 1682). Flemish composer. By 1633 he was a choirboy at the royal chapel in Brussels and was still a singer there in 1641. In 1645 he registered at Leuven University. In 1649 or 1650 he became *maître de chant* of the church of St Nicolas in Brussels, and probably remained there until 1664. He held the same post at the church of St Géry from 1668 to 1669. From 1658 or even before that date he was an altar chaplain at the royal chapel and he still held this position in 1679. After a collection of Flemish and Latin noëls (1660), he published at Antwerp two collections of masses and motets. In the first volume the contrast of solo and ripieno vocal groups gives rise to some pleasing effects. Frequent references to him in inventories are evidence of the success that his music enjoyed in the 17th and 18th centuries.

HENRI VANHULST

Verloge, Hilaire [Alarius] (*b* Ghent; *d* Ghent, 1734). Flemish cellist, viol player and composer. His name appears in Parisian sources from 1709, when he was listed with Forqueray, Anet and others as a musician in the service of the exiled Elector of Bavaria (who had been in the Low Countries). He was later an *ordinaire de musique de la chambre du roy*; Couperin mentioned him as a participant in performances of the *Concerts royaux* in the Versailles Sunday concerts, 1714–15. His name appears in court records from 1717: he received payments (some of them unusually large) for performances, and permission to travel to Flanders (1720, 1731 and on his retirement in 1733) and to Lyons (1722, in the service of the Marshal of Villeroy). He often played in concerts at Marly and Versailles, where he lived, at least from 1725. He provided the instrumental music for Matho's ballet, *Le ballet de la jeunesse (L'union de la jeunesse avec la sagesse)*, performed before the king at the Tuileries in February 1718 (to words by Beauchamp), and music for an entertainment for the Count of Prade in May 1723; neither survives. La Laurencie's reference to a *Ballet de la jeunesse* at Versailles in 1686 (to words by Dancourt) would seem to be a confusion with a work by Lalande of that name.

JULIE ANNE SADIE

Vermeeren [Vermeren], **Anthonis** [Anthoni] (*b* Wilrijk, 1618; *d* ?Antwerp, after 1667). Flemish composer and organist. He spent his life at Antwerp. He was paid as an occasional organist at Antwerp Cathedral in 1630–31, when only 13 years old. In 1640–42 he served as an instrumentalist at the Andrieskerk, and during the period 1648–68 he was organist at the citadel church of St Philippus and St Jacobus, where in 1653/4 he became also choirmaster. He married Joanna vande Moortel in 1653; the elder of their two sons, Franciscus Daniel (1654–1719), was organist at the same castle church in 1702.

Vermeeren's known works comprise 19 motets, six masses and two Flemish Christmas songs. Although not of the highest standard, his compositions (including the lost op.2) were nevertheless performed, since they are listed in several 17th- and 18th-century church inventories in Antwerp, Huy, Oudenaarde, Ghent, Hasselt and Lübeck.

GODELIEVE SPIESSENS

Vermeer Quartet. American string quartet. It originated in 1969 as a trio of string players brought in as artists-in-residence at Northern Illinois University, De Kalb. The

founding members were the violinist Shmuel Ashkenasi, the viola player Scott Nickrenz and the cellist Richard Sher; in 1970 second violinist Pierre Menard was added. Marc Johnson replaced Sher as cellist in 1973; after Nickrenz, the viola players have been Nobuko Imai, Jerry Horner, Bernard Zaslav and Richard Young, the last having joined the group in 1985. The quartet, acclaimed for solid performances of repertory of all periods, tours widely in the USA and has performed regularly at the Marlboro Music Festival and at the Mostly Mozart festival in New York; it has also been featured at the Festival of Two Worlds in Spoleto. Its recordings include a complete cycle of Beethoven string quartets.

JAMES WIERZBICKI/R

Vermeersch, Peter (*b* Waregem, 25 Sept 1959). Belgian musician. After receiving elementary tuition in theory and clarinet at the Waregem music academy, he studied architecture at the St Lucas Institute in Ghent. There he played clarinet and saxophone in Union, a group specializing in jazz, rock and punk. He was a member of the group Maximalist! from its foundation, as composer and clarinettist. He then co-founded the Ictus Ensemble, which at first played mostly works by Vermeersch and Thierry De Mey for the dance productions of Wim Vandekeybus. Vermeersch is also active in rock-inspired groups like X-Legged Sally. He has written music mostly for dance and theatre groups such as Rosas (with Anne Theresa De Keersmaeker), for Vandekeybus, Josse De Pauw and the group Radeis. Although his music is functional to the scenic event, without being purely decorative, it is also designed to be played independently from the visual scenic action, in the concert hall. As an architect, his approach to music is that of a constructivist; nevertheless, as a musician he feels free from the functional constraints of architecture. His compositions are simple, using repetitive patterns and cellular augmentation and diminution. He has also written for classical ensembles.

WORKS
(*selective list*)

Music-theatre pieces De oplosbare vis (J. De Pauw), 1994; Music Hall, 1996
Incid music for plays Echafaudages, 1983–4; Usurpation (V. Ostaijen), 1985

YVES KNOCKAERT

Vermeulen, Matthijs [Van der Meulen, Mattheus Christianus Franciscus] (*b* Helmond, 8 Feb 1888; *d* Laren, 26 July 1967). Dutch composer and writer on music. Having been recognized for many years chiefly for his literary qualities, Vermeulen is now regarded as a composer of international significance and as the most important symphonist of the Netherlands.

1. Life. 2. Style.

1. LIFE. The oldest son of a blacksmith, his passion for music was revealed at the age of 14 at the seminary in Heeswijk, where he was taught the rudiments of 16th-century counterpoint and received piano lessons. A short period (1904–05) spent at a Jesuit boarding school in Belgium provided him with a thorough schooling in the classical writers and a fluent mastery of French. After he abandoned his plan to become a priest, Vermeulen moved to Amsterdam in 1907 to submit his first samples of composition to the director of the conservatory, Daniël de Lange, who gave him lessons for two years. At the age of 21, Vermeulen became a critic on the daily newspaper *De Tijd*; shortly afterwards he fulfilled the same role on the progressive weekly *De Amsterdammer*.

During this period he made the acquaintance of Diepenbrock, who became his mentor and was of great significance for the development of his range of ideas. Diepenbrock's influence is particularly noticeable in Vermeulen's treatment of the antithesis between the Germanic and Latin spirit in the arts. As an advocate of the new French music, Vermeulen came into conflict with Willem Mengelberg, whom he regarded highly as a conductor but considered to be remiss in his duties as the musical director of the Amsterdam Concertgebouw Orchestra, because of his bias towards German musical culture. It was apparent that this criticism was not appreciated when Mengelberg refused even to consider performing Vermeulen's First Symphony.

In 1915 Vermeulen became arts editor at *De Telegraaf*; in his column he opposed German war policy. Vermeulen's commitment is also evident in the choice of texts for his songs of 1917, including the dramatic *La veille*. Shortly after he married in 1918, Vermeulen composed his Cello Sonata no.1, in which he explored free atonality. In 1920, a year after he had started on his Second Symphony, full of daring experimentation, he gave up his writing career to devote himself entirely to composing, supported financially by friends. After a last vain appeal to Mengelberg, Vermeulen moved to France with his family in the hope of finding a more suitable climate for his music. In La Celle-St Cloud, near Paris, he completed the Third Symphony, the String Trio and the Violin Sonata.

However, there was no breakthrough. Although Pierné and Koussevitzky were very interested in Vermeulen's work, and Nadia Boulanger and Prunières both made efforts to promote it, none of the symphonies were performed. Only some of his chamber music found a platform at the Société Musicale Indépendante and the Revue Musicale. Out of sheer necessity, Vermeulen returned to journalism and in 1926 became general correspondent for a newspaper in the Dutch East Indies (now Indonesia), to which for 14 years he contributed hundreds of brilliantly written 'Letters from Paris' on the most varied subjects. In 1930 he was commissioned to write the music for an open-air play back in the Netherlands, *De vliegende Hollander* by Martinus Nijhoff. But afterwards he did not compose anything for a considerable time, depressed over his lack of prospects, until in 1937 he picked up the thread of the Second Cello Sonata, which he had left half-finished ten years earlier.

Two years later his fortune took a vital upward turn with the première of the Third Symphony in Amsterdam by the Concertgebouw Orchestra under Eduard van Beinum. After so long, the performance finally provided him with proof of the effectiveness of his concepts. His

fourth and fifth symphonies followed during 1940–45, their sub-titles 'Les victoires' and 'Les lendemains chantants' symbolizing Vermeulen's confidence in the successful conclusion of the war. However, personal tragedy struck in the autumn of 1944 when Vermeulen lost in quick succession his wife and his most beloved son, who perished in the French Resistance. His diary, published as *Het enige hart*, presents a poignant account of the process of grieving. In his search to make sense of these losses, Vermeulen came to a philosophical position which he elaborated in his book *Het avontuur van den geest*: behind all manifestations of matter and life lies a 'creative spirit', the awareness of which may bring mankind to an understanding of his responsibility for the future of the earth. In this credo, Vermeulen hoped to offer a counterpart to existentialism, his vehement protests against nuclear arms proliferation in the 1950s falling within the same framework.

In 1946 Vermeulen re-married and returned to the Netherlands, where he worked for ten years on the weekly *De Groene Amsterdammer*. His articles on music, with their international perspective, are compelling. In 1949 Vermeulen's fourth and fifth symphonies were first performed, with varying success. However, the performance of the Second Symphony (to which a prize was awarded at the Queen Elisabeth competition of 1953) during the Holland Festival in 1956 instigated a new period of creativity, in which he composed the Symphony no.6, followed by various songs and the String Quartet. His last work, the Seventh Symphony, speaks of unbroken optimism matched by the sub-title 'Dithyrambes pour les temps à venir'.

2. STYLE. Vermeulen's earliest composition, the First Symphony, is in some passages reminiscent of Debussy, Diepenbrock, Bruckner and Mahler, four of his great models. In this work bursting with youthful élan – which according to the composer 'plays on the boundary between the 19th and 20th centuries, when the great shadow [World War I] had not yet fallen' – Vermeulen had already left behind traditional harmony. The freely handled part-writing repeatedly leads to complex chords, while conventional cadences are virtually absent. Modality does, however, play a major role, as in the anti-war songs of a few years later. The transition from diatonic thinking to an integral chromatic concept came, at the age of 30, in the First Cello Sonata, and it was consolidated in the Second Symphony ('Prélude a la nouvelle journée'), which dates from the expectant atmosphere of the postwar years. Revolutionary with respect to melody, harmony, form and instrumentation, the piece confirmed Vermeulen's personal style, coupling overwhelming power and vitality with tenderness and lyricism. Extended passages are of a density and energetic pulse encountered in little other 20th-century music, while organic transitions to simpler, open textures, which radiate contemplative rest, are equally striking.

Although significant developments occurred during the course of his output and works differ appreciably in character and structure, a number of basic principles remained the same: primacy of melody in all parts, equality of voices, no regulation in the succession of notes, and 'unlimited chord formation'. Vermeulen regarded melody as the representation in sound of a person, as the expression of emotion. Polymelody, that is, the interaction of several independent melodies (in his symphonies mostly three to six and occasionally even eight or nine, in his chamber music two to four) acquired the significance of a reflection of an ideal society in which freedom, equality and fraternity prevail. General aspects of Vermeulen's melodic writing are a commonly vocal character, the preference for asymmetrical and long-spanned phrasing, varied repeats of interval patterns, the prevalence of small intervals, a tendency to chromatic completion (combining a minor 2nd in one direction with a major 2nd in the opposite direction is a common device), rhythmic variation (frequently, in melodies with a slow tempo each beat has a different sub-division from the last) and the avoidance of regular metric division (floating rhythm). Despite an overall atonality, many times a melody is spun around a focal pitch, upon which it begins and ends. Such perpetually circling movement and gradual unfolding gives an insistent, often oriental flavour to the music, while the regular use of ostinatos and fixed or slowly moving 'harmonic fields' adds to the mesmerizing effect, as does, in the symphonies, the richness of orchestration. Unusual timbral combinations are evident, while the melodies are frequently given special colour through being played in parallel intervals or chords, much in the manner of Debussy. Another notable feature of Vermeulen's music is differentiated application of canonic technique, most frequently in the String Trio and Symphony no.3, in which in particular shows how a step-by-step shortening of the distance between *dux* and *comes* is applied to build up to a climax.

Formally Vermeulen's symphonies and chamber works are highly diverse, consisting of contrasting parts which generally merge into each other without interruption. Various pieces show a particular relationship between outer movements, the ends of the Cello Sonata no.1 and the String Trio, for example, recalling their meditative beginnings by means of varied repetition of the first theme. Such symmetries are worked out on a larger scale in the Third Symphony – a broad A–B–A form with introduction, of which B has a rondo structure; and in the Fourth Symphony, where a complex of three themes returns. In terms of musical materials, the earlier large-scale Violin Sonata is not untypical in its economy, dominated melodically, harmonically and architectonically, by the interval of the major 7th. The later Fifth Symphony takes a new path, in its constant developing, the first and second parts of the symphony each built out of one theme of which elements are incorporated into a sequence of long self-renewing melodies. The Sixth Symphony ('Les minutes heureuses') returns to pervasion by a single motif – A(la)–C(do)–D(re) – Vermeulen spelling the notes in French to give 'l'adorée', to translate into sound his philosophy of mankind's admiration for the miracle of life.

In the dissemination of a spiritual idea of this kind – the message behind all his instrumental music and the subject of most of his songs – Vermeulen felt that he formed part of a long tradition. Although he always looked out for new developments with interest, he had, finally, little affinity with the main currents in 20th-century music. In particular he rejected Stravinsky's neo-classicism. He also saw a fallacy in Schönberg's series technique, for him a self-imposed limitation which destroyed the freedom, only just acquired, of atonality. The string quartet (1960–61), for example, demonstrates – without recourse to serial procedures of inversion,

retrograde and so on – the equality of the chromatic total, in the form of various 12-tone melodies (Vermeulen calls them 'pantonic') at important structural points.

TON BRAAS

Vermillion, Iris (*b* Bielefeld, 1960). German mezzo-soprano. She studied with Mechthild Böhme (Detmold) and Judith Beckmann (Hamburg) and was a prizewinner at the Cardiff Singer of the World competition before making her stage début at Brunswick in 1986 as Zulma (*L'italiana in Algeri*). She joined the Deutsche Oper in Berlin in 1988, and remained there as an ensemble member until 1993. Her roles include Cherubino, Dorabella, Sextus, Judith (*Duke Bluebeard's Castle*), Charlotte (*Werther*) and Clairon (*Capriccio*), which she sang to marked effect at the Salzburg Festival in 1990: she is, like Clairon herself, an accomplished actress. The following year she was Third Lady in the Salzburg Festival *Zauberflöte*, conducted by Solti. She is a sought-after soloist in choral works, including Beethoven's Ninth Symphony and *Missa solemnis* (both of which she has recorded), and a discerning interpreter of lieder. In the latter field she has made a speciality on disc of Loewe's songs. Vermillion is also a warm, expressive soloist in *Das Lied von der Erde*, which she has recorded with Sinopoli.

ALAN BLYTH

Vermont, Pernot [Pierre] [*le jeune*] (*b c*1495; *d* ?Paris, 1558). French singer, possibly related to Pierre Vermont *l'aîné*. Like the elder Vermont, Pernot sang as a choirboy in the Ste Chapelle, Paris, before 31 December 1513 and went on to serve as a cleric in the chapel. Pernot Vermont received a domicile from the canons of the Ste Chapelle on 24 November 1520, but was not among those receiving a chapel distribution on 15 February 1522. He celebrated his first Mass at the Ste Chapelle on 1 January 1523, and his name also appears in a list of chapel clerics dated 26 February 1523. That he was irregular in his attendance to his chapel duties is suggested by the reassignment of his domicile to another cleric on 3 February 1526 and a fine he received on 14 April 1526 for being absent without leave. In 1528 Vermont was successfully recruited for the papal choir by Jean Conseil, and served Pope Clement VII up to at least June 1532. He returned to the French court not later than 1 January 1533, and sang tenor for the royal chapel throughout that year. Court documents from 1546 and 1547 identify him as a *chapelain des hautes messes* for the royal chapel. He sang in the chapel at least through 1555, picking up a perpetual chaplaincy at the Ste Chapelle in 1539 and benefices in Tully and Béthencourt in Picardy. He probably composed none of the music ascribed to 'Vermont'.

For bibliography *see* VERMONT, PIERRE.

JOHN T. BROBECK

Vermont, Pierre [*l'aîné*] [Vermont primus, Vermond seniorem] (*b c*1495; *d* before 22 Feb 1533). French composer and singer, possibly a relative of Pernot Vermont. The careers of the two musicians are closely intertwined but clearly distinguishable. On 1 January 1510 the elder Vermont was one of six choirboys in the *maîtrise* of the Ste Chapelle, Paris, a group that often travelled with and sang treble for the itinerant personal chapels of the French kings. By November 1511 he had left the *maîtrise* to complete his formal education at royal expense at the nearby Collège de Navarre, but returned to the Ste

Chapelle the following year as one of the lower clerics charged with the performance of its daily liturgy. Sometime between 1521 and 1525 he took over as the music master of the Ste Chapelle's *maîtrise*, a position that would have required frequent travel with the royal chapel. Perhaps owing to his new position, on 23 January 1525 he was able to obtain the chantry of St Quiriace de Provins from Louise de Savoy upon the resignation of one of her own chaplains, Jean Baillet. He led the *maîtrise* until at least 23 October 1527 and appears also to have sung *basse-contre* for the royal chapel from 1525 until his death.

Pierre Vermont *l'aîné* almost certainly composed all 12 works that have come down under the name of 'Vermont'. Eight motets are attributed to 'Vermont primus' (one falsely) as well as one chanson, and the four chansons ascribed simply to 'Vermont' had all been printed by April 1533, not long after his death and a quarter of a century before Pernot Vermont's. Although the elder Vermont's career lay entirely in Paris, most of his compositions differ markedly in character from comparable pieces by 'Parisian' contemporaries such as Claudin or Certon. Three of his seven motets are for five voices, and two employ a tenor cantus firmus with a separate text. In contrast to Claudin's limpid works, Vermont's pervasively imitative motets generally evince little textural variety. Their melodies often are sinuous and lengthy, and few employ sectional repetitions. The chansons also tend towards imitation, and even *Las voulez vous*, which mirrors many of the formal and rhythmic clichés of Claudin's homophonic chansons, is far more sprawling in its counterpoint.

JOHN T. BROBECK

Vernacular music. Classifications and ontologies of music that distinguish between musical practices in which few or many participate give rise to the concept of vernacular music. Unlike musics known and practised by a sociocultural and professional élite, vernacular music is accessible to the majority of people because of their familiarity with its forms and functions and because they are able to acquire knowledge of it through everyday practice, that is, without any specialized skills. Unifying otherwise distinctive concepts of vernacular music is the metaphorical relationship between linguistic and musical models. One acquires a vernacular music as one would a language, naturally and through communication with others. Vernacular musics possess aspects of orality, such as dialect differences, which distinguish them from written traditions, whose complex structures and social contexts are rarely accessible to all. Viewed cross-culturally vernacular musics are more likely to be grounded in vocal than in instrumental traditions, especially those vocal traditions expressed through everyday practice.

Distinctions between musics considered vernacular and those regarded as élite or classical have played a special role in American-music historiography, often exhibiting a dialectical tension. H. Wiley Hitchcock (1988) has positioned vernacular music against cultivated music, claiming that the latter must be approached with considerable effort. Social, if not moral, implications in the distinctions between vernacular and élite traditions reflect and proliferate the cultural hierarchies, of which American music cultures are components. In American-music historiography vernacular music exists at the greatest distance from imported Europeanness.

In European folksong scholarship the conceptualization of the vernacular reflects social hierarchies quite unlike those in North America, usually reflecting greater concern for class and the distinctions between rural and urban music cultures. The common language of North European ballads, for example, is the written language, such as High German in Central European repertories or the literary English of broadsides and print culture in the ballads collected by F.J. Child (1882–98). Regional and local dialects, as well as the folksongs that utilize these, are therefore the repertories to which the folk, imagined or self-identified, have the greatest access.

Vernacular musics occupy yet another position in Asian cultures, especially because of the impact of religious thought on the ontology of music. The linguistically-unified music of Asian Muslims, in the Middle East and elsewhere, is sacred and text-based, relying often on the classical Arabic of the Qur'an. It is, nonetheless, obligatory for devout Muslims to learn or at least to understand classical Arabic. As anthropologists and ethnomusicologists extended Western classificatory methods to Asia during the 20th century, particularly through the dichotomy between 'great' and 'little traditions' (e.g. Singer, 1972, or Powers, 1979), the 'little' traditions took on the profile of vernacular musics, whereas the 'great' traditions, their wide geographical distribution notwithstanding, were elevated to the status of élite or classical musics.

With the explosion of inexpensive technologies for the dissemination of music in the late 20th century more individuals acquired greater accessibility to a greater diversity of musical practices. The social transformation of everyday life on a global level concomitantly multiplied the contexts for vernacular musics.

PHILIP V. BOHLMAN

Vernart, Esteban. *See* BERNARD, ETIENNE.

Vernici, Ottavio. *See* VERNIZZI, OTTAVIO.

Vernier, Jean Aimé [*fils*] (*b* Paris, 16 Aug 1769; *d* after 1838). French harpist and composer. A child prodigy, he received training from his father, a harpist and mandolinist. At the age of 11 he performed a violin concerto at the Concert Spirituel with some success; in the next year he played the harp in a quartet there and in 1789 a harp sonata of his own composition. He was employed at the Théâtre Feydeau as a harpist from 1795 until 1813; he then succeeded Dalimare at the Opéra, where he remained until his retirement in 1838. Though Vernier was renowned as a harp virtuoso and as a teacher, his many works, nearly all including a harp, are virtually forgotten; their style suggests that he may have studied with F.J. Nadermann.

According to Gerber another Vernier *fils*, from Geneva, was active in Paris, and published some works for piano as well as a romance, *L'hermite*, to his own text.

WORKS

INSTRUMENTAL

all published in Paris

Hp solo: sonatas, opp.1, 4, 18, 28, 32, 34, 42, 51; variations, opp.2, 6, 11, 14, 37, 40, 49; pot pourris, opp.3, 7, 8, 25, 27, 41; Fantasies, op.39; Fantasie et variations, op.57; other variations, fantasies, preludes, dances, without op. nos.

Hp, other insts: sonatas, hp, vn, opp.5, 13, 16, 54, 55 [vn/fl]; duos, hp, pf, opp.19, 23, 48, 53; duos, 2 hps, opp.21, 30; sym., hp, vn; 3 airs variés, hp, vn, op.52; Nocturne, hp, vn, op.61 no.1; 3 sonatas, hp, vn, b, op.10; 2 trios, hp, fl, vc, op.20; conc., hp, pf, vn, op.29 (1803); Valses et sauteuses, hp, pf, vn, op.56; qt, hp, pf, hn, ob, op.33

VOCAL

La jolie gouvernante (oc, 2), Paris, Cirque du Palais Royal, 1798
Poésies sacrées (Racine, Rousseau, Franc de Pompignon and others), hp acc., 3 vols.
Many romances with hp acc.

HANS J. ZINGEL

Vernizzi [Vernici, Invernizzi, Invernici], **Ottavio** (*b* Bologna, 27 Nov 1569; *d* Bologna, 28 Sept 1649). Italian composer and organist. He was organist of S Petronio, Bologna, from November 1596 until his death. Under the name 'Indefesso' he was a member of the Accademia dei Filomusi. He taught G.C. Arresti. His published output consists entirely of church music, but he also wrote music (all of which is lost) for several *intermedi* performed in Bologna between 1617 and 1625. He composed on the one hand conventional double-choir music and six-part polyphony, as in the 1603 collection, with its semi-contrapuntal writing and melismas on appropriate words; and on the other hand pieces in the new small-scale concertato style for few voices and organ, as in the other four surviving motet books. In *Caelestium applausus* (1612), the only one to include solo motets, the contents are unusually arranged in decreasing order of textures, with four-part pieces first and solos last. The bass solo *Surrexit Dominus* is unified by a refrain, while the alto solo *Salve regina* is a simple recitative over a slow-moving bass, with chromaticism at 'O dulcis'. These are early examples of solo motets, and their melodies are not remarkable.

WORKS

all except anthologies published in Venice

Motectorum specimen, 5–10vv, bc (org) ... liber I (1603)
Armonia ecclesiasticorum concertuum, 2–4vv, bc (org/other insts), op.2 (1604)
Angelici concentus, 2–4vv, bc (org), op.3 (1606; rev. 2/1611)
Caelestium applausus variis, 1–4vv, bc (org), op.4 (1612)
Concerti spirituali, 2–4vv, bc, op.6 (1648)
5 motets in 1613[5], 1616[2], 1617[1], 1623[2]; 1 responsory in 1612[3]; 3 works in *PL-WRu*
Intermedi for the following ops (S. Branchi), first perf. in Bologna, 1623 [music lost]: Stratira, Intermedii d'Ulisse e Circe per l'Alteo opera regia maritima, La coronatione d'Apollo, Europa rapita da Giove
Alcune conclusioni musicali, disputate in musica publicamente nell'Academia de' Filomusi di Bologna, inventate et poste in musica (Bologna, 1625) [music lost]

JEROME ROCHE

Vernon, Joseph (*b* ?Coventry, bap. ? 12 April 1737; *d* London, 19 March 1782). English tenor, actor and composer. He studied under William Savage and was still a boy when he 'sung for the first time very well' at Drury Lane as Puck in *Queen Mab* (December 1750). He created Thyrsis in Boyce's *The Shepherd's Lottery* the following year and went on to build up a repertory of minor acting and singing roles. His Savoy Chapel marriage in June 1755 to the singer Jane Poitier was declared invalid and Vernon had to give evidence against the officiating clergyman, who was transported; as a result Vernon was repeatedly hissed off stage the next season. After four years on the Dublin stage (1758–62) he remained at Drury Lane until a few months before his death. He was much admired in Shakespearean roles requiring singing, such as Amiens, Balthasar, Feste and Autolycus. He had leading roles in the all-sung English operas *Almena* by Arne and Battishill (1764) and *Pharnaces* by William Bates (1765), and took part in most of Dibdin's Drury Lane operas (1768–76). C.H. Wilson remembered him as 'the best acting singer we ever had, if he may have been allowed the name of singer, for it was little more than speaking

musically', and Boaden wrote that 'his look was an invitation to be happy'.

Some songs by Vernon were published between 1758 and 1772, including the best-known setting of 'When that I was and a little tiny boy', which he sang as Feste in *Twelfth Night*. He contributed songs to Garrick's comic interlude *Linco's Travels* (6 April 1767, Drury Lane) and the pantomine *The Witches* (26 December 1771, Drury Lane).

OLIVE BALDWIN, THELMA WILSON

Verocai, Giovanni (*b* Venice, *c*1700; *d* Brunswick, ? 13 Dec 1745). Italian composer and violinist. Apparently a pupil of Vivaldi, he was recruited in 1727 by the theatre director Santo Burigotti to travel from Venice to Breslau and join the orchestra at the new Stadttheater. His first known compositions are arias that he contributed to the pasticcio *Griselda* (Breslau, summer 1728). In 1729 he entered the service of Friedrich August, Prince-Elector of Saxony and King of Poland, at the Dresden court. He was one of a group of 22 musicians chosen by Friedrich August to travel to Moscow in 1731; here he composed his only known cantata, for the first anniversary of the coronation of the Empress Anna Ivanova. When the Dresden musicians were recalled home, Verocai stayed on as a member of the Russian court orchestra and later moved with the court to St Petersburg, where he was involved in the first opera production in the city, *La forza dell'amore e dell'odio* by Francesco Araia (1736). He married the singer Sophie Amalia Kayser. Verocai left St Petersburg in June 1738 and travelled to Brunswick, where he became Kapellmeister and director of the Opera. He remained in Brunswick until his death and all his operas were produced there. Although Mooser reported the date of his death as 13 December 1745, Loewenberg pointed out that his operas were produced regularly until 1747, with no indication in the librettos that the composer had died, and it is unlikely that Verocai composed four operas long before they were to be produced, as he would not have known what singers his music would have to suit.

CAROLYN V. RICKETTS

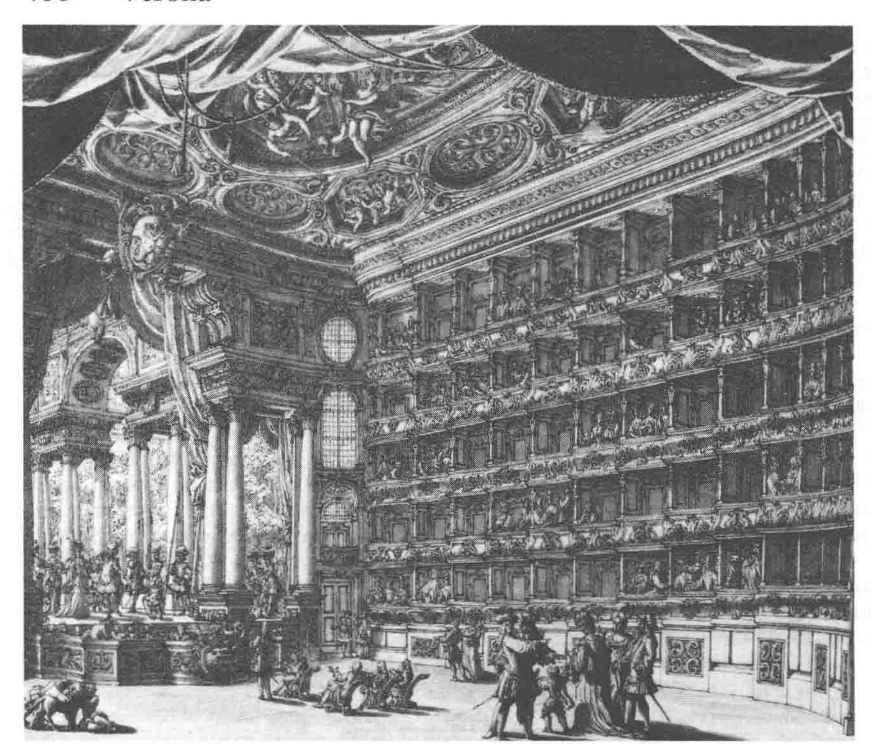
Véron, Louis (*b* Paris, 5 April 1798; *d* Paris, 27 Sept 1867). French theatre director. Displaying a keen eye for a lucrative venture, early in his career he procured the rights for a medicinal chest paste and marketed it as a cure for the common cold. He applied the same flair for publicity to the post of director of the Paris Opéra, to which he was appointed in 1831. He was the first director to be permitted to operate the institution as a private enterprise, albeit with a large state subsidy and surveillance by a government commission. With the financial backing of the Spanish banker Alexandre Aguado and new business strategies that included increasing the number of long-term subscribers, Véron amassed a considerable fortune during his four-year directorship. He steered the Opéra to a position of renewed prominence in Parisian society by creating a meeting ground for the aristocracy and upper castes of the bourgeoisie. His early triumph with the première of Meyerbeer's *Robert le diable* in 1831 was followed by the successes of the ballet *La sylphide* (1832) and Halévy's *La Juive* (1835). A revival and refashioning of *Don Giovanni* in 1834, with the title role sung by Adolphe Nourrit, fared less well. Following Véron's period at the Opéra, this self-styled 'bourgeois de Paris' went on to acquire a major interest in the newspaper *Le constitutionnel* and to participate in French political life as a parliamentarian during the Second Empire. His *Mémoires d'un bourgeois de Paris* were published in Paris (1853–5).

STEVEN HUEBNER

Verona. City in northern Italy. A powerful and prosperous city in Roman times, it has two surviving buildings important to its musical history: the theatre, which was probably begun in the 1st century BCE, and the amphitheatre or arena (cap. 25,000), built in the 1st century CE. These are the oldest and largest Roman theatrical buildings in northern Italy. About the mid-4th century Verona belonged to the province of Venetia and Istria, and in the 5th century the diocese was under the rule of the patriarchs of Aquileia. St Zeno was Bishop of Verona from 362 to 372, and the reference to chant in his *Tractatus* is the earliest evidence of musical activity in the city. A *schola sacerdotum* was founded at the cathedral before 517, and in the 9th century the Benedictine abbey of S Zeno became an important Veronese cultural centre. The earliest musical documents are manuscripts with neumatic notation, both northern Italian and Nonantolan, dating from the 10th and 11th centuries (in *I-VEcap*). Two 10th-century works, a so-called *salutatio magistri* entitled *O admirabile Veneris idolum* (in *Rvat* Cod.lat.3227; *GB-Cu* Cod.Gg.5.35 *olim* 1577; see Paganuzzi, 1978–9) and a *cantus peregrinorum* entitled *O Roma nobilis* (in *I-Rvat* Cod.lat.3227; *MC* Cod.Q.318), are of Veronese provenance. Music was an essential part of the education of the cathedral clerics, and according to a detailed account of Raterius, Bishop of Verona for

several periods between 931 and 968, the canons of the Veronese church could sing the Office (psalms, hymns and canticles) better than those of any other church in Italy (J. Migne: *Patrologiae cursus completus*, ser. lat. (Paris, 1881), cxxxvi, section 479, col.615). The *Carpsum* 'collection' (*I-VEcap* Cod.XCIV 89), an 11th-century document containing directions for cathedral services throughout the year, including musical performance of the liturgy, is based on an earlier work by the cantor Stephen. The cantor supervised the musical education of the younger pupils as well as performing the musical part of the liturgy. After 1225 four *mansionarii* led the choral singing.

Verona was one of the principal centres of the Ars Nova in the first half of the 14th century. Marchetto da Padova finished his treatise *Lucidarium* (1309–18; *GS*, iii, 64–121) there, and Dante stayed at the court of Cangrande della Scala (*d* 1329), which had an active musical culture; at a later date Petrarch was also in Verona. A poem by the Roman Immanuel Giudeo (*d* 1330) indicates that the city was filled with music: 'Chitarre e liuti, viole e flaùti, voci alt'ed acute qui s'odon cantare. Qui boni cantori con intonatori, e qui trovatori udrai concordare'. Cangrande's nephew Mastino II (*d* 1351) also received renowned composers as guests, including Jacopo da Bologna, Giovanni da Cascia and Magister Piero. These composers wrote madrigals to texts infused with local dialect, some on Veronese subjects. After Donato da Cascia the Servite Andrea de Florentia came from Florence in 1383 to play the organ at the convent of S Maria della Scala for the meeting of the general chapter. Two important trecento treatises on poetic-musical metre and accidence are dedicated to the Scaligeri: to Alberto II *Delle rime volgari* by Antonio da Tempo, a Paduan, and to Antonio (reigned 1374–87) *Lo tractato e la arte de li rithimi volgari* by Gidino da Sommacampagna, based on Tempo's treatise.

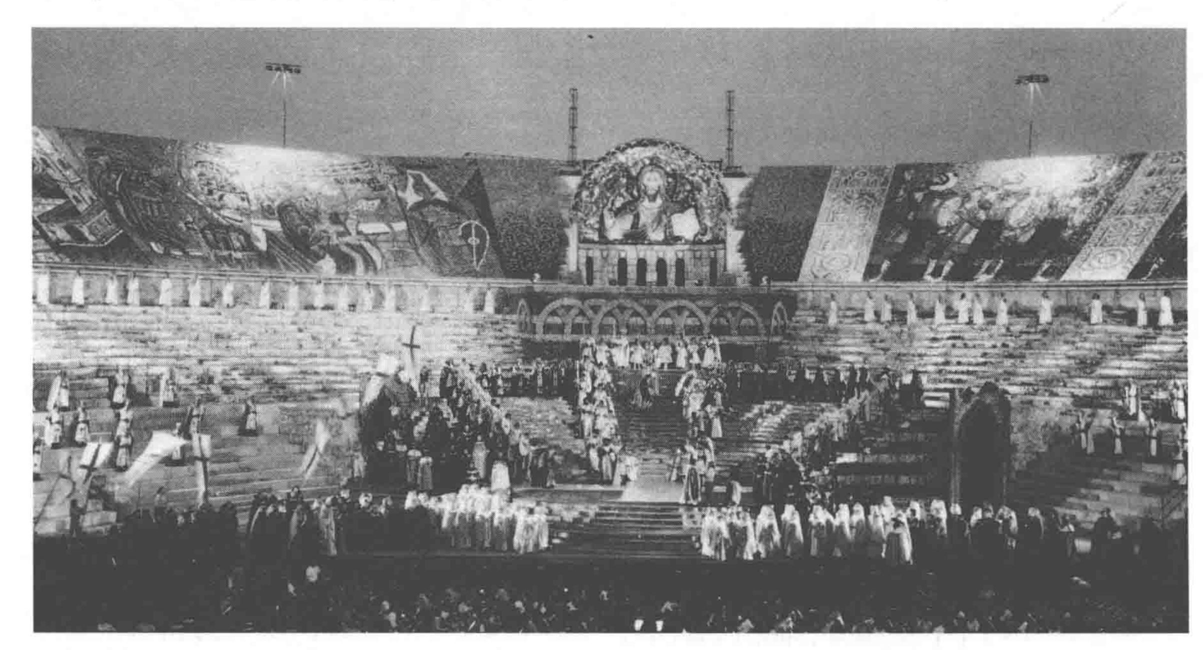


The end of the Scaligeri rule in 1387, and the struggles between the Carraresi and the Visconti and between the Visconti and the Venetians, led to a decline in musical life in Verona, which in 1405 surrendered to the Venetians and in 1439 became part of the Venetian Republic. The following year, Pope Eugenio IV (the Venetian Gabriele Condulmer) founded the Mensa Acolythorum (college of acolytes) for the religious, literary and musical education of the clergy and of gifted, poor young men. The *accoliti* were instructed by 12 *sacerdoti*. Gaffurius was in Verona in 1476–7 as teacher of the *accoliti*, indicating a musical revival further evidenced by the flowering of a generation of Veronese frottolists, most of them former *accoliti*, including Michele Pesenti, Marchetto Cara, Giovanni Brocco, Antonio Rossetto and Peregrinus Cesena.

One of the most notable members of the college was Biagio Rossetti, first a pupil and later a teacher, who became a chaplain, cantor and organist at the cathedral, and also published *Libellus de rudimentis musices* (Verona, 1529), a manual for the training of choirboys and cantors, concentrating on plainchant. The book is dedicated to Bishop Gian Matteo Giberti (1524–43), who required excellent musicians for the school and the cathedral. *Maestro di cappella* in the first half of the century were Girolamo Richini (to 1520), Francesco 'Gallo' (i.e. French; 1520–25), Francesco da Lodi (1525–7), Jacques Colebault (later called Jacquet of Mantua; 1527–33), Jacques (?Du Pont, from Rome; 1534–5), G.M. Lanfranco (*c*1535–8), Nicolaus Olivets (1539–46) and Jacquet de Berchem, formerly appointed in 1546.

The progressive political and economic consolidation in Verona during the early 16th century stimulated one of the most important eras in the city's musical history. The Accademia Filarmonica was formed on 23 May 1543, from the union of two earlier academies – the Incatenata and the Filarmonica. At first the academy's activities centred on music (although later literature and philosophy were also cultivated); in 1549 *Il Geloso* by Ercole Bentivoglio was given with music written and performed by members. Musicians engaged by the Accademia included Jan Nasco, Vincenzo Ruffo, Alessandro Romano, Lambert Courtois, Agostino Bonzanino (one of the academy's founders), Ippolito Chamaterò, Pedro Valenzuela, Paolo Bellasio, Alessandro Sfoi, Paolo Masnelli, Stefano Bernardi and Carlo Calzareri, who was also *maestro di cappella* of the municipality. Other academies and *ridotti* ('retreats') in the city included the *ridotto* of Count Mario (and later his nephew Alessandro) Bevilacqua, famous in Italy and abroad; the Accademia alla Vittoria, which united with the Filarmonica in 1564; the Accademia dei Moderati, of which Giammateo Asola was a member; the Accademia dei Novelli, directed by Pietro Cavatoni; and the *ridotto* Ridolfi.

In addition to the flourishing musical activities in the academies, sacred music was cultivated in the cathedral and the churches of S Maria in Organo, S Eufemia, S Fermo Maggiore and S Anastasia. From the second half of the 16th century the cathedral *maestri di cappella* were Vincenzo Ruffo (1551–60, with interruptions), G.B. Girri (1561–?1566), Gabriele Martinengo (1566–84), Bartolomeo Spontone (1586–8), Asola (1590–91), Ippolito Baccusi (1592–1608), G.F. Anerio (periodically 1609–11), Stefano Bernardi (periodically 1611–24), Cristoforo Guizzardo (1624–34), Simone Zavaiolo (1635–44), Nicolò Fontei (1645–7), Dionisio Bellante (1658–85), Gasparo Gaspardini (1685–1714), Giovanni Porta (1714–16) and Domenico Zanata (1724–46). As elsewhere, the use of instruments in musical ensembles increased during the 16th century. Noted violinists at the cathedral were Giuseppe Maccacaro (from 1566), Francesco Lauro and Antonio Bertali, who were both engaged by the Accademia Filarmonica. Giuseppe Torelli was violinist at S Stefano (occasionally, 1676) and then at the cathedral (1683–4). The most important *maestri* at other churches were Valerio Bona at S Fermo Maggiore (1613–*c*1620) and Carlo Milanuzzi at S Eufemia (1621–2).



Only from the 18th century was there any important theatrical activity. One of the earliest public theatres after Roman times was the Teatro dei Temperati (1656; after 1677 called di Palazzo), a small theatre seating 108 which operated until 1715, reopening for a short time in 1749. The most important theatre, the Teatro Filarmonico, was inaugurated on 6 January 1732 with the pastoral play *La fida ninfa* by Scipione Maffei, with music by Vivaldi (fig.1). The theatre, built on a site owned by the Accademia Filarmonica, was designed by Francesco Galli-Bibiena and was one of the most beautiful in Italy. In 1744 it gave the première of *Il Tigrane* by the Veronese composer Daniel Dal Barba; it burnt down in 1749 but was reopened in 1754 with Hasse's *Alessandro nell'Indie* and David Perez's *Lucio Vero*. Mozart gave a concert there on his first trip to Italy in 1770. Several works had their

1. *Rehearsal for Vivaldi's 'La fida ninfa', Teatro Filarmonico, Verona, 1732: drawing by Francesco Galli-Bibiena and Jean-Joseph Chamant, pen and ink wash (Royal Library, Windsor Castle)*

premières at the Filarmonico during the 18th and 19th centuries, including Traetta's *Olimpiade* (1758), Cimarosa's *Giunio Bruto* (1781) and Pedrotti's *Romeà di Montfort* (1846). Bombed and burnt in February 1945, it was rebuilt (1961–71) and thereafter managed by the municipal Ente Lirico. The Teatro dell'Accademia (later called Vecchia) presented operas from 1722 until the 19th century; it was closed in 1873. There were several theatres briefly active during the 19th century, including the Teatro di S Tomìo (or Teatro Morando), the Teatro Ristori and notably the Teatro Nuovo, which opened in 1846 with Verdi's *Attila* and gave the premières of Pedrotti's *Fiorina* (1851) and *Tutti in maschera* (1856). On the initiative of the tenor Giovanni Zenatello, a series of open-air performances at the Arena was inaugurated in 1913 with a performance of *Aida*. With the exception of the war years, operas have been mounted there each summer and are among the most important musical events in the city (fig.2).

Other musical organizations include the Società Amici della Musica, active from 1909; and more recently the celebrated Coro dei Concerti Spirituali della Cattedrale.

2. *Scene from Verdi's 'I Lombardi alla prima crociata', Verona Arena, 1984: designed and directed by Attilio Colonello*

The Scuola d'Arco (founded 1877) and the Scuola di Pianoforte, Composizione e Organo were amalgamated in 1927 as the Civico Liceo Musicale, which became a state conservatory in 1968 known as the Conservatorio E.F. Dall'Abaco (in honour of one of the city's many natives who had important musical careers elsewhere). The Biblioteca Capitolare has a music collection, and the Accademia Filarmonica holds a collection of 16th- and 19th-century instruments.

Veronensis, Peregrinus Cesena. *See* CESENA, PEREGRINUS.

Verovio, Simone (*b* 's-Hertogenbosch; *fl* Rome, 1575–1608). Dutch calligrapher, editor and engraver of music. He moved to Rome not later than 1575 and in 1586 he began to publish music books, among the first to be printed entirely from engraved plates. (The *Intabolatura da leuto del divino Francesco da Milano*, imperfectly engraved in about 1535, inspired no immediate imitations of the technique.) Two of these were entitled *Diletto spirituale*, one with keyboard score and lute tablature (see illustration overleaf), and one with only the vocal parts; the third was Peetrino's *Primo libro delle melodie spirituali*. In two of the books Verovio called himself 'scrittore', but in all three books the phrase 'Martinus van Buijten incidit' appears on the title-page. Van Buyten may have engraved all of the plates for the Peetrino book and the purely vocal version of *Diletto spirituale* as well as other Verovio books. However, the version of *Diletto spirituale* with instrumental music was 'collected by Simon Verovio, engraved and printed by the same'. In some later editions Verovio clearly stated that he was the engraver, others he signed 'appresso Simone Verovio' or 'stampate da S.V.', and some he did not sign at all.

Verovio's 18 signed music books show his cursive hand; the music hand is neat, with shaded and rounded note-heads. The books are largely devoted to three-voiced *canzonette spirituali*, often with optional instrumental parts, by composers then active in Rome. Musically his most impressive books are Luzzaschi's *Madrigali* (1601) and Merulo's two books of *Toccate d'intavolatura* (1598, 1604). He also probably printed Anerio's *Gagliarde* of 1607. Verovio also wrote or contributed to at least five writing books between 1587 and 1598, two of them broadsides.

Verovio's *Gesu sommo conforto* appears in the *Diletto spirituale*, but his musical activities cannot be further traced. Several Roman musicians of the early part of the 17th century were named Verovio and were probably his children. They include Giacomo (*fl* 1607), singer in the Oratorio dei Filippini; Giovanni (*fl* 1614), also a singer; Michelangelo del Violino, whose mordents and vibrato on the violin were mentioned by Arteaga; and La Verovia, a nun in the convent of the Holy Spirit, famed for her singing. Della Valle cited the 'tenore famoso' who sang in his *carro* simply as 'Verovio'.

THOMAS W. BRIDGES

Verrall, John (Weedon) (*b* Britt, IA, 17 June 1908). American composer. Early studies in composition with Donald Ferguson were followed by studies with R.O. Morris in London and Kodály in Budapest. He attended the Minneapolis School of Music and Hamline University (BA 1932) and continued his studies with Copland (at the Berkshire Music Center), Harris, and Jacobi. Verrall taught at Hamline University (1934–42), Mount Holyoke College (1942–6), and from 1948 at the University of Washington, from which he retired as professor emeritus in 1973. He received numerous awards including a Guggenheim Fellowship (1947) and a D.H. Lawrence Fellowship (1964). From the late 1940s, he used as the tonal basis for his music a nine-pitch scale consisting of two tetrachords on either side of a central pitch, itself alterable (C–D♭–E♭–E, F or F♯, G–A♭–B♭–B). This collection lends itself to symmetrical harmonic formations and melodic contours which, with equivalent rhythmic and metrical formations, generate the global and local pitch and rhythmic relations in his music.

WORKS

Dramatic: Minnesota Document (film score), 1941; The Cowherd and the Skymaiden (op, 2, E. Shephard, after Chin. legend), 1951, U. of Washington, Seattle, 17 Jan 1952; The Wedding Knell (chbr op, 1, after N. Hawthorne), 1952, U. of Washington, Seattle, 5 Dec 1952; 3 Bind Mice (chbr op, 1, G. Hughes), 1955, U. of Washington, Seattle, 22 May 1955

RICHARD SWIFT

Verrecore, Mathias [Matthias] **Hermann.** *See* WERRECORE, MATHIAS HERMANN.

Verrett [Carter], **Shirley** (*b* New Orleans, 31 May 1931). American mezzo-soprano, later soprano. She studied in Los Angeles with Anna Fitziu and Hall Johnson. After winning a television talent show in 1955, she attended the Juilliard School. While a student there she sang the solo in Falla's *El amor brujo* under Stokowski and made her professional operatic début, as Lucretia in Yellow Springs, Ohio, in 1957. The following year she played (under the name Shirley Carter) Irina in Weill's *Lost in the Stars* at the New York City Opera. Concerts and recitals preceded her European début in Nabokov's *Rasputins Tod* (1959, Cologne). In 1962 her remarkable Carmen was first seen at the Spoleto Festival; it was later repeated at the Bol'shoy (1963), the New York City Opera (1964), her La Scala (1966) and Metropolitan Opera (1968) débuts, and Covent Garden (1973), where she had first appeared as Ulrica (*Un ballo in maschera*) in 1966. Her other notable roles include Gluck's Orpheus, Donizetti's Elizabeth I (*Maria Stuarda*) and Léonore (*La favorite*), Verdi's Amneris, Eboli, Azucena and Lady Macbeth, Saint-Saëns's Delilah, and Selika in Meyerbeer's *L'africaine*. At the first Metropolitan performance of *Les Troyens* in 1973 she played both Cassandra and – because of Christa Ludwig's illness – Dido. Her voice was richly burnished with an even range of more than two octaves, used with the utmost intelligence. In the late 1970s she began to assume soprano roles, most notably Tosca and Norma, while retaining most of her mezzo ones. On stage, especially as Delilah, Eboli or Azucena, she fused word, tone and gesture into an unforgettable characterization. She recorded several of her roles, most memorably Orpheus, Lady Macbeth, Ulrica and Eboli. Her large recital repertory included songs by Schubert, Brahms, Mahler, Milhaud, Falla and Rorem.

ALAN BLYTH

Verrijt [Verrit, Verrith, Verryt], **Jan Baptist** (*b* Oirschot, North Brabant, *c*1605; *d* Rotterdam, bur. 29 Aug 1650). Dutch composer, organist and carillonneur. He began his career as deputy organist of St Maartenskerk at Weert, near Eindhoven. In 1636 he was appointed organist of St Pieterskerk, Leuven, and at the same time became one of the city musicians; when his salary was raised the magistrates described him as an 'organist very capable in the art'. In 1639 he became city carillonneur and organist of St Jan, 's-Hertogenbosch, for which he converted to Protestantism. For a month in 1642 he studied with Jacob van Eyck in Utrecht. From early March 1644 until his death he was organist of St Laurens, Rotterdam. He was an authority on organs and their restoration. Verrijt's surviving publications comprise sacred and secular concerted music, generally for modest forces and in a relatively up-to-date style.

RANDALL H. TOLLEFSEN/RUDOLF A. RASCH

Vers. A technical term in troubadour poetry, with three separate meanings. For the earliest troubadours, up to and including Marcabru, it was the usual term for a strophic song in the vernacular, encompassing both love songs and political or moralizing songs, which were called *cansos* (*see* CANSO) and *sirventes* respectively by the troubadours of the classical period. For the last troubadours, such as Guiraut Riquier and the 14th-century Toulouse school, it means specifically a political or moralizing song, as distinct from the amorous *canso*. It is also the usual term for a line of verse. The word is undoubtedly related to the Latin *versus* (*see* VERSUS (i)), although those writers who used the term to denote a political or moralizing song believed it to be derived from *verus* ('true').
See also TROUBADOURS, TROUVÈRES, §I, 5.

STEPHEN HAYNES

Versailles. French royal palace 16 km west of Paris. *See* PARIS, §V, 1.

Verschiebung (Ger.: 'shifting'). A term used in connection with the use of the UNA CHORDA pedal. *See also* MUTE, §3.

Verschueren. Dutch firm of organ builders. Leonard (Léon) Hubert Verschueren (1866–1957) trained with the firm of Maarschalkerweerd in Utrecht, and then founded a pipe-making workshop in his native village of Heythuysen, Limburg, on 5 May 1891. Within a few years he was supplying more than 30 organ builders at home and abroad with pipes and parts. In 1896 he built his first entirely new mechanical-action organ for the Noordkerk, Schagen. After 1904 Léon developed the business with South German organ builder Max Bittner (*d* 1955), making all parts in-house (a rarity at the time). Tonally their instruments blended South Dutch, Walloon, Rhineland and, through Bittner, South German styles. Actions were pneumatic (a good example is in the Petruskerk, Gulpen).

Verschueren was very struck by the Klais organ in the abbey of Rolduc, which was built in accordance with the principles of the *Orgelbewegung*. In response he changed his design for the new instrument at St Dyonisius, Schinnen, adopting electro-pneumatic cone-chests and a neo-Baroque specification. His *magnum opus*, for the Catharinakerk, Eindhoven (1936, restored 1990; main and altar organ, 71 stops), remains the most important organ of this type in the Netherlands. He maintained this style of building into the 1950s.

In the mid-1930s the firm was joined by Léon's sons Léon Gerard Joseph (1903–86) who later became its director, George Emile (1909–85) who ran the Tongeren (Belgium) branch from 1937 (which became independent in 1951) and Frans Joseph Jacques (1914–86), who after training with the Kuhn firm in Männedorf headed the pipeshop and voicing department. In 1946, another son, Antoine Henri Joseph (1911–72) joined as administrator. During the post-war period the firm's production of new organs reached its height. Instruments were exported to locations in the USA and Japan, some still employing electric action.

In about 1970 the organologists Willem Talsma and Hans van der Harst led the firm into the historically informed organ building movement. Under Leonard (Léon) Francis Maria Verschueren (*b* 1947), son of Frans Joseph Jacques and director from 1977, the firm set about rethinking its methods, using fine instruments of the past as exemplars. Among the most important instruments is the organ built at the Lambertuskerk, Wouw (1984), which is rooted in the 17th- and 18th-century Hollandic tradition. From the mid-1980s Verschueren continued to build new instruments along historically informed lines, as well as restoring and reconstructing old organs with great success. On its 100th centenary in 1991 Queen Beatrix bestowed upon the firm the title *Hofleverancier* (supplier to the court). During the late 1990s the firm was chosen to restore the large three-manual Hagerbeer organ in the Pieterskerk, Leiden, to its 1643 condition, a project of international importance and the largest historical organ tuned in mean tone in the Netherlands. At the close of the 20th century the firm remained very active, boasting 28 employees, shipping pipes to the USA and organs to locations across Europe and North America.

ADRI DE GROOT

Verschuere Reynvaan, Joos(t) (*b* Middelburg, 11 Sept 1739; bur. Vlissingen, 5 May 1809). Dutch organist, composer and lexicographer. After taking the doctorate in law (Harderwijk, 1765), he practised as a lawyer in Middelburg. However, in his youth he had studied with the local well-known violinist and cellist I. Gerzony and the keyboard player Benjamin Bouchart, who succeeded Pieter Bustijn as city organist and carillonneur in Middelburg, and in 1769 he was appointed organist of the Jacobskerk in Vlissingen, where he moved in 1774. There he taught, advised on organs and served as organist at the freemason's lodge. He retired from the Jacobskerk in 1794. Of his many compositions only the *CL psalmen* and the *Mengeldichten* have survived; the *CL psalmen*, written in a more secular, Italianate style, seem to have been popular abroad. His writings concerning music, especially his *Muzijkaal kunst-woordenboek* (the first music lexicon in the Dutch language), are of particular musicological importance as they contain much detailed information about a wide variety of subjects, especially those pertaining to the Netherlands.

WORKS

Mengeldichten, in gezangen, op muziek gebracht (Middelburg, 1774)

De CL psalmen met de lofzangen (Amsterdam, Middelburg and Vlissingen, 1789)

ALBERT CLEMENT

Verse (i) (from Lat. *versus*). In liturgical books of the Roman Catholic Church, a line of a psalm or canticle, or a sentence from a biblical text, such as those used in graduals, alleluias and introits (where the verse is marked ℣). Such verses were always sung by soloists, either in chant or polyphony, while the RESPONSORY, or response (℟), was sung by the choir. The alternation between soloists for 'verses' and choir for 'responds' was the basic principle of the Anglican verse anthem of the 16th and 17th centuries (*see* ANTHEM, §I, 3).

See also ALTERNATIM.

□

Verse (ii). The words 'verse', 'versus' and 'verset' (or 'organ verse', 'organ verset') are often used to denote a short, possibly improvised, organ piece used in place of a verse of a hymn, psalm, canticle or other liturgical item from the Mass or Office. The word 'verse' (more rarely 'versus') was also used in England in the 16th and 17th centuries to denote a short, freely composed organ piece.

See also ORGAN HYMN; ORGAN MASS; and VOLUNTARY.

□

Verseghy, Ferenc (*b* Szolnok, 3 April 1757; *d* Pest, 15 Dec 1822). Hungarian poet and composer. As a Pauline monk he studied theology and philosophy. In 1794 he joined the clandestine Hungarian Jacobin movement led by Ignác Martinovics (he was the first to translate the text of the *Marseillaise* into his native language). The movement was

uncovered in 1794, and for his part in it Verseghy was sentenced to death in 1795; after a royal reprieve the sentence was commuted to nine years' imprisonment.

Although he played the piano and harp and was well-versed in music theory, it is as a composer of Hungarian songs that Verseghy is remembered. He set Hungarian words to Viennese songs and also composed new songs. In 1781 he compiled a manuscript collection of contemporary melodies using ancient texts, *A Parnasszus hegyén zengedező magyar múzsának szózati* ('Voice of the Hungarian muse singing of Parnassus'), and in 1791 he published *Rövid értekezések a Muzsikáról VI énekkel* ('Short essays on music with six songs'). In the appendix to his satiric epic *Rikóti Mátyás* he published four arias from Mozart's *Die Zauberflöte* as well as a Hungarian folksong. In 1806 he published the songbook *Magyar Aglája* ('Hungarian Aglája') with a musical appendix, and in 1807 the song collection *A' Magyar Hárfásnak részént Aglájábul vett, részént ujjonon szerzett Énekei* ('Songs of the Hungarian harpist, partly taken from Aglája, partly new composed'). He sought to combine the Viennese Classical style with elements of the *verbunkos*. Although he included folksongs in his published collections, the freedom and lack of restraint of the traditional folksong nevertheless remained foreign to his own works. In his discovery of the unity of melody and words, and in his recognition of the possibilities of combining western and eastern European elements to create a new genre, Verseghy was a pioneer in the development of the Hungarian art song.

FERENC BÓNIS

Verset. *See* VERSE (ii).

Versicle (from Lat. *versiculus*: 'small verse'). In Christian liturgies any short text (often said by celebrant or deacon) followed by an answer or 'response' (from congregation or choir). The combination of versicle and response is generally called 'versus' in Latin liturgical sources. Versicles and responses are often grouped in series, and sung in litany fashion, as in the Roman rite on Sundays at Prime, or in Anglican Morning and Evening Prayer. (*See also* LITANY; for the Preces in non-Roman Latin rites, *see* GALLICAN CHANT, §13; MOZARABIC CHANT, §3(x); for the abbreviations commonly signifying 'versicle' and 'response' *see* RESPOND.)

In the Roman rite, except for the Preces ('prayers') at Prime on Sundays, sets of versicles and responses are said or sung singly at many places in the Office: at the beginning of each of the canonical Hours, and at the close of all but Prime and Compline; on Sundays and feast days after the nocturns of Matins, after the hymns of Lauds and Vespers and after the Short Responsory of the Little Hours. Their music follows a simple intonation formula. The versicle BENEDICAMUS DOMINO, with the response *Deo gratias*, is one of the closing versicles of each of the Hours.

In the Anglican rite, series of versicles and responses appear twice during both Matins and Evensong. The initial petition is normally spoken by the officiating minister, the response by the congregation or choir. The terms 'preces', 'responses' and 'suffrages' are also used to describe some versicles. 'Suffrages' has the most general application: in the first Book of Common Prayer, for instance, the rubric 'then the suffrages before assigned at Matins [follow here]' is found at the close of the order of Evensong, referring to the versicles that follow the Creed (beginning 'The Lord be with you') and the term can indeed be applied to any sequence of intercessory prayers involving initial petitions and group responses (e.g. in the litany). The versicles leading up to *Venite* at Matins and to the psalms at Evensong (the first group in each service) are sometimes referred to as 'preces' (a historically inexact usage), and those after the Creed at both services as 'responses' (e.g. in John Barnard's *First Book of Selected Church Musick*, 1641). The versicles between the Creed and the Lord's Prayer (from 'The Lord be with you' to 'Lord, have mercy upon us') are sometimes referred to as the Lesser Litany.

The earliest English settings of the versicles for Matins and Evensong, in Merbecke's *The Booke of Common Praier Noted* (1550), are adaptations of traditional pre-Reformation formulae. Composers subsequently set the versicles chorally. Probably the first to do so was Tallis, who included with the versicles simple choral settings of special psalms for the Christmas season (*see* ANGLICAN CHANT); his versicles are based on Merbecke's formulae. Between 1550 and 1644 over 40 groups of Preces were set, many of which were allied to festal psalm settings. During this period at least another seven complete sets of versicles were composed, some of which are free in form and unconnected with the traditional intonations. The preces and responses by William Smith (i) are certainly the most elaborate and are generally regarded as the finest.

Little attention was paid to this comparatively lowly form of Anglican liturgical music after the Restoration, although two composers, Richard Ayleward and Thomas Ebdon, provided music that still rightly holds a place in the current repertory. Several versicle settings have been written in the 20th century, notably by Bernard Rose and Kenneth Leighton (full choral settings) and by Harold Darke (for boys' voices).

Versified Office. A form of medieval Office, of Carolingian origin and common until about 1500, in which some or all of the antiphons and responsories are in verse. The vast majority are for saints' days, but some are for particular Sundays or other feasts, including Advent, Trinity and Corpus Christi. Both metrical and accentual

versification systems were used, and the verse was frequently rhymed. At least 1500 such Offices are known, some consisting of as many as 50–60 versified items (and there are countless others with only a single item); they are found throughout western Europe, including regions such as Scandinavia and Poland, whose conversion to Christianity was relatively late. (For a discussion of the overall structure of the Office, *see* DIVINE OFFICE.)

1. Terminology and origins. 2. Texts: (i) Versification, compilation and style (ii) Examples of particular Offices. 3. Music: (i) General characteristics (ii) Relation of texts and music.

1. TERMINOLOGY AND ORIGINS. No medieval equivalent exists for the modern term 'versified Office'. Designations from the period refer to other aspects of the texts, for example, *Responsoria cum antiphonis ... dulcissime modulationis* ('Responsories with antiphons of the sweetest melody'; see Jonsson, 116–18). The term *historia*, first used by Amalarius of Metz, denotes a coherent series of responsories (antiphons were also added on occasion) to be sung at the liturgical Hours on a particular feast day (e.g. *historia de Iudith*); the texts were taken from books of the Bible other than *Psalms*. At a later date non-biblical sources, some of which might be versified, were used for the responsories and antiphons of newly written Offices, for example, those for saints. A coherent narrative is often, though not invariably, followed within Offices of this kind.

During the later Middle Ages, there are many instances in which *historia* signifies 'versified Office'. The more general term *officium* could also refer to such an Office. 'Rhymed Office', a term current since the publication of Analecta Hymnica Medii Aevi (1886–1922) and hitherto used widely (and often loosely) by scholars, nevertheless refers to a subcategory of versified Office, which itself is a subcategory of *historia*. The versified Office is not, however, a liturgical genre in its own right: it simply defines the textual technique of a *historia*.

Historiae (and hence versified Offices) are usually found in antiphoners or in special *libelli* for particular feasts; complete Offices, with psalms, lessons, hymns etc., are found in breviaries. With the proliferation of saints' cults during the Middle Ages, there was a corresponding growth in the popularity of the versifed Office. New Offices (as well as hymns, tropes and sequences) were often written for well-known saints; thus, for example, 21 different versified Offices survive for St Anne alone. In many cases a clear local influence on these new compositions is evident: towns, villages, monasteries and churches were all keen to place themselves under the patronage of a saint, perhaps some long-dead figure recently brought to prominence through the discovery or translation of relics. Religious orders such as the Dominicans and Franciscans, through the composition and diffusion of their own Offices, also played an important role in the dissemination of the versified Office. In some places new, versified Offices replaced the older prose Offices, for example, the Office of St Benedict (original Offices: CAO, i–ii, nos.50[5], 57[5], 102[4]; versified Offices: AH, xxv, 145–52).

2. TEXTS.

(i) Versification, compilation and style. Versified Office texts are often formulaic: repetition and paraphrase are common, as in hymns and sequences, and the various saints' virtues, torments and miraculous deeds are mostly recounted in stereotyped fashion. Many texts have similar openings, as, for example, *Ave gemma claritatis*, *Ave gemma confessorum* and *Ave gemma pretiosa*. Frequently, the same text, with only the names changed, is used for the invitatories of different saints, as in the following example, where 'Germanum' might be replaced by 'Lambertum', 'Mariam' or 'Cucufathem', sometimes at the expense of the prosodic scheme:

> Aeternum trinumque Deum laudemus et unum
> qui sibi Germanum transvexit in aethera sanctum.

Nevertheless, the repertory contains much that is of both poetic and musical value.

A broad spectrum of metrical and accentual verse forms is found, including hexameters, elegiac distichs, accentual trochaic septenarii and iambic dimeters (Ambrosian strophes), as well as irregular forms (e.g. the Office of St Chrysanthus and St Daria, AH, xxv, 207). A kind of 'prosimetrum', a combination of prose and different kinds of verse within the same Office, is common, particularly in the earlier period (see Norberg).

All the texts within a versified Office functioned together and were always sung together during a particular liturgical celebration. Thus antiphons not infrequently reflect their psalms or canticles, and responsories echo their readings; within the whole context there is a network of allusions, quotations, themes and symbols. For example, the text of the opening of the *Benedictus* is as follows (*Luke* i.68–9):

> Benedictus Dominus Deus Israel, quia visitavit et
> redemit populum suum,
> et erexit cornu salutis nobis in domo David servi
> suo.

This is directly echoed by the following *Benedictus* antiphon (AH, xxviii, 262):

> Cornu salutis erexit
> nobis deus qui respexit
> exaltando visitando
> per utrumque Valentinum.

(It should be noted that in editions such as Analecta Hymnica, a versified Office will normally consist of the antiphons and responsories for Matins, Lauds and Vespers – the Little Hours mostly repeat pre-existing chants – but not the hymns, even in the case of late Offices where a hymn, and sometimes also a sequence, was composed together with the other pieces and appeared in the same manuscript.)

The oldest surviving source with chants for the entire Office is the Compiègne Antiphoner (*F-Pn* lat.17436) dating from 860–80. The antiphons and responsories it contains are compiled from the Bible and other texts such as Patristic sermons; many of the non-biblical chants focus on the Virgin. The manuscript includes versified items for Christmas, the Holy Cross, St Benedict, St Peter the Apostle and the local saint Medardus, and are derived from three main sources: hymns (metrical and accentual), metrical lives of the saints and inscriptions in churches. The Office for Christmas, for example, which includes antiphons in elegiac distichs and trochaic septenarii, uses strophes from Sedulius's *Carmen paschale* (a biblical epic in hexameter verse) and from his hymn *A solis ortus cardine*, and an inscription from the Basilica di Santa Maria Nuova in Rome. All sources, including the Bible, were reworked in various ways, and the original versification was sometimes ignored, suggesting that even items

originally in verse were chosen for their content rather than their form.

In the 10th century, versified Offices seem to have been created in much the same way, that is, through compilation and arrangement of existing textual material; there is no instance from this period in which every item of an Office is in verse. A greater overall coherence is evident in many versified Offices written during the period between the 11th century and the Council of Trent, and most of those from the later Middle Ages have the same kind of verse throughout. The stylistic history of versified Offices is in fact similar to that of hymns and sequences: the distinctions between the various genres gradually diminished. Thus, in the later Middle Ages there are more frequent and more sophisticated rhymes, but also texts written in classical hexameters. Prose Offices also continued to be composed throughout the period.

(ii) Examples of particular Offices. Among the oldest surviving 10th-century Offices is that for the Trinity composed by Stephen of Liège. It is written in highly structured prose (with several rhymes), and is mainly compiled from verses from the Bible and hymn doxologies, including parts of Alcuin's hymn to the Trinity (*PL*, ci, 55). In the first antiphon at Lauds, in iambic dimeter, the three persons of the Trinity are not referred to by name but as 'Trinitas aequalis' and 'una Deitas' (CAO, iii, no.2948):

> Gloria tibi, Trinitas
> aequalis, una Deitas,
> et ante omnia saecula
> et nunc et in perpetuum.

The word order used in these terms is known as 'chiastic', since equivalent parts of speech form the shape of the Greek letter *chi* (χ). In the third antiphon at Lauds, based on a hymn to St Vedastus by Alcuin (AH, l, 155), the subject is 'gloria', to which two similar verbs, 'resonet' and 'resultet', are tied, both with forms of 'laus'; the singers are present in the text through the phrase 'in ore omnium', and the verse form is a Sapphic stanza (CAO, iii, 1968, no.2947):

> Gloria laudis resonet in ore
> omnium patris genitaeque prolis,
> Spiritus sancti pariter resultet
> laude perenni.

Although this Office is not a *historia* in the narrative sense, it was known from an early date as the *historia de Trinitate*, and like the Office for Christmas was in widespread use until the revisions of the Second Vatican Council.

The Office of St Lambert (AH, xvi, 230), also compiled by Stephen of Liège, is more conventional in that it consists mainly of items taken from pre-existing works devoted to the saint's life: the rhymed prose *Gesta sancti Lamberti*, mostly for the responsories, and the hexameter epos *Carmen de sancto Lamberto*, particularly for the antiphons. All the prose chants are fully rhymed, but many fewer than half of the hexameter parts of the Office contain Leonine rhymes. The Office also includes a *Magnificat* antiphon in trochaic septenarii with a few rhymes. The chants contain laudatory expressions from the *Carmen* and form a narrative sequence following the saint's life from childhood to martyrdom.

In the Office of St Fuscianus and his Companions (AH, xiii, 150), the earliest source for which is the 10th-century Mont-Renaud manuscript (PalMus, 1st ser, xvi, 1955/*R*), almost all the responsories are in prose whereas all the antiphons are in verse – hexameters and pentameters (about half of them with Leonine rhymes), a few trochaic septenarii, and other, hybrid types. The texts are drawn from the lives of the saints, including the epic *Carmen de sancto Quintino*, but the original prose or hexameters have been mostly reworked. For example, lines 150–51 of the *Carmen* are hexameters:

> Regia martyrii redimitum munere caeli
> sed iam Quintinum posuit super astra polorum.

(But the kingdom of heaven has already placed Quintinus above the stars, crowned with the gift of martyrdom.)

But in the Office, at the second antiphon of the second nocturn, the second line of this text has been adapted to obtain a pentameter or kind of hybrid verse, appearing as follows:

> Regia martyrii redimitum munere caeli
> sed iam Quintinum sumpserat emeritum.

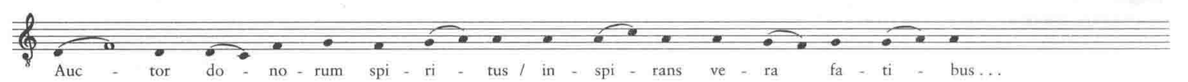
(But the kingdom of heaven had already taken Quintinus, who
now had finished serving, crowned with the gift of martyrdom.)

Some Offices from the earliest group are in octosyllabic verse: the Office of St Cuthbert, found in a number of 10th-century sources (*GB-Lbl* Harl.1117, *Ccc* 183, *I-Rvat* Reg.lat.204, etc.), consists of octosyllabic verse with some rhymes. It follows the general outline of both of Bede's *Vitae sancti Cuthberti* but seems to be an independent composition. Another, slightly later example is the well-known versified Office in honour of St Gregory the Great composed by Pope Leo IX (Bruno of Toul, *d* 1054; AH, v, 184). Except for the invitatory, which is in hexameters, the entire Office is in non-accentual and non-metrical octosyllabic rhyming couplets.

The Venetian Office of St Eufemia and her Companions is from a later group of Offices, and parts of it are highly structured. Thus, for example, in the invitatory (written in accentual trochaic dimeters) there is a play on the word 'virgo' in which the Blessed Virgin Mary is linked with Jesus and the virgin saints:

> Virgo sponsum veneretur, virginem ecclesia,
> Virginumque filiarum celebrat sollemnia.

(The Virgin may venerate the bridegroom and the Church the Virgin,
as it celebrates the solemnity of the virgin daughters.)



Julian of Speier (*d* 1250) composed the widely known versified Offices for St Francis, *Franciscus vir catholicus* (AH, v, 175), and for St Anthony of Padua, *Gaudeat ecclesia* (AH, v, 126). Both are systematically rhymed: the former is in regular accentual iambic verse and the latter in accentual trochaic septenarii. John Peckham (*d* 1292) wrote one of the many versified Offices modelled upon Julian's work, the Trinity Office *Sedenti super solium* (AH, v, 20).

(For further information on Office texts, see the introductions to AH, 1889–1909/*R*, v, xiii, xiv*b*, xvii, xviii, xxiv–xvi, xli*a*, xlv*a*, xlviii, lii.)

3. Music.

(i) General characteristics. The melodies of versified Office chants are often indistinguishable in style from those of prose Offices. There was no *a priori* requirement for versified Office music to differ from traditional prose chant or for composers to write in a new style; one composer, Letaldus of Micy, is even said to have 'declined to abandon similarity to old chant' (*excedere noluit a*

Ex.1 Antiphon in form of a hymn stanza in iambic dimeters from the versified Office for St Cuthbert (*GB-WO* 160, f.292)

similitudine veteris cantus) and to have disapproved of the 'novitas' sought by others (*PL*, xxxvii, 784). Thus, the versified antiphon melodies in ex.1 and ex.3 below are no different from the kind of standard prose antiphon melody in ex.7 below; such similarity is due to the common melodic type rather than to deliberate borrowing. A number of hymn melodies resemble versified antiphon melodies (see below, ex.8), but generally any similarity between antiphons and hymns is caused more by the hymn-like forms of antiphon texts rather than the hymn-like characteristics of antiphon melodies.

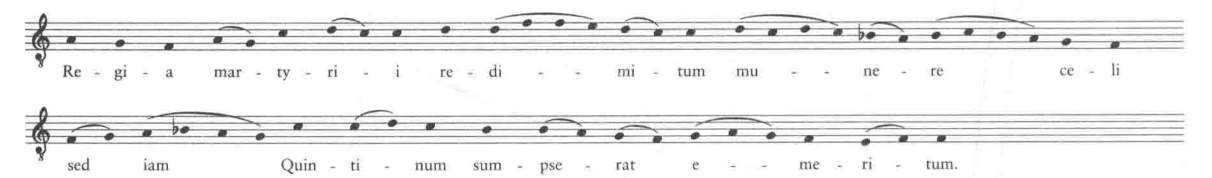
Developments in melodic style that occurred during the 11th and 12th centuries were neither exclusive to Offices with versified texts nor related in any obvious way to the use of verse. Nevertheless, certain versified Offices from the 11th to the 13th centuries, for example, the Office of St Gregory (see Hiley, 1993), the Office of St Thomas of Canterbury (Stäblein), various Offices attributed to Bruno of Toul (Bernard) and some Rhenish rhymed Offices (Jammers), reveal a more condensed musical style with a prevalence of short, self-contained lines, restricted melodic goals and closer sequences of melodic cadences (see Hiley, 1993, p.276). These stylistic changes may have arisen through the need to accommodate shorter textual units and the regular accentual verse cadences that were often reinforced by rhyme (particularly from the 12th century onwards).

A common musical device in medieval Office composition, appearing from the 10th century onwards and mentioned by Stephen of Liège, is the numerical ordering of chants according to their mode; but this feature was not unique to Offices with versified texts (see Hughes, 1983). Such an arrangement was probably influenced by tonaries (Huglo, 1971, p.122); in tonaries, however, the mode is a criterion by which pre-existing chant is classified, whereas in Offices it functions as a category of composition (Haug, 1991, pp.117–19).

(ii) Relation of texts and music. Examples of pre-Carolingian versified Office chants have been preserved, although their occurrence is sporadic. The Latin hymn also served as a concrete model for Office compositions and as a general paradigm for any attempt to represent in music the formal features of Latin verse in a linguistically competent way (*see* HYMN, §II). Nevertheless, the emergence of the versified Office might most successfully be interpreted as a typically Carolingian phenomenon – a result of the encounter between a melodic idiom whose origins lay in the setting of biblical Latin prose (i.e. traditional liturgical chant) and the poetic intricacies of classical Latin verse.

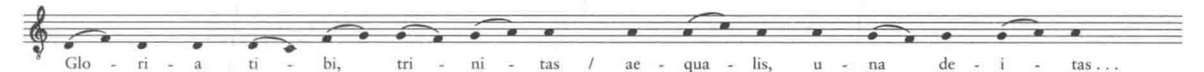
An important question from both a liturgical and an aesthetic point of view concerns the extent to which the music made the verse form perceptible to those who sang or listened to it. Melodies that articulate verse structure may well indicate a genuine interest by composers in the verse *per se*, to a degree perhaps sufficient to have motivated the use of poetic diction within Office chant. Certainly those antiphons that are melodically similar to hymns (as in ex.1) seem to reveal an appreciation for the intrinsic song-like qualities of the verse. Also important, particularly to the music historian, is whether the more complex, ambiguous structure of certain versified texts affected the structure of the melodies. Increasing textual intricacy may not only have necessitated changes in the musical style of Latin chant but also contributed to a growth in the potential of monophonic music to articulate text. A metrical text whose syntax is as discontinuous as that of the antiphon in ex.2 (from the Office of St Fuscianus and his Companions; see §2(ii) above) poses problems of melodic composition far beyond the basic concern of rendering the text intelligible.

A widely diverse range of musical settings is evident within the repertory. Some chants focus on verbal syntax and meaning but ignore the verse form; others emphasize the verse form alone; while others reveal a subtle balance between all these elements. Such differences become apparent on close analysis of text and music, taking into account whatever performance indications are provided by the notation. By way of example, the versified antiphons in exx.3 and 4 reveal a conflict between verse form and syntax. In ex.3 the main syntactic (and sense) groups are as follows:



Gloria tibi / trinitas aequalis / una deitas

In terms of the verse form, however, the same words constitute two lines, with the line division coming after 'trinitas', thus causing an enjambement:



Gloria tibi trinitas / aequalis una deitas

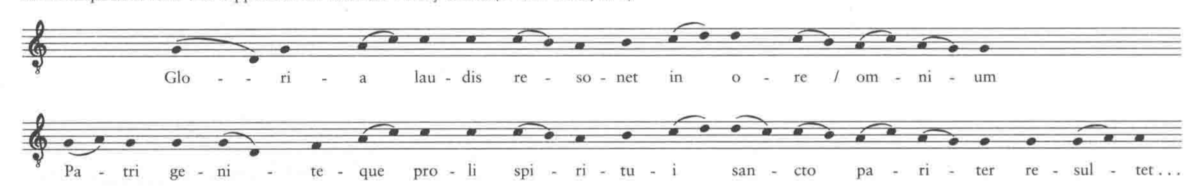
The melody at the outset is hymn-like and resembles that of *Auctor donorum* in ex.1. The verse lines, rather than the sense units, are marked off with identical and unambiguous cadences. However, the neumatic notation (see illustration) indicates that the cadential effect of these figures is to be modified in performance: on the last syllable of 'deitas', which marks the end of both a line and a sense group, an *episema* signifies a lengthening of the note; however, there is no such *episema* on the corresponding syllable of 'trinitas', which occurs at the end of a line but in the middle of a sense group. In other words, although syntax and sense were subordinated to

Ex.2 Antiphon in form of an elegiac distich from the Office for St Fuscianus (*F-Pn* lat.1269, f.338)

Ex.3 Antiphon in iambic dimeter from the Trinity Office (*D-BAs* lit.25, f.71)

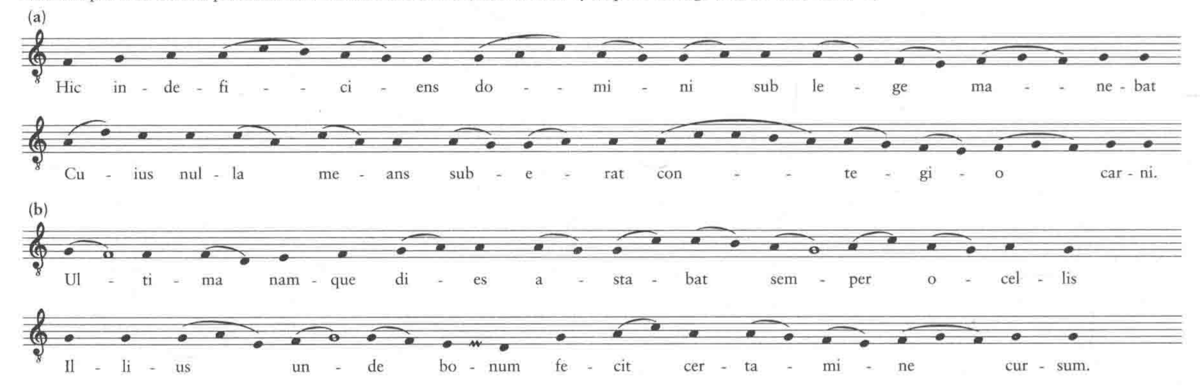
verse form in the composition of the melody, they were not entirely to be ignored during performance.

In ex.4 a similar enjambement occurs at 'in ore / omnium': the end of the verse line at 'ore' is not marked by a cadence, but instead – and in contradiction to the verse form – there is a melodic parallelism between the sense units 'Gloria laudis resonet in ore omnium' and 'Patri geniteque proli spiritui sancto pariter'. As fig.1 shows, the notation includes a 'c' (*celeriter*: 'quickly'), which prevents the performer from slowing down at the end of the verse line; moreover, the capital 'P' of 'Patri' implies a pause after 'omnium', that is, at the end of the sense group rather than the verse line. It appears, therefore, that the scribe and the singers for whom the book was prepared were aware of the versification of the text but were also conscious of the convention of performing it as if it were in prose (see Björkvall and Haug, 1999, pp.10–13).



A number of prose responsories and versified antiphons from the Office of St Lambert by Stephen of Liège are contained in *B-Br* 14650–59 (f.118), copied at the beginning of the 10th century). In this source the antiphons are written in pairs of hexameters, and the verse form is reflected in the layout of the manuscript, each line beginning with a capital letter. Two of these antiphons are transcribed in ex.5. There is no indication that the melodies were designed to reflect syllabic quantities: the setting is not sufficiently syllabic to be performed with longer and shorter notes corresponding to the long and short syllables, and there is no tendency for the longer melismas to occur on long rather than on short syllables. Indeed, there is no evidence at all that the music was conceived with the scansion of the verse in mind. If the ascent from *g* to *c′* is regarded as a melodic accent, most such accents coincide with the prose accentuation rather than with the ictus of the verse.

Although syllabic quantity and verse ictus are not integral to these examples, the music nevertheless makes essential features of the poetic metre perceptible by marking line-endings and internal caesuras with recognizable cadential figures. In ex.5 the ends of most lines are set to a recurring cadential figure. Moreover, all the lines transcribed have a caesura in the third foot, and this too is often marked by a melodic cadence. There are, however, notable exceptions to this strategy: in cases where marking the verse structure would cause an interruption to the syntax, a compromise is made so that the meaning of the words remains clear. In ex.5*b* there is an enjambement from the noun 'ocellis' to its qualifier 'illius'; the cadential figure at the end of the other verse lines is not used at 'ocellis', and as a result the effect of the enjambement is veiled rather than enhanced by the music. A similar process has been observed in other Offices (see Schlager, 1993).



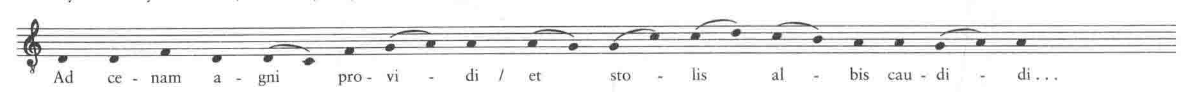
The text of the antiphon from the Office of St Fuscianus (see ex.2) is based on the *Carmen de sancto Quintino*. Since a pair of hexameters from the original poem has been transformed into an elegiac distich without any significant change of textual content, the genuine intention must have been a change of metre. Not surprisingly,

Series of versified antiphons from the Trinity Office of Stephen of Liège, with a notation of the melodies in German neumes, showing parameters of performance. The ascending numerical order of the modes can be seen from the tonus letters in the margin: the vowels 'a', 'e', 'i' and 'u' designate modes 1, 2, 3 and 4, the consonants the differentiae (CH-SGs 390/391, p.101; 'Antiphonary of Hartker', St Gallen, c1000).

Ex.4 Antiphon in form of a sapphic stanza from the Trinity Office (*D-BAs* lit.25, f.71)

Ex.5 Antiphons in form of pairs of hexameter from the Office for St Lambert by Stephen of Liège (*NL-Uu* 406, f.167*r–v*)

Ex.6 Antiphon in prose from the Trinity Office (*D-BAs* lit.25, f.71*v*)



therefore, the melody is clearly designed to convey the structure of the distich: every word is set to its own self-contained melodic segment, and in most cases these end with a descent either to the final *f* or to its upper 5th *c′*, all with a more or less distinctively cadence-like figure. The sequence of melodic segments is not without direction. A double melodic arch is formed, rising from and returning to the final: the first arch, reaching its peak at *f′*, constitutes the hexameter, and the second, with its peak on *d′*, the pentameter. The lengths of the two verse lines are therefore related to the height of the melodic arches. At the same time, both verse lines end on the final, and the central caesuras of the hexameter and the pentameter are clearly marked by similar cadential figures. Thus the textual form of the elegiac distich is strongly brought out by the music, although this is achieved without regard to syntax or meaning. The melody continues over successive words that do not belong together, and sense units such as 'redimitum munere' ('crowned with the gift') are split up by cadences. In this example, however, the word order is so complex that whatever the arrangement of the melodic cadences the text could not be divided up any more meaningfully or clearly. A contrasting case is illustrated in ex.6, where a similar melody is set to a more straightforward text in rhymed prose: here melodic units correspond closely to sense units.

There appear to have been different reasons for the coexistence of Office melodies that closely follow the verse form of their texts (as also found in hymn melodies) and those that effectively neutralize that form. Genre may have been a determining factor: antiphons were more likely to have the melodic characteristics of hymns than the more elaborate responsories (or responsory verses set to the standardized tone); moreover, hymn strophes, along with Sapphic stanzas, pairs of hexameters and elegiac distichs, were of more or less the right length to be used as antiphons. On the other hand, since antiphons were sung before and after passages of straightforward psalmody, even hymn-like (i.e. moderately elaborate) antiphon settings would only be used in order to achieve a contrast in musical idiom between the psalmody and its 'frame'. Another factor might have been verse form: iambic dimeters and trochaic septenarii are more common forms in the hymn repertory and were therefore more likely to be set to hymn-like melodies than were hexameters or elegiac distichs.

RITVA MARIA JACOBSSON (1–2), ANDREAS HAUG (3)

Vers mesurés, vers mesurés à l'antique (Fr.). French verses, written in the last third of the 16th century by Jean-Antoine de Baïf, a member of the group of poets known as the Pléiade, and by his followers. Baïf attempted to apply the quantitative principles of Greek and Latin poetry to the French language, by its nature accentual, and worked out an accentual version of classical metres – hexameters, Sapphic strophes, and so on – by equating long with accented syllables and short with unaccented syllables.

As a member of the Pléiade, Baïf was committed to the proposition that music and poetry should be united as they had been (according to their theories) in ancient times. Eventually, Baïf and his musical associates – Thibault de Courville, Jacques Mauduit, Guillaume Costeley and the brilliant Claude Le Jeune – devised a technique for setting *vers mesurés* to music. In *musique mesurée à l'antique* (or, more simply, *musique mesurée*), the composer followed the metre of the verse exactly; each long (accented) syllable was set to a minim and each short (unaccented) syllable to a crotchet. To ensure that the words would not be obscured the verses were set syllabically in an almost strictly homophonic texture broken occasionally by very brief melismas often no more than two notes long. Because of the complex patterns of classical verse *musique mesurée* moves in irregular rhythmic groupings, alternating between two and three beats. Since no regular musical metre is maintained such compositions are best transcribed without bar-lines, or, at most, with bar-lines marking ends of phrases. The beginning of Le Jeune's *Si le lien se voit deffait* (ex.1), from his *Airs* of 1594, shows the austere character of the new style.

D.P. Walker, whose studies of *vers* and *musique mesurées* are the best and most thorough to date, reported that Baïf and his principal musical adviser, Thibault de Courville, began working out their theories and experimenting with practical solutions in 1567. By 1570 they had amassed enough material and gained enough support from musicians and men of letters to found an Académie de Poésie et de Musique for which Charles IX granted Letters of Patent. Baïf set ambitious goals for the Académie; it was not to be merely a literary salon where the union of music and poetry could be celebrated

Ex.1 Claude Le Jeune: *Si le lien se voit deffait*

properly for the first time since the golden age of Greece and Rome. He intended that, through *vers* and *musique mesurées*, it would be able to revive the ethical effects of ancient music. Its aims were political and, indeed, revolutionary. An art new in its style and in its effect on listeners was to be cultivated at the concerts sponsored by the Académie in Baïf's house. Consistent with his plans, Baïf would not tolerate anything but *musique mesurée* at these concerts. The statutes of the Académie reveal that there were to be two classes of members, professional musicians and *auditeurs*, the gentlemen who attended the concerts who were to pay annual subscriptions to subsidize the group's work. The professional musicians were to meet every day to rehearse, and were forbidden from copying or carrying away any of the books containing *vers* or *musique mesurées*. The Académie was also to be an educational institution, training young poets and musicians, not so that they could popularize *musique mesurée* or introduce it to ever larger audiences, but so that the new art could be kept within a small circle of intellectuals and politically powerful men until its style was fixed and its superiority clearly recognized. Then the élite could impose their art on the general public; the musical life of the country was to become well regulated and mankind be improved.

Baïf's grandiose plans came to very little. After initial opposition, the Académie was in fact organized and met, but it probably did not survive after Charles IX's death in 1574. Certainly, Baïf and his circle continued to be active throughout the 1570s and 80s, but the first Académie was replaced by another – the so-called 'Académie du Palais' (because it met in the Louvre) – under the reign of Henri III. The new Académie had a completely different and more narrowly aesthetic character, even though many of the same members participated and it, too, enjoyed royal patronage.

Baïf's Académie might be considered but a curious footnote to history were it not for the confined but significant influence his work had on the most important French musicians of the late 16th and early 17th centuries. No *musique mesurée* was published during the few years the original Académie was meeting; but collections of neo-classic verse set to *musique mesurée* appeared in great quantities in the 1570s and 1580s. In 1578, for instance, F.M. Caietain indicated in a preface to his *Chansons* that the rhythmic profile of his settings of some of Baïf's *chansonettes mesurées* had been shaped under the guidance of Thibault de Courville. From thereafter a number of other composers, such as Didier Le Blanc (1579), Guillaume Tessier (1582), Nicolas de la Grotte (1583) and Claude Le Jeune (1583 and 1585) included examples of *musique mesurée* in their chanson publications. Jacques Mauduit issued his complete settings of Baïf's *chansonettes mesurées* in 1586. The bulk of Le Jeune's *mesurées* settings did not appear in print until shortly after his death, in *Le printemps* of 1603, a book issued under the editorial supervision of his sister Cecile. Despite the specialized social and aesthetic origins of the genre, *vers* and *musique mesurées* continued to be written; the posthumous *Meslanges* (1610) by Eustache Du Caurroy, for example, includes a good many settings of neo-classical poetry by Nicolas Rapin.

The formation of Baïf's Académie and the subsequent history of the specialized musical settings that derived from it have long held the attention of those interested in the French Renaissance, thanks to the pioneering researches and early modern editions of Walker, Expert and Yates. *Musique mesurée* has also been viewed in somewhat broader and less isolated musical and cultural contexts. It has long been acknowledged, for instance, that the lyrical impulse of the nascent *musique mesurée* recall that of the homophonic *airs* (earlier called vaudevilles) in mid-15th-century French music prints, even if the latter were based on rhymed poetry rather than on texts written in emulation of Greek or Latin metrical schemes. Perhaps more surprisingly, some of Baïf's poems (and Le Jeune's settings in particular) are closely modelled on *villanesche* and *villotte* published in Venice during the 1550s and later. One of the most famous examples of the repertory and among the very first of Le Jeune's *airs mesurés* to appear in print, *Une puce j'ay dedans l'oreille*, seems to be a reworking of the poem *No pulice m'entrato nell'orecchia* from Donato's *Le napollitane et alcuni madrigali* of 1550. Of new interest, too, are the parallels that exist between the classicizing tendencies of the Académie and other attempts to align current French musical practice with the expressive ideals and ethical effects of ancient poetry and music, from the retrospective anthologies of chansons issued during the late 16th century to the musical poetics of Ronsard's *Amours* and the philosophical dialogues of Pontus de Tyard.

Verstimmung (Ger.). *See* SCORDATURA.

Verstockt, Serge (*b* Brasschaat, 28 Feb 1957). Belgian composer. He studied clarinet at the Antwerp Conservatory and composition, electronic and computer applications with Gottfried Michael Koenig at the Instituut voor Sonologie in Utrecht (1983–5). He works at the Contactorgaan voor Elektronische Muziek studio in Arnhem and teaches computer music at the Arnhem Conservatory; he has also worked at the IPEM in Ghent. In 1988 he founded the new music ensemble Champ d'Action; Verstockt is the artistic director of the ensemble. His music is based on his own computer composition program 'Trans', which defines symbols as well as the relationship between the symbols. These symbols are linked with musical quantities; the relations give rise to gradual transitions from one musical quantity to another. Thus 'Trans' generates musical processes with infinite possibilities; no aesthetic or style is imposed on the user. The audible result consists of abstract sounds of great complexity, but very controlled. The music exploits transitions within traditional parameters as well as within range and texture, voice-leading and density, tempo and episode duration. Every musical episode is characterized by the explicit accentuation of some parameters, while others stay in the background, in a continually changing process. Verstockt applies his computer working method to electronic as well as acoustic means.

YVES KNOCKAERT

Verstovsky, Aleksey Nikolayevich (*b* Selivertsovo estate, Michurin region, Tambov district, 18 Feb/1 March 1799; *d* Moscow, 5/17 Nov 1862). Russian composer and theatre official.

1. LIFE. Son of a wealthy, music-loving landowner, Verstovsky was educated in St Petersburg at the Institute of the Corps of Engineers; simultaneously, he studied the piano with Daniel Steibelt and John Field (to whom he dedicated a boyhood sonata), the violin with Ludwig Maurer and thoroughbass with Karl Zeuner. Maurer and Steibelt, employed by the Imperial Theatres, encouraged the young man to compose *kupletï* ('couplets' or 'verses', more particularly strophic ballads or songs, usually satirical or sentimental) as well as other music for theatrical entertainments, particularly opera-vaudevilles. When he left the institute in 1817 he abandoned engineering, and the first of his vaudevilles, translated from the French, was given as early as November 1817. He proved talented, and, either alone or with older composers such as Alyab'yev and Cavos, wrote no fewer than 33 opera-vaudevilles.

In 1823 he moved to Moscow, where the Imperial Theatres organization was just being made independent of St Petersburg. In 1825 he was appointed 'inspector of music', in 1830 inspector of the Moscow Theatrical Repertory, and in 1848 manager to the administrative board of the Moscow Imperial Theatres, thereafter playing an all-important part in their development and improvement until his retirement in 1860. The dramatist Ostrovsky testified to Verstovsky's friendly relations with the actors and actresses, who greatly valued his opinion.

In 1828 his first more ambitious work for stage, an opera with spoken dialogue entitled *Pan Tvardovskiy* ('Twardowski'), was produced; in 1830 he gave up writing or contributing to opera-vaudevilles and concentrated on operas. Out of the five that followed *Twardowski* only one, his third opera *Askol'dova mogila* ('Askold's Grave'), achieved lasting success, becoming the most popular Russian opera of the 19th century.

2. WORKS. Verstovky's best-received vaudeville written (with Maurer) before he moved to Moscow was *Karantin* ('Quarantine'; 1820), like his first effort adapted from a French source; his best (though not immediately popular) opera-vaudeville, however, composed soon after his arrival in Moscow to a libretto by P. Vyazemsky and Aleksandr Griboyedov, the well-known author of the comedy *Gore ot uma* ('Woe from Wit'), was a travesty-farce *Kto brat, kto sestra, ili Obman za obmanom* ('Which is the Brother, Which the Sister, or Ruse upon Ruse'; 1824). All the ingredients of the finest opera-vaudevilles are to be found in it: dances (especially waltzes, mazurkas and polonaises), racy or sentimental *kupletï* in profuse variety, and good ensembles which further the action no less than the spoken dialogue does. It contains numbers adapted from previous opera-vaudevilles and provided material for later ones, especially *Stanislav, ili Ne vsyaskiy ėto sdelayet* ('Stanislav, or Not Everyone will Do it'; 1829). Such borrowing was typical of the ephemeral opera-vaudevilles, an important element of which was topical parody. (For several synopses, see Karlinsky, 1985.) Only *Which is the Brother* has been published in its entirety (Moscow, 1949). Numbers from various opera-vaudevilles were published by Verstovsky in *Dramaticheskiy al'bom* (1826) and in issues of *Muzïkal'nïy al'bom* from 1823; some have appeared in modern volumes.

Although Verstovsky wrote conventional salon romances, songs and 'Russian' songs (sad pseudo-folksongs for the drawing-room, usually in the minor mode), his most important vocal solos with piano were his dramatic ballads (or cantatas), which were extended enough to allow space for development of characterization, changes of key and tempo, and variation of accompaniment figures. Some were performed in semi-staged, orchestrated versions. Two are particularly distinguished: his setting of Pushkin's 'Chornaya shal'' ('The Black Shawl'), no less than 219 bars in length, and his highly dramatic *Tri pesni*

skal'da ('Three Songs of the Skald' [Scandinavian bard]), with a text by Zhukovsky after Uhland's *Die drei Lieder*; the latter's march-like opening anticipates later Russian ballads. But his version of Zhukovsky's 'Nochnoy smotr' ('The Night Review'), a translation of Zedlitz's 'Die nächtliche Heerschau', though interesting, was inferior to Glinka's setting. Most of these were written in the 1820s, just when Carl Loewe wrote many of the ballads for which he is chiefly remembered.

Der Freischütz was the catalyst for Verstovsky's eventual move from opera-vaudeville to what may be called Russian opera-Singspiel. It was first performed in St Petersburg in 1824, originally in German, and soon afterwards in Russian; that version received its first Moscow performance in 1825 under Verstovsky's supervision. In an essay 'Fragments from the History of Dramatic Music', published in *Dramaticheskiy al'bom* the following year, he gave the highest praise to Mozart and his 'not unworthy' successors Cherubini and Méhul; but most important of all for the future of musical beauty, he asserted, was *Freischütz*. Twardowski, in his opera of that name derived from a Polish legend, is a Slavonic Caspar, from whose clutches Julia is eventually rescued by the hero, whose aria at the beginning of Act 1 is typical of romantic melodies by later Russian composers. In his next opera, *Vadim* (1832), Verstovsky deliberately introduced 'Russian' characteristics which, however, are rather flavourless; again there is the element of Weberian evil magic, and a descent into hell in Act 2.

Neither opera was successful, but they gave Verstovsky the experience necessary to produce his runaway success, *Askold's Grave*, which received its première in Moscow in 1835 and its first St Petersburg performance in 1841. The libretto was based by Mikhail Zagoskin on his historical novel published in 1833 to an acclaim in which he was hailed as a Russian Scott. Verstovsky asked him for two changes: first, the heroine Nadezhda should not be of noble birth (for nobles and their followers would not use folk materials) but a Christian fisherman's daughter; secondly, she and her lover, ward of the ruler of as yet pagan Kievan Rus', should not finally cast themselves into the swollen river Dnepr from Prince Askold's burial mound but should be pardoned and rescued in the nick of time. The work thus follows paths well worn in previous Russian operas; it was a 'rescue opera' with folk intonations, especially noticeable in two fishermen's choruses in Act 1. Rescue elements are to be found, for example, in Cavos's *Ivan Susanin* (1815), and there are folk intonations in the Cavos opera; such material had often been used, as in Titov's unaccompanied women's chorus in Act 1 of his opera *The Bridal Party* (1808), where the imitation of folksong and the periodic coalescence of the parts into unison is similar to Verstovsky's material in *Askold's Grave*. Clearly, Verstovsky had carefully calculated the formulae for his opera.

The most important characters are neither the passive heroine, Nadezhda (soprano), two of whose arias, in time-honoured opera-vaudeville fashion, had been taken from pre-existing songs with quite different words, nor Vseslav (tenor), who sings only in ensembles. The enigmatic, rather ominous figure of the Unknown (Neizvestnïy; bass) and Toropka Golovan (tenor), a *gudok*-playing *skomorokh* (jester), dominate the stage, and initiate all the action and have the strongest arias. The finest scene of continuous music is the 'finale' of Act 3, in which the action is taken forward without need for the spoken word; it is longer than all the musical numbers of the rest of the act put together. It includes a song for Toropka, at the concluding climax of which a well-known patter drinking-song of 18th-century origin is introduced, the only true 'folk' material employed by Verstovsky; this is one of many instances of vaudeville style. Another of Toropka's numbers, 'Uzh kak veyet veterok' ('How the Wind blows'), became the most popular operatic song of its day, beyond anything subsequently written by Glinka. At the beginning of Act 4 there is a scene where magic is used to find the hiding lovers: here, set in the witch's ramshackle hut complete with broom, cat, owl and cauldron, the most pronounced influence of *Der Freischütz* is to be found, with an obvious debt to the Wolf's Glen music. The influence of Weber can also be heard in the sweeping cadences and the shapes of phrases.

Verstovsky's next completed opera, *Toska po rodine* ('Homesickness'; 1839) mostly takes place in contemporary Spain, with feeble attempts at Spanish idioms (according to Findeyzen). Not much more successful were his last two historical operas, *Son nayavu, ili Churova dolina* ('A Waking Dream, or Chur's Valley'; 1844) and *Gromoboy* (1857), though the latter, which was through-composed, enjoyed a lavish production.

Verstovsky died resenting that what he felt was his just position as the originator of truly Russian elements in music had been usurped by Glinka. As early as December 1836, after the first performances of *A Life for the Tsar*, he had written to Prince Odoyevsky, one of the writers who had lavishly praised the Glinka opera, claiming pride of place: 'I shall not and cannot yield the claim of precedence [to Glinka]'. Disagreeing with the contemporary assessment of Verstovsky, the critic and composer Aleksandr Serov, while acknowledging Glinka's superiority in some respects, praised aspects of Verstovsky's music, including the female chorus and the ensuing *alla polacca* dance at the beginning of Act 3 of *Askold's Grave*, and he was influenced by Verstovsky in his own historical opera, *Rogneda*. But no other composer of consequence owed any significant debt to Verstovsky. It was not so much that he and Glinka both used Russian folk material or intonations as what they did with them: the chorus praised by Serov is very simply harmonized and repeated once in strophic fashion. That naive treatment cannot be compared with Glinka's harmonically inventive orchestral accompaniment of, for example, the melody in the chorus of Persian slave-girls at the beginning of Act 3 of *Ruslan and Lyudmila*, whose sinuous 'oriental' triplets influenced, among others, Balakirev (in *Tamara*) and Rimsky-Korsakov (in *Sheherazade*). There is nothing in Verstovsky's music to compare with Glinka's originality and his fertile imagination.

Yet Verstovsky's music was known by everybody, from the greatest composers to the humblest amateurs (who made arrangements of his popular pieces). In 1892, Rimsky-Korsakov mentioned *Askold's Grave* to his 'Boswell', V.V. Yastrebtsev, if only to agree, tongue in cheek, with the (ill-founded) rumour that it must have been composed by Varlamov and not Verstovsky, since 'everything else by Verstovsky is terribly bad'. Also in the 1890s, the critic K.N. Chernov tried (unsuccessfully) to persuade that great piano improviser Balakirev to write down his extemporized variations on the *csárdás* from *Gromoboy*.

Nevertheless, it is for *Askold's Grave* that Verstovsky is remembered. It was written quickly for the forces at his disposal early in the 1835–6 Moscow season, the wholly spoken parts (15 out of a total of 28) being taken by actors and the small sung parts by singer-actors or chorus members, with only three full-blown operatic parts. With this rather motley assembly he put together the last and best opera of the old school, containing elements of previous Russian operatic successes mixed with the Western operatic ingredients he admired. The reason he failed to match *Askold's Grave* in his later operas may be that he was trying too hard to achieve something beyond his powers. Although these works suffered from tame harmonic writing, unimaginative orchestration and amateurish counterpoint, his melodic fecundity and innate feeling for the stage ensure for him a small but important place in the history of Russian music.

WORKS

MSS mainly in RUS-SPsc and SPtob

OPERAS

all first performed at Moscow, Bol'shoy Theatre; excerpts from all complete operas in 1963 edition of 'Askold's Grave'

Pan Tvardovsky [Twardowski] (romantic magic op, 3, S. Aksakov and M.N. Zagoskin), 24 May/5 June 1828; excerpts in *IRMO*, iii, ov. [condensed] in Rabinovich

Vadim, ili Probuzhdeniye dvenadtsati spyashchikh dev [Vadim, or The Awakening of the Twelve Sleeping Maidens] (magic-romantic op, prol., 3, S.P. Shevïryov, A.A. Shakhovskoy, Aksakov and Zagoskin, after V.A. Zhukovsky: *Gromoboy, or The 12 Sleeping Maidens*, pt ii), 28 Nov/10 Dec 1832; excerpts in *IRMO*, iii, and Rabinovich.

Askol'dova mogila [Askold's Grave] (romantic op, 4, Zagoskin, after his novel), 16/28 Sept 1835, vs (St Petersburg, 1836); vs, ed. B.V. Dobrokhotov (Moscow, 1963) [incl. material from all Verstovsky's other operas]; vs, ed. M. Shcherbakova (Leningrad, 1983) [incl. all orig. spoken dialogue]; excerpts in *IRMO*, iii

Zheleznoye pero [The Iron Quill] (N. Polevoy), 1836–7, inc., unperf.

Toska po rodine [Homesickness] (comic op, 3, Zagoskin, after his novel), 21 Aug/2 Sept 1839

Son nayavu, ili Churova dolina [A Waking Dream, or Chur's Valley] (magic op, 3, Shakhovskoy, after Cossack Lugansky [V.I. Dal']: *A Night at the Crossroads* and Slavonic legends), 1841, 28 Nov/10 Dec 1844

Gromoboy (grand fantastic op, 4, D.T. Lensky, after Zhukovsky: *Gromoboy*, pt i), 1853–4, 24 Jan/5 Feb 1857, vs (Moscow, 1857); excerpts in *IRMO*, iii

OTHER STAGE

Edition: *A. Verstovskiy: romansï, pesni i kupletï iz muzïki k vodevilyam i p'yesam* [Romances, songs and couplets from music to vaudevilles and plays], ed. A.V. Voynova (Moscow, 1971) [V]

Opera-vaudevilles: Kto brat, kto sestra, ili Obman za obmanom [Which is the Brother, Which the Sister, or Ruse upon Ruse] (I.A. Griboyedov and P. Vyazemsky), Moscow, 24 Jan/5 Feb 1824, vs (Moscow, 1949); 32 others (excerpts from 16 in V [full list in *GroveO*])

Incid music: Gesiod i Omer soperniki [The Rivalry of Homer and Hesiod] (K. Batyushkov), 1827; Vïkup barda [The Bard's Ransom] (I. Dmitriyev, N. Yazïkov), 1827

Erato's Hymn, S solo, in prol to Torzhestvo Muz [The Triumph of the Muses] (Dmitriyev), for opening of Bol'shoy Theatre, Moscow, 1825 [other music by Alyab'yev and F.E. Shol'ts (Scholtz)]

Songs for dramas: Roslavev, 1832; Kremnyov, 1839

CHORAL

Pevets vo stane russkikh voinov [Singer in the Camp of the Russian Warriors] (hymn, Zhukovsky), unison vv, military band, 1827

Hymn on the death of Aleksandr I (D. Khvostov), chorus, orch, 1825

Tri obednya [3 Liturgies], 1830

Velik Gospod' [Great is the Lord] (hymn, Yazïkov), chorus, orch, 1831

Cantata for the inauguration of the Moscow Society of Lovers of Russian Literature, reciter + hp, chorus, orch, *c*1850

Cantata for the centenary of Moscow University (Shervïryov), 1855

Vostorg voinov [The Warriors' Rapture] (N.V. Kukol'nik), ?1856

SONGS

all for solo voice and piano

Edition: *A. Verstovskiy: izbrannïye romansï i pesni* [Selected Romances and Songs] (Moscow, 1980) [IRP]

Bednïy pevets [The Poor Singer] (Zhukovsky), 1823; Chornaya shal' [The Black Shawl] (A.S. Pushkin), 1823, IRP; Kolokol'chik [The Little Bell], 1823, IRP; Tri pesni skal'da [Three Songs of the Skald] (Zhukovsky, after L. Uhland: *Die drei Lieder*), 1823, IRP; Dubrava shumit [The Oak Trees Rustle] (Zhukovsky), 1827; Kak trava v polyakh [Like Grass in the Fields], 1827; Kto pri zvezdakh, pri lune [Who by the Stars, the Moon], 1827; Luna srebrila tok spokoynïy [The Moon Silvered the Quiet Stream] ('A.M.'), 1827; Tsïganskaya pesnya: Starïy muzh, groznïy muzh [Gypsy Song: Old Husband, Cruel Husband] (Pushkin), 1827, IRP

Ya schastliv bïl [I was Happy] (Dmitriyev), 1827; Gispanskaya pesnya: Nochnoy zefir struit efir [Hispanic Song: The Night Breeze Stirs the Air] (Pushkin), 1827, IRP; Son [A dream] (Zhukovsky), 1828; Dva vorona [The Two Ravens] (Pushkin), ?1820s, IRP; Ne govori ni da, ni net [Say neither Yes, nor No] (N.F. EDWARD GARDEN

Versus (Lat.). A general term used to designate, among many other things, a particular kind of Latin sacred song popular from the 11th century on. Its distinguishing features are rhyme and accentual scansion in the text; frequent but varied and imaginative use of strophe, couplet and refrain; and clear, songlike phrases in the melody.

In so far as it is equivalent to the English 'verse', the Latin *versus* is a frequently used formal term in early medieval music, and perhaps one of the most confusing. There are at least three main contexts in which the term is used, with many additional shades of meaning. The first is specifically that of metrics. Augustine (*De musica*) described the *versus* as the metric unit after which one 'turns back' (*revertere*) to begin the next line or 'verse'. A *versus*, therefore, is either a line of metric poetry, or a poem using a pattern of such lines. The opposite of verse in this sense is prose: *prosa*, from *prorsus oratio*, i.e. 'straight-on' diction with no (regular) line pattern. For the early Middle Ages the *versus* often meant a particular kind of pattern, one for which a classical quantitative model existed. This was most often the dactylic hexameter. Carolingians tended to use *versus* to label the thousands of hexameters and elegiac distichs that they composed.

The second context is the Latin Psalter. Even though Jerome's translation resulted in the psalms being in prose not verse, every psalm was divided into 'verses' (as was all scripture); when sung to a psalm tone, the tone or formula was used once for each verse.

The third context is the most important for music, and the hardest to specify. Many kinds of Gregorian chant (and other repertories), e.g. introit, gradual, alleluia, offertory, communion, responsory, use *versus* to designate a secondary section – a *Nebensatz* (in popular music a 'bridge', or actually 'verse' as opposed to 'chorus'). In this context *versus* has nothing to do with metrics or with psalmody (even though the text of a gradual verse, for example, is often a verse from a psalm), but rather has to do with an episodic musical function that needs to be much more closely identified.

In medieval historiography the term has become most prominent in the first context, but by a circuitous route. The words of the Gregorian repertory are in prose; items in verse are rare, and that, apparently, for reasons of principle. But post-Gregorian medieval music – Latin, vernacular, sacred, secular – is predominantly in verse of some kind, and there was a whole procession of different kinds. In between the Carolingian forms of *versus* and *prosa* there gradually appeared new forms sometimes derived from classical models, sometimes invented anew. Here the traditional quantitative procedures were often replaced with syllable-count, word accent being handled with freedom and imagination or simply ignored, depending on the choice and ability of the author. There is great variety in technique, with little or no consistent terminology to describe it.

A certain group of pieces has been described as 'sequences with double cursus' ('sequences' because of a couplet structure $a^1a^2b^1b^2c^1c^2$ . . .; 'double cursus' because of a large-scale melodic repeat A^1A^2); examples are *Rex caeli* (see Phillips and Huglo) and *Sancte Paule* (N. de Goede, ed.: *The Utrecht Prosarium*, MMN, vi, 1965, p.lxi) and others studied by Spanke and Stäblein. But these pieces can just as well be treated as instances of 'Carolingian *versus*'; in any case their melodic phrase structure is basically distinct from that of the sequence repertory. A famous collection, written in the late 9th or early 10th century, of *versus* of many kinds, including classicist models (Boethius) as well as more recent products survives in *F-Pn* lat.1154; some melodies, unfortunately indecipherable, are provided. *CH-SGs* 381 contains some distinctive St Gallen *versus*.

The influence of various metrical models, the Ambrosian hymn in particular, and the steady pressure towards rhyme and an attendant regularity in accentual pattern combined to produce in the 11th century a new kind of *versus*, one which can be more specifically designated as 'rhyming, scanning *versus*'. As in medieval verse generally, the base of the scansion is provided by the syllable-count of the verses. What characterizes the new *versus* of the 11th century is a high degree of regularity in the placement of word accents. These accents occur in one of two modular patterns (always with some slight irregularity or inconsistency): either every other syllable, or every third syllable, carries an explicit or implicit accent; but lines in the two-syllabled pattern can alternate with lines in the three-syllabled pattern with great variety and originality. This accented regularity in verse structure is confirmed by an intense use of rhyme, with both end-rhyme and internal rhyme being used to an extent not exceeded in any other phase of European literature. Couplet and strophe are also highly developed; refrains, both simple and complex, are very frequent.

In addition, many of the musical features of the 11th-century *versus* can be derived from the hymn of the preceding century; yet there is apparent in the *versus* melodies a lilt, a lyricism not previously discernible. Some melodies, furthermore, suggest by their typical procedures a derivation from the kind of intonation formula used for the versicles of Matins, which have, in their simplest form, a reciting note with a short descending terminal melisma.

Incorporation of the Matins versicle *Benedicamus Domino* makes such a piece a *Benedicamus-versus*, a category important in the 12th century. The St Martial manuscript *F-Pn* lat.1139, from which the following example is taken, contains the most famous early collection of such *versus*.

> Vállus móntem, lápis fóntem, spína rósam speciósam édidit;
> Vírga núcem, vírgo dúcem, máter fácta sed intácta rédidit;
> Stélla sólem, vírgo prólem, cáro númen párit lúmen cécitas,
> Et látuit quod pátuit sub servíli cárne víli déitas;
> Érgo nos púro ánimo
> Benedicámus dómino!

The liturgical use of *Benedicamus-versus* can be surmised from the liturgical tag incorporated at the ends of the stanzas. But apart from such tags, the liturgical function is known only from the assignment of items in an antiphoner or gradual (either by rubric or position in the series), or by position in an analogous book. The Offices of Sens and Beauvais provide much information for the *versus* as well as other kinds of medieval chant; but the Aquitanian manuscripts are not much help in this respect.

What the contents of *F-Pn* lat.1139 do show is that the Latin *versus* is an important point of departure for two other developments. First, the manuscript contains the earliest Provençal songs, an indication of the central role played by the Aquitanian *versus* in the development of the troubadour repertory. Secondly, it contains the first examples of Aquitanian polyphony, whose primary form is that of the polyphonic *versus*: text structure is exactly

that of the monophonic *versus*, and musical structure is so similar that one of the two polyphonic parts could often be mistaken for a monophonic *versus* melody. This kind of piece was later often called a conductus.

The repertory of 11th-century *versus* is largely unknown, except to specialists; very few examples have been printed. The most accessible ones are in the items cited below by Crocker, Stäblein (1966 and *MGG1*) and Gennrich.

Verticalization. The simultaneous statement, in a 12-note composition, of two or more adjacent members of a 12-note set (*see* TWELVE-NOTE COMPOSITION). Verticalization is thus significant in that it fails to define any ordering of pitch classes. In early atonal works, such as Schoenberg's Piano Piece op.11 no.1, a 'cell' or collection of pitch classes, under transpositional equivalence, is used to generate chords as well as lines. In the tonal system 'cells' such as triads function both as horizontal and vertical determinants, but in atonality there are not the same methods of creating functional differentiation explicitly between vertical and horizontal events (as contained in the concept of a passing note or neighbour note, for example).

Verve. American jazz and popular record company. It was established in Los Angeles in 1956 by NORMAN GRANZ, whose earlier labels Clef and Norgran were absorbed into the new company. Clef, formed by 1946, had functioned as a subsidiary of Mercury until 1953, when Granz briefly ran it independently; it issued recordings by groups associated with his organization Jazz at the Philharmonic and by many leading swing and bop musicians, notably Charlie Parker. Later in 1953 Granz formed Norgran, which reissued material from Clef and produced new recordings predominantly by swing and bop combos. With Verve, Granz continued this policy, reissuing Clef and Norgran recordings and organizing outstanding new swing and bop sessions by veteran players, including Stan Getz and Dizzy Gillespie. Concurrently, Ella Fitzgerald's series of recorded 'songbooks' (to 1961) were of even greater significance; carrying Verve into the realm of American popular song, these albums offered definitive interpretations of the music of Porter, Rodgers and Hart, and the Gershwins.

In 1960 MGM bought the company from Granz, but it continued to issue new recordings, most notably those directed by Creed Taylor between 1961 and 1967. Numerous sessions were issued by Columbia and HMV in England and Barclay and Blue Star in France.

In 1965, under Jerry Schoenbaum, the company branched out into folk, blues and rock music. A series called Verve Folkways was set up in association with the Folkways company owned by Moses Asch. Artists appearing on the label included Mark Spoelstra, Sonny Terry and Brownie McGhee, Dave Van Ronk, Doc Watson and Dock Boggs. Another series, Verve Forecast, issued recordings by young white blues groups such as the Blues Project led by Al Kooper. The Forecast roster also included Ritchie Havens, one of the few black performers of the American folk revival. Verve benefited from the services of Tom Wilson, who produced one of the most influential albums in rock music history, *The Velvet Underground and Nico* and signed up Frank Zappa, but Verve's greatest commercial success came from the Righteous Brothers, notably their 1966 hit record *You're My Soul and Inspiration*.

In 1967 Polydor purchased Verve and the following year the company ceased to operate. Items from its catalogue continued to be re-released in the 1970s and 80s by affiliated companies, including an ambitious reissue project by Polygram, using the Verve label, on which it also began to put out new albums. Granz retained the rights to Art Tatum's Verve recordings and later released them on his new label Pablo.

Revitalized from the late 1980s under the direction of Richard Seidal, Verve again became an important jazz label. While taking over the jazz labels Antilles, Birdology (from France) and JMT (from Germany), and introducing two subsidiary labels, a revived Verve Forecast and the new Verve World (the latter devoted to 'world music'), it offered important new jazz sessions from such established players as Getz, Abbie Lincoln, Betty Carter and Joe Henderson, and recorded many young musicians. In 1998 Polygram was taken over by Seagram leading to the merger of Verve with other jazz labels, such as GRP and Impulse, under the rubric 'Verve Music Group'.

BARRY KERNFELD, DAVE LAING

Verykivs'ky, Mykhailo Ivanovych (*b* Kremianets, Volhynia region, 8/20 Nov 1896; *d* Kiev, 14 June 1962). Ukrainian composer and conductor. He attended the Kiev Conservatory where he studied with Yavorsky, graduating in 1923. In 1919 he had already been appointed director of the Ukrainian National Chorus and later ran the Leontovych Society (1921–8). He later conducted both the Kiev Opera (1926–8) and the Khar'kiv Opera (1928–35) and was invited to appear as guest conductor in Kiev, Khar'kiv, Moscow and – during World War II – Ufa. For a while (1928–30) he was head of VUTORM, the All-Ukrainian Society of Revolutionary Musicians. He was appointed to teach at the Lysenko Institute while still a student and later taught, from 1946 as a professor, at the Kiev Conservatory, retiring in 1960. He was the first Ukrainian composer of the Soviet era to write a ballet – *Pan Kanyovs'ky*, 1931 – and led the way for many of his compatriots in other genres. The influences of constructivism and Expressionism are evident in his first mature works such as the *Himny svyatoi Terezy* ('Hymns of St Theresa', 1923) and *Tanez' in voyovnychyy marsh* ('Dance and Battle March', 1924); during the mid-1920s he wrote much innovative music. Near the end of his life, during the Krushchyov thaw, he returned to the Yavorskian aesthetic which informed his early works with the *11 Little Preludes* (1957–8) which delightfully recall Prokofiev's *Visions fugitives*. He also developed a personal manner of varying folksong material over ostinato melodic patterns. One of the first works to employ this technique is the attractive orchestral suite *Vesnyanky* ('Spring Songs') of 1924. His works of the 1930s, 40s and 50s continue this trend and reflect the Ukrainian reaction to socialist realism. He became an Honoured Artist of the Ukrainian SSR in 1944.

WORKS
(*selective list*)

Stage: Pan Kanyovs'ky/Bondarivna (ballet, 4), 1930, rev. 1953; Dila nebesni [Heavenly Acts] (op, 1, after O. Vyshnya), 1931; Sotnyk [The Lieutenant] (op, 2 scenes, T.H. Shevchenko), 1938, Odessa, 1939; Naimychka [The Maid] (op, 3, 5 scenes, Verykivs'ky and K. Herasymenko, after Shevchenko), 1939–43, Irkutsk, 1943, rev. 1956–60; Bayka pro budyaka i troyandu [The Fable of the Thistle and the Rose] (op-étude, L. Hlibov), 1948; Vtikachi [Fugitives] (op-étude, 3 fragments, after M. Kotsiubyns'ky), 1948, Kiev Radio, 1948; Slava [Glory] (op, 4, after V. Huseyva), 1955–62

Choral: Haidamaky (fantasia, Shevchenko), solo vv, chorus, pf, 1919; Rekviyem pamyati M. Leontovycha [Requiem in Memory of M. Leontovych] (P. Tychyna), B, chorus, pf, 1921; Duma pro divku-branku Marusiu Bohuslavku [Elegy for the Captive Marusia Bohuslavka] (orat), solo vv, chorus, pf, 1923, orchd 1954; 1905 rik [The Year 1905] (O. Oles), 1925; Zhovten [October] (cant., M. Ryl's'ky), chorus, orch, 1936; Hniv slovyan [Anger of the Slavs] (cant., R. Stiyens'ky), B, chorus, orch, 1941; Varshavskyy tsykl [Warsaw Cycle] (L. Dmyterka), solo vv, chorus, orch, 1952; Vesnyana suita [Spring Suite] (I. Franko), 1956

Other vocal: Himny svyatoi Terezy [Hymns of St Teresa] (M.V. Semenko), 1923; 4 Romances (L. Ukraïnka), 1938, rev. 1958; 2 Romances (Franko), 1939–40; V dni viyny [Days of War], song cycle, 1942–3; Monoloh Skovorody [Monologue of Skovoroda] (Tychyna), 1944; Monoloh Yaroslava Mudrohd [Monologue of Yaroslav Mudryi], 1945; Bdzhilky zolotysyi [Golden Bees] (Ryl's'ky), S, 1948; Pisniakh Safo [Songs of Sappho], 1958; 3 Romances (Y. Slovats'ky), 1958

Orch: Vesnyanky [Spring Songs], suite, 1924, rev. 1956; Berezil, ov., 1925; Tatars'ka, suite, 1928, rev. 1948; Petro Konashevych-Sahaidachnyy, sym. poem, 1944; Ukraïns'ka Siuita [Ukrainian Suite], vn, orch, 1948; Sportyvne svyato v Bershadi [A Sports Holiday in Bershad], sym. panorama, 1951

Chbr and solo inst: 3 Preludes and Valse, pf, 1920; Sonata-Allergo, pf, 1923; Str Qt, a, 1923; Tanez' in voyovnychyy marsh [Dance and Battle March], pf, 1924; 2 Preludes, pf, 1939; Volyns'ki akvareli [Volhynis's Aquarelles], pf, 1943; Pf Conc., 1950; Prelude, Nocturne and Dance, pf, 1952; 11 Little Preludes, pf, 1957–8; 8 Novelettes, wind qt, 1960; Rondo, vc, pf, 1960

Film scores, incid music, *c*70 popular songs, folksong arrs.

VIRKO BALEY

Veselá [Štěpánková], **Alena** (*b* Brno, 7 July 1923). Czech organist. She studied the organ with Michálek at Brno Conservatory (1942–7) and at the Janáček Academy (1947–51). Her first appearances abroad date from the early 1960s and she has given recitals in most important music centres of Europe, in the USA and in Canada. Her repertory covers all periods of organ music up to the present day. She introduced organ concertos by Poulenc and Hindemith to Czechoslovakia and has given premières of works by such contemporary Czech composers as Ištvan, Jan Novák and Eben, some of which have been dedicated to her. She has played as a soloist with many leading Czech and foreign orchestras. In 1964 she began teaching the organ at the Janáček Academy in Brno; she also acts as a member of organ competition juries and is an artistic adviser on organ construction. She was elected chancellor of the Janáček Academy for two periods in the 1990s. Her recordings include much of Bach's organ music, organ concertos by old Czech masters and organ pieces by Czech contemporary composers (Eben, Parsch and Kabeláč).

ALENA NĚMCOVÁ

Veselinović-Hofman, Mirjana (*b* Belgrade, 29 June 1948). Serbian musicologist. She studied musicology at the Academy of Music in Belgrade, graduating in 1971 and taking the master's degree under Nikola Hercigonja in 1974. She took the doctorate under Radoslav Joksimović at the University of Belgrade in 1981, with a dissertation on the creative presence of the European avant garde in Serbia. She became a professor at the Slavenski Music School in 1972, and in 1973 a professor at the Faculty of Musical Art. She attended the Darmstadt summer courses in 1968 and 1974, and was a visiting lecturer in Rostock in 1997; DAAD in Cologne (1997). Her chief areas of interest are contemporary music and multimedia; she has introduced new trends in Serbian musicology, and is Editor-in-chief of the international magazine for music *New Sound*.

ROKSANDA PEJOVIĆ

Veselka, Josef (*b* Nové Město, 7 March 1910; *d* Prague, 22 Oct 1992). Czech choral conductor. He studied music, classical philology and philosophy at Brno University (1929–35) and studied with Steinmann (1931–2) at the choral conductors' school of the vocal ensemble Opus, of which he was a member and later assistant conductor. In 1931 he founded a male-voice choir, Akademické pěvecké sdružení Moravan ('Academic Singing Association Moravan'), which he continued to conduct after his departure in 1959 for Prague, where he became conductor of the Prague Philharmonic Choir for 22 years. Under his direction both ensembles achieved high reputations. Veselka's thorough knowledge of the human voice and its capabilities enabled him to give lively and convincing interpretations, rich in colour, rhythm and dynamics. With the Moravan ensemble he gave notable performances of the choral works of Křížkovský, Smetana and in particular, Janáček; with the Prague choir he gave larger works, including Stravinsky's *Oedipus rex*, Prokofiev's *Aleksandr Nevsky*, Berlioz's Requiem and Janáček's *Glagolitic Mass*. Veselka taught choral singing at the Brno and Prague conservatories, the Janáček Academy, Brno, and the Prague Academy of Musical Arts. He also wrote many reviews and articles.

Vesely, Raimund Friedrich. *See* RAYMOND, FRED.

Vesi, Simone (*b* Forlì, *c*1610; *d* ?Padua, after 1667). Italian composer. He was a priest. On 13 December 1638 he entered Padua Cathedral as a tenor and shortly afterwards (by 1646, according to Eitner) became a chaplain there. In 1648 he was appointed to take charge of the private chapel of Giorgio Cornaro, Bishop of Padua, and he also retained his positions as singer and chaplain at the cathedral. On 22 August 1647 he competed unsuccessfully for the post of *maestro di cappella* at the cathedral. He retired from his post as a singer there on 19 December 1667. He may have had some connection with Faenza, because his *Messa e salmi* (1646) is dedicated to the Archbishop of Faenza. He taught Paolo Bettella.

Vesi's motets and psalms for solo voice are interesting examples of the concertato style that come close to sacred cantatas: short passages of recitative alternate with passages in an arioso style. The accompanying instruments are used in introductory sinfonias and to punctuate the vocal lines, and they play an integral expressive part in each piece. In several works Vesi made notable use of elegant melodic decoration. *Le mascherate* (1660) is his only extant volume of secular music; the fanciful titles of the pieces show his interest in the lighter forms of semi-dramatic vocal music.

WORKS

Messa e salmi, 6vv, 2 vn (Venice, 1646)
Motetti e salmi, 1v, insts, in fine le lettanie della Madona, a 4, op.2 (Venice, 1648)
Motetti, 1v, bc, op.3 (Venice, 1652)
Salmi concertati, 3–6vv, insts, con il secondo choro ad lib (Venice, 1656)
Le mascherate, 2–4vv, 2 vn ad lib (Venice, 1660)
Salmi ariosi, 8vv, op.6 (Venice, 1663)
2 works, 3, 7vv, 1659[3]
4 sacred works, 1, 4vv, insts, bc, *D-Bsb* (according to Eitner; attrib. 'Vesi'), *S-Uu* (tablature, incl. 1 work from 1646 vol.)
Mass, vespers, psalms, 1v, insts, lost (attrib. 'Vesi' in inventory compiled 1690 now at Villa Lagarina, nr Rovereto, see Lunelli)

JUDITH NAGLEY

Vespa, Girolamo (*b* Naples, probably *c*1540–45; *d* after 1596). Italian composer. He took minor orders in the Franciscan convent at Naples on 26 April 1568. By 1575 he was *maestro di cappella* at Osimo Cathedral, and in 1584 he became *maestro di cappella* at Fermo; on 2 September 1584 he was paid 24 florins and, in January 1586, he received a further 16 florins with a supplement of eight scudi. In 1587 he probably stayed for some time in Ascoli, but he retained his post in Fermo until 1591. The dedication of 31 August 1591 of his fourth book of madrigals implies that he had resumed his former position as *maestro di cappella* at Osimo Cathedral. On 10 June 1596 he was named 'magister musices' of his monastic order. He apparently enjoyed a substantial reputation in his own day, both as a composer of church music and as a madrigalist. His works show his considerable contrapuntal skill in maintaining flowing lines while making strict and economical use of material. No stylistic evolution is evident across the four books of madrigals, although the later two bear a more marked mannerist style.

WORKS

all printed works published in Venice

SACRED VOCAL

Psalmi Vespertini … per totum annum occurrentes, falsi bordones super tonos ac Te Deum laudamus modulantibus; itemque canticum divae Mariae, 4, 5vv (1589)
Sacrae cantiones (motecta noncupatae)… in singulis anni festivitatibus concinendae, 4–8vv (1594[2]), inc.

2 psalms, 3 motets, 5vv, 1590[7], 1592[3], 1609[1] (probably repr.)

SECULAR VOCAL

Il primo libro de [29] madrigali, 5vv (1570)

PIER PAOLO SCATTOLIN

Vespers (from Lat. *vesper*: 'evening'). A service of the DIVINE OFFICE, traditionally performed at twilight, at the time when lamps are lit indoors. Among the services celebrated by the early secular churches was an elaborate form of 'cathedral' Vespers, many elements of which have survived in the evening Office of the Armenian and East Syrian churches, as well as, to a lesser extent, in the Byzantine church (*see* HESPERINOS), but almost none in the Roman tradition, in which Vespers acquired at a very early date a strongly monastic cast. Cathedral Vespers in the 4th century began with the *lucernarium*, the lighting of the lamps and the blessing of the new light, after which was sung the ancient hymn *Phōs hilaron*; a number of psalms followed, including Psalm cxli (Vulgate cxl; this psalm seems to have early associations with the Office) accompanied by incensation, after which various other musical items such as hymns, canticles and responsorial psalms might also be included. A degree of flexibility in the choice of psalms – perhaps a sign of monastic influence – is already apparent even in those areas of western Europe, such as Gaul or Visigothic Spain, for which a cathedral Vespers is recorded. With the absorption of Vespers into the daily cursus of psalm singing, a process that was virtually complete by the time of the Rule of St Benedict (*c*530), the cathedral elements of Vespers had all but disappeared. A single vestige of the older tradition, though not in fact of Roman origin, is the blessing of the Paschal Candle at Easter.

Vespers begins with the versicle and response *Deus in adjutorium* followed, in the Roman cursus, by five psalms, each preceded and followed by an antiphon. In an ordinary week, Psalms cix–cxiii (Vulgate numbering) are sung on Sunday, and Psalms cxiv–cxlvii during the rest of the week, five each day, omitting those sung in the other services of the Divine Office. In the monastic use, four psalms are sung each day. For some feasts special series of psalms are chosen: at Christmas, for example, the psalms are cix, cx, cxi, cxxix and cxxxi. On some other feasts the psalms for Sunday are used. But on many days, even when Proper antiphons are provided, the ordinals and breviaries state that the ordinary psalms are to be used, according to the day of the week on which the feast happens to fall ('psalmi feriales'). In different years, then, as the day of the week changes on which a particular feast falls, some vesper antiphons may be sung with changing psalms. The Roman use is more conservative than the monastic in this respect; it requires specific vesper psalms for relatively few feasts. (See particularly the 1337 *Ordinale Exon.*, ed. J.N. Dalton, i, London, 1907.) After the psalms and antiphons comes a short reading (the capitulum). This is followed in the Roman use by a hymn. In the monastic use (and in some sources following the Roman use in most other respects) a responsory precedes the hymn: this is a full-scale greater responsory, often one that is also sung in Matins. A versicle follows and then an antiphon, rather more elaborate in style than those for the vesper psalms, introducing and following the singing of the *Magnificat*. The service ends with prayers and *Benedicamus Domino*.

Vespers and Lauds are similar in several respects: the number of psalms and antiphons, the hymn, the New Testament canticle and its antiphon. There are, however, differences, for Lauds has a unifying theme – the praise of God at sunrise. These differences are particularly evident in its psalms, which are limited in number and represent a selection made from the book of *Psalms* as a whole. Vespers has a larger number of psalms that are constantly changing, following each other in nearly strict numerical order, which gives it a more varied aspect. In medieval manuscripts, the section for Lauds of a particular feast day often looks entirely different from that for Vespers: whereas full sets of Lauds antiphons are common, frequently all that is given for Vespers is a *Magnificat* antiphon, since the ferial psalms and antiphons were retained.

On some feast days two Vespers services rather than one are found: first Vespers sung the evening before the feast and second Vespers on the day itself. It might be assumed that first Vespers was the original service, forming the beginning of the liturgical day in an echo of the procedure enjoined upon the Jews in *Leviticus* xxiii.32: 'From evening to evening shall you keep your sabbath'. This seems not to have been the case: in the Rule of St Benedict, as in the Roman cursus, the series of vesper psalms began on Sunday, not Saturday. Frequently, however, Proper chants are provided for first Vespers, but not for second Vespers.

In some sources of the 12th and later centuries there are descriptions of a procession after first Vespers for which the words and music celebrate the feast of the day to come. These sources often contain references to one or more stations (stops) for prayers or the singing of particular chants. There seem to be as many formulae for the procession as there are medieval ordinals and processionals; indeed, the floor plan of a particular church, the location of the chapels and altars dedicated to individual saints, and local customs were all factors in determining the course of the procession and its length. The increase in attention to the music of Vespers evident in medieval manuscripts may have come in part from increased interest in processions. The responsory of Vespers, borrowed from Matins, is sometimes sung more elaborately at Vespers than at the earlier service. For example, in the 13th-century monastic antiphoner *GB-WO* f.160 (PalMus, 1st ser., xii, 1922/*R*) the response *Verbum caro*, sung as the penultimate responsory of Christmas Matins, is prescribed again for second Vespers (op. cit., p.33); but in the latter service a long melisma is appended to it. Sometimes prosulas were set to the melismas of vesper responsories, themselves often (as in the preceding instance) not part of the original chant.

There are extensive monophonic additions to Vespers in a manuscript of Sens (see Villetard). There was also some use of polyphony in Vespers in the 12th and 13th centuries. One important source of Vespers polyphony is the Beauvais manuscript *GB-Lbl* Eg.2615. Some of the polyphony consists of settings of texts added to the embellished first Vespers of the feast of the Circumcision in the same manuscript. One group of these added texts comes between *Deus in adjutorium* and the antiphon for the first psalm; the monophonic additions are the *Alleluia, Veni Sancte Spiritus* (replacing the simpler alleluia at the

end of *Deus in adjutorium*), *Haec est clara die*, *Salve festa dies*, *Laetemur gaudiis* and *Christus manens*. The polyphonic version of the first of these is the motet (really a three-voice organum whose upper voices have the same text) *Veni doctor previe/Veni sancte*. *Christus manens* is also set as a three-voice organum in Notre Dame style.

Later in the service another chant, the responsory, is set polyphonically. The treatment of this at Beauvais, in the *Confirmatum est* (transformed by a trope into *Confirma nos Christe*), is uniquely complex. A number of polyphonic arrangements of vesper responsories made at Paris formed part of the *Magnus liber de antiphonario* (in the manuscripts containing works of the Notre Dame composers). These vesper responsories, which one expects only in manuscripts of the monastic cursus, often appear in manuscripts that otherwise have characteristics of the Roman cursus – for example, five, rather than four, vesper psalms.

The hymn usually following the vesper responsory is occasionally replaced: in both first and second Vespers at Beauvais it is replaced by a prosa – *Laetabundus* in the former and *Hac clara die* in the latter. Although the rubrics at Beauvais do not call for polyphonic performance of the *Benedicamus Domino* or its paraphrase *Super omnes alias* at second Vespers, there are numerous polyphonic works of this type in the manuscripts of the period, and the end of Vespers seems a likely place for them to have been sung.

RUTH STEINER/KEITH FALCONER

Vespertini. Responsorial chants sung during Vespers in the Mozarabic rite. *See* MOZARABIC CHANT, §3(ix).

Vesque von Püttlingen, Johann (*b* Opole, Poland, 23 July 1803; *d* Vienna, 29 Oct 1883). Austrian composer. He studied law and worked in the civil and diplomatic service from 1827 to 1872. In 1866 he was made a baron, and in 1876 he became a member of the German Herrenhaus. His music teachers included Sechter, Moscheles and Voříšek; and Vogl for singing. In Vienna his house was a focal point of social activity, and there, as an accomplished tenor, he gave performances of his own songs. He did much to further the city's musical life through his efforts, both as artist and patron, his active interest in the building of the conservatory, and his support of the Gesellschaft der Musikfreunde. He wrote an authoritative book on musical copyright *Das musikalische Autorrecht* (Vienna, 1864).

Vesque is primarily of interest today as a composer of the late Romantic school (his works were performed and published under the pseudonym J. Hoven). He belonged to the generation between Schubert and Loewe, and Mendelssohn and Schumann, and he had personal connections with all of them. His operas were successful in their day, and among Austrian song composers he was perhaps the most significant in the period between Schubert and Wolf. Like Wolf he had a scrupulous respect for the texts he set and a penetrating sense of literary irony, satire and symbolism. Like Wolf, too, he favoured harmonically bold accompaniments of distinct rhythmic character and conceived the lied as an integral fusion of words and music, though more in the manner of a sensitive eclectic than as the bearer of a great tradition.

Vessel flute. An aerophone in which the body of the pipe is globular- or vessel-shaped rather than tubular. The best-known example is the ocarina. Most vessel flutes have finger-holes; where they do, the action of opening them raises the pitch (irrespective of the order in which the holes are opened) but the change in pitch is related to the sizes of the apertures.

For a full discussion of vessel flutes, *see* OCARINA.

Vestris [Vestri]. French family of dancers and musicians, of Italian origin. At least five of the eight children of Tommaso (Maria) Ippolito Vestri and his wife Violante Beatrice Bruscagli had settled in Paris with their mother by about 1747.

(1) Gaetano (Appolino Balthasar) Vestris (*b* Florence, 18 April 1729; *d* Paris, 23 Sept 1808). Dancer, choreographer and teacher. He is generally recognized as the greatest dancer of his time, and the exemplar of the noble or serious style of French ballet. He danced at the Paris Opéra from 1749 to 1780 (and was ballet-master from 1769 to 1776), a period which coincided with the momentous development of ballet from a decorative appanage to opera to a theatrical form in its own right. In his early years he appeared in many of the great *opéras-ballets* of Campra and Rameau, but later he became a staunch supporter of the *ballet d'action*. The experience of taking part in Noverre's ballets in Stuttgart in the 1760s came as a revelation, and he staged two versions of Noverre's *Médée et Jason* in Paris before Noverre himself was engaged as ballet-master there in 1776. His Italian origins equipped him to meet the new and growing need for a dancer to be skilled in mime, and his interpretation of Jason was widely praised.

He was also one of the most distinguished teachers of his day, and perfected the techniques of the two dancers who were to succeed him in the noble genre, Maximilien and Pierre Gardel. His most celebrated pupil, however, was his son (2) Auguste Vestris. Through his son's virtuosity Gaetano revealed himself as a teacher with an uncanny vision, for instead of creating a dancer in his own image, he laid the foundation for the domination of the French method of training in the century to come. He married the ballerina Anne(-Frédérique) Heinel (1753–1808) in 1792.

Gaetano's elder sister (Marie) Teresa (Francesca) (1726–1808) was one of the leading dancers of the Opéra between 1751 and 1766 and notorious as a courtesan. His brother Angiolo (Maria Gasparo) (1730–1809) was also a distinguished dancer; after performing at the Opéra from 1753 to 1757 he danced in Noverre's company in Stuttgart between 1761 and 1767. Angiolo's younger sister Violante (Maria Caterina) (*c*1732–1791) sang at the Concert Spirituel until 1757, under her married name of Vestris-Giardini. Louis Hoguet-Vestris, son of the dancers Michel-François Hoguet (1793–1871) and Emilie Vestris, performed at the Opéra in 1843–6.

(2) **Auguste** [Marie-Jean-Augustin] **Vestris** (*b* Paris, 27 March 1760; *d* Paris, 5 December 1842). Dancer and teacher, illegitimate son of (1) Gaetano Vestris and the dancer Marie Allard. He was first presented at the Opéra at the age of 12, and even then showed signs of extraordinary promise. Admitted to the ballet company of the Opéra in 1776, he quickly rose to the top rank. His style was very different from that of his father: he was a *demi-caractère* dancer who displayed unprecedented virtuosity. Towards the end of his career he was inevitably surpassed by younger dancers such as Louis Duport, but by then he was turning to roles demanding acting skills in narrative ballets such as Gardel's *Alexandre chez Apelles* (1808) and *L'enfant prodigue* (1812). After his retirement in 1816 he became a celebrated teacher; his pupils included Auguste Bournonville and, much later, Fanny Elssler, whom he coached in preparation for her American tour of 1841–2. He had two illegitimate sons: (Auguste-)Armand (1787–1825), a brilliant dancer who also produced ballets in London and Naples and married (3) Lucia Elizabeth Bartolozzi, and Bernardo (*d* 1845), a less gifted dancer who staged a number of successful ballets at La Scala, Milan, in the early 1840s. Charles (*b c*1795), cousin of Auguste, possibly a grandson of (1) Gaetano's brother Giovanni, made his début at the Opéra in 1809, danced for some years in Naples, and ended his career in North America in 1828–9 partnered by his wife, Maria Ronzi-Vestris.

(3) **Lucia Elizabeth** [Eliza Lucy] **Vestris** [née Bartolozzi] (*b* London, 3 Jan or 2 March 1797; *d* London, 8 Aug 1856). Contralto, actress and theatre manager. She was the daughter of Gaetano Stefano Bartolozzi and granddaughter of the celebrated engraver Francesco Bartolozzi and in 1813 married (Auguste-)Armand Vestris. She made her first public appearance at her husband's benefit at the King's Theatre (20 July 1815), in the title role of Winter's *Il ratto di Proserpina*; this was highly successful although her acting and singing abilities were still limited. She made several appearances in 1816 but with less success, her faults becoming more apparent with familiarity. In the winter she appeared in Paris at the Théâtre-Italien and various other theatres, including the Théâtre-Français, where she played Camille in *Les Horaces*. About this time Vestris deserted her. She returned to London and on 19 February 1820 made her début at Drury Lane Theatre. Her success was immediate and she remained until her retirement in 1854 an extraordinary favourite at the patent theatres, in opera, musical farces and comedies. In some of these works she introduced well-known songs, including *Cherry ripe*, *I've been roaming*, and *Meet me by moonlight alone*, which gained their popularity through her ballad singing. At the King's Theatre she sang in the English premières of many Rossini operas: *La gazza ladra* (as Pippo, 10 March 1821), *La donna del lago* (as Malcolm Graeme, 18 February 1823), *Ricciardo e Zoraide* (as Zomira, 5 June 1823), *Matilde di Shabran* (as Edoardo, 3 July 1823), *Zelmira* (as Emma, 24 January 1824) and *Semiramide* (as Arsace, 15 July 1824). She sang there again in 1825 and on 12 April 1826 created the role of Fatima in *Oberon* at Covent Garden (see illustration). She also appeared in Dublin (1824–47), but after 1830 she was more important as a theatre manager, leasing the Olympic (1831–8), Covent Garden (1839–42) and the Lyceum Theatre (1847–55), the last two with the actor Charles Mathews jr, whom she married on 18 July 1838 and with whom she made an unsuccessful tour of the USA that autumn. Many of J.R. Planché's early 'extravaganzas' were brought out during her tenancy of the Olympic; at Covent Garden she occasionally mounted fine operatic productions in English. As both manager and actress, she was influential in developing the more naturalistic theatrical style of the 1860s and 1870s. But contemporary critics, for instance Chorley (1862), never quite forgave her for not becoming the greatest English operatic contralto of her age:

Lucia Elizabeth Vestris as Fatima in Weber's 'Oberon', Covent Garden, London, 1826: hand-coloured lithograph

If she had possessed musical patience and energy, she might have queened it, because she possessed (half Italian by birth) one of the most luscious of low voices ... great personal beauty, an almost faultless figure, which she adorned with consummate art, and no common stage address. But a less arduous career pleased her better; and so she could not – or perhaps would not – remain on the Italian stage.

IVOR GUEST (1, 2), □ (3)

Vetter [Vötter], **Conrad** [Cornu, Andreas de; Andreae, Conrad; Hueber, Martin; Hüber, Martin] (*b* Engen an der Donau, Swabia, 1546; *d* Munich, 11 Oct 1622). German poet. He was for a few years chaplain to the convent church at Hall in Swabia, and then entered the Jesuit order in 1576. He was active as a preacher at Regensburg Cathedral, and as both preacher and teacher at Ingolstadt and St Michael, Munich. Vetter wrote numerous anti-Lutheran polemics and two books of poetry: *Rittersporn, das ist Fünff ausserlessene wolgescherffte schöne und gantz Christliche Betrachtungen* (Ingolstadt, 1605) and *Paradeissvogel, das ist Himmelische Lobgesang und solche Betrachtungen dardurch das menschliche Hertz mit Macht erlustiget von der Erden zum Paradeiss und Himmelischen Frewden gelockt, erquickt, entzündt und verzuckt wirdt* (Ingolstadt, 1613, 2/1624). The first, which contains no music, is written in doggerel verse typical of the Nuremberg poet Hans Sachs. *Paradeissvogel* consists of texts translated from Latin, with music by unknown composers; as well as Vetter's own German translations, there are two songs by Johann von Schwartzenberg and one by Nicolaus von der Flüe. Included are two melodies for *Planctus Beatae Mariae Virginis* and a four-voice piece, *Alle Tage sing und sage*. Vetter also published a German verse paraphrase with music of the *Philomela* attributed to St Bonaventure, entitled *Nachtigall dess heiligen Bonaventura* (Munich, 1612); the composer of these tunes is also unknown.

Vetter's volumes of verse represent the earliest examples in Germany of Jesuit Baroque poetry. The Jesuits recognized at an early date that Lutheran hymns in the vernacular had done much to spread that doctrine, and made a clear effort to produce German hymns as part of the re-Catholicizing efforts of the Counter-Reformation. Vetter's texts served as an impulse to the poems of FRIEDRICH VON SPEE.

MARA R. WADE

Vetter, Daniel (*b* Breslau [now Wrocław], 1657–8; *d* Leipzig, 7 Feb 1721). German organist and composer. Vetter was a student in Leipzig from 1678. In 1679 he was chosen to succeed his teacher, Werner Fabricius, as organist of the Nikolaikirche, and he assumed the post on 11 August 1679, remaining there until his death.

Vetter's *Musicalische Kirch- und Hauss-Ergötzlichkeit* (1709–13) was apparently the first collection of organ pieces by a Leipzig organist published in over a century. In it, well-known chorale melodies are presented in simple four-part harmonizations intended for the organ. Most of the settings are followed by a variation in broken style to be played on a spinet or clavichord. Although these pieces have been severely criticized by modern writers as primitive, the appearance of a second part suggests they were popular in their time.

The collection provides evidence of the Leipzig chorale tradition inherited by J.S. Bach. It is also of some importance in the history of the Lutheran chorale: Vetter significantly advanced the trend towards the prevailing use of even note-values in chorale melodies. One of the four hymn tunes appearing here for the first time, *Liebster Gott, wann werd ich sterben*, which Vetter composed in 1695, was appropriated by J.S. Bach (BWV 8).

Vetter composed at least two cycles of church cantatas for the liturgical year as well as many occasional works. A humorous wedding cantata of 1698, for which Vetter created both the libretto and the music (now lost), 'A Debate . . . on the Propriety of a Bachelor's Marrying a Widow', is an early example of the genre later perfected in J.S. Bach's 'Peasant' and 'Coffee' cantatas.

WORKS

Der Gutte Muth des . . . Herrn Joh. von Guttsmuths, S, 2 vn, 2 va, vle, bc (?Leipzig, after 1675), wedding aria

Musicalische Kirch- und Hauss-Ergötzlichkeit, org, clvd, i (Leipzig, 1709/*R*); ii (Leipzig, 1713/*R*)

1 German cant., *D-Bsb*; 2 German cants., *Dl*; funeral motet on the death of Johann Schelle, *Dl*

Lost works: over 2 annual cycles of church cants., formerly in Jacobikirche, Stettin (now Szczecin, Poland), see Freytag, and Krummacher (1965), 186; wedding cant., 1698

ROBERT L. MARSHALL

Vetter, Michael (*b* Oberstdorf, 18 Sept 1943). German composer, performer and teacher. He began experimenting in the late 1950s with the sound-colours of the recorder and the possibilities offered by multiphonics and microtones. His discoveries, which inspired avant-garde composers such as Bussotti, Kagel and Stockhausen to use the instrument in their compositions, were codified in *Il flauto dolce ed acerbo* (1969), which included an analysis of 2000 fingerings. Vetter's second recorder tutor (1983) promoted a method of teaching improvisation and included 100 of his compositions. Later, he similarly explored performing on and composing for the tambura, koto, tam-tam, Tibetan singing bowls, piano and voice. Beginning in 1968 he worked with children to develop new methods of music education involving improvisation. In 1973 he moved to Japan, where he became a Zen monk, performed his 'structural theatre' and wrote on 'experimental Zen arts', collected in his *Shijima no oto* [The Sound of Silence] (1981). On his return to Germany in 1983 he founded the Zentrum für meditative Kommunikation und kommunikative Meditation in Todtmoos-Rütte, transforming it in 1993 into the Accademia Capraia near Seggiano/Grosseto, Italy, a 'school in the art of living'. In workshops, performances and exhibitions he demonstrates and teaches 'intermedial improvisation' (the oneness of all creativity) and 'transverbal poetry' (language is movement; movement is everything).

DAVID LASOCKI

Vetter, (Andreas) Nicolaus (*b* ?Herschdorf, Königsee, Thuringia, Oct 1666; *d* Rudolstadt, 13 June 1734). German organist and composer. The most important influence on Vetter was that of Johann Pachelbel, with whom he studied in Erfurt from 1688 to 1690. Before then he had been a pupil of G.K. Wecker in Nuremberg and a student at the Gymnasium in Rudolstadt from 1683 to 1688. When Pachelbel left Erfurt for Stuttgart in 1690, Vetter assumed his position at the Predigerkirche. In July of the following year he moved to Rudolstadt as the castle organist, being succeeded in Erfurt by J.H. Buttstedt. The authorities honoured him in later years with the appointments of government advocate, church procurator and master over the page boys, positions which tend to support the theory that as a young man he had also attended the University of Erfurt.

Vetter's contemporaries seem to have valued his chorale settings as good examples of the middle German style established by Pachelbel. There also seems to have been some confusion between his output and Bach's, since the manuscript Mus.40035 of the Deutsche Staatsbibliothek, Berlin (now lost) once gave his name as the composer of variations eight and three of *Allein Gott* BWV771. World War II also saw the destruction of sources for his free organ compositions and a work for chorus and orchestra, *Zum frohen Empfang Grossherzogs Carl Fürsten Primas.*

HUGH J. McLEAN

Vetter, Walther (*b* Berlin, 10 May 1891; *d* Berlin, 1 April 1967). German musicologist. Vetter studied at the Leipzig Conservatory, and from 1914 to 1920 (with interruptions caused by the war) he studied musicology under Abert in Halle, with philosophy, psychology and art history as secondary subjects. In 1920 he received the doctorate in Halle with a dissertation on Gluck's arias. He was a music editor in Danzig from 1921 until 1927, when he completed his *Habilitation* at the University of Breslau with *Das frühdeutsche Lied*. He was active first as an instructor and from 1934 as a reader at the University of Hamburg,

moving on to Breslau (1934) and Greifswald (1936), where he became director of the musicology institute in 1939. In 1941 he accepted a chair at the University of Posen (Poznań) and from 1946 until his retirement as professor emeritus in 1958 he directed the Institute of Musicology at Humboldt University in Berlin. He was editor of the journal *Musik in Pommern*, co-editor of *Die Musikforschung* from 1948 to 1961 and editor of the *Deutsches Jahrbuch der Musikwissenschaft* from 1956 to 1966.

Vetter was much influenced by Abert. His education in the humanities informed his studies of early music, which he approached as a literary, rather than a paleographic scholar. A disciple of the Halle school of musicology, he believed that since the artist and his work form an inseparable unity, one must understand the author in order to grasp his creative output. Vetter dabbled with race theories in the 1930s, extolling the potential of the Nazi state and criticizing his contemporaries for ignoring the 'Jewish question', interests he managed to conceal from Soviet authorities after the war.

Apart from his studies of early music, his writings fall into three main areas: the history of the German lied, Bach and the Viennese Classicists. Intended as a preliminary study for a history of German monophonic song, his book *Das frühdeutsche Lied* is the first substantial treatment of the development and aesthetics of the monophonic and polyphonic art song of the 17th century. His study *Der Kapellmeister Bach* (1950), representing 20 years of research, gave renewed impetus to Bach research by drawing attention to the instrumental works of the Cöthen period, as did Besseler and Smend in similar but independent studies. His concept of the Classical period extended beyond what is normally understood by the term; he used it to include such typical pre-Classical figures as Wagenseil, whose artistic importance he tended to overvalue, as well as Schubert, to whom he devoted two large monographs (1934; 1953). His overemphasis of Classical at the expense of the Romantic elements in Schubert's works has led to criticism of the second book. For Vetter, the essence of Classicism in music was to be found in the personality and the operas of Gluck. He studied and interpreted the works of Gluck throughout his entire career as a scholar, from his doctoral dissertation to his last completed work, the essay on Gluck (1964). Vetter also wrote several essays on contemporary music and the music of eastern Europe.

LOTHAR HOFFMANN-ERBRECHT/PAMELA M. POTTER

Vetterl, Karel (*b* Brno, 30 June 1898; *d* Brno, 30 Nov 1979). Czech musicologist and folklorist. He studied with Helfert at Brno University (1921–6), taking the doctorate with a dissertation on Rieger. Until 1928 he worked under Helfert in the music section of the Moravian Museum; he then became head of the music division of Brno Radio (1928–45), which he helped to develop to a high standard, particularly increasing its educational role in the promotion of folk and art music. After the war he was director of the Brno University library (1945–53) and then head of the Brno Institute for Ethnography and Folklore at the Czech Academy of Sciences (1953–70); he also lectured on folk studies at the university (1954–9). Although Vetterl's writings reflect his work in libraries and the radio, where he undertook valuable cataloguing projects, his chief interest was folksong. In 1933 he became a member of the Moravian-Silesian committee of the State Institute for Folksong and in 1962 of the executive board of the International Folk Music Council

and president of its Czech committee. His chief concern in folk music research was the analysis and classification of folksong and the creation of a catalogue of Moravian folk tunes. His folksong editions are characterized by their clear historical viewpoint and a concentration on early sources, well demonstrated in the posthumously-published *Guberniální sbírka*.

JOHN TYRRELL

Vetulus de Anagnia, Johannes (*b* ?Anagni; *fl* 14th century). Italian theorist. He may be the notary Johannes Vetulus de Anagnia, mentioned in a document of 16 August 1372. (The form 'Verulus' is due to a misreading of the name.) His *Liber de musica* (ed. in CSM, xxvii, 1977), probably written in the mid-14th century, opens with an introduction defining music and expounding its nature, origin and purpose. After a short section on *musica plana*, the main part of the work is devoted to mensural music: the division of time, single notes and ligatures, rests, perfect and imperfect time, the four main mensurations and a short chapter on the *minima*. The most original and interesting feature of the treatise is Vetulus's determination of tempo in absolute terms: the minim is taken as the unit of measure and is made equal to $^1/_{72}$ of a minute. Six different mensurations are then distinguished in terms of the minim as follows:

Perfect time (*tempus perfectum*): *maius* = 12 *minime*; *minus* = 9 *minime*; *minimum* = 6 *minime*

Imperfect time (*tempus imperfectum*): *maius* = 8 *minime*; *minus* = 6 *minime*; *minimum* = 4 *minime*.

The form of Italian mensural theory expounded in the treatise is strongly influenced by 14th-century French theory. The author described the structure of the only four Italian mensurations equivalent to those of the French system. Major perfect time (*duodenarium*) and major imperfect time (*octonarium*) are ignored, since he regarded them simply as triple and double versions, respectively, of the *tempus imperfectum minimum*.

F. ALBERTO GALLO

Vevlira. A Swedish HURDY-GURDY.

Veyron-Lacroix, Robert (*b* Paris, 13 Dec 1922; *d* Garches, Hauts-de-Seine, 2 April 1991). French harpsichordist. He graduated from the Paris Conservatoire, where he won *premiers prix* for the piano, the harpsichord and theory. He began his concert career on French radio in 1949, going on to perform as soloist and chamber player, principally with the flautist Jean-Pierre Rampal, with whom he made many recordings. He taught at the Schola Cantorum from 1956 and at the International Summer Academy in Nice from 1959. In 1967 he became professor of harpsichord at the Paris Conservatoire, serving until his retirement in 1988. In the Baroque repertory Veyron-Lacroix was much admired for his assured performing style and ingenious continuo realizations. He was also a noted exponent of French 20th-century music, giving the

premières of harpsichord concertos by Françaix (1960), Damase (1966) and Milhaud (1969), as well as works by Jolivet, Ohana, Jacques Charpentier and Aubin.

HOWARD SCHOTT

Veysberg [Weissberg], **Yuliya Lazarevna** (*b* Orenburg, 13/25 Dec 1878/6 Jan 1879 or 25 Dec 1879/6 Jan 1880; *d* Leningrad, 1 March 1942). Russian composer and critic. On her graduation from the St Petersburg Gymnasium (1895), Veysberg became a student at the historico-philological faculty of the Women's University, and simultaneously (from 1899) gave private lessons in music theory under the auspices of I.I. Krïzhanovsky, a pupil of Rimsky-Korsakov. From around 1902 to 1905 she studied at the St Petersburg Conservatory, where she was taught composition by Rimsky-Korsakov, orchestration by Glazunov and singing by Tsvantsiger [Zwanziger]. She was expelled from the Conservatory in 1905 for her participation in the revolutionary events of that year, but was later allowed to return; she eventually graduated in 1912, after returning from Berlin, where she had studied with Humperdinck and Reger. Back in Russia she married Andrey Rimsky-Korsakov in 1914, and worked with him in publishing and editing the journal *Muzïkal'nïy sovremennik* ('The Musical Contemporary') from 1915 to 1917 (her links with the Rimsky-Korsakov family continued during her second marriage; her son V.L. Kreytser worked with A.N. Rimsky-Korsakov and others in building electronic instruments such as the Emiriton, for which Grigory Rimsky-Korsakov wrote works).

In the 1920s Veysberg organized and participated in voluntary organisations such as the Petrograd Society for Propaganda on Behalf of Contemporary Russian Music, the Circle of Friends of Chamber Music and the Leningrad division of the Contemporary Music Association, in addition to teaching choral singing at the Workers' Youth Musical School. Although the romances conform to pre-revolutionary Russian salon standards, she also wrote 'conjunctural' pieces on texts from Aleksandr Bezïmensky and works for children which have won praise from critics.

WORKS
(*selective list*)

Ops: Rusalochka [The Little Mermaid] (children's op, S. Parnok and Veysberg, after H.C. Andersen), op.18, 1923; Gusi-lebedi [Geese-Swans] (children's op, S. Marshak and Veysberg), op.19 (1937); Gyul'nara (comic op, Parnok and Veysberg, after *A Thousand and One Nights*), op.32 (1935); Myortvaya tsarevna [The Dead Princess] (radio op, after A.S. Pushkin), 1937, arr. broadcast 1938; Zaykin dom [A Little Rabbit's House] (children's op, W. Weltman), Moscow, 1937

Orch: Sym., Gb, op.4; Fantaziya, op.5; Dramaticheskoye Skertso, op.6; Noch'yu [At Night], sym. picture after F. Tyutchev, op.10 (1929); Korol' Garol'd [King Harold], ballade after H. Heine, trans. Maykov, op.12 (1930); Skazochka [A Fairy Tale], op.13 (1928) [after K. Meyer: *Napyorstochek*, 'Little Thimble']

Vocal: Rautendeleyn (3 songs, G. Hauptmann: *Die versunkene Glocke*), op.3, 1v, orch (1912); 4 kitayskikh pesni [4 Chinese Songs], op.7, 1v, pf (1912); Lunnaya skazka [The Story of the Moon] (lullaby, P. Dehmel), op.8, 1v, fl, str qt, hp (1921); Poyedinok s sud'boy [Duel with Fate] (ballad, P. Guk, trans. M. Liverskaya), op.9, 1v, orch (1915); Poyot pechal'nïy golos [A Sad Voice Sings] (F. Solugub), op.14, 1v, orch (1924); Dvenadtsat' [The Twelve] (sym. fantasia-cant., A. Blok), op.21, chorus, orch (1928); Iz persidskoy liriki [From Persian Lyric Poetry] (O. Khayyam, trans. I. Umov), op.26, 1v, pf (1926); Negrityanskaya kolïbel'naya [A Negro Lullaby] (T. Churilin), op.33, 1v, small orch (1935); many children's songs, choral works and arrs. of Moldavian folk songs

MARINA MOISEYEVNA MAZUR

Veysel, Aşık (*b* Sivrialan, Sivas, 1894; *d* Sivrialan, Sivas, 21 March 1973). Turkish folk musician who was blind. He was the product of a rural Turkish musical culture shaped by Alevi (heterodox Islamic) mysticism since at least the 15th century and focussed on the music of the *bağlama* or *saz* (long-necked plucked lute), played by ritual specialists known as *aşık* ('lovers'; *see* TURKEY, §II, 1). Veysel was also shaped to a significant extent by the experience of nation-building in the early Turkish Republic, achieving distinction at the Republic's decennial festival, Cumhuriyet Onuncu Yılı, in Ankara in 1933. His songs attracted the attention of the nationalist intelligentsia for their direct and unadorned expression of national sentiment and a humanistic mysticism; his work, largely improvised around fixed melodic and poetic schemes, was written down and extensively published. Songs such as *Dostlar beni hatırlasın* and *Uzun ince bir yoldayım* are widely known throughout Turkey. Along with many rural *aşık* he was co-opted into the *Köy enstitüleri* (village institute) movement, which was designed to further knowledge of and research into rural culture in Turkish villages between 1940 and 1954. In 1965 the Turkish parliament awarded him a pension for his services to the mother tongue and national unity (illustration overleaf).

MARTIN STOKES

Vèze (Fr.). *See* BLADDER PIPE.

Vézina, Joseph (François) (*b* Quebec, 9 June 1849; *d* Quebec, 5 Oct 1924). Canadian bandmaster, composer, conductor and organist. He studied at the Séminaire de Québec and at the Collège Militaire. He was mainly self-taught, although he received musical instruction from his father, François Vézina, music director of the Société St

Asik Veysel singing and playing the Turkish saz

Jean-Baptiste, and studied harmony for six months under Calixa Lavallée. His career began in 1869 as bandmaster of the 9e Voltigeur de Québec. He founded and directed numerous bands, for which he made many arrangements and composed a number of pieces, including his popular *Mosaïque sur des airs populaires canadiens*. From 1896 to 1912 he was organist at St Patrick's and from 1912 to 1924 choirmaster at the Basilica of Notre-Dame, both in Quebec. He taught and directed the band at the Séminaire de Québec, where many of his manuscripts remain. Active as an orchestral and choral conductor from at least 1880, in 1902–3 he founded the Société Symphonique de Québec, which he conducted until 1924. In 1922 he helped to organize the music department of Laval University, which conferred the DMus on him in that year.

DALE WARD/JULIETTE BOURASSA

Viadana, Berardo Marchese da (*b* Viadana, nr Parma; *fl* 1616–27). Italian composer. He joined the Franciscan order at the monastery of S Francesco, Viadana, and in his spiritual capacity he was sought after as a confessor. According to Frezza he spent much of his career at Modena as a 'padre guardiano' or 'penitenziere'. Only two publications of church music by him remain: the *Primavera ecclesiastica adorna di sacri fiori musicali a 2–4 voci con basso continuo* (Venice, 1616) and the *Salmi vespertini ... concertati a 5 voci col basso continuo* (Venice, 1617). Seven motets (possibly reprints from the former) appeared in anthologies edited by Donfrid (RISM 1622^2, 1623^2, 1627^1 and 1627^2) and Reininger (1626^2), showing that, though meagre in quantity, his music achieved popularity north of the Alps. The three contributions to the second volume of Donfrid's *Promptuarii* (1623^2) are tenor duets, of which *Renovamini carissimi* shows an unmelodious, discontinuous style with an awkward harmonic sense, although rhythms are lively and ornament is not lacking. Viadana, however, was unaware of the structural possibilities of refrains and repeated material.

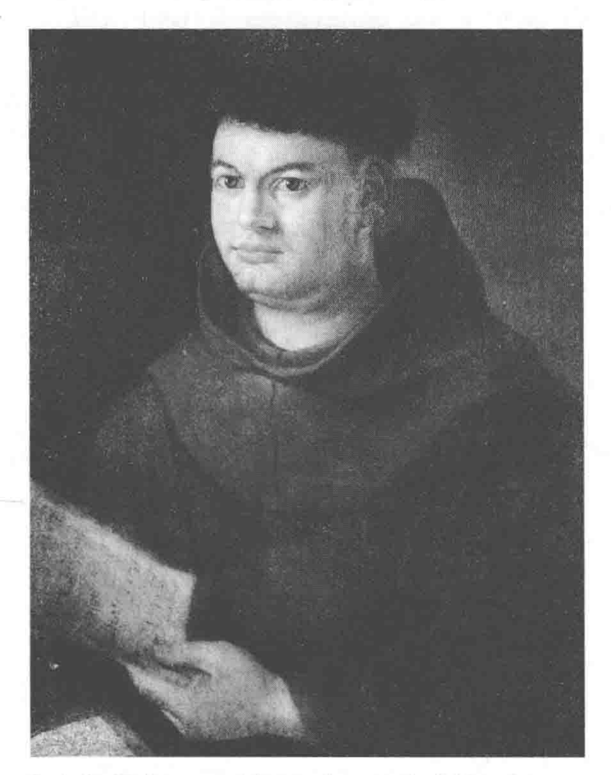
JEROME ROCHE

Viadana, Giacomo Moro [Jacobi Mori] **da.** *See* MORO, GIACOMO.



Viadana [Grossi da Viadana], **Lodovico** (*b* Viadana, nr Parma, *c*1560; *d* Gualtieri, nr Parma, 2 May 1627). Italian composer. He ranks highly among composers of his period for the freshness, fluency and notably expressive quality of his music; above all, he gave a strong impulse to the vocal concerto with basso continuo in ecclesiastical music, and acquired many pupils who continued his work.

1. LIFE. According to a document dating from the end of the 18th century, he was a member of the Grossi family by birth and took the name Viadana when he entered the order of the Minor Observants some time before 1588 (see illustration). It has been asserted that he was a pupil of Costanzo Porta, but there is no confirmation of this. He was *maestro di cappella* at Mantua Cathedral from at

least January 1594 probably until 1597. At the end of the 16th century he may have been at Padua, for he had connections with that city, and he was also in Rome. In 1602 he was *maestro di cappella* at the convent of S Luca, Cremona, from 1608 to 1609 of the cathedral at Concordia, near Venice, and from 1610 to 1612 of Fano Cathedral. In 1614 he was appointed *diffinitor* of his religious order for the province of Bologna, which included Ferrara, Piacenza and Mantua; he remained in this office for three years. Shortly thereafter a troubled time for him was caused by the enmity of some of his religious associates. In 1623 he was ordered to leave Viadana and to settle in Busseto; he later moved to the convent of S Andrea, Gualtieri, where he died.

2. WORKS. In Viadana's work, most of which survives, sacred vocal music is predominant. He cultivated the *a cappella* style and from op.13 onwards added a *basso per l'organo* which was a *basso seguente* rather than a true continuo bass. His style in these works ranges from the strict homorhythm of *falsobordone* and pseudo-polyphony to genuine polyphonic writing. The simpler music is purely functional, and as such was very successful. Even the more elaborately polyphonic music is modest in proportions and simple in text-setting. Three volumes are particularly worthy of attention: the masses of 1596, which were very popular, the *Lamentationes* op.22, which use fine expressive melodies and the *Completorium* op.16, with its brilliant interplay of choral forces.

The *Concerti ecclesiastici* op.12 (1602) is chronologically the first publication to include a basso continuo with sacred vocal music. It was designed to provide sacred music that could be performed by any number of singers from one to four, so that in practical performance the

Lodovico Viadana: portrait by an unknown artist (S Maria Assunta del Castello, Viadana)

musical text should not become distorted through the lack of any one type of voice among the performers. In the *concerti* for three voices the basso continuo, which is partly figured, is indispensable, but some of those for four voices can be performed unaccompanied. The composer recommended, however, that the instrumental part, assigned to the organ, or exceptionally to the clavichord ('manicordo'), should never be omitted. Viadana's monody has little in common with recitative: it is a simple melodic line influenced by his *a cappella* practice, with varied expressive ideas and some decorative *passaggi*. Chromaticism is comparatively rare and quite mild; episodes in the concertante style occasionally appear. The success of op.12 and the three subsequent volumes of *concerti* can be attributed largely to their modernity: the works are closely aligned with progressive composition techniques in the early 17th century.

In his later works in this genre, Viadana's vocal lines are more truly monodic, although he never abandoned his feeling for melody. There are several fine pieces in these volumes; nevertheless, with their gentle but superficial fluency, they are on the whole somewhat lacking in colour. The *Missa dominicalis* for one voice and basso continuo in the second volume of *Concerti ecclesiastici* (1607) is worthy of mention for its introduction of monody into the principal rite of Catholic worship (see Wagner, 412–13). Viadana used the concertante style with impressive effect in the *Salmi a 4 cori* op.27, written for a *coro favorito* of five solo voices, three choirs of four voices and instruments (three organs and a chitarrone for realizing the harmonies, and strings, cornetts, bassoons and trombones for doubling the vocal lines); the pieces can also be performed with only two choirs. In these works, some of the best of Viadana's compositions, the style is on the whole very lively and rich in colour. Declamatory techniques in the choral parts offset episodes for the soloists, some of which contain varied ideas and ornamental *passaggi*. In design and layout these pieces anticipate the instrumental concerto. The *Ventiquattro Credo* (1619) are homophonic pieces, the melodies of which are taken from hymns belonging to most parts of the liturgical year; their rhythmic plan is close to the simple movement of the original plainsong.

Viadana's surviving secular works consist of two books of canzonettas (1590, 1594) and many pieces published in collections; the canzonettas show in their delicacy some kinship with Marenzio's villanellas. Viadana's only instrumental publication, op.18, contains compositions for two instrumental choirs and basso continuo, reminiscent in style of the instrumental canzona; each piece is named after an Italian city (*La romana*, *La genovese* etc.); the writing is generally homophonic when in triple metre and polyphonic when in duple. A few other instrumental compositions have survived and for some of the vocal works Viadana suggested performance by instruments as an alternative, or directed that obbligato instrumental parts should accompany the vocal lines.

FEDERICO MOMPELLIO

Viaera, Fredericus (*fl* 1563–4). Netherlandish composer and instrumentalist. He appears to have been an amateur musician and, according to the title-page of his 1564 publication, a 'D[octor] S[cientiarum]' and a native of Friesland (now part of the Netherlands). He is known as the author of one of the earliest cittern books, *Nova et elegantissima in cythara ludenda carmina* (Leuven, 1564[21]), written for the small cittern (tuned *a*–*g*–*d′*–*e′*), which was popular among north European amateurs for 30 or 40 years from the 1550s. The book contains cittern arrangements of 68 pieces, most of them popular tunes. The first part, containing suites made up of movements entitled 'passamezzo–padoana–saltarello', with individual pieces called 'gaiarda', was adapted from Giovanni Pacolini's volume *Tabulatura tribus testudinibus* (Leuven, 1564). To these pieces Viaera added a few villottas and chansons by Arcadelt, Claudin de Sermisy, Lupi and others, and some Netherlandish songs and dances. Pierre Phalèse included 27 of Viaera's arrangements, without attribution, in his *Hortulus cytharae* (1570[34]). Viaera's music shows cittern playing at its very simplest – the two lowest positions are used almost exclusively – and is therefore close to the practice of the amateur performer. Viaera was also the author of a laudatory poem printed as an introduction to two lute anthologies, *Teatrum musicum* (Antwerp, 1563) and *Luculentum theatrum musicum* (1568[23]).

IVAN F. WALDBAUER

Viana, Frutuoso (de Lima) (*b* Itajubá, Minas Gerais, 6 Sept 1896; *d* Rio de Janeiro, 22 April 1976). Brazilian composer and pianist. He enrolled in 1917 at Rio as a pupil of Oswald (piano) and of Gouveia and França (harmony). In 1923 he travelled to Europe for further piano studies with Hanschild in Berlin, De Greef in Brussels and Selva in Paris. Back in Brazil he developed a career as a concert pianist and teacher. He was professor of piano at the conservatories of Belo Horizonte (1929–30) and São Paulo (1930–38), director of the Coral Paulistano at the São Paulo Conservatory (1938–41), professor of choral singing at the National Technical School in Rio (from 1942) and professor of piano at Bennet College. It was his participation in the Week of Modern Art in February 1922 that stimulated Viana's pursuit of musical nationalism. His works include piano miniatures that take or reconstruct thematic material from folk sources and make effective use of popular rhythmic patterns within a brilliant virtuoso style. The drive of these pieces, reminiscent of sambas and *batuques*, assured them a continuing popularity. Many of Viana's songs are also nationalist in aesthetic.

GERARD BÉHAGUE

Vianesi, Auguste Charles Léonard François (*b* Legnano, 2 Nov 1837; *d* New York, 4 Nov 1908). Italian conductor, later naturalized French. He was taught music on the advice of Giovanni Pacini and Theodor Döhler, and went to Paris to complete his training in 1857 with a letter of introduction to Rossini from Giuditta Pasta. Following engagements at Drury Lane, London, in 1858–9 he travelled to New York and later conducted regularly at the Imperial Theatre, Moscow and at St Petersburg. He returned to London in 1870 and for ten years conducted at Covent Garden, directing the first London performances of Wagner's *Lohengrin* (1875) and *Tannhäuser* (1876). Klein commented on the latter that 'Vianesi ... knew little or nothing of Wagner's intentions as to the reading of the score.... It satisfied curiosity without affording a true idea of the opera'. He also directed works from the Italian and French repertory, including Cherubini's *Médée* and Meyerbeer's *L'Africaine*.

On 22 October 1883 Vianesi conducted the opening night of the first season of the Metropolitan Opera, New York, returning in 1891–2, when he conducted the first performance there of Gluck's *Orfeo ed Euridice*. In July 1887 he succeeded Altès as chief conductor of the Paris Opéra, where he commanded a broad repertory and directed the first performances of Saint-Saëns's *Ascanio* (1890) and Massenet's *Le mage* (1891).

A manuscript score (probably autograph) of an opera in three acts by Vianesi, *Una fortuna in prigione*, signed London, 20 October 1858, was listed in Liepmannssohn's catalogue 185, no.1236.

DAVID CHARLTON

Vianna da Motta [Viana da Mota], **José** (*b* S Tomé, 22 April 1868; *d* Lisbon, 1 June 1948). Portuguese pianist, teacher and composer. After early studies at the Lisbon Conservatory he went to Berlin where he had lessons from Xaver Scharwenka (piano) and Philipp Scharwenka (composition). He subsequently worked with Liszt at Weimar (1885) and Bülow at Frankfurt (1887), and made extensive tours of Europe (1887–8), the USA (1892–3, 1899) and South America (1902), sometimes playing as many as four concerted works in one programme. In Berlin he collaborated with Busoni on several editorial projects, including works by Bach and Liszt, and also performed with him in two-piano recitals; Busoni dedicated a set of transcriptions of Bach's Chorale Preludes to Vianna da Motta. From 1915 to 1917 Vianna da Motta held the post formerly occupied by Stavenhagen at the Geneva Conservatoire, and from 1919 to 1938 was director of the Lisbon Conservatory, where the determination and meticulousness of his work led to a generation of accomplished artists including his pupil Sequeira Costa.

Vianna da Motta was particularly distinguished as an interpreter of Bach, Beethoven and Liszt, and in 1927 played Beethoven's 32 sonatas in Lisbon, a significant event in Portuguese musical life. He was also keenly interested in the music of Field, Alkan and Falla, and was noted for his idiomatic interpretation of Falla's *Noches en los jardines de España*. His refined and intellectual approach, quite distinct from the flamboyance of many other Liszt pupils, showed the extent of Bülow's influence, and makes his few recorded performances seem remarkably modern, though not lacking in colour or spontaneity. As a composer he was instrumental in introducing into Portugal post-Beethovenian symphonic form and he pioneered the use of folksong material in serious music. His compositions include *Invocação do poema de Luis de Camões Os Lusiadas* for chorus and orchestra, a symphony (*A Patria*), a piano concerto, a string quartet, a number of songs and piano pieces as well as two-hand transcriptions of eight of Alkan's Treize Prières, Op.64 for pedal piano.

CHARLES HOPKINS

Viardot, Paul. French violinist and composer, son of PAULINE VIARDOT.

Viardot [née García], **(Michelle Ferdinande) Pauline** (*b* Paris, 18 July 1821; *d* Paris, 18 May 1910). French singer and composer of Spanish origin. She came from a family of singers: her father was the elder Manuel García, her mother María Joaquina Sitches, her brother the younger Manuel García and her sister Maria Malibran. After the death of her father in 1832, her mother took over her training. Viardot not only inspired composers such as Chopin, Berlioz, Meyerbeer, Gounod, Saint-Saëns, Liszt, Wagner and Schumann with her dramatic gifts but also collaborated on the composition of roles created especially for her. She was active as a teacher, continuing the García method. She studied the piano with Meysenberg and Liszt and composition with Reicha, but concentrated on singing after Malibran's death in 1836. A year later, when she was 16, she made her singing début in Brussels at a concert given by her brother-in-law, the Belgian violinist Charles-Auguste de Bériot; her range of three octaves and her musical versatility caused a sensation. During her first concert tour, which took her and her brother to Germany in 1838, she performed her own songs, accompanying herself on the piano. She met Clara Wieck and Schumann in Leipzig. (Schumann published one of her songs in his *Neue Zeitschrift für Musik*, and later dedicated his cycle of Heine songs op.24 to her.)

She made her operatic début, like her sister, as Desdemona in Rossini's *Otello*, in London on 9 May 1839, and appeared in the same role in Paris on 8 October 1839. Her first engagement in Paris was at the Théâtre Italien, where she demonstrated her talent in a variety of parts in operas by Rossini. Alfred de Musset (who said, 'She sings as naturally as she breathes'), George Sand, who depicted her as the heroine of her novel *Consuelo* (1842), and Berlioz were soon among her most ardent admirers. The director of the Théâtre Italien was the writer Louis Viardot, whom she married in 1840. 21 years older than his wife, he gave up his post and

accompanied her on concert tours throughout Europe in the years that followed. (Their first daughter, Louise, born in 1841, was brought up by Viardot's mother.) The major cities in which Viardot appeared were London, Berlin, Dresden, Vienna and St Petersburg. From 1843 to 1846 she sang with the opera at St Petersburg, where she met the writer Ivan Turgenev. Turgenev fell in love with her, and lived in close proximity to the Viardot family for the rest of his life. She first appeared in St Petersburg as Norma, one of her most famous roles. While there, she sang works by Glinka and Dargomïzhsky in Russian as well as the Italian repertory. She not only spoke fluent Spanish, French, Italian, English, German and Russian, but also composed in different national styles. This stylistic versatility enabled her to assist other composers, influencing works such as Meyerbeer's *Le prophète*, Berlioz's *Les Troyens* and *Béatrice et Bénédict*, Gounod's *Sapho* and Massenet's *Marie-Magdeleine*.

At this time Viardot seldom appeared in Paris, where she might experience hostility as the wife of Louis Viardot, a republican and declared opponent of Louis Napoléon. However, the première in 1849 of Meyerbeer's *Le prophète*, in which she created the part of Fidès, was a triumph. Meyerbeer wrote of the singer, then not quite 28 years old: 'I owe a great part of the opera's success to Viardot, who as singer and actress rose to tragic heights such as I have never seen in the theatre before'. Viardot sang Fidès more than 200 times, on all the great European stages. She was famous for this part and especially for Gluck's Orpheus, to which she brought great dramatic conviction. The part, originally for castrato, was revised for her by Berlioz in a version that in 1859 brought the forgotten opera back to the stage. Viardot's other notable roles were Beethoven's Leonore, Gluck's Alceste and Verdi's Lady Macbeth (although she was unable to bring success to *Macbeth* itself).

In 1863, at the age of 42, she retired from the stage and left France for political reasons. With her husband, her three youngest children and Turgenev she settled in Baden-Baden, where she taught singers from all over the world. She built an art gallery in her garden and a small opera house, where she, her pupils and her children gave concerts and performed their own dramatic works. The librettos were by Turgenev. One of Viardot's operettas, *Le dernier sorcier* (1869), was also performed in an orchestral version in Weimar in 1869 and in Riga and Karlsruhe in 1870. Henry Chorley wrote in the *Athenaeum* (12 October 1867): 'It is not possible to conceive anything of its kind more perfect in quaint fantasy, real charm and complete execution'. She also performed piano duets with Clara Schumann and gave private organ concerts. She sang in the première of Brahms's Alto Rhapsody (Jena, 3 March 1870) during her time in Baden-Baden. The defeat of Napoléon III in the Franco-Prussian war enabled Viardot to return to Paris (she went first to London, where there was a private performance of *Le dernier sorcier* on 11 February 1871). She continued to live there until her death, teaching and composing, among other works, 'salon operettas' such as *Le conte de fées* (1869) and *Cendrillon* (1904), and presiding over a highly regarded musical salon in the rue de Douai until the death of both her husband and Turgenev in 1883, when she moved to the boulevard St Germain.

Viardot did not regard herself as a composer, yet her work was highly professional. Like her father's operas,

Pauline Viardot as Orpheus in Gluck's 'Orpheo ed Euridice', performed in Berlioz's edition, 1859–62

her compositions arose from the pleasure she took in music and drama. They employ several different languages and styles, and were designed for her own vocal abilities and those of her colleagues. She wrote more than 100 songs and *mélodies*, to texts by Musset, Turgenev, Pushkin, Gautier, Mörike, Goethe and others, most of which were published in her lifetime. At least as popular as her own songs were her transcriptions of 12 of Chopin's mazurkas, set to poems by Louis Pomey, and she often sang them in concerts. Chopin was enthusiastic about the transcriptions, which contributed considerably to his own popularity. Viardot also made similar transcriptions of waltzes by Schubert and Hungarian dances by Brahms.

Her pupils included Désirée Artôt, Aglaja Orgeni, Marianne Brandt and Antoinette Sterling. She published a manual on singing, based on the García method, *Une heure d'étude: exercices pour voix de femmes* (Paris, *c*1880/*R*); a collection of selected songs and arias, *Ecole classique de chant* (Paris, 1861), with comments on phrasing, accentuation and interpretation; and a critical edition of 50 of Schubert's lieder. These publications and her own compositions and transcriptions are an important

source for the understanding of performing practice in the 19th century.

Her eldest daughter Louise (Pauline Marie) Héritte (*b* Paris, 14 Dec 1841; *d* Heidelberg, 17 Jan 1918) became a contralto, teacher and composer. She taught singing in St Petersburg, Frankfurt, Berlin and Heidelberg. Her comic opera *Lindoro* was performed at Weimar in 1879 and a cantata, *Das Baccusfest*, in Stockholm in 1880. She published many songs and a string quartet, and *Memories and Adventures* (London, 1911; Fr. trans., 2/1923).

Her son Paul (Louis Joachim) (*b* Courtavenel, 20 July 1857; *d* Algiers, 11 Dec 1941) became a violinist, conductor and composer; he was a pupil of Léonard. He occasionally conducted at the Paris Opéra. Among his compositions are two violin sonatas and a piano trio. His writings include *Histoire de la musique* (Paris, 1905), *Rapport officiel (mission artistique de 1907) sur la musique en Scandinavie* (Paris, 1908) and *Souvenirs d'un artiste* (Paris, 1910). Pauline Viardot's third daughter, Marianne (*b* 1854), was for a time engaged to Fauré; she later married the French pianist and composer V.A. Duvernoy.

WORKS

Stage (operettas unless otherwise stated): Trop de femmes (I. Turgenev), 1867; L'ogre (Turgenev), 1868; Le conte de fées, 1869; Le dernier sorcier (Der letzte Zauberer) (Turgenev), perf. Weimar, 1869; Cendrillon (oc), 1904; Au Japon (pantomime); Phèdre et Atholie; Andromaque

Choral: Choeur bohémien, soloists, SSA; Choeur des elfes, soloists, SSA; Choeur de fileuses (from L'ogre); La jeune République (P. Dupont), 1v, chorus (Paris, ?1848)

Other vocal: Duo, 2 solo vv, pf: *c*100 songs, incl. 5 Gedichte (St Petersburg, 1874), 4 Lieder (Berlin, 1880), [5] Poésies toscanes (L. Pomey) (Paris, 1881), 6 mélodies (Paris, 1884), [6] Airs italiens du XVIIIe siècle (trans. Pomey) (Paris, 1886), 6 chansons du XVe siècle (Paris, 1886), [3] Album russe; Canti popolari toscani; arrs. for 1v, pf of inst works by Brahms, Chopin, Haydn, Schubert; other arrs.

Inst: 2 airs de ballet, pf; Défilé bohémien, pf 4 hands [also as song]; Gavotte et sérénade, pf (Paris, 1885); Introduction et polonaise, pf 4 hands (Paris, 1874); Marche militaire, 2 fl + pic, 2 ob, 2 brass choirs; Mazourke, pf; 6 morceaux, vn, pf (Berlin, 1868); Album russe, pf; Sonatine, vn, pf (Paris, 1874); Suite arménienne, pf 4 hands

BEATRIX BORCHARD

Vibert, Nicolas (*b* *c*1710; *d* Paris, 16 Aug 1772). French violinist and composer. He came from a family of luthiers, was listed among the violinists of the Paris Concert Spirituel in 1751, but made his début as a horn player, performing in a horn quartet for the Concert Spirituel in May 1750. In 1752 he gained the reversion to membership of the 24 Violons du Roi, and published two series of sonates: six unaccompanied *Sonates* for two violins, op.1, and *Six sonates à trois*, for two violins and bass, op.2. In 1753 he joined the Opéra-Comique, becoming supernumerary violinist in the Opéra orchestra in 1757. His second set of compositions, three *Suites d'airs gracieux en trio* for two descant viols (or violins) and bass, opp.3–5, were published *c*1759–60. He held the position of first violin in the Concert Spirituel orchestra from 1760 to 1763.

Vibert's compositions reveal a virtuoso violin technique coupled with considerable inventiveness, particularly in the op.2 sonatas. These *Sonates à trois* appear also to have been conceived orchestrally with frequent indications of 'solo' and 'tutti'. They are further distinguished in their unusual harmonies and a tendency towards strikingly descriptive and fanciful titles, such as *Largo ideali* and *Allegro assai bizaria*. The first sonata ends with a long, free-fantasy *Capricio* of a brilliance reminiscent of Locatelli's works. The op.1 sonatas maintain a clear delineation of melody and accompaniment, with occasional canons usually at the unison. The three suites were probably intended for the upper nobility; they consist of a number of short characteristic pieces, often humorous and again interestingly titled in both Italian and French. The *Arlequinade* of the second suite is described by La Laurencie as displaying an off-handed impertinence recalling Michel Corrette's *concertos comiques*.

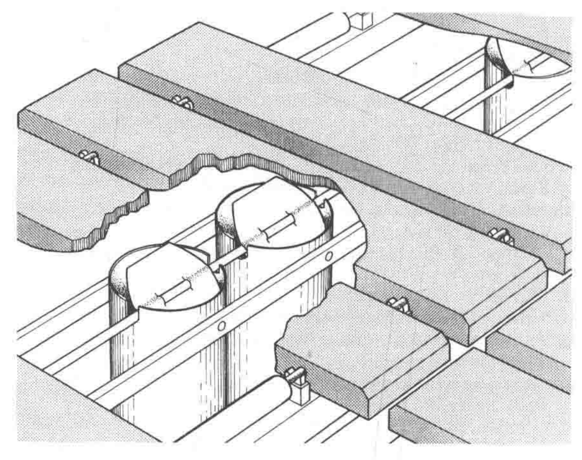
STEPHANIE VIAL

Vibraharp. Name by which the VIBRAPHONE is known in the USA, a trade name used by Deagan of Chicago.

Vibraphone. A metallophone of the bar percussion family. It was developed in the USA, where it is sometimes called 'vibraharp' (it is classified as an idiophone: set of percussion plaques). Notes are produced by vibrations of metal bars amplified by a special type of resonator or electronically, producing a pulsating tone. The bars (an alloy), which are arranged keyboard-fashion, are suspended on cords at the nodal points (*see* GLOCKENSPIEL (i)). They are (in contrast to the raised mounting of the 'black-key' bars of the normal orchestral xylophone) level-mounted to facilitate the use of three or more beaters



1. Modern orchestral vibraphone by Tuned Percussion, London

(fig.1). Rubber-tipped or yarn-wound rubber mallets are normally used, the texture in some cases being defined by a colour code. The celesta-like tone of the metal bars is of long duration; the instrument is equipped with a foot-controlled sustaining device, operating similarly to the piano sustaining pedal (pressure on the pedal releases the felt damper; in early models the bars ring freely, and pressure on the pedal damps the tone). The usual range of the concert vibraphone is three octaves (f–f'''); instruments of four octaves (c–c'''') became readily available in the last quarter of the 20th century, and have become common, especially in continental Europe. Alban Berg (*Lulu*, 1929–35), Messiaen (*Trois petites liturgies*, 1944) and Henze had all apparently asked for a four-octave instrument earlier in the century, a good example of the way in which percussion instruments have often developed to satisfy the demands of composers.

The outstanding feature of the vibraphone is its unique vibrato. In the tube-resonated model this is obtained by the repeated opening and closing of the upper (open) ends of the resonators by means of revolving vanes (flat metal discs; fig.2). The vanes are attached to a spindle which is driven by a motor mechanism. The repeated breaking up of the sound causes it to emerge in a series of pulsations, the speed of which is governed by adjusting the revolutions of the spindle. Many composers have used the vibraphone without vibrato; then the vanes rest in a vertical position. (For the comparative pitch of bar and resonator *see* XYLOPHONE, §2(ii) and ACOUSTICS, §V, 2.)

The desire for the extraordinary in early 20th-century vaudeville was probably responsible for the introduction of the vibraphone into the field of entertainment where the xylophone and numerous novel percussion instruments were popular features. In 1916 Hermann Winterhoff of the Leedy Drum Co. (USA) applied a mechanical vibrato to a 'steel marimba', where a *vox humana effect* (*see* ORGAN STOP) was produced by lowering and raising the resonating chambers by means of a motor-driven apparatus. This system may have been developed from earlier experiments. In 1921 a development of the original principle was applied, whereby the vibrato was obtained by opening and closing the upper (open) ends of the resonators by means of revolving discs, and by the mid-1920s the vibraphone was an integral part of the dance orchestra. Some years elapsed before it was frequently employed in serious compositions. Possibly the first significant use of the instrument is in Havergal Brian's opera *The Tigers*, which calls for two vibraphones (one a bass vibraphone of unusually extended lower compass). In 1932 Milhaud scored for the vibraphone in *L'annonce faite à Marie*. Berg gave it a place in his opera *Lulu*. Britten used it in his Spring Symphony (1949) and in his opera *A Midsummer Night's Dream* (1960). It appears in Walton's Cello Concerto (1956) and Partita (1957); two are used in K.A. Hartmann's Eighth Symphony (1960–62). Other orchestral or chamber works with vibraphone include Maderna's Serenata no.2 for 11 instruments (1954, rev. 1957), Schuller's *Seven Studies on a Theme of Paul Klee* (1959), and Vaughan Williams's *Sinfonia*

2. Diagram to show position of vanes in vibraphone resonators

antartica (1949–52) and Eighth Symphony (1953–6). There are particularly challenging vibraphone parts in Boulez's *Le marteau sans maître* (1953–5, rev. 1957), Tippett's Third Symphony (1970–72), Siegfried Fink's Concertino for Vibraphone (1958–9) and Marc Bleuse's *Moon Step* for two vibraphones and percussion (1973). Milhaud's Concerto for Marimba and Vibraphone (1947) remains an outstanding example of the possibilities of the instrument. In this work Milhaud requested that the back ends of the mallets should be used and that the bars be struck with the hands. In Ernst Toch's First Symphony (1950) 'Vibraphone ohne Vibrato' is given as a substitute for marimba; in Britten's *Prince of the Pagodas* (1956) and *Death in Venice* (1973) the vibraphone is used as a metallophone (without motor), and together with other percussion instruments provides a worthy imitation of a Javanese gamelan. Occasionally instructions are given for the vibraphone to be played with no resonance ('pedal off'), or with a steadily accelerating (or retarding) vibrato. Possibly unique are the requests of William Kraft in his *Configurations* (1968) to 'set discs so that "whites" are open [vertical], "blacks" are closed [horizontal]' and of Lutyens for a thin metal strip to be placed on the bars of the vibraphone in *Essence of our Happinesses* (1968).

Experiments with electronic amplification and vibrato have resulted in such instruments as the Deagan Electra Vibe where no tube resonators are used, each bar being individually fitted with a pickup transducer. Tremolo and volume controls are incorporated.

The vibraphone ('vibes') is an integral instrument in the modern percussion ensemble and in jazz, where performers such as Lionel Hampton, Milt Jackson, Red Norvo and Gary Burton are famed for their virtuosity; Burton in particular has been noted for his four-mallet playing (two in each hand) and his technique of 'bending' or slightly lowering the pitch of a note. He has also used electronic attachments to vary the tone.

Music for the vibraphone is written in the treble clef.

JAMES BLADES/JAMES HOLLAND

Vibrato (It., from Lat. *vibrare*: 'to shake'). A regular fluctuation of pitch or intensity (or both), either more or less pronounced and more or less rapid. The Italian term 'tremolo' is also occasionally used for vocal vibrato. Terminology used in music was not standardized until the 20th century; earlier terms, primarily applied to vocal vibrato, include: *flattement*, *flatté*, *balancement*, *balancé*, *plainte*, *langueur*, *verre cassé*; *tremolo*, *tremolo sforzato*, *ardire*, *trilletto*; *Bebung*, *Schwebung*; and sweetening, depending on the effect wanted or technique used. Terminological uncertainties arise because vibrato is regarded not as a single ornament but rather as a complex of 'quivering' ornaments which might be modified in performance depending on the desired expression or the emotion to be aroused. Neither intensity nor tempo, therefore, can be clearly determined, and many Baroque or Classical kinds of vibrato are only distantly related to our present concept. 'Wobble' (exaggerated, slow or irregular vibration of the singing voice) is a technical fault, and not to be regarded as vibrato.

Vibrato as a device can be found throughout Western music with descriptions dating from early medieval sources to the present day, but the techniques have varied. Historical descriptions are often vague and do not make clear how the vibrato was actually produced, but it seems always to have been accepted as an ornament until the first quarter of the 20th century, when its continuous use gradually became the norm.

1. TECHNIQUES. On string instruments vibrato is produced by moving the finger on the string backwards and forwards, aided by the wrist and sometimes by the forearm. On fretted string instruments such as viols 'two-finger' vibrato (also known as the close shake or *langueur*) was used, the first finger being placed firmly on the string and the second making a trilling movement near to it, thus creating an undulation of about an eighth- to a quarter-tone. Only with the little finger was a 'normal' vibrato comparable to modern practice allowed as a substitute for the usual technique (sources in England and France agree on the subject). German violin sources of the late 17th century and the 18th also describe a vibrato produced without the usual rocking movements of the finger; here too, a slight beating of the string in a trill-like movement without altogether leaving it is described (e.g. Printz, 1676, or Petri, who suggests combining this technique with the inward and outward movement of the finger, thus actually describing the changes in finger pressure explained by Tartini and Leopold Mozart in their tutors). Two-finger vibrato on the violin (the 'gypsy trill') is not mentioned explicitly. One unclear passage in Mersenne could point to it, but more likely a beat (mordent) is meant; Tartini refers to it in passing. Rocking of the fingers has always been the usual technique for producing vibrato on string instruments of the violin family. The amount of wrist or arm movement differs according to different schools of violin playing.

On plucked instruments the same device (known variously in history as tremolo, *tremolo sforzato*, *verre cassé*, *soupir*, *mordant*) is found. The lower strings of the lute, however, demand a stronger movement: here the string is pulled back and forth (indicated by the same symbol as the mordent; on higher strings the vibrato is indicated by <).

On wind instruments during the 17th and 18th centuries vibrato was normally produced by a trill-like movement (usually made with stiff fingers) over a hole some distance from the ones covered, thus producing a very slight fluctuation in pitch. Breath vibrato is described early in the 16th century (Agricola, Ganassi) but seems to have been abandoned because of its bad effect on breathing technique. The FLATTEMENT (or sweetening, *Bebung* or *Klopfen*) was in use throughout the 17th and 18th centuries and at the beginning of the 19th. There was some experimenting in the second half of the 18th century, resulting, for example, in Lusse's rolling of the flute to produce a vibrato by slight changes of the embouchure. When all these forms as well as the written-out measured vibrato (see below) became obsolete, there seems to have been a period with little or no vibrato on wind instruments; only in the 20th century did 'breath' (diaphragm) vibrato become generally accepted as the norm, even if it is still not universally used on all wind instruments (e.g. clarinets, horns, Viennese oboes).

Vocal vibrato is regarded as standard if the voice is well supported; during the 16th to 18th centuries it was supposed to be small and was considered virtually non-existent. It is impossible to establish whether 'vibrato-free

production' (described at least until the end of the 19th century) denotes a sound entirely without vibrato in the modern sense; statements that the singing voice differs from the speaking voice in that it contains an almost inaudible vibrato rather suggest that it does not (see Dodart, 1706). Some Baroque treatises mention a vocal sound wholly without vibrato as an ornament (Bernhard, Montéclair), which would support the hypothesis that a well-trained Baroque voice normally used minimal vibrato. The same sources mention not only ornamental non-vibrato but also ornamental vibrato. The technique of the latter is described somewhat vaguely, as 'breath vibrato'. Changes in singing technique later suggest that sound production changed in the latter half of the 19th century; vibrato would thus have had a higher priority before that time.

2. Measured vibrato. Measured vibrato, now all but obsolete, was much used throughout the 17th and 18th centuries and in part of the 19th, mostly in orchestral music to underline passages (see below). On string instruments it is rendered by controlled pressure changes of the bow (indicated by a wavy line, and about M.M.60 or 120; a well-known example is found in the scene with the Cold Genius in Purcell's *King Arthur*). The choice of quavers or semiquavers serves to suggest the tempo. On wind instruments a measured breath vibrato is indicated with the same device. Singers also use it; here too, the beats should be strictly in time. This kind of vibrato is often said to be an imitation of the Tremulant stop of the organ. Such indications as staccato (or, eventually, such counter-indications as andante) show that repeated quavers or semiquavers in slow movements were generally considered to point to the use of measured vibrato, although the actual performance may sometimes have been less a vibrato than something akin to a portato (as suggested by Roger North); from the mid-18th century on, German writers distinguish between 'Tremolo' and 'Tragen der Töne'.

In ensemble music of the 17th and 18th centuries, measured vibrato is often the only kind accepted, as the specific technique, which relies mostly on carefully gauged fluctuations in intensity, helps the players to stay together and reduces the risk of intonation problems.

Although normal vibrato is also to some extent measured, and most measured vibrato involves fluctuations of pitch, both kinds were mainly connected with only one of their characteristics. As a rule, measured vibrato has strong emotional connotations; its use survives well into the 19th century, most clearly in opera, but also in the symphony. Unlike an ornamental 'normal' vibrato, it produces some degree of continuity.

3. History. In Western music vibrato has been documented since the Middle Ages. It may have been in use as an ornament even in early Christian music, but here documentary confirmation is lacking. During the 16th century it became fashionable as a mannerist ornament, and towards the end of the century there seems to have been at least one (polyphonic) singing school that would eventually accept it as some sort of a continuous device (described by Zacconi in 1592 as 'art eventually turned nature': 'di natura tale, che usandolo, sempre usar si deve; accioche l'uso si converti in habito', f.60*r*). It was then associated with bravura and ornamentational skill (hence the term *ardire*, sometimes used for bravura vibrato) and was used as the basis of trilling ornaments. This more or less continuous vibrato was rejected by practitioners of solo singing and the new style in Italy, and slowly also elsewhere (in Germany the injunction to sing with a tremulous voice, found in singing tutors for boys, became obsolete during the first half of the 17th century, although some tutors, following tradition, advocated its use until the latter years of the century). As a result of this change of style, vibrato is described as an (occasional) ornament, thus conveying a meaning in accord with Baroque conceptions of passions or with a character as portrayed in a given piece of music. Even in singing tutors of the time it was not mentioned as a substantial element in sound production; there is a clear distinction between the small 'natural' vibrato of the well-placed voice, which is considered the same as a non-vibrated instrumental sound, and the audible ornamental vibrato. The association with well-defined passions lacks meaning if vibrato is used continuously as a means of musical tone production (see Seashore). According to 17th- and 18th-century sources, vibrato was associated with fear, cold, death, sleep and mourning, and was generally perceived as a 'feminine' ornament (hence denoting also sweetness or loveliness, as reflected in many of the names given to it); its use in this way was eventually superseded by the more modern idea of using vibrato to embellish the tone.

During the Baroque vibrato was used sparingly, for emphasis on long, accentuated notes in pieces with an affect or character to which it was suited. Being regarded as an ornament, in principle it was used on single notes like any other. It was usually denoted by wavy lines; in tablatures a cross (×) has the same meaning. Most of the signs used appear either in tutors or in French amateur music where unspecified ornaments are often indicated by a cross (+). Less common ornaments such as vibrato or glissando were in theory used only by soloists. In the second half of the 18th century there was a tendency towards more vibrato; in some circles it may even have been used continuously.

By the mid-18th century vibrato was gradually identified with some of its more positive connections, especially the sweetness of sound quality ('lieblich'). With many performers it seems to have been in nearly constant use – at least on all longer notes. Such theorists as Leopold Mozart, Simon Löhlein and Tromlitz warn against overuse. In Classical orchestral works there are many written-out forms of vibrato or similar effects; as a rule these are measured (bow) vibrato, thus allowing small groups to be in time and in tune despite its use. Vibrato at that time also spread among amateur musicians (there is a warning in Bremner); finger vibrato on woodwind instruments as described for amateurs was already known, because relatively little technical knowledge was needed to produce it (English and French sources of the late 17th and early 18th centuries). The early 19th century saw, again, a much more restricted use of the device.

The extensive use of vibrato and measured vibrato in the last decades of the 18th century brought a reaction at the beginning of the 19th; a tendency developed towards a stricter use of prescribed measured vibrato in the symphonic repertory of the first half of the 19th century, and tutors warn against overuse of the normal vibrato, still described as an ornament and not as part of basic sound production. This becomes clear in the fact that during the first three decades of the 19th century wind

tutors still describe finger vibrato as the standard technique (e.g. Fürstenau). Nor do singing tutors mention vibrato as a part of normal tone (e.g. Garcia, 1840), and even at the beginning of the 20th century Leopold Auer expressed reservations about the spread of continuous vibrato, which he in no way advocated. In opera abundant use is made of the measured vibrato for dramatic effect until the very end of the 19th century, suggesting that members of Italian opera orchestras were not expected to use left-hand or normal breath vibrato.

In the 20th century absence of vibrato, except for some wind instruments, came to be regarded as a special effect to be employed for character delineation. Only when continuous vibrato began to establish itself did treatises or 'tutors' on vibrato in singing and playing begin to appear; there are none devoted solely to the subject until the 20th century. It would seem that the use of metal strings to replace gut strings in the orchestra went hand in hand with an increasing demand for continuous left-hand string vibrato; before this, left-hand vibrato was still reserved for particular effect, as for example in Schreker's *Der ferne Klang* (1912). Not until the 20th century was 'incorrect' vibrato first seen as a problem; earlier, it had simply been considered as resulting from generally poor technique (especially where singers and wind players were concerned). Continuous vibrato is a 20th-century phenomenon, indicating in itself that the older ornament has lost its expressive power. Regular vibrato has thus become a normal element of sound production, hence an important component of singing and playing technique.

Measured vibrato is as a rule written out by the composer, although use ad libitum may exist. It is used mainly to convey fear and awe, but also supplication and mercy. In late 17th-century German sonatas a tremolo movement is often inserted as a slow movement; this use is also documented by Roger North for the Italian style in general. In his church cantatas, Bach made ample use of measured vibrato, usually with a particular purpose, although there are indications that he and his contemporaries also used it to indicate ensemble vibrato. Especially in small ensembles this use of bow vibrato helps to avoid fluctuations in pitch and speed. Measured vibrato was still used freely by Italian opera composers of the 19th century to denote feminine mourning passions. As a technical exercise it was still taught to string players at the beginning of the 20th century; symphonies of the latter half of the 19th century still have passages with measured vibrato, suggesting that not only in opera orchestras was continuous vibrato (left-hand vibrato for strings) not established before the introduction during the 20th century of metal strings. These paved the way for changes in violin technique and sound perception, one of which was the increasing use of continuous vibrato, not only for solo use. After a period of virtually universal use, playing with little or no vibrato has become increasingly popular through the revival of early music and early singing and playing techniques.

Vibrato linguale (It.). *See* FLUTTER-TONGUING.

Vičar, Jan (*b* Olomouc, 5 May 1949). Czech musicologist. He studied musicology at the University of Olomouc with Robert Smetana and Vladimír Hudec (MA 1972, PhDr 1974), accordion at the Ostrava Conservatory (graduated 1972), and composition with Jiří Dvořáček and music theory with Karel Risinger at the Academy of Performing Arts in Prague (graduated 1981, 1983). He later attended numerous courses and received scholarships in Germany, Italy, England, Japan, the USA and Chile. He taught at the department of musicology and music education at the University of Olomouc from 1973 to 1985, receiving the CSc in 1985 with a dissertation on stylistic trends in the works of Václav Trojan. From 1985 to 1989 he worked as editor and chief editor with the journal *Hudební rozhledy* in Prague, at the same time teaching in the music faculty of the Prague Academy of Performing Arts where, in 1988, he received the title of Docent. In 1992 he became head of the department of musicology at the University of Olomouc, becoming professor there in 1998. At the same time he has taught at the department of music theory and history of the Prague Academy of Performing Arts. His compositions include the cantata *Cry* (1981) and *Choruses and Songs for Children* (1997).

KAREL STEINMETZ

Vicenot, Johannes [Joh.]. *See* VINCENET.

Vicente, Gil (*b* ?Guimarães, northern Portugal, *c*1465–70; *d* 1536/7). Portuguese dramatist, poet, musician and courtier. He probably died in the year after his last dated play, performed in December 1536. Vicente's plays were written for the royal court during the reigns of Manuel I (1495–1521) and João III (1521–57). According to Reckert, 48 plays are extant, dated between 1502 and 1536; 20 are written in Portuguese, 12 in Castilian and the others use a mixture of languages. Vicente's early work was influenced by Juan del Encina. However, Vicente made much more use of music in his entertainments than Encina or any other of his contemporaries, as is shown by frequent textual references, citations and stage directions. Of almost 250 pieces called for in his plays, only four (which do not survive) are identifiable as his own. At least 15 compositions can be found in the Cancionero de Palacio; others belong to the religious sphere. Although in some cases the relationship between these pieces and their theatrical context is slight, in general Vicente displays amazing wit and originality in the way he makes music play a significant dramatic role. In his plays we find the earliest literary references to the *ensalada* (*Auto da fé*, 1510) and the *folia* (*Sibila Cassandra*, 1513).

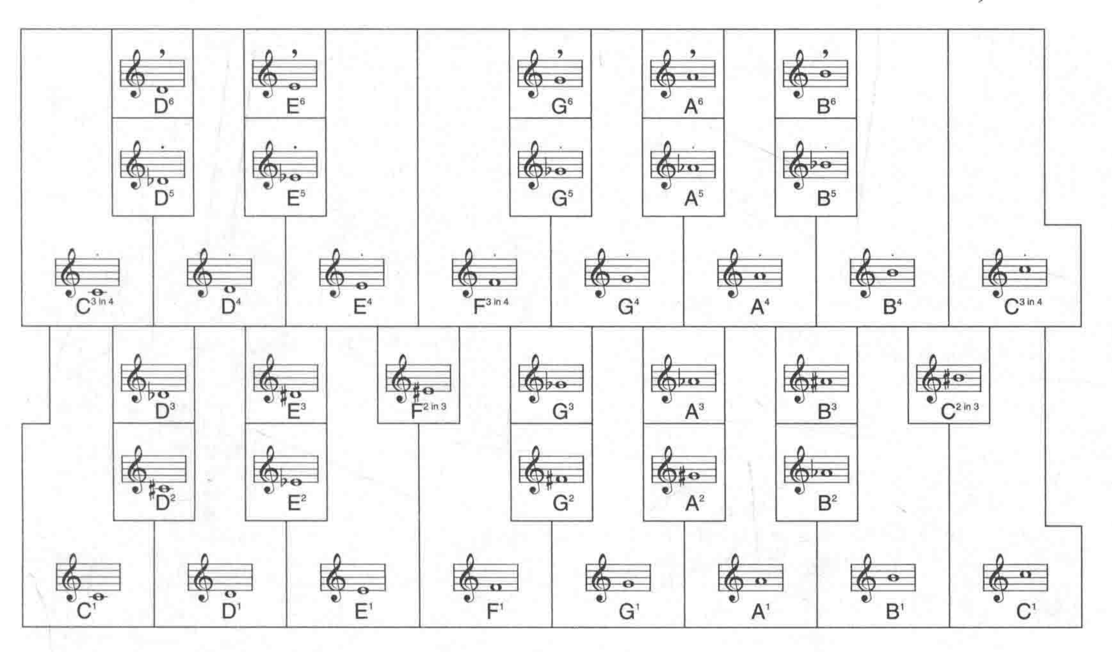
ALBERT T. LUPER/MANUEL PEDRO FERREIRA

Vicentino, Michele. *See* PESENTI, MICHELE.

Vicentino, Nicola (*b* Vicenza, 1511; *d* Milan, *c*1576). Italian composer and theorist. He helped to free theory from its adherence to the ecclesiastical modes and experimented with harmonies which anticipated many later innovations. Little is known of his early years in Vicenza, but he probably came under the influence of the humanist Giangiorgio Trissino there. Perhaps the proximity of Vicenza to Venice allowed ready access to the ideas and teaching of Willaert. On the title-page of his first book of madrigals he called himself 'pupil of the one and only Adrian Willaert', an association confirmed in the preface to the same work. At some time during this period he was ordained to the priesthood, but his interest seems to have been chiefly in the theoretical examination of the diatonic, chromatic and enharmonic genera, and their use in practice.



It is not known when Vicentino arrived in Ferrara. Since his name does not appear in the account books of the Ferrarese court, he was probably employed by Cardinal Ippolito II d'Este rather than by the court chapel – a theory supported by later documentary evidence. Although he lacked an official connection with the ducal court, Vicentino, according to his treatise, gave musical instruction to several members of Duke Ercole II's family; the duke himself participated in the singing and playing of Vicentino's music.

The succeeding years saw the growing recognition of Vicentino's work. In 1546 his first book of five-voice madrigals appeared at Venice. The central event in his life was the famous debate with the Portuguese musician VICENTE LUSITANO which took place in 1551 at Rome where Vicentino had moved with his patron. Vicentino's argument was based on a particular interpretation of the genera which he later amplified in his treatise. Instead of considering the diatonic, chromatic or enharmonic tetrachord as a unit, he maintained that the use of any one of its component members was sufficient to identify the genus. Thus, chromatic could be represented either by the complete series: minor 3rd–semitone–semitone, or by the minor 3rd alone or a semitone alone. Similarly, the use of the major 3rd could be interpreted as evidence for the existence of the enharmonic genus. In essence then, the music commonly sung was a mixture of the three genera. Lusitano disputed this, arguing that most music could be explained in terms of the diatonic gender. The final judgment signed by the papal singers Bartolomeo Escobedo and GHISELIN DANCKERTSwas in favour of Lusitano. That did not dissuade Vicentino from his experiment nor from completing his treatise *L'antica musica ridotta alla moderna prattica* (Rome, 1555, 2/1557) in which his theories were more fully explained (fig.1).

The events of the next few years are outlined in the treatise. Ippolito II and his entourage returned briefly to Ferrara, then settled in Siena for almost two years and after this moved frequently between Rome and Ferrara. By the year 1561, Vicentino had completed not only the *arcicembalo* discussed in the fifth book of *L'antica musica* but had also built an *arciorgano* constructed along similar lines and capable of reproducing the sounds of all three genera (described in a publication dated 25 October 1561).

1. *Nicola Vicentino: woodcut from his 'L'antica musica' (Rome, 1555)*

2. Diagram showing the disposition of the orders and the notation used by Vicentino for his arcicembalo

In this publication, Vicentino served notice of his availability for a new position, probably occasioned by the frequent absences of his patron on official ecclesiastical business; by 1563 he had left the service of the cardinal and assumed the post of *maestro di cappella* at Vicenza Cathedral. This position apparently did not please him for he remained there only until the end of the following year.

Where Vicentino went after he left Vicenza remains unclear. Vincenzo Galilei indicated that he had a number of private pupils who sang his music 'in all the principal cities of Italy' (see Palisca, pp.341–2). He was perhaps in Milan as early as 1565. Certainly by the end of 1566, probably through the agency of Nicolò Ormaneto (Carlo Borromeo's vicar in Milan), Vicentino had been found a place as the second rector (with a small salary) of S Tommaso in Terra Amara, a parish in a populous and poor northern quarter of the city; his service there is documented for the next decade. However, his request to the cardinal for the higher-paid rectorship was not granted, his clerical work was criticized in curial visitation reports, and in 1574 Borromeo made S Tommaso into a collegiate church, effectively cutting Vicentino off from chances of ecclesiastical promotion. Before that, he applied in 1570 to Duke Wilhelm V of Bavaria, requesting a better position. The Bavarian archives later record payments to Vicentino, but it is not clear whether for personal appearances or for compositions sent to the court.

The year 1571 saw the publication of his fourth book of motets (of which only the quintus partbook is extant) by the Milanese printer Ponzio; several of the motets seem related to Milanese devotion. Together with evidence for at least one student, this shows that he remained active as a composer and a teacher in his later years. In 1572 Vicentino's fifth book of *Madrigali a cinque voci* appeared. In the same year a madrigal, *Passa la nave mia calma d'oblio*, was printed in an anthology at Paris by Le Roy & Ballard; it is the only Italian work in the collection and its inclusion gives direct evidence of the esteem in which the French held Vicentino. Ercole Bottrigari in *Il Desiderio* (1594) stated that Vicentino died during the plague of 1575–6; his pastoral activities would certainly have exposed him to infection, and his post was vacant by 1577. Still, his memory continued in Milan, as his *arcicembalo* passed into the ownership of Prospero Visconti, and he was respectfully mentioned by Giovanni Paolo Lomazzo (*Rime*, 1587), in Federico Borromeo's musical miscellany (*I-Ma* G.309 inf., *c*1595), and by Girolamo Borsieri (*Il supplemento della Nobiltà di Milano*, 1619).

Vicentino's extant musical legacy consists chiefly of two books of madrigals. To these may be added a few isolated sacred and secular works in both published and manuscript sources, and several incomplete compositions including the quintus of a collection of motets. His fame, however, rests on the treatise *L'antica musica ridotta alla moderna prattica*. The work as a whole is divided into two main parts. The first, a single book 'della theorica musicale', is based chiefly on Boethius but with an emphasis on those elements that support Vicentino's own ideas. The other part contains five books 'della prattica musicale', the first of which concentrates chiefly on a discussion of various intervals in their melodic functions, extended to encompass the possibilities of the three genera. The second concentrates on vertical function of intervals in contrapuntal practice. The third deals chiefly with the eight diatonic modes and their extension into chromatic and enharmonic forms. The bulk of the fourth applies all of these concepts to the actual construction of musical work and serves as a manual of composition. The fifth submits the principles and theories of the previous books to the definitive test of performance on an instrument, the *arcicembalo*, which was so constructed that any type of microtonal composition could be played on it. Vicentino's instrument is provided with two keyboards, each containing three ranks or orders of keys. The diagram (fig.2) shows the disposition of the orders

and the notation used by Vicentino for each sound. The names of the notes make clear the progression from one order to the next, the denomination of each note in the succeeding orders being derived from the name of the note in the first. Thus, in moving from *A la mi re primo* (A, in the first order) to the second order, the notation is given as G♯, but the note is called *A la mi re secondo*. In other words, Vicentino preferred to think of the location of his notes with reference to the keyboard rather than to the staff. The first order is made up entirely of white keys that correspond to those found in most keyboard instruments. The second order contains the black keys most frequently used in the 16th century: F♯, G♯, B♭, C♯ and E♭. The keys of the second order are split and raised to provide for the third order, which is then completed by the insertion of shortened black keys between the semitones E–F and B–C. This order contains the less commonly used semitones: G♭, A♭, A♯, B♯, D♭, D♯, E♯.

The second frame begins with the fourth order, which contains the same white keys as the first order, but pitched a *diesis* higher. This interval, equal to half a minor semitone or a fifth of a tone, is represented notationally by a dot over the note. The notes of the fifth order are G♭, A♭, B♭, D♭ and E♭, all a *diesis* higher than the corresponding notes in the second and third orders. The sixth order resembles the first diatonic order by using plain notes, but is a comma (equal to half a *diesis*) higher in sound than the first order. The notes are G, A, B, D and E, with the symbol of a comma over each note.

Vicentino's novel and visionary concepts remain a witness to the battle of those musicians of 16th-century Italy who sought a new and contemporary art. From their innovations emerged the free chromatic style of the *seconda pratica* of the 17th century and the stabilization of tuning into the equal temperament of more modern times.

HENRY W. KAUFMANN/ROBERT L. KENDRICK

Vicenza. City in the Veneto region, in northern Italy. The canonical post of cantor in the cathedral was created between 1255 and 1270, but was abolished in 1329 because of financial difficulties, and for the rest of the century musical activity was confined to *mansionarii*, who operated irregularly. During the first quarter of the 15th century there were at least five cantors, including Canon Johannes Gasparus, the dedicatee of Ciconia's *Liber de proportionibus*. Another canon-musician (from 1412) was Matheus de Brixia, who died in Vicenza in 1419 and left (in addition to his music and books) 1200 gold ducats for the creation of a prebend for a singer; all the singers were supported by prebends, transferred from one cantor to another to assure continuity of musical activity. A performance of a liturgical play in the cathedral in 1379, including 'cantus et melodiae variae', is recorded by the local chronicler Conforto Pulci. In 1409 Beltram Feragut wrote the motet *Excelsa civitas Vincencia* for the accession of Pietro Emiliani as Bishop of Vicenza, and it was re-used for that of his successor Francesco Malipiero. A school for singing 'cantum figuratum' was founded in 1431, and its first teacher was probably Johannes de Lymburgia, then one of the cathedral cantores, whose motet *Martires Dei incliti* celebrates the two patron saints of the city. In 1460 the teaching of music in the cathedral was firmly established. Luca de Cataro and Cornelius (1487) were clergymen entrusted with the teaching of 'cantum planum et figuratum'; the first musician employed at the cathedral was Robinus de Picardia (1488–1511).

Among *maestri di canto* during the 16th century were Fra Ruffino (1525–31), a figure of some importance in the development of *cori spezzati*, Nicolò Vicentino (1534) and the madrigalists Ippolito Camaterò (*c*1565) and Leon Leoni (1588–1627). Employing these few composers, the Accademia Olimpica, founded in 1555, was encouraged to add music to the normal literary and philosophic studies, and by 1596 it provided part-time employment for several musicians to teach its members. Being the most distinguished body of its kind, it entertained noble visitors to Vicenza, in 1582 receiving Duke Guglielmo III of Mantua with a concert by its virtuosos and featuring

Interior of Palladio's Teatro Olimpico, Vicenza, designed by Andrea Palladio, 1579: construction completed and fixed stage scenery designed by Vincenzo Scamozzi, 1580–85

'ladies of Vicenza, celebrated for their singing', which suggests an ensemble created in imitation of the famous trio of lady singers at the Ferrara court. The Accademia Olimpica was renowned for its theatre, the Teatro Olimpico, which still survives (see illustration); it was designed by Palladio and built between 1580 and 1585 by Vincenzo Scamozzi, who designed its fixed stage scenery. One of the earliest revivals of Greek drama with sung choruses was mounted there in 1585, a performance of Sophocles' *Oedipus tyrannus* in an Italian translation by one of the *accademici*, Orsalto Giustinian, with the choral sections set by Andrea Gabrieli. The play was repeated in 1612 with music by Leoni.

In the 17th century the cathedral still employed good musicians as *maestri di cappella*, including Amadio Freddi (1627–34), the violinist Biagio Marini (1655–6) and the opera composer G.D. Freschi (1656–1710). The first public opera house in Vicenza was the Teatro Castelli or Teatro delle Garzerie, opened in 1656. P.P. Bissari provided the texts for at least three operas, including *La Romilda* (1659). The theatre, also called the Teatro di Piazza, was destroyed by fire in 1683, rebuilt by local noblemen and reopened in 1689 as the Teatro Nuovo. Theatrical life was still quite lively in the 18th century: the Teatro delle Grazie was built in 1711 and opened in 1713 with C.F. Pollarolo's *La pazzia degli amanti* and *La violenza d'amore*; it burnt down in 1784 and was replaced by the Teatro Eretenio, opened in 1784 with Cimarosa's *Olimpiade*. The Teatro Eretenio offered full and varied seasons during the early 19th century. It was closed between 1847 and 1850 and between 1859 and 1866, and had few important seasons after that. A new theatre, the Teatro Verdi, was inaugurated in 1923. Like the Eretenio, it was destroyed by bombing in 1944.

Cathedral music was dealt a decisive blow in 1810 when Napoleon secularized the monastery and musicians were no longer employed. In 1866 the Istituto Filarmonico was founded, sponsored by the city; it later became the Istituto Musicale F. Canneti, which in turn became part of the Venice Conservatory in 1969. In 1910 the Società del Quartetto was founded and has continued to hold concerts in the Teatro Olimpico, while regular seasons of chamber and symphonic music are given by the Amici della Musica. Operatic activity in Vicenza has been kept alive by the Comitato Spettacoli of the Teatro Olimpico and more recently by the Vicenza Festival (June to September), which has presented operas by Monteverdi and Mozart and Italian 18th-century works in the Teatro Olimpico.

DENIS ARNOLD/R

Vick, Graham (*b* Liverpool, 30 Dec 1953). English director. After a period as director of productions for Scottish Opera, 1984–7, he became artistic director of City of Birmingham Touring Opera in 1987. One of the most prominent directors of his generation, his penchant for visually striking but essentially non-interventionist stagings has ensured his popularity in opera houses throughout Europe and the USA. From 1993 to 2000 he was director of productions at Glyndebourne, where his work included a theatrically gripping *Queen of Spades* and *Yevgeny Onegin* (Richard Hudson's designs for both operas combining Pushkin-period naturalism with a sense of the surreal and phantasmagoric), as well as *Ermione*, *Manon Lescaut*, *Lulu*, *Pelléas et Mélisande* and the Mozart/da Ponte trilogy. His productions for Covent Garden have included *Mitridate* and *King Arthur* (1995), both wittily observed and postmodernist in their synthesis of historical detail and contemporary ironic gloss. Other notable productions for the ROH include Berio's *Un re in ascolto* (1989), staged as a riotous theatrical rehearsal with acrobats and trapeze artists in full swing, and a Breughelesque, nostalgic *Die Meistersinger von Nürnberg* (1993), in which acrobatics and vibrant theatricalism also played a significant role. For the Metropolitan Opera he has staged *Lady Macbeth of Mtsensk* and *Moses und Aron*, as well as *War and Peace* at the Mariinsky Theatre and *Parsifal* and *Don Carlos* in Paris.

BARRY MILLINGTON

Vickers, Jon(athan Stewart) (*b* Prince Albert, SK, 29 Oct 1926). Canadian tenor. He studied at the Royal Conservatory of Music, Toronto. After appearances in Canada as the Duke, Don José and the Male Chorus in *The Rape of Lucretia* he joined the Covent Garden Opera in 1957, making his début as Gustavus III, but he made his most striking impression as Don José, Aeneas (*Les Troyens*) and Don Carlos in Visconti's famous staging of Verdi's opera in 1958. The same year he made his Bayreuth début as Siegmund, and sang Jason to Callas's Medea in Dallas.

In 1959 Vickers appeared at the Vienna Staatsoper, made his San Francisco début as Radames, and sang Parsifal at Covent Garden. He joined the Metropolitan Opera in 1960, making his début as Canio, and sang there for more than 25 years; his roles included Florestan, Saint-Saëns's Samson, Hermann (*Queen of Spades*), Tristan, Otello, Alvaro, Laca (*Jenůfa*) and Grimes. At the Salzburg Festival he appeared under Karajan as Tristan, Siegmund, Otello and Don José (the last two roles recorded on film). He sang Herod and Pollione at Orange (1974), took the title role in *Benvenuto Cellini* at Boston (1975) and sang Monteverdi's Nero in Paris (1978). His heroic voice and arresting declamation are preserved on recordings of his Aeneas, Tristan, Siegmund, Radames, Otello, Florestan, Samson, Don José and Peter Grimes; his dramatic presence and committed acting are best seen in the video recording of *Peter Grimes* (Covent Garden, under Colin Davis).

HAROLD ROSENTHAL/ALAN BLYTH

Vico, Diana (*b* Venice; *fl* 1707–32). Italian contralto. She was in the service of the Elector of Bavaria from 1720. She first sang in her native city in Girolamo Polani's *Vindice la pazzia della vendetta* in 1707, and returned there in 1709, 1713, 1717–21, 1723 and 1726, appearing in 16 operas by Gasparini, Lotti, C.F. Pollarolo, Antonio Pollarolo, Porta and Orlandini among others, the last of them Porpora's *Meride e Selinunte*. She sang at Verona (1708), Ferrara (1711), Padua (1712 and 1718), Vicenza (Vivaldi's *Ottone in villa*, 1713) and Mantua (1714). For the 1714–16 seasons she was a member of the King's Theatre company in London, making her début in a revival of the pasticcio *Ernelinda* in 1714. She sang Rinaldo in the 1714–15 revival of Handel's opera, Dardano in the first production of his *Amadigi* (1715), and in the revival of Alessandro Scarlatti's *Pirro e Demetrio* (1716). She was in constant demand in Italy, singing in Bologna (1718 and 1721), Genoa (1718 and 1724), Florence (1718–19), Turin (1719), Reggio nell'Emilia (1718–20), Modena (1720) and Milan (1720, 1722, 1726, 1729 and 1732). In 1720 she was engaged for Munich and probably sang there in later seasons. She

sang in nine operas at Naples (two by Vinci) during the period 1724–6 and one at Parma in 1726. She was a specialist in male roles; all her London parts were of this kind. In 1726 Swiney dismissed her with Merighi as 'some He-she-thing or other'. Her compass in *Amadigi* was narrow (*b*♭ to *e*♭″), but the richness of the music suggests that Handel admired her gifts. There is a caricature of her by A.M. Zanetti in the Cini collection (*I-Vgc*).

WINTON DEAN

Victimae paschali laudes (Lat.: 'praises to the paschal victim'). The sequence for Easter (*LU*, 665; HAM, no.16*a*). The text is ascribed to Wipo of Burgundy (*d* *c*1050). It was one of the four sequences retained by the Council of Trent (1545–63), following which the first part of the final double versicle, containing an uncomplimentary reference to the Jews, was normally omitted. It occupies a position midway between the early type and that of Adam of St Victor (*see* SEQUENCE (i), §9); there is some rhyme, but the metre is still very irregular even though it was not apparently written to a pre-existing melody. It was frequently incorporated into liturgical dramas at Easter (*see* MEDIEVAL DRAMA). There is a primitive organum setting in the Las Huelgas manuscript (*E-BUlh*; early 14th century), and an anonymous 15th-century *alternatim* setting survives in Trent (*I-TRmp* 88). In addition there are settings by Busnoys, Josquin (two), Willaert (two), Lassus, Palestrina (four), Victoria (an incomplete setting beginning at 'Dic nobis'), Fernando de las Infantas and Byrd. It was used as a cantus firmus in Isaac's setting of a different Easter sequence, *Laudes Salvatori*, and there is a partial setting, beginning at 'Agnus redemit oves', in Johannes Hähnel's Easter Mass. This latter is largely based on the German tune *Christ ist erstanden*, itself derived from parts of the plainsong of *Victimae paschali*, from which it was absorbed into the stream of Lutheran melodic style (*see* PSALMS, METRICAL, §II, 2 for the Calvinist use of the tune).

JOHN CALDWELL

Victor. *See* RCA VICTOR.

Victoria, Tomás Luis de (*b* Avila, 1548; *d* Madrid, 20 Aug 1611). Spanish composer and organist partly active in Italy. He was not only the greatest Spanish Renaissance composer but also one of the greatest composers of church music of his day in Europe, who has been admired above all for the intensity of some of his motets and of his Offices for the Dead and for Holy Week.

1. Life. 2. Works: general characteristics. 3. Masses. 4. Other works.

1. LIFE. Victoria was the seventh of 11 children born to Francisco Luis de Victoria and Francisca Suárez de la Concha, who were married in 1540. There were important relatives on both sides of the family. For example, three of his Suárez de la Concha cousins achieved success, Cristóbal as a naval commander, Hernando as a Jesuit pioneer in Mexico and Baltasar as a merchant in Florence, where he married Grand Duke Cosimo I de' Medici's sister-in-law and was ennobled. The uncle on his father's side after whom Victoria was named was a lawyer who pleaded cases before the royal chancery at Valladolid; he entered the priesthood after his wife's death and in 1577 was installed as a canon of Avila Cathedral. Victoria's father died on 29 August 1557, and another uncle, Juan Luis, who was also a priest, took charge of the orphaned family.

Victoria learnt the rudiments of music as a choirboy at Avila Cathedral under the *maestros de capilla* Gerónimo de Espinar (1550–58) and Bernardino de Ribera (1559–63); Ribera and his successor, Juan Navarro (i), were among the leading Spanish composers of their time. The cathedral organists during this period were Damián de Bolea and Bernabé del Aguila. Victoria may also have known Cabezón, who played at the cathedral in November 1552 and again in June 1556; Cabezón's wife came from Avila, and their family residence from about 1538 to 1560 was not far from Victoria's. Victoria's classical education probably began at S Gil, a school for boys founded at Avila by the Jesuits in 1554. The school enjoyed a good reputation from the beginning, and St Teresa of Avila insisted that her nephews attend it; in April 1557 St Francisco de Borja visited Avila to inspect it and to encourage other Jesuit establishments in the town.

After his voice had broken, Victoria was sent to the Jesuit Collegio Germanico, Rome, which had been founded in 1552. He may have been enrolled by 25 June 1563, though 1565 is a more probable date (see Casimiri). The 200 students at the college were of two kinds, a small group of young men in training for the German missionary priesthood and a much larger number of English, Spanish and Italian boarders, whose fees helped maintain the college; Victoria was among the latter group and was specifically enrolled as a singer. Here, if not already at S Gil, he achieved fluency in Latin. In the dedication of his first collection of motets (1572) he acknowledged his debt to Otto Truchsess von Waldburg, Cardinal-Archbishop of Augsburg, who with King Philip II had been a chief benefactor of the college. Victoria surely knew Palestrina, who at the time was *maestro di cappella* of the nearby Seminario Romano, and may even have been taught by him. He was the only peninsular composer before Manuel Cardoso to master the subtleties of Palestrina's style, as is evident in even his earliest publications.

For at least five years from January 1569 Victoria was singer and organist at S Maria di Monserrato, the Aragonese church at Rome in which the two Spanish popes are buried; his monthly salary was one scudo. From 1568 to 1571 he may also have been *maestro* of Truchsess's private chapel (Jacobus de Kerle had left the post by 18 August 1568). In September or October 1571 the rector of the Collegio Germanico engaged him to teach music to interested boarders at a monthly salary of 15 julios paid out of students' fees. In 1573 the college authorities decided to separate the Italian boarders from the German seminarians, and on 17 October a parting ceremony was held, during which Victoria's pupils and others sang his specially composed eight-part psalm *Super flumina Babylonis*. After the reorganization he was retained to teach the German seminarians, with whom he was able to converse in Latin, and was appointed *maestro di cappella*. The new rector, Michele Lauretano, paid him two scudi a month, increased to three in April 1574. On 9 January 1574 Pope Gregory XIII gave the Collegio Germanico the Palazzo di S Apollinare as their new home and on 15 April 1576 the adjoining church. A bull of the latter date prescribed that the student body sing the entire Office on at least 20 days of the church year. Victoria continued as *maestro di cappella* of the Collegio Germanico until 26 December 1576 or possibly a few months longer – his successor was in office by 20 September 1577.

In 1575 he graduated from minor orders to the priesthood: Bishop Thomas Goldwell, the last surviving member of the pre-Reformation English hierarchy, ordained him deacon on 25 August and priest three days later. The ceremonies took place at the English church on the Via di Monserrato.

Victoria next joined the Congregazione dell'Oratorio, a newly formed community of lay priests led by Filippo Neri, and on 8 June 1578 he received a chaplaincy at S Girolamo della Carità, which he held until 7 May 1585. During these years he published five sumptuous volumes in folio, one each of hymns, *Magnificat* settings and masses, an Office for Holy Week and an anthology of motets; the last-named contained two motets by Francisco Guerrero, who was a personal friend, and one by Francesco Soriano. From 1579 to 1585 he derived his personal income largely from five Spanish benefices conferred by Gregory XIII (S Miguel at Villalbarba, S Francisco and S Salvador at Béjar, S Andrés at Valdescapa and another rent in the diocese of Osma), which produced a total of 307 ducats a year. While a chaplain at S Girolamo della Carità, and even earlier, he further increased his income by occasionally serving at S Giacomo degli Spagnoli. Each year from 1573 to 1577 this church paid him four scudi for Corpus Christi services; in 1579 he received six scudi and 60 baiocchi and in 1580 nine scudi and 60 baiocchi; on 18 November 1582 he and a number of choristers received nine scudi for celebrating the victory by Spanish naval forces at the Battle of Terceira, in the Azores. In 1583 he was elected to the office of visitor to the sick and Spanish destitute in Rome, who were under the charitable care of the Confraternity of the Resurrection. Founded in 1579, this confraternity, attached to the church of S Giacomo, subsidized the celebration of the twice-yearly Forty Hours Devotion, and paid for Easter services. Victoria's disbursements to the sick and needy were reimbursed 23 times during the time that he was visitor to the sick (19 April 1583–3 April 1584). On two occasions, 31 October 1583 and 8 March 1584, he also received 50 julios to pay the eight singers of polyphony who sang the *Salve Regina* in the Forty Hours Devotion. The 25 signed receipts in the archive of S Giacomo degli Spagnoli constitute the largest single collection of documents in Victoria's handwriting.

In the dedication of *Missarum libri duo* (1583) to Philip II, Victoria expressed his desire to return to Spain and to lead a quiet life as a priest. The king, as a reward for his homage, named him chaplain to his sister, the Dowager Empress María, daughter of Charles V, wife of Maximilian II and mother of two other emperors, who from 1581 lived in retirement with her daughter Princess Margarita at the Monasterio de las Descalzas de S Clara at Madrid. The convent was established in 1564 by Juana de la Cruz, sister of St Francisco de Borja, and liberally endowed by Charles V's daughter Juana, who married João III of Portugal; it housed 33 strictly cloistered nuns, who heard Mass daily in an exquisite small chapel attended by priests who were required to be accomplished singers of plainchant and polyphony. Victoria served the dowager empress from 1587 at the latest until her death in 1603, with an annual salary of 120 ducats, and he was *maestro* of the convent choir until 1604. From then until his death he held the less arduous post of organist, earning 40,000 maravedís in each of his first two years in it and 75,000 a year thereafter. The chaplains enjoyed a number of benefits, including a personal servant, meals served in their private quarters adjacent to the convent and a month's holiday each year. Until 1601 they were all required to participate in the daily singing of two masses, one a votive mass with deacon and sub-deacon. At the time of Victoria's arrival the choir comprised 12 priests (three to a part) and four boys. Instrumentalists were engaged for Easter and for Corpus Christi and its octave. In 1601 a royal decree provided for a bassoonist, who was to play in all musical services, and for two clergymen chosen for their excellent voices to replace three of the foundation's 12 chaplains. At the same time the number of choirboys was increased to six; they were required to practise daily and to learn plainchant, polyphony and counterpoint from the *maestro*.

Life at the convent held such advantages for Victoria that no cathedral post could tempt him – in 1587, for example, he turned down invitations from Seville and Zaragoza to become *maestro de capilla* there. The élite of Madrid often went to services at the convent, where his works were regularly sung. It is doubtful whether any cathedral would have allowed him the extended leave that the convent gave him in 1592 to enable him to supervise the printing at Rome of his *Missae . . . liber secundus*, which he dedicated to María's son Cardinal Alberto. On 18 July 1593 his motet *Surge Debora et loquere canticum* was performed in his presence by the Collegio Germanico during Mass and Vespers at S Apollinare to celebrate the defeat of the Turks at Sisak. On 2 February 1594 he joined the cortège at Palestrina's funeral. A royal warrant of 21 January 1594 authorized the Spanish ambassador at Rome to pay him 150 ducats owing to him from a benefice at Córdoba. He returned to Madrid in 1595.

María bequeathed three chaplaincies to the convent, one of which went to Victoria, who thereby continued to receive his salary of 120 ducats after her death. Most of his income, however, derived from his numerous simple benefices, whose yearly revenue had grown by 1605 to 1227 ducats through the addition of pensions from the dioceses of Córdoba, Segovia, Sigüenza, Toledo and Zamora. On 1 October 1598 he engaged Julio Junti de Modesti of Madrid to produce 200 copies of a collection of polychoral masses, *Magnificat* settings, motets and psalms in partbooks, which eventually appeared in 1600. The printer, who was paid 2500 reales in three instalments, was himself allowed an additional 100 copies to sell, beginning 12 months after publication. The masses of this collection were extremely popular at the time, but are not frequently performed today. The nine-part *Missa pro victoria* was a favourite work of Philip III; the eight-part *Missa 'Ave regina coelorum'* and *Missa 'Alma Redemptoris mater'* were so popular in Mexico City that in 1640 they had to be recopied by hand because the original partbooks were worn out. Victoria or his agents sent sets to such distant places as Graz, Urbino and Bogotá, Colombia. In accompanying letters he asked for contributions to cover printing costs and in at least one instance solicited money to secure the release of a younger brother from prison. His strong family ties were especially evident during the last years of his life, when two of his brothers and two of his sisters lived in Madrid; one of the brothers, Agustín, was also a chaplain of the Descalzas Reales convent. Victoria died near the convent in the

chaplains' residence. He was buried at the convent, but his tomb has not been identified.

2. WORKS: GENERAL CHARACTERISTICS. Victoria not only left far less music than either Palestrina or Lassus but also limited himself to setting Latin sacred texts. He had a habit of reissuing works that he had already published: more than half the contents of five of his 11 prints had appeared in earlier prints, and of prints subsequent to his first only the first consists almost entirely of newly published music. Moreover, unlike Palestrina, he succeeded in publishing, usually in a luxurious format, nearly the whole of what is now recognized as his authentic oeuvre. Thus the first seven volumes of the eight-volume complete edition of 1902–13 consist wholly of music published during his lifetime; some of that in the eighth is spurious.

Victoria's posthumous reputation has largely rested on some plangent motets in his first publication (1572) and on the *Officium defunctorum* of 1605, composed on the death of the Empress María. Such memorable motets as *O vos omnes* and *Vere languores nostros* and a passage such as the setting of the words 'nihil enim sunt dies mei' in *Versa est in luctum* from the Office of the Dead do indeed have a poignancy rarely encountered in other music of the period. Poignancy and mystical fervour are, however, not the only emotions in Victoria's music, nor indeed the predominant ones. His contemporaries and immediate successors certainly saw a different side of his artistic nature. One astute critic who knew his whole oeuvre as few do today was João IV of Portugal, who, noting in his *Defensa de la música moderna* (1649) that he instinctively leant more towards the joyful than to the sad, observed that 'although there is much in his Holy Week volume [1585] that exactly suits the text, nonetheless his disposition being naturally sunny he never stays downcast for long'. João IV also gave the lie to another misconception about Victoria still prevalent in the 20th century when he endorsed the liberal use of instruments to double the vocal lines, and there is other contemporary evidence confirming that doubling was widely practised in his works circulating in Spain.

3. MASSES. Confirmation of Victoria's generally cheerful disposition can be found in his own motets that he chose as the basis of his parody masses. He based seven of his masses on his own motets – *Ascendens Christus*, *Dum complerentur*, *O magnum mysterium*, *O quam gloriosum*, *Quam pulchri sunt*, *Trahe me post te* and *Vidi speciosam*; the masses are parodies of motets for Ascension, Pentecost, the Circumcision, All Saints, the Conception, any Lady feast and the Assumption respectively. Five of these motets end with exultant 'Alleluias'. His three masses based on his own Marian antiphons *Salve regina*, *Alma Redemptoris* and *Ave regina*, as well as the *Missa 'Laetatus sum'*, based on his own psalm, display similarly positive qualities. Three other parody masses are based on works by Guerrero, Morales and Palestrina respectively. The *Missa pro victoria* is one of several Spanish battle masses based on Janequin's *La guerre*.

There are 20 authentic masses by Victoria, all published during his lifetime. 15 are parodies, four are paraphrases (*'Ave maris stella'*, *De Beata Maria Virgine*, *Pro defunctis* of 1583 and the mass sections of the *Officium defunctorum*), and one, *Missa quarti toni*, is mostly a free mass, which does, however, at the close of both Gloria and Credo ('Amen') quote verbatim the music of the last appearance of 'ipsum quem genuit adoravit' in his Purification motet *Senex puerum portabat*. The four masses published in the 1600 miscellany, all of which are provided with organ scores paralleling Chorus I, contrast in a number of ways with those published earlier: they are for two choirs, one for three (Laetatus), and the three new masses are in an undeviating F major. There are subtle structural differences too, such as the greater use of free episodic material, and the repetition of polyphonic blocks. These are sometimes from movement to movement: for instance, in the *Missa pro victoria*, first Kyrie, bars 1–8 = Agnus Dei, bars 1–8; second Kyrie, 36–42 = Agnus Dei, 16–22; Gloria, 1–3 = Credo, 83–5; Gloria, 28–34 = Agnus Dei, 8 (beat 3) – 15 (beat 3); and Gloria, 59–76 = Credo, 133–50. But there are also repetitions within the same movement: in the *Missa pro victoria*, Gloria, bars 59–64 = bars 67–72; Credo, 133–8 = 141–6; and Sanctus, 21–5 (beat 1) = 25–9 (beat 1) = 47–51 (beat 1) = 51–5 (beat 1). Another feature of Victoria's late masses is his frequent recourse to triple metre: whereas *'Ave maris stella'* and *'Dum complerentur'* (both 1576) do not contain a single bar of triple time, the 1600 masses are full of them, the *Missa pro victoria* composed to celebrate the Treaty of Vervins (1598) alone containing 134.

A prominent stylistic trait in masses from all periods of Victoria's career, and in other works, too, is the kind of tonal fluctuation represented by melodic progressions such as F–G–F#, F#–G–F♮ and E–F–E♭, which are not found in, for example, the works of Palestrina or Guerrero. He anticipated both composers when in 1576 he chose to base a mass on one of his own motets (*Dum complerentur*). In his middle-period masses, however, he shared with Guerrero a fondness for paired imitation. His masses are on the whole much more concise than those of Palestrina or Guerrero; this is particularly true of those in the 1592 and 1600 volumes. Unlike Palestrina, he broke up his masses with frequent emphatic cadences. He often wrote functional rather than modal harmony, even in the *Missa quarti toni*. The modes that he used in his parody masses have been tabulated by Rive (1969), who drew attention to the high incidence of the Dorian and Ionian modes (six and five masses respectively) compared with the Mixolydian (three masses), a tendency also found in his other music. His chromatic alterations in his parodies, especially the later ones, make the Dorian mode sound increasingly like a minor key and the Ionian more and more like a major key.

4. OTHER WORKS. The principal source of Victoria's *Magnificat* settings is his 1581 collection, which contains 16 of them, including the six already published in 1576; the two polychoral settings in his 1600 volume are based in part on works from the two earlier books. These works have never found as much favour as those of Morales or even Guerrero, yet they contain some of his finest inspirations. In contrast with the *Magnificat* settings of Morales, Guerrero and Palestrina, they are greatly coloured by *musica ficta*: for example, in his odd-verse *Magnificat* on the 7th tone (1581) he called for 69 accidentals, whereas Palestrina prescribed only 16 in his corresponding setting (1591). As with his masses, Victoria also made changes to his *Magnificat* settings as well. The six settings of 1576 reappear in a manuscript (*E-Tc* Mus.B.30) copied in about 1577 by the renowned Vatican

Opening of Victoria's Lamentations 'Incipit lamentatio Jeremiae' from his 'Officium Hebdomadae Sanctae' (Rome: Alessandro Gardane, 1585)

music scribe, Johannes Parvus (active 1536–*c*1580). In this manuscript the variants consist of the addition of a fifth voice to a single verse in two of the settings, the occasional alteration of vocal textures, and the shortening of the settings of tones I and VIII by 16 bars. In addition, the two *Magnificat* settings in his 1600 volume show differences from the earlier settings: they are more concise, include more triple time and light parlando rhythms and fewer unaccented passing notes, and display a new aversion to canon (there is only one, and that is optional).

In the same year that Victoria published his complete *Magnificat* settings, he also published 32 hymns. In the 1581 volume the texts and chronological order are basically the same as in Guerrero's *Liber vesperarum* (1584) and Palestrina's *Hymni totius anni* (1589). Like Guerrero he provided polyphony for the even-numbered strophes (Palestrina's hymns are basically settings of the odd-numbered ones). In their final verses Guerrero and Palestrina frequently resorted to canon and increased the numbers of voices from four to five, but Victoria shunned canon altogether and sometimes heightened final verses by returning to a four-part texture after reducing it to three voices in some middle strophes. He included two settings of *Pange lingua*, the second of which is marked 'more hispano' because it is based on the peninsular melody, not the Roman.

Victoria's music for Holy Week, *Officium Hebdomadae Sanctae* (1585), in all comprising nine Lamentations, 18 responsories, two Passions and various other pieces, includes some of his most admired music, much of it of a plangent austerity. The Lamentations in particular display certain Spanish qualities (see illustration). In accordance with custom they are predominantly chordal, but Victoria showed great ingenuity in the way he varied the textures through a few scalic passages and contrasts of high and low voices. The responsories are also mainly homophonic, but by contrast the *St Matthew Passion*, for Palm Sunday, contains some contrapuntal writing, including canon. The Lamentations also exist in an earlier manuscript source (*I-Rvat* C.S.186), which contains significant differences from the printed version. As Rive (1965), who has studied the two versions, reported:

> between the date of the first beginning of compositions and the date of publication in 1585, Victoria's technique of composition made tremendous advances. His re-working of earlier music shows greater conciseness in melodic organization, a keen insight into the problems of apt setting of text and a greater appreciation of harmonic organization, movement, and purpose.

Victoria wore his learning lightly in his three scintillating eight-part sequences, *Lauda Sion* (1585), for Corpus Christi, *Victimae paschali* (1600), for Easter, and *Veni, Sancte Spiritus* (1600), for Whitsun. The Easter sequence, one of his most ebullient works, is closer in spirit to a popular villancico than almost any of his other short works and emphasizes the drama of the question-and-answer text. It moves from triple to duple metre in a most attractive manner and soars to a climax of unrestrained

joy in the final 'Alleluias'. The play of syncopated homophony at bars 36–46 of the Corpus Christi sequence echoes the strains of revelry found in the earliest surviving *guineos*.

The fact that Victoria composed no fewer than four different settings of *Salve regina* (two for five voices and one each for six and eight voices) and two each of *Alma Redemptoris*, *Ave regina* and *Regina coeli* (each pair for five and eight voices respectively) shows the importance that he attached to the Marian antiphon. The individuality of the *Salve regina* settings is remarkable, considering that they are all in the same mode and on the same plainsong. The number of manuscript copies of them both in the Iberian peninsula and in the New World suggests that they enjoyed great popularity in Victoria's own day and in the early 17th century.

All of Victoria's published psalms are polychoral. The only one not for two choirs is *Laetatus sum*, which is for three, and takes pride of place as the first triple-choir work published at Rome. Except for *Ecce nunc*, a Compline psalm, all his others are for Vespers. All seven psalms published in 1576, 1581, 1583 and 1600 have one flat in the signature: two (*Dixit Dominus* and *Laudate Dominum*) are proleptically in G minor, while the other five are in what equates with F major. By contrast, *Miserere mei* (Ps 1) is in a chordal style in strict fabordón to tone IV; it has no doxology. The 'Gloria Patri' of other psalms always begins in homophonic triple metre, but *Laetatus sum* is unique in that the main body of the work begins in triple time. In all the settings except for the short psalms *Laudate Dominum* and *Ecce nunc* the composer avoided textual repetition, and he also frequently elided psalm verses.

The psalms were also republished, and in later editions he added organ parts that double the voice-parts of choir I; Victoria himself wrote that the organ could substitute for the choir if necessary. In triple-choir works he specified the use of instrumentalists to substitute for choir II. This tendency to reduce the number of voices necessary for his works is also reflected in his preparation for publication in Rome of ten plainchant-based Vespers psalms for four-part choir, which were copied in manuscript by Francisco Soto de Langa; apparently, however, Victoria's desire that they should be printed was never fulfilled.

Several earlier historians and anthologists expressed a preference for Victoria's motets, often at the expense of all his other works. It is easy to see the attractions of so intensely passionate a work as *Vere languores nostros*, and there are many other arresting ones. Several include descriptive writing of a madrigalian nature prompted by the words; examples include the rising scales at 'surge' in *Nigra sum sed formosa* and at the beginning of *Ascendens Christus in altum*. Victoria sometimes used unusual melodic intervals, such as the diminished 4th in *Sancta Maria, succurre miseris*, another trait reminiscent of madrigalian music and consistent with the relatively small role played by plainchant in his motets. Several works begin with paired imitation, as in the masses and other works, and a few motets include extensive use of canon.

Despite the fact that isolated works ascribed to Victoria are still occasionally found, especially in Italian archives, it seems likely that after analysis these will be deemed to be spurious, as with the cases of the hymn *Jesu dulcis memoria* and the *Missa Dominicalis*, which are not generally held now to be by Victoria; the *Missa 'Pange lingua'*, ascribed to Victoria in a manuscript in Cuenca Cathedral, is by Juán Pérez Roldán. It seems that Victoria's oeuvre as he wished it known was published by him, and this theory is reinforced by his frequent rewriting and reprinting of his works within his lifetime.

To vindicate his claim to being progressive, he wrote a letter dated 10 February 1601 to Jaén cathedral authorities in which he took pride in having preceded everyone else in providing printed organ scores to substitute for Choir I in polychoral works (Rubio, 1981). Far from being deemed too frothy, his *Missa pro victoria* emerged in its first recording (Accord *Le parlement de musique*, 1998) as an avant-garde triumph.

WORKS

Editions: *Thomae Ludovici Victoria Abulensis Opera omnia*, ed. F. Pedrell (Leipzig, 1902–13/*R*) [P]
Tomás Luis de Victoria: Opera omnia, ed. H. Anglès, MME, xxv, xxvi, xxx, xxxi (1965–8) [A]
Tomás Luis de Victoria: Motetes, ed. S. Rubio (Madrid, 1964) [R] [based chiefly on 1603 edn of 1583b, variants annotated; incl. 7 motets from MS sources]

published in Rome unless otherwise stated

[33] Motecta, 4–6, 8vv (Venice, 1572) [1572]
Liber primus: qui missas, psalmos, Magnificat . . . aliaque complectitur, 4–6, 8vv (Venice, 1576) [incl. 7 works from 1572 edn] [1576]
Cantica Beatae Virginis vulgo Magnificat, una cum 4 antiphonis [8 settings] Beatae Virginis per annum, 4, 5, 8vv (1581) [incl. 6 Magnificat, 3 Marian antiphons from 1576 edn] [1581a]
[32] Hymni totius anni secundum sanctae romanae ecclesiae consuetudinem, 4vv, una cum 4 psalmis, pro praecipuis festivitatibus, 8vv (1581, 2/1600 without 4 psalms) [incl. psalm from 1576 edn] [1581b]
[9] Missarum libri duo, 4–6vv (1583) [incl. 5 from 1576 edn] [1583a]
[53] Motecta, 4–6, 8, 12vv (1583, 2/1589 with 8 motets rev., 3/1603) [1583 incl. 33 from 1572 edn (12 rev.) and 13 from 1576; 3/1603 does not incl. revs. of 1583 or 1589] [1583b]
[37] Motecta festorum totius anni cum communi sanctorum, 4–6, 8vv (1585[6]) [incl. 25 from previous edns; 3 not by Victoria] [1585a]
[37] Officium Hebdomadae Sanctae, 3–8vv (1585) [incl. 2 from 1572, 1 from 1576, 1 from 1583 edns; ed. S. Rubio (Cuenca, 1977), ed. E. Cramer (Henryville, PA, 1982)] [1585b]
[7] Missae, una cum antiphonis Asperges, et Vidi aquam totius anni: liber secundus, 4–6, 8vv (1592) [incl. 1 mass from 1583 edn] [1592]
[32] Missae, Magnificat, motecta, psalmi et alia quam plurima, 3, 4, 8, 9, 12vv (Madrid, 1600) [incl. 19 works from previous edns] [1600]
Officium defunctorum: in obitu et obsequiis sacrae imperatricis, 6vv (Madrid, 1605) [1605]

MASSES

Alma Redemptoris mater, 8vv (2 choirs), org, 1600 (on own antiphon, 1581a); P iv, 99
Ascendens Christus, 5vv, 1592 (on own motet, 1572); P ii, 162
Ave maris stella, 4vv, 1576; P ii, 1; A xxv, 1
Ave regina coelorum, 8vv (2 choirs), org, 1600 (on own antiphon, 1581a); P vi, 1
De Beata Maria Virgine, 5vv, 1576; P ii, 93; A xxv, 58
Dominicalis, 4vv, *E-TO* (spurious, see R. Casimiri, *NA*, x, 1933); P viii, 5
Dum complerentur, 6vv, 1576 (on own motet, 1572); P iv, 29; A xxx, 87
Gaudeamus, 6vv, 1576 (on Morales's Jubilate Deo, 1538); P iv, 1; A xxv, 99
Laetatus sum, 12vv (3 choirs), org, 1600 (on own psalm, 1583b); P vi, 59
O magnum mysterium, 4vv, 1592 (on own motet, 1572); P ii, 69
O quam gloriosum, 4vv, 1583a (on own motet, 1572); P ii, 56; A xxx, 30
Pange lingua, 4vv, *CUi* (spurious, also attrib. J. Pérez Roldán, *SE*)
Pro defunctis, 4vv, 1583a; P vi, 102
Pro defunctis, 6vv, 1605; P vi, 124

Pro victoria, 9vv (2 choirs), org, 1600 (on Janequin, La guerre, 1528); P vi, 26
Quam pulchri sunt, 4vv, 1583a (on own motet, 1572); P ii, 38; A xxx, 1
Quarti toni, 4vv, 1592 (on own motet, Senex puerum portabat, 1572); P ii, 81
Salve regina, 8vv (2 choirs), org, 1592 (on own antiphon, 1576); P iv, 72
Simile est regnum coelorum, 4vv, 1576 (on F. Guerrero, 1570); P ii, 21; A xxv, 31
Surge propera, 5vv, 1583a (on Palestrina, 1563); P ii, 119; A xxx, 49
Trahe me post te, 5vv, 1592 (on own motet, 1583b); P ii, 145
Vidi speciosam, 6vv, 1592 (on own motet, 1572); P iv, 56

MAGNIFICAT SETTINGS ETC.
verses set polyphonically given in parentheses

Magnificat primi toni (odd), 4vv, 1576; P iii, 1
Magnificat primi toni (even), 4vv, 1576; P iii, 6
Magnificat Primi toni (all), 8vv (2 choirs), org, 1600; P iii, 81
Magnificat secundi toni (odd), 4vv, 1581a; P iii, 11
Magnificat secundi toni (even), 4vv, 1581a; P iii, 16
Magnificat tertii toni (odd), 4vv, 1581a; P iii, 22
Magnificat tertii toni (even), 4vv, 1581a; P iii, 27
Magnificat quarti toni (odd), 4vv, 1576; P iii, 32
Magnificat quarti toni (even), 4vv, 1576; P iii, 37
Magnificat quinti toni (odd), 4vv, 1581a; P iii, 42
Magnificat quinti toni (even), 4vv, 1581a; P iii, 47
Magnificat sexti toni (odd), 4vv, 1581a; P iii, 52
Magnificat sexti toni (even), 4vv, 1581a; P iii, 57
Magnificat sexti toni (all), 12vv (3 choirs), org, 1600; P iii, 95
Magnificat septimi toni (odd), 4vv, 1581a; P iii, 61
Magnificat septimi toni (even), 4vv, 1581a; P iii, 66
Magnificat octavi toni (odd), 4vv, 1576; P iii, 71
Magnificat octavi toni (even), 4vv, 1576; P iii, 76
Nunc dimittis, 4vv, 1600; P iii, 107

LAMENTATIONS

Cogitavit Dominus, 4vv, 1585b; P v, 151; earlier MS version, *I-Rvat*, P viii, 51
Ego vir videns, 5vv, 1585b; P v, 157; earlier MS version, *Rvat*, P viii, 36
Et egressus est, 4vv, 1585b; P v, 126; earlier MS version, *Rvat*, P viii, 18
Incipit lamentatio Jeremiae, 4vv, 1585b; P v, 122; earlier MS version, *Rvat*, P viii, 14
Incipit oratio Jeremiae, 6vv, 1585b; P v, 181; earlier MS version, *Rvat*, P viii, 50
Manum suam, 5vv, 1585b; P v, 130; earlier MS version, *Rvat*, P viii, 23
Matribus suis dixerunt, 4vv, 1585b; P v, 153; earlier MS version, *Rvat*, P viii, 32
Misericordiae Domini, 4vv, 1585b; P v, 175; earlier MS version, *Rvat*, P viii, 41
Quomodo obscuratum, 4vv, 1585b; P v, 178; earlier MS version, *Rvat*, P viii, 40

RESPONSORIES

Aestimatus sum, 4vv, 1585b; P v, 193
Amicus meus, 4vv, 1585b; P v, 135
Animam meam dilectam, 4vv, 1585b; P v, 163
Astiterunt reges, 4vv, 1585b; P v, 192
Benedictus Deus Dominus Israel, 4vv, 1585b; P v, 143
Caligaverunt oculi mei, 4vv, 1585b; P v, 168
Credo quod Redemptor (part of Missa pro defunctis, 1583a)
Ecce quomodo moritur, 4vv, 1585b; P v, 190
Eram quasi agnus, 4vv, 1585b; P v, 139
Jesum tradidit impius, 4vv, 1585b; P v, 167
Judas mercator, 4vv, 1585b; P v, 136
Libera me (part of Missa pro defunctis, 1583a)
Libera me (part of Missa pro defunctis, 1605)
O vos omnes, 4vv, 1585b; P v, 189
Peccantem me quotidie (part of Missa pro defunctis, 1583a)
Popule meus, 4vv, improperium, 1585b; P v, 174
Recessit pastor noster, 4vv, 1585b; P v, 188
Seniores populi, 4vv, 1585b; P v, 142
Sepulto Domino.4vv, 1585b; P v, 194
Taedet animam (part of Missa pro defunctis, 1605)
Tamquam ad latronem, 4vv, 1585b; P v, 160
Tenebrae factae sunt, 4vv, 1585b; P v, 161
Tradiderunt me, 4vv, 1585b; P v, 165
Una hora, 4vv, 1585b; P v, 140
Unus ex discipulis, 4vv, 1585b; P v, 138

ANTIPHONS

Alma Redemptoris mater, 5vv, 1572; P vii, 68; A xxvi, 65
Alma Redemptoris mater, 8vv (2 choirs), org, 1581a; P vii, 73
Asperges me, Domine, 4vv, 1592; P vii, 131

ROBERT STEVENSON

Victorinus [Victorin], **Georg** (*b* ?Hultschin, Silesia [now Hlucin, nr Racibórz] or ?Hültschken [now Holičky], Bohemia; *d* probably at Munich, 1639). Music editor and composer. His possible places of birth derive from

descriptions of him as 'Hultzinensis' (in his manuscript *Magnificat* of 1591 in *D-Mbs*) and 'Huldschönensis' (RISM 1596[2]). In 1591 he was *magister chori* at the Jesuit college at Munich, and he held this post until at least 1616. From 1601 to 1608 he also taught the choristers of the Munich Hofkapelle, and he was on friendly terms with Rudolph de Lassus (whose lost *Cygnaeum melos* he apparently edited for publication in 1626). In 1624 he was teaching at the Peterskirche, Munich, and shortly afterwards was ordained priest. He is known principally for his editing of three collections of sacred music, which include a total of 23 of his own compositions, as well as arrangements by him. As a composer he was thoroughly schooled in 16th-century polyphony but was increasingly drawn to *falsobordone* technique. His output ranges from two-part *falsobordoni* to a *Litania de Beata Vergine Maria* (1596[2]), in which a four-part choir is contrasted with a six-part one to splendid effect. (*EitnerQ*; *MGG1*, R. Machold)

Magnificat super motetam 'Laetatus sum', 6vv, *D-Mbs* Mus.76 [ded. A. Gosswin, 1591]

ROBERT MACHOLD

Victorius, Lauretus. *See* VITTORI, LORETO.

Victory, Gerard (*b* Dublin, 24 Dec 1921; *d* Dublin, 14 March 1995). Irish composer. After completing a degree in modern languages and Celtic studies at University College, Dublin, he received the BMus and MusD (1972) in music from Trinity College, Dublin. From 1967 until his retirement in 1982 he was the director of music at RTE. During his long and prolific career in music and broadcasting, Victory became one of the most widely published of Irish composers. Commissions from major European festivals brought him international recognition. His honours include the Order of Merit of the Federal German Republic (1975) and the Ordre des Arts et des Lettres of France (1975) awarded in recognition of his settings of German and French authors. An elected Fellow of the Royal Irish Academy of Music and a member of Aosdána (Ireland's state-sponsored academy of creative artists) since its inception, Victory also served as president of UNESCO's International Rostrum of Composers from 1981 to 1983. He was a founding member of the Association of Irish Composers.

Victory's extensive output, the product of over 40 years of compositional activity, includes works in instrumental, vocal and electro-acoustic genres. His compositions demonstrate ease and fluency in a variety of compositional styles. Neo-Tonal writing is particularly evident in his light, celebratory music; other works employ a system of tonality in which key relationships are derived from serial techniques, rather than from the Classical tonal hierarchy. His operas have been staged in Dublin and Würzburg and broadcast in Europe and the USA; *The Music hath Mischief* (1960) and *Chatterton* (1967) are among the best known. His symphonic portrait *Jonathan Swift* (1970) was given its première performance at the Dublin Festival of 20th-Century Music in 1972. Among his choral works, *Hymnus vespertinus* was commissioned by the Heinrich Schütz Festival (1965) and a number of cantatas were composed for the BBC's educational series 'Music Workshop'. Victory frequently stated that his ultimate compositional motivation was to communicate with his audience. *Ultima rerum* (1981), his 'global Requiem Symphony', best exemplifies this concern. First performed in 1984, this work, the first major requiem by an Irish composer, draws on a wide range of theological and philosophical literature and explores the attitude of different religions, societies and civilizations to the after-life. The recording, released in 1994, is one of only a few commercial recordings of Victory's work.

WORKS

(*selective list*)

DRAMATIC

Ops: An fear a phós balbhán [The Silent Wife] (1, T. MacAna, after F. Rabelais), 1952, Dublin, 1953; Iomrall aithne [Mistaken Identity] (1, G. ANNE MARGARET MURPHY

Vic-Wells Opera. The name of the opera company of the Old Vic theatre, London, from 1931 to 1935, when it played both at the Old Vic and at Sadler's Wells. In 1935 it moved to the latter theatre and was renamed Sadler's Wells Opera. *See* LONDON (i), §VI, 1(i).

Vidaković, Albe (*b* Subotica, 1 Oct 1914; *d* Zagreb, 18 April 1964). Croatian musicologist and composer. He studied composition and musicology at the Pontificio Istituto di Musica Sacra in Rome. From 1942 he was choirmaster at Zagreb Cathedral and editor of the church music journal *Sv. Cecilija* (1942–5, 1946), from 1951 professor of aesthetics and church music at the theology faculty at Zagreb. In 1963 he founded the Institute of Church Music. Vidaković was one of the most important Croatian musicologists. His systematic examination of Croatian music, for instance in his detailed analysis of Jelić's works in the introduction to his edition of *Parnassia militia* or in his book on Križanić, where he discussed the Croatian musical theorists of the 17th century, are well known. His compositions consist mainly of vocal music and include a number of masses which, although written on the polyphonic basis, seek to capture the spirit of Croatian folk music.

WORKS

Masses: Missa caeciliana, chorus, org (1945); Missa simplex, chorus (1946); Missa gregoriana, male chorus, org (1946); Staroslavenske mise [Old Slavonic Masses], i, 2vv, org (1948), ii, female chorus, org (1950), iii, chorus, org (1953); Misa za umršeje [Requiem], chorus, org (1957); Missa brevis gregoriana (1959); Hrvatska misa [Croatian Mass], chorus, org

Tužba u hramu [The Dirge in the Temple], orat (1947), completed by A. Klobučar; Str Qt, g (1940); works for orch, org, chbr works, songs, choruses

DRAGOTIN CVETKO/ZDRAVKO BLAŽEKOVIĆ

Vidal, Louis Antoine (*b* Rouen, 10 July 1820; *d* Paris, 7 Jan 1891). French music historian. He was an excellent amateur musician (he studied the cello with Franchomme), an accomplished linguist, and a friend of the violin maker J.-B. Vuillaume. His great work was the sumptuous three-volume *Les instruments à archet*, published in 1876–8 with illustrations by Frédéric Hillemacher, dealing with the history of the violin, its makers, and musical typography, and including biographies of composers and an exhaustive bibliography of chamber music. The sections concerning history and manufacture, and the Corporation of St Julien des Ménétriers and the French Minstrels, were also published separately. Although it is now outdated, the work is still valued for its mass of information and its elegant style of writing.

Vidal was a member of the Société de l'Histoire de Paris et de l'Ile-de-France. He was compiling a history of the piano when he died.

WRITINGS

Les instruments à archet, les faiseurs, les joueurs d'instruments, leur histoire (Paris, 1876–8/*R*); extracts in *Les vieilles corporations de Paris* (Paris, 1878) and *La lutherie et les luthiers* (Paris, 1889)

BRUCE CARR

Vidal, Paul Antonin (*b* Toulouse, 16 June 1863; *d* Paris, 9 April 1931). French conductor, teacher and composer. He attended the Toulouse Conservatoire and later the Paris Conservatoire, where he was in Massenet's composition class. He achieved a formidable record, winning *premiers prix* for both harmony (1879) and counterpoint and fugue (1881) and the Prix de Rome (1883) with the cantata *Le gladiateur*, which was published in vocal score. During his subsequent stay in Rome he became a particular friend of Debussy, whose *L'enfant prodigue* won the Prix de Rome in 1884. He began his conducting career at the Paris Opéra in 1889 as assistant chorus director, becoming director of singing in 1892 and chief conductor in 1906. He directed performances at the Opéra from 1894, beginning with Chabrier's *Gwendoline*. Apart from the standard opera and ballet repertory he conducted the Parisian premières of Massenet's *Ariane* and *Roma*, d'Indy's *L'étranger* and numerous other works. With Georges Marty he founded the Concerts de l'Opéra (1895–7) and from 1914 to 1919 was musical director of the Opéra-Comique.

Vidal is particularly remembered as a fine teacher who was sympathetic to new ideas. At the Paris Conservatoire he taught classes in solfège (from 1894), piano accompaniment (from 1896) and composition (from 1909). He commanded a wide field of theoretical knowledge, drawing on both Franck's system on the French side and Riemann's on the German, and his theatrical experience gave special value to his vocal and instrumental teaching. His Conservatoire pupils included André Caplet and Arthur Hoérée, but Vidal's generous nature also brought him into contact with hundreds of less privileged persons,

whose evening classes he taught for many years in the working-class districts of Paris.

Vidal's most successful compositions were the ballet *La maladetta* (1893), which had been performed nearly 200 times by 1930, and the light opera *Eros*. The operas *Guernica* and *La Burgonde* were unsuccessful; extensive critiques of the libretto and music of each are printed in Clément and Larousse's *Dictionnaire lyrique*. His musical style, perhaps not surprisingly for a pupil of Massenet, is professionally finished and pleasingly lyrical. *Le gladiateur* shows the influence of both *Parsifal* and French grand opera, but the sweetness and artifice in parts of *Eros* and the linear discipline in the music for Bouchor's *Noël* suggest the music of Poulenc.

Vidal's elder brother, Joseph Bernard Vidal (*b* Toulouse, 15 Nov 1859; *d* Paris, 18 Dec 1924), was a conductor and composer. His works include operettas, notably *Le mariage d'Yvette* (1896) and *Le chevalier de Fontenoy*, and both original compositions and arrangements (including some of Paul Vidal's works) for wind ensembles.

DAVID CHARLTON

Vidal, Peire (*fl c*1183–*c*1205). Provençal troubadour. The ironic wit, fantasy and whimsical boastfulness of his verse probably contributed to the rapid spread of legendary stories concerning his life. A restless wanderer, he served Raimon V of Toulouse, Raimon Gaufridi Barral, Viscount of Marseilles, Alfonso II of Aragon, Alfonso VIII of Castile and Boniface I of Montferrat. He visited Hungary as a follower of Constance of Aragon and lived in Genoa and Pisa. Some of his poems touch on political quarrels of the time. He was a supporter of Richard the Lionheart, and supposedly accompanied him as far as Cyprus on the Third Crusade. The tale of his marriage to a Greek woman whom he thought to be the granddaughter of the Emperor of Constantinople is now regarded as fictitious.

Vidal's poems reveal technical ease and power as well as an original approach to traditional themes. Of approximately 50 poems that are attributable to him, 12 survive with music. One anonymous work, *Pos vezem*, may also be his. Structural patterns employed by Vidal are to be found in some 17 other medieval lyrics that survive without music, and it is possible (though conjectural) that a few of these employed Vidal's melodies.

Anc no mori per amor, *Be·m pac d'ivern* and *Quant hom* survive with music in more than two sources. The variants of *Anc no mori* and *Be·m pac* affect significant details of modal structure and form, while two unrelated melodies are extant for *Cant hom*. The poems set to music are primarily isosyllabic (either decasyllabic, octosyllabic or heptasyllabic), the opening section of the strophe is normally in an *abba* pattern and the closing section usually has paired *c* and *d* rhymes. The melodies generally develop freely over the span of a 9th or 10th, but *Be·m pac d'ivern*, one of the more florid works, attains the extraordinary compass of an octave and a 7th. A wide variety of modal structures is used. More often than not, the final does not constitute a pervasive tonal centre, and in two works it is not used cadentially before the last line. Bar form is used in *Baros, de mon dan covit*, *Nulhs hom no·s pot* and *Pos vezem*, while the same pair of phrases ends each of the two halves of *Tart mi veiran*. Repeated motifs are occasionally to be found within individual phrases, but there is little other evidence of symmetrical construction.

THEODORE KARP

Vidala. A lyrical vocal form of Bolivia and northern Argentina. It is often confused with and thought to be descended from the *yaraví* of pre-Conquest, possibly Inca origins. Usually in triple metre in the minor mode, the *vidala*'s octosyllabic *coplas* (stanzas) and *estribillos* (refrains) are sung in parallel 3rds except, occasionally, when the melody is either tetratonic or pentatonic. Typical instrumental accompaniment is provided by the *caja* (frame drum), *tambor* (bass drum) and guitar played in arpeggio style.

WILLIAM GRADANTE

Vidala coya. *See* BAGUALA.

Vidales, Francisco de (*b* ?Mexico City, *c*1630; *d* Puebla, 2 June 1702). Mexican organist and composer. He was the nephew of Fabián Ximeno, *maestro de capilla* of Mexico City Cathedral, 1648–54. On Ximeno's death in 1654, the post went to the brilliant Mexican polyphonist Francisco López Capillas, and Vidales was made second organist. Vidales so impressed the cathedral chapter that they specified that López Capillas and he should alternate as organist week by week. In 1655 Vidales left Mexico City for Puebla Cathedral, where he served as principal organist for nearly half a century under such notable *maestros de capilla* as Juan Gutiérrez de Padilla, Juan García de Zéspedes and Antonio de Salazar. He was presumably active as a composer during this time; in 1676 he presented the Chapter with eight bound books of music (now lost), which probably contained his original compositions.

Vidal Pacheco, Gonzalo (*b* Popayán, 23 Nov 1863; *d* Bogotá, 21 Sept 1946). Colombian composer. Born to a musical family, he was a talented self-taught musician. He lived and worked in Medellín from 1876 until 1941. In 1889 he succeeded his father as organist of Medellín Cathedral. Vidal directed the Escuela de Música Santa Cecilia (1889–92), the Banda de Medellín (1913–27) and a small orchestra (1913), and he exercised great influence on every aspect of the musical life of Medellín. A prolific composer, Vidal wrote orchestral and religious music as well as salon pieces for the piano and songs. His popular *pasillos*, *danzas*, polkas, mazurkas and waltzes are still remembered.

ELLIE ANNE DUQUE

Vidame de Chartres (*b* 1145–55; *d* ?April 1204). French trouvère, probably identifiable with Guillaume de Ferrières. The evidence relating to the identification of the Vidame includes the coat of arms given in the miniature in the Manuscrit du Roi (*F-Pn* fr.844), the date of the *Roman de la rose ou de Guillaume de Dole*, which quotes two strophes from *Quant la saison*, the best-known chanson by the Vidame, and the reference in *Combien que j'aie demouré* to an enforced stay in a hated land. The coat of arms is traceable in the mid-13th century to the Meslay family, but members of this family did not become Vidames of Chartres before 1224. The *Roman de la rose* is now assumed to have been written in the 1220s, and it seems probable that *Quant la saison* was written a number of years earlier. Guillaume de Ferrières took part in the crusades of 1188–92 and 1201–4, and it is likely that the mention of an unhappy, hated land refers not to the Holy Land, but to a stay in southern or western France in 1188, when the crusaders were squabbling among themselves before their departure. The title 'Vidame' designated the chief lay official of a bishopric, responsible for the defence of that territory.

Only one of the eight pieces ascribed to the Vidame has no conflicting attribution; nonetheless, only *Quant foillissent li boscage* seems likely not to be his. The ascription

'Li viscuens de Chartres' attached to *Desconsilliez plus que nus hom* was probably intended to refer to the Vidame. Four of the eight poems attributable to the Vidame consist of isometric, decasyllabic strophes, while the body of a fifth is similarly constructed, though with the addition of two short lines in a three-line refrain. The remaining poems employ octosyllabic lines in various admixtures with shorter lines. There are considerable problems in the establishment of the musical texts – another argument in favour of the early dating of the trouvère. The main setting of *Li plus desconfortés* is non-repetitive, but all the other original melodies are in bar form. The melodies all move over a range of an octave or more, with *Chascuns me semont* spanning a diminished 12th. There is a preference for D modes, but the modal structures do not usually remain stable among the various readings. The majority of *Tant ai d'amours* is given in the 3rd mode in the Chansonnier Cangé (*F-Pn* fr.846), but modal rhythm seems ill-suited to the remaining tunes, especially the ornate *Combien que j'aie demouré* and *D'amours vient joie*.

THEODORE KARP

Viðar, Jórunn (*b* Reykjavík, 7 Dec 1918). Icelandic composer and pianist. She began music lessons with her mother and with Páll Ísólfsson, and studied the piano with Árni Kristjánsson at the Reykjavík College of Music (1932–6). She then attended the Berlin Hochschule für Musik (1937–9) and the Juilliard School (1943–5; theory and orchestration, Vittorio Giannini; piano, Hélène Morzyn). She completed her education with further piano lessons in Vienna (1959–60). On returning to Iceland she became an active performer, showing a special affinity for the music of Beethoven, Chopin, Schumann and Debussy. In later years she taught on the faculty of the Reykjavík School of Singing.

Her music combines national and international elements in a distinctively colourful and melodious style. Much of her instrumental music – *Ólafur Liljurós*, *Slátta* ('Touches'), *Meditations on Five Icelandic Themes* – draws on the metrical schemes and ornamental figures of Icelandic folksong, as does her ambitious choral work *Mansöngur úr Ólafs rímu Graenlendings* ('Ballad from the Rhymes of Ólafur the Greenlander'). She is best known for her songs, many of which, including *Únglingurinn í skóginum* ('The Youth in the Forest') and *Gestaboð um nótt* ('Nocturnal Visit'), display a recitative style finely attuned to the text, combined with impressionistic piano accompaniment. Her modal, folk-like tunes, for example *Thað á að gefa börnum brauð* ('Children must be Given Bread'), occasionally give the impression of being actual folk material.

ÁRNI HEIMIR INGÓLFSSON

Vide, Jacobus (*fl* ?1405–33). Franco-Flemish composer. He may have been a choirboy at the Cathedral of Notre Dame, Paris, in 1405. He was awarded a prebend in the church of St Donatian, Bruges, in 1410, at which time he may have been a singer in the chapel of John XXIII (Strohm); a document of 1410 calls him a 'clericus' from the diocese of Tournai, but he was not ordained. By December 1423 he had been retained as a *valet de chambre* to Philip the Good, Duke of Burgundy, and in 1426 was given charge of the upbringing of two choirboys of the Burgundian chapel. He was promoted to the post of secretary to the duke in 1428, and in the same year was given a small organ. Despite his talents as a composer, Vide was never listed as a member of the ducal chapel. His name last appeared in the Burgundian records in 1433.

Vide's surviving compositions are eight French rondeaux. All are found in *GB-Ob* Can.misc.213 except *Qui son cuer* (in *I-TRmp* 92). They display a simple style in which several short phrases of music are linked together through overlapping cadences. The frequent dissonances and cross-rhythms as well as the considerable melodic variety of the top voice parts lend a special charm to Vide's chansons.

Videl (Ger.). *See* FIDDLE.

Video. In connection with music, the term 'video' or 'music video' is used primarily to refer to a form of short film, whose soundtrack exclusively or predominantly consists of a popular song, and which is intended for television presentation with the purpose of promoting a recording of the song. Since the beginning of the 1980s, music video has been a regular component in the marketing procedures of popular music. Notwithstanding the designation, music videos or 'video clips' are often produced using traditional celluloid film technology and transformed to electronic media in the post-production process.

1. History. 2. Structure. 3. Theory.

1. HISTORY. The predecessors of music video in its modern form can be traced back to the experiments on the synchronization of film with recorded sound made since the earliest days of film. These experiments also included forms governed by the primary formal determinant serving to distinguish music video from film music: the use of the film medium for visual illustration of songs as opposed to the film music practice of providing music to accompany visual narration. Thus in the 1910s and 1920s silent 'song-plug' films were produced, intended for presentation accompanied by live performances of the songs that the films illustrated. Animated films with musical soundtracks were produced by the German Oskar von Fischinger from 1921 onwards, and this technique was popularized in Disney's series of Silly Symphonies short films (from 1929) and the full-length *Fantasia* (1940). In the 1930s and 40s a great number of musical short films were produced, each featuring one or two songs by a popular artist and intended as preludes to the main feature film in cinemas. In the 1940s 'visual jukebox' films under the designation Panoram Soundies were produced in the USA, followed in the 1960s by the French colour film jukebox Scopitone. Other predecessors of and possible influences on music video include such experimental films as Fernand Léger's *Ballet mécanique* (1924), with music by Georges Antheil; the conventions established within the Hollywood film musical from the 1930s onwards and in rock films from the 1950s onwards; the dramatization procedures used for popular songs in television shows such as the 1950s 'Your Hit Parade' (USA); and avant-garde art video from the 1970s onwards.

The expanding pop culture of the 1960s furthered the development of new conventions concerning the visualization of rock music, not least through the influence of the Beatles films directed by Richard Lester, *A Hard Day's Night* (1964) and *Help!* (1965). The Beatles and other British groups also produced early examples of 'promo films' promoting particular songs (e.g. 'Penny Lane' and 'Strawberry fields forever') intended for television presentation and featuring many of the formal characteristics typical of later videos; these, however, did not attract any wider attention or achieve tangible commercial effects. The first video alleged to have had a substantial influence on sales of a song was the clip produced by Jon Roseman and Bruce Gowers for Queen's *Bohemian Rhapsody* in 1975; for that reason, as well as for its then innovatory use of visual special effects, this clip is often cited as 'the first music video'. Following this example, during the second half of the 1970s an increasing number of video clips were produced, notably by artists with a marked emphasis on visual image elements, such as David Bowie in the UK or the group Devo in the USA.

Music video proper, that is as a routine marketing technique for popular music, emerged in the early 1980s as the result of technological and demographic developments. Satellite and cable technology had enabled the establishment of specialized commercial television channels, aimed at particular segments of the audience ('narrowcasting'). This technology was used for the dissemination of music video to a pop and rock audience whose relationship with the television medium had grown less antagonistic than it had been in the earlier days of rock history. MTV, the first 24-hour music video cable channel, was launched in the USA on 1 August 1981. Its impact as a promotional tool was allegedly demonstrated by effects such as the success of British 'New Pop' in the USA. Music video was rapidly established as a regular element in the marketing of popular music. Production budgets and aesthetic ambitions soon increased, an illustrative example being the extravagant 13-minute video produced for Michael Jackson's *Thriller* (1983). MTV was followed by other cable and satellite video services, such as VH-1 (1985) in the USA and Music Box (1984), MTV Europe (1987) and The Power Station (1990) in Europe.

2. STRUCTURE. Since the visual dimension of music video is created with the purpose of visualizing a popular song, its formal disposition tends to be determined by the structural aspects of song form (the sequence and layout of sections such as verse, chorus etc.) rather than by previously existing models of visual narrative. Visual narration is sometimes based on narrative elements in the words of the song, but generally any narration in a video tends to be rather fragmentary. A second important category of visual content is the one constituted by imagery of musical performance, which is often set in surroundings simulating the conventions of stage performance of rock and pop music. In addition to visual narrative and performance images, many videos feature a rapidly shifting montage of more or less coherent images not immediately relatable to the words of the song; this type of visual material ('dreamlike visuals') has come to be regarded as particularly typical. Animation and technical special effects are often used to create striking and unusual images. Visual thematics are often strongly influenced by conventional genre norms in different popular genres, such as the gothic horror imagery common in heavy metal videos, or the use of 'realistic' street images in videos featuring artists who aspire to established notions of rock authenticity. In addition, visual quotations from various areas of popular culture (film, television, advertising), as well as from high art, are common.

Regardless of musical style or genre, in most videos the rhythmic characteristics of the song are at least to some

degree illustrated visually, by way of co-ordination of movements depicted and/or the pace of the editing with the beat of the music; also, specific musical effects, such as rhythmic, melodic or timbre accents, are often illustrated visually. Thus, 'mickey-mousing' relationships between music and images, rather than being considered a flaw, as in conventional film music aesthetics, constitute an important means with which to attain qualities desirable in music video.

3. THEORY. The literature on music video has largely concentrated, on the one hand, on analysis of visual content and its effects on the audience, and, on the other, on the theorization of video as a 'postmodern' form. Music video has been characterized as postmodern in several respects. By combining elements from a wide variety of sources it erases genre boundaries, such as the general one between high and popular culture. Its intertextual references to these sources are often described as 'blank' and distanced, to the effect of creating pastiche rather than parody or critique. Further, as a commercial form and simultaneously a form of artistic expression, it blurs the distinction between commercial and autonomous art. Also, compared with other visual media forms, it appears to break established codes of linear visual narration and to thematize these codes in a self-reflexive way. However, such judgments as these are largely based on unrealistic notions of autonomous artistic expression within popular culture, and on partly irrelevant comparisons between music video and the 'realistic' codes of narrative film. It seems that music video in its dominant form of the late 1990s can best be analysed and explained on the basis of (*a*) its commercial functions, as its visual codes are closely linked with those of television commercials; (*b*) its adaptations and transformations of the visual conventions of stage performances of popular music; (*c*) genre conventions as regards visual imagery, thematics of song lyrics, behavioural codes etc. within different genres of contemporary popular music; and (*d*) the consequences for visual narration brought about by the subordination in music video of the visual dimension to the structural characteristics of popular song. From a musical-analytical point of view, music video as a multi-dimensional form raises important questions about musical narrative and the structuring of time in popular music. Further, its predominance within popular culture, implying that the combination of music with visual images is increasingly becoming a norm in the everyday use of popular music, may be indicative of changes affecting the modes of perception typically applied in this use. These matters, however, are still largely uninvestigated.

ALF BJÖRNBERG

Viderkehr, Jacques. *See* WIDERKEHR, JACQUES.

Viderø, Finn (*b* Fuglebjerg, 15 Aug 1906; *d* Copenhagen, 13 March 1987). Danish organist and composer. He graduated from the Copenhagen Conservatory in 1926 and was appointed organist at several Copenhagen churches: the German-French Reformed, 1928; Jaegersborg, 1940; Trinitatis, 1947; and St Andreas, 1971. Having taken the MA in musicology at Copenhagen University in 1929, he taught music theory (1935–45) and lectured on organ and harpsichord music (1949–74) at the university. In 1959–60 he was visiting professor of organ and acting university organist at Yale University, and in 1967–8 visiting professor of organ at North Texas State University. In 1968 he was appointed to teach at the Copenhagen Conservatory. The foremost Danish organist of his time, Viderø enjoyed international esteem. He gave numerous organ recitals and broadcasts in Europe and the USA, and held masterclasses in the organ at Helsinki (1950), Bergen (1955), Andover, Massachusetts (1955), Detmold (1956), New York (1960), the International Bach Seminar at Varde, Denmark (1972), and the Bach Seminar at Oslo (1974). Among the awards he received are the Harriet Cohen Bach Medal (1961), the Buxtehude Prize (1964), the Ludvig Schytte Memorial Prize (1970) and the Gramex Prize (1973).

Viderø's thorough studies of Gregorian chant resulted in the publication of his adaptations of Gregorian melodies to Danish texts in *Det Danske Antifonale*, i–ii (1971, 1977). He wrote a number of articles on 16th- and 17th-century performing practice, and published editions of organ music, hymn tunes, folksongs and choir music, and *Orgelskole* (with Oluf Ring, 1933, 2/1963). His own compositions include music for the fairy play *Guldskoene* (1945), two cantatas (*Den ømskindede brudgom*, 1937, and *Kom Hedningers Frelsermand*, 1938), organ music (Passacaglia, 1946; three chorale partitas, 1952; chorale preludes, 1946, 1966), choral music, songs and piano pieces.

TORBEN SCHOUSBOE/R

Vidošić, Tihomil (*b* Boljun, Istria, 1 Aug 1902; *d* Zagreb, 24 Jan 1973). Croatian composer. After graduating from the Zagreb Academy of Music, where his teachers included Odak and Bersa, he worked as a conductor of military bands and choirs and, from 1945, as a teacher at the 'Pavao Markovac' music school in Zagreb. Vidošić developed a pleasing, communicative musical style incorporating elements of Istrian folk music. The most notable of his works is the comic opera *Stari mladić* ('The Old Lad'), which succeeds in depicting a regional atmosphere, using the short motifs characteristic of Istrian folk music.

WORKS
(*selective list*)

Stage: Začarani rog [The Enchanted Horn], (ballet), 1951; Karnevalski capriccio [The Carnival Caprice] (musical comedy, 1, Vidošić), 1956, unperf.; Stari mladić [The Old Lad] (comic op, Vidošić), 1959, Rijeka, 11 May 1960; Čempresi i sunce [The Cypresses and the Sun] (op), 1961, lost; Umjetnik izazivlje đavla [The Artist Challenges the Devil] (ballet), 1961; incid music

Orch: Burleska, 1927; Preludij, 1927; Intermezzo, 1932; Večer na žalu [Evening on the Shore], 1933; Uvertira na narodne teme [Ov. on Folk Themes], 1933; Scherzo sinfonico, 1934; Suita, 1939; Rondo capriccioso, 1942; Concertino, vn, orch, 1943; Rhapsody, 1951; Koncertna fantazija, pf, orch, 1952; Zlatna mladost [Golden Youth], fantasy-ov., 1952; Concertino [no.2], vn, orch, 1955; Suite, cl, chbr orch, 1955; Rhapsody, 1955; Baletna scena, 1956; Koncert za mlade ruke [Conc. for Young Hands], pf, orch, 1957; Intrada, 1959; works for brass orch and tambura orch

Choral: Pod Jahorinom [Under Jahorina], solo vv, chorus, orch, 1943; Şviram u sviralu [I Play a Pipe], solo vv, chorus, orch, 1945; Cvijeće [Flowers], solo vv, chorus, orch, 1955; Radosti miće [Small

Joys] (cant.), 1957; Slavan pjevač [A Glorious Singer] (burlesque), female chorus, chbr orch, 1958; other works

Chbr and solo inst: Impromptu, pf, 1946; Suita za mlade ruke [Suite for Young Hands], pf, 1948; Dječja slikovnica [Children's Picture Book], pf, 1951, orchd 1952; Scherzo, vn, pf, 1957; Sonata, vn, pf, 1961; 3 improvizacije, chbr ens, 1967

Film scores, solo songs, music for children, folk arrs.

KORALJKA KOS

Vidovszky, László (*b* Békéscsaba, 25 Feb 1944). Hungarian composer. He was a student of Farkas at the Liszt Academy of Music, Budapest (1962–7) and attended Messaien's composition classes and courses organized by the Groupe de Recherche Musicale in Paris (1970–71). In 1970 he co-founded the Budapest New Music Studio with Jeney, Sáry and others, an enterprise that resulted in collective composing, improvisation and experimentation. He has taught at the teacher training college of the Liszt Academy (1972–84) and at the Janus Pannonius University in Pécs (from 1984).

Distinct characteristics of Vidovszky's work include the incorporation of visual elements into musical performance and a striking sense of humour. *Autokoncert* (1972) is to be performed in a theatrical space in which instruments are suspended above the stage and released by performers invisible to the audience at various intervals; the première was a seminal 'happening' in Hungarian postwar musical life. *Schroeder halála* ('Schroeder's Death', 1975, the title refers to the pianist in Charles M. Schultz's comic strip *Peanuts*) consists of a continuous, irregular scale ascending and descending over the piano keyboard; this is progressively distorted and then obliterated, note by note, by three assistants muting the strings. Later works include a series of studies for solo MIDI piano and two MIDI pianos that experiment with diverging tuning systems, 'remake' pieces from the past and explore algorithmic composition.

RACHEL BECKLES WILLSON

Vidu, Ion (*b* Mînerău, Arad district, 17/29 Dec 1863; *d* Lugoj, 7 Feb 1931). Romanian composer and choral conductor. He studied harmony and choral conducting at the Conservatory of Music and Declamation, Iaşi (1890–91), with Musicescu; his working life (1888–1927) was spent in furthering musical activities in a small town lacking any artistic tradition, and his success was such that, by the time of his death, Lugoj was one of the most noted centres of choral music in Romania. In 1922 Vidu founded the Banat Choral and Brass Band Society, an organization that included 10,000 peasant singers. He wrote exclusively for chorus and all his music is grounded in Romanian folk music, of which he was a passionate collector (he had connections with Bartók, Musicescu and Kiriac-Georgescu). Although he recognized the modal character of folk music, he preferred to work within the major–minor harmonic system. His first collection of choruses, *Severina* (1899), enjoyed such wide dissemination that Vidu's original melodies came to be mistaken for folktunes, and the popularity of many of his later works was greatly enhanced by their intensely patriotic, anti-Habsburg spirit.

VIOREL COSMA

Vidula (Lat.). *See* FIDDLE.

Vidusso, Carlo (*b* Talcahuano, Chile, 10 Feb 1911; *d* Milan, 7 Aug 1978). Italian pianist and teacher. His first studies were with Ernesto Drangosch in Buenos Aires. After his family returned to Italy, he studied with Carlo Lonati at the Milan Conservatory, and had lessons in composition with Riccardo Bossi and G.C. Paribeni. Vidusso began his concert career, which was chiefly restricted to performances in Italy, in the early 1930s, though during this period he also dedicated himself to teaching. From 1933 he was an instructor at the Istituto Musicale in Padua, moving to a similar position at Verona in 1937. From 1939 to 1951 he taught at the Parma Conservatory. A meticulously accurate pianist and a demanding teacher with an immense knowledge of the repertory, Vidusso laid special emphasis on fingering, and this extended even to numbering every note in the student's score of a Chopin study. In 1950, for the Bach bicentenary, he performed the '48' in Milan, and he also became a noted champion of Casella, Pizzetti and Malipiero. Performances of several Liszt studies recorded in the early 1950s demonstrate the perfect symmetry and immaculate technique of his playing, though latterly he did not appear in public, on account of a problem with his hand. Pollini is his most famous pupil.

JAMES METHUEN-CAMPBELL

Viduus, Robert. *See* WYDOW, ROBERT.

Vieira, (José) Ernesto (*b* Lisbon, 24 May 1848; *d* Lisbon, 26 April 1915). Portuguese lexicographer. For some time he was a teacher at the Academia de Amadores de Música. He is known by his *Diccionario biografico de musicos portuguezes: historia e bibliographia da musica en Portugal* (Lisbon, 1900). The subtitle is significant in differentiating this book from the dictionary by Vasconcellos; Vieira gave fewer articles, but covered his subjects in more detail, with greater emphasis on their historical importance, and with fuller lists of works.

ALEC HYATT KING

Viejas (Sp.). *See under* ORGAN STOP.

Vielart [Vielars, Wilars] **de Corbie** (*fl* early 13th century). French trouvère from the region of the Ile de France. He was probably active in the first quarter of the 13th century (at the latest), since *De chanter me semont Amours*, one of the two songs that may be firmly attributed to him, was the basis of a contrafactum by Gautier de Coincy who died in 1236. He was thus one of the earlier representatives of the northern French tradition. The other song, *Cil qui me prient de chanter*, apparently served as the model for a later Latin contrafactum (text published in *AH*, xlv, 1945, p.68), although this is uncertain as the latter has not been preserved with music. The two remaining songs which have been attributed to him are of doubtful authenticity; in a large number of sources both are assigned to Gace Brulé.

Vienna (Ger. Wien). Capital city of Austria. Originally a Celtic settlement, it later became a Roman military town and finally the capital of the Duchy of Austria in the 12th century. It came under Habsburg rule in 1278 and expanded greatly as the capital of the vast Austro-Hungarian Empire, which was dissolved after World War I; since that time the city has been the capital of the Federal Republic of Austria.

1. TO THE 15TH CENTURY. Long stretches of Vienna's history, particularly that of its music, are shrouded in obscurity; only for the modern period is the picture reasonably complete. Since Josef Mantuani (1904), the literature has been based largely upon analogies and assumptions, a failing due as much to the state of the historical data as to the loss of source materials and lack of systematic research, which is in turn the consequence of an overemphasis on the apparent highpoints of musical development.

Prehistoric relics have been found only in Vienna's more outlying areas, and even Roman traces are negligible. From the city itself Mantuani mentioned only one piece, representing a female figure playing a wind instrument (probably a flute or an aulos), and even that was probably imported. Certainly they offer no evidence of an indigenous musical culture and, together with remarks made in Eugippius's *Vita S Severini* (discussing Christian psalmody of the 5th century), testify to no more than the fact that there, as elsewhere, music was performed. Music emerges later than other disciplines from the uncertainty surrounding Vienna's fate during the post-Roman period. Source material remains scarce and unreliable in view of its late date and the existence of forgeries (as with the alleged 13th-century minstrels Wolfker and Eberhard). It may be assumed that liturgical music was performed in churches (the oldest of which are St Ruprecht, the Peterskirche and St Stephan) and in monasteries (the Benedictine Schottenstift, *c*1155), although no investigations relating directly to Vienna have yet been undertaken and important sources (including the Schottenstift's books, which were removed in 1418 when the Hibernian monks left) have been lost. The Austrian monasteries, some founded and some reorganized by the Babenberg court, were centres of plainsong, and of particular importance for Vienna was the Augustinian KLOSTERNEUBURG, the court residence until 1156. There is evidence of sacred song in the vernacular at Klosterneuburg (*Christ ist erstanden*, in

12th-century neumatic notation) and it may be assumed that the same practice existed in Vienna.

The first important period in Viennese music history that is reliably documented was under the last four Babenberg dukes (1177–1246). Their court in Vienna became a centre of Minnesang, with the presence there, for shorter or longer stays, of such prominent minstrels as Reinmar von Hagenau, Walther von der Vogelweide, Neidhart von Reuental and Ulrich von Liechtenstein. Their contemporaries and successors included Reinmar von Zweter, Ulrich von Sachsendorf, Tannhäuser and Hugo von Montfort (*d* 1423), who was a later exponent of Minnesang at the court of Leopold IV of Habsburg; and many others must have had connections with Vienna, stayed there or visited the court. Of particular importance were the wars between Rudolf of Habsburg (*d* 1291) and Ottokar of Bohemia, when the retinues of both rulers contained minstrels whose songs refer to the events and places involved. Of all the minstrels active under the Babenberg dukes, Neidhart is the only one to have written songs whose music has survived to any extent. Some of his melodies are contained in a manuscript dated 1457, formerly in the possession of Jörg Schrat, parish priest of the Peterskirche. This and other manuscripts attest to the continuity of the tradition.

Neidhart, Reinmar von Hagenau, Wernher der Gartenaere, Tannhäuser, Jans Enenkel and others also referred to the round-dance, which clearly involved both music and words and in which apparently even the duke's family took part. The music was played by minstrels and, according to Jans Enenkel, there was a minstrel at the Babenberg court as early as 1052. In the city laws of 1221 and 1244, minstrels were declared to have no legal rights, but that reference is chiefly to itinerant musicians; minstrels resident in a parish were expressly exempted. Their position secure, they were able to develop within the framework of municipal law; and in the Nicolai-Bruderschaft, founded by 1288 and based in the Michaelerkirche, they had their own organization, which lasted until Joseph II's general disbanding of all such brotherhoods in 1782. The post of *Spielgraf* also appears to date from the 13th century. In 1354 the post of *Oberster Spielgraf* was created. The *Spielgrafen* in Vienna and Lower Austria were subject to him and the Nicolai-Bruderschaft enjoyed his protection. The hereditary posts of both *Oberster Spielgraf* and *Oberster Erbkämmerer* (supreme hereditary treasurer) were held by the Eberstorff family until 1556 (the first incumbent was Peter von Eberstorff), by the Eytzingers from 1561 to 1619 and by the Breuners from 1620 until 1782.

The art of the minstrels, unlike that of their courtly contemporaries, seems to have survived the political and military upheavals between the death of the last Babenberg duke in 1246 and the Battle of Marchfeld in 1278, which resulted in the Habsburgs seizing possession of the country. Various references to 'reciting, singing, playing string instruments' and other such topics survive from the intervening years of Ottokar's rule, and the use of certain instruments and the names of the players are recorded from the end of the 13th century. Sacred music continued during that period, and records survive of hymns in the vernacular (*In gotes namen varen wir*), including a reference of 1260 to hymns sung by the flagellants (*Ir slacht euch sere*). There is no evidence of sacred drama until the 14th century. Easter plays are mentioned by Neidhart and were known in Klosterneuburg as early as the 13th century; they must have been performed in Vienna even earlier. One conservative 14th-century form of Easter celebration survives from the Augustinian convent of St Jakob. The Vienna Easter play of 1472 from the Augustinian monastery of St Rochus und St Sebastian is in a type of German whose dialect suggests a Silesian original. The earliest known performance was given in the duke's castle in 1432 by members of the university. Rudolf IV (*d* 1365) founded a Gottesleichnamsbruderschaft ('Brotherhood of Corpus Christi') for the performance of religious plays.

Education in schools was also in the hands of the clergy. Schools were attached to St Stephan, to the Schottenstift (where singing by the schoolboys was mentioned as an established custom in 1310), to the Michaelerkirche and to the Bürgerspital. The school of St Stephan, first mentioned in 1237, was no doubt in existence in the 12th century. In 1296 it passed out of the court's patronage into that of the townspeople, and in 1446 a set of regulations was established which provided for a Kantor and Subkantor. Polyphony (*cantus figurativus*) was first mentioned in a *Bestelung und ordnung der Cantorey* of 1460. There was a choirmaster named Gottfrid in 1287, followed in 1349 by Jacob and in 1360 by Ulrich. From 1365 there were two Kantors, Jacob (probably the one already mentioned) and Johannes (also attested in 1387). In 1356 the Kantor Thomas von Senging was connected with the Rathauskapelle.

The University of Vienna, founded in 1365, had close links with the St Stephan school; they shared the same teaching staff. In accordance with the medieval curriculum, music was one of the obligatory subjects of the Quadrivium. A supplement to the faculty of arts regulations referred in 1389 to Boethius and a *Musica speculativa*, probably the work of Johannes de Muris, as standard texts. There is documentary evidence that members of the university community officiated at services in St Stephan; individual teachers in the 14th and 15th centuries include Nikolaus von Neustadt in 1393, Georg von Hob in 1397, Johann Geuss von Teining in 1421 and Paul Troppauer in 1431, and writings on music by some of the other university teachers (Nikolaus von Dinkelsbühel and Thomas Ebendorfer) are extant.

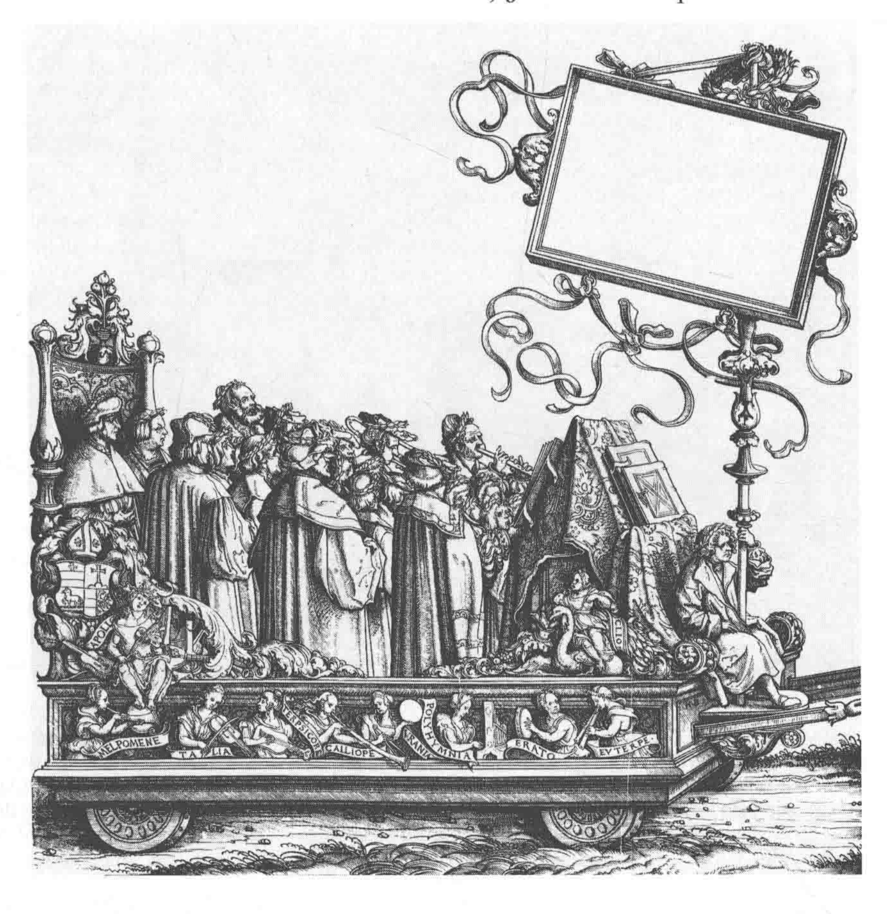
Evidence of polyphonic music in Vienna, as indeed throughout Austria, is relatively late. The 1460 reference cited above does not indicate its beginnings, and an argument against so late an introduction is the importance of French cultural influences, which were felt as early as the Babenberg period (in Minnesang, in Otto von Freising and the Cistercians, for example; Fichtenau has produced evidence of a French schoolmaster in Vienna in the 12th century). French influence continued throughout the ensuing period, as is clear from the dominant role played by university professors from Paris summoned to Vienna between 1383 and 1385 to reorganize the university. There was an organ at St Stephan by 1334, and between 1370 and 1397 an organist by the name of Peter. A new organ was built between 1391 and 1412 by Jörg Beheim (perhaps identical with 'Giorgio del fu Giovanni da Vienna', who lived in Tolmezzo, 1436–43; Beheim is attested in Viennese records until 1438). In 1507 Burkhard Tischlinger built another organ.

Not only the Church and the city but also the court employed musicians, although little is known about their

activities. Between 1287 and 1291 there were court minstrels in the service of Duke Albrecht I and in 1291 a fife player, Gemperlein, was named. Albrecht's successor, Friedrich I, Duke of Austria (1308–30), had minstrels in his service. On one occasion they performed at the court of Jaime II of Aragon; the accounts show their names as Frefre, Feoli, Lorenço and Ibarri. A larger number of minstrels served the dukes Albrecht III and Leopold III, who reigned jointly from 1365. These minstrels travelled extensively, visiting France, Spain, Switzerland, Brabant and Burgundy. The most famous of them was one whose name occurs in a variety of forms, including Ewerl (in Vienna 1376–89) and Everli (in Spain); several princes were among his patrons. Most of the other musicians played wind instruments or drums, but there was also a singer-lutenist by the name of Hans and an *artifex organorum* called Nicolaus. Austrian musicians continued to visit foreign countries during the 15th century. Lutenists travelled to Spain and France, Viennese singers and instrumentalists to various towns in what is now southern Germany and Switzerland, to Hamburg and Mechelen and even to Richard III's court in England.

No Kantorei, however, is known to have existed until the time of Albrecht II (*d* 1439). His court, possibly not in Vienna, included Erasmus Adam, Johannes Brassart, Martin Galer (or Martingale), Johannes de Sarto and Johannes Touront (the names, which appear in a motet written for Albrecht's funeral, are not all certain). Albrecht took them over from his father-in-law, Emperor Sigismund, though apparently not until after Albrecht's election as the German king the year before his death (1439). Nonetheless, musical performances on a large scale must have been possible in Vienna even before then, as seems to be indicated by a rather cryptic note (referred to by the writer J. Angerer) stating that to celebrate the end of schism following the election of Pope Martin V in 1417 in Vienna the *Te Deum* 'in una ecclesia simul in octo locis cantabatur ... humanis vocibus iuncto omni genere musicalium instrumentarum'. It seems reasonable to assume that the court played a part in these celebrations.

Albrecht's successor, Friedrich III (1439–93), retained the Kantorei and may even have had a French and German one, as did his son Maximilian. Friedrich's *cantor principalis* was Brassart, who died soon after taking up the position. Other members of the institution were the organist Gregor Valentinus, Nicolas Mayoul, Arnold Heron, Arnold Pikart, Hans Bubay, Albrecht Morhans-Artus and possibly also Arnolt Schlick. Friedrich's court also included Erasmus Lapicida, who was probably chaplain. The court is unlikely to have spent much time in Vienna, since Friedrich chiefly resided in Graz, Wiener Neustadt and Linz. But it was in Vienna, in 1462, that he was besieged by his brother Albrecht VI (who in 1449 was in Freiburg im Üchtland with 11 musicians in his retinue), an event remembered today for having produced the *Buch von den Wienern*; its subject is the *Angstweise* ('fear-mode') and it is the work of Michel Beheim, one of Friedrich's beleaguered followers.



2. THE RISE OF THE IMPERIAL HOFMUSIKKAPELLE. Maximilian I (1493–1519) kept on a number of the musicians who had served his father and maintained a Kantorei in Upper Germany and in Burgundy. The latter, which had been under Mayoul's direction since 1486, passed to Philip the Fair in 1494, while the former was transferred to Vienna on Maximilian's orders in November 1496, apparently having previously been based in Augsburg. It was then under the direction of Hans Kerner and included Heinrich Isaac. Maximilian gave instructions for this Kapelle to be reorganized in 1498, by which date it was under the direction of Georg Slatkonia. Nevertheless, although the Kapelle was then based in Vienna, its members were far from spending all their time there. Isaac, court composer from 1496, had the emperor's authority to live in Florence from 1513; he was succeeded by Senfl no later than 1517. It is unlikely that Paul Hofhaimer spent more than a few years in Vienna after the removal of the Kapelle there.

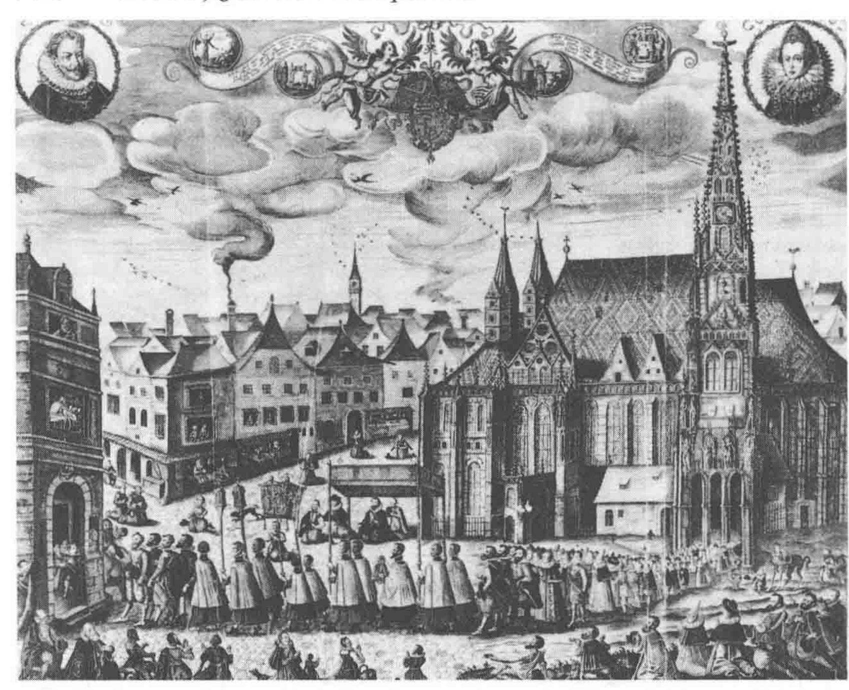
Vienna under Maximilian witnessed a number of celebrations of musical significance. In 1504 C.P. Celtis's drama *Rhapsodia laudes et victoria Maximiliani de Boemannis* was performed with music. Maximilian had summoned Celtis to Vienna from Ingolstadt in 1497, so that humanism actually came to Vienna under imperial protection. For music this meant the introduction of humanist drama and odes, the latter no doubt being adopted by Celtis into the syllabus of Vienna University and actively encouraged there – Senfl, Hofhaimer and his pupil Wolfgang Grefinger, the organist at the Stephansdom and a member of the university, all contributed compositions. Latin drama, meanwhile, was encouraged by an impressive performance of *Voluptatis cum virtute disceptatio*, written by Benedictus Chelidonius, the abbot of the Schottenkloster, to celebrate the double wedding of Maximilian's grandsons in Vienna in 1515. Hofhaimer was knighted during the festival. He and the other imperial musicians had frequent opportunity to distinguish themselves in church, in the dance room and in processions and tournaments.

One art which was cultivated both by the court and the bourgeoisie was that of lute playing, a fact attested as early as the 14th century by the names of such lutenists as Wolfhart (1368–91), Henricus (1376–1460), Hans (1390–1414) and of the lute makers Konrad (1375–1418) and Nikolaus (1397). Hans Judenkünig lived in Vienna during the time of Maximilian, and Albrecht Morhans-Artus actually served the emperor. Hans Neusidler and Bálint Bakfark, who was lutenist to Maximilian II from 1566 until at least 1569, later spent some time in Vienna.

Printed music first began to appear in Vienna during Maximilian I's reign. Johannes Winterburger printed a *Missa de Requiem* in 1499, followed by other liturgical works, including the first printed music textbook in Austria, Simon de Quercu's *Opusculum musices* (1509). Winterburger's contemporaries and successors include Hieronim Wietor and Johann Singrenius, who was responsible for the publication of the work by Chelidonius mentioned above and for the first printed German lute tablatures by Judenkünig (1523). The earliest example of printing from type in Vienna is the only surviving musical publication from the printing works of Raphael Hofhalter, a canon by Jacobus Vaet, dedicated to Maximilian II.

The Hofkapelle was disbanded on Maximilian I's death, as always happened in such cases. At first Ferdinand I had to struggle to consolidate his political power, and it was not until the beginning of 1527 that he issued a decree re-establishing a Hofkapelle. Its direction was entrusted to the 82-year-old Heinrich Finck, then living in the Schottenkloster, but he died six months later. His successor, Arnold von Bruck, who held the position from 1527 to 1545, was the first of a number of Netherlands

1. Pageant car bearing Maximilian's Hofkapelle, with Georg Slatkonia and Ludwig Senfl standing at the back: woodcut by Hans Burgkmair I from the 'Triumphzug Maximilians', c1516–18



musicians to hold the post of Hofkapellmeister; Bruck's successor Pieter Maessens (1546–62) supervised the largest number of Netherlanders. Other Netherlands musicians connected with the Kapelle were Stephan Mahu, Jacques Buus, Johannes de Cleve and Jean Guyot, who was also Hofkapellmeister for a short time.

Not only the court but also the Schottenstift had eminent musicians. Finck and Lapicida committed themselves to the care of the monks, intending to spend their declining years there. The monastery's organist was Johann Rasch, better known for his chronicle. The activities of the schoolmaster Wolfgang Schmeltzl are important for a number of reasons: his much quoted *Lobspruch der Stadt Wien* (1547) indicates Vienna's importance as a centre of music, and his quodlibet collection, *Guter seltzamer und kunstlicher teutscher Gesäng* (1544), includes a wealth of songs; further, it was Schmeltzl who introduced vernacular Schuldrama to Vienna.

When Ferdinand died in 1564, his estates, including the court musicians, were divided among his sons at the various Habsburg residences. It has generally been assumed that the Hofkapelle's centre of activity moved to Prague under Ferdinand's three successors; this may have been true for Rudolf II, but not in the case of Maximilian II (see Pass, 1972) or, probably, Matthias. Countless documents were drawn up in Vienna during Maximilian's reign, no doubt because the sacred chapter resided in Vienna (the Hofkapelle was primarily a religious body). It may therefore be assumed that the imperial Kapelle performed at least intermittently in Vienna under its Kapellmeister, Vaet, Monte, De Sayve and Christoph Strauss. Matthias, who, while he was still archduke, had been served by Alard du Gaucquier and De Sayve as Kapellmeister and by Christoph Strauss as organist, lived for a time in Vienna before his accession.

3. The Baroque era. Compared with the Kapelle of archdukes Karl II and Ferdinand II of Styria, that of the imperial court was throughout the 16th century the embodiment of musical conservatism. Nevertheless, instrumental music had often and increasingly been entrusted to Italians from the time of Ferdinand I onwards, and the appointment of P.P. Melli as court lutenist to Matthias indicates that the court did not shun the latest musical trends. With Ferdinand II's accession in 1619, Baroque musical ideals came to be accepted in Vienna and the city became established as a European musical centre. Ferdinand made Vienna his capital and place of residence, although neither he nor his immediate successors liked to reside there permanently; other towns such as Prague, Regensburg (site of the Imperial Diet) and Graz shared Vienna's reputation as one of the places where the imperial Kapelle gave outstanding performances.

It was also under Ferdinand II, however, that prominent Italian musicians began what was to be a 200-year association with Vienna. Giovanni Priuli and Giovanni Valentini, the two Hofkapellmeister, were both pupils of Giovanni Gabrieli, as was the organist Alessandro Tadei. Musicians were engaged not only in Venice but also in other centres of Italian music, including Florence, Mantua and Rome, sometimes by envoys specially dispatched or

2. Procession from the Stephansdom, Vienna, with medallions of Emperor Matthias and his wife Anna: engraving by Heinrich Ulrich, 1614

authorized for the purpose. Ferdinand's marriage in 1622 to Eleonora Gonzaga was of crucial importance in Vienna's musical life and in its culture generally, for it led to the imperial court's establishing links with Monteverdi and to consequences far exceeding those still discernible today. The 'Fedeli', who had given the first performance of Monteverdi's *Arianna* in 1608 in Mantua, were attached to the imperial court from 1626 to 1628 and must have performed the first opera *Arcas* there in 1627, at a time when the court was in Prague. *Il ballo delle ingrate* may also have been associated with the Fedeli, if the supposed date of its performance in Vienna, 1628, is correct. The Hofkapelle engaged its first female singer in 1631 – Margherita Basile, who was to have taken the title role in Monteverdi's *La finta pazza Licori* (1627). Monteverdi's *Selva morale* (1640) was dedicated to the Empress Eleonora and his eighth book of madrigals to Ferdinand III. This contained *Il ballo delle ingrate* and a ballo to celebrate his coronation in 1637. It is not clear what purpose was served by the Vienna score of *Il ritorno d'Ulisse in patria*; there is no evidence that a performance of the work ever took place there.

The influence of Valentini was considerable (and not confined to music): he was music teacher to Ferdinand II's children and continued as Kapellmeister under Ferdinand III, with the latter's own Kapellmeister, Pietro Verdina, having to make do with the post of Valentini's assistant. Ferdinand III (1637–57) was the first of the composing Habsburg emperors, who later included Leopold I (1657–1705), Joseph I (1705–11) and (though no work by him has survived) Charles VI (1711–40). All four had a sound musical training and were able to take part in and even direct performances. Not only the emperors but also the empresses had their own Kapelle. The most important patron apart from the emperors was Archduke Leopold Wilhelm, who had in his service numerous musicians, including Orazio Benevoli and Antimo Liberati, as well as the librettist Orazio Persiani. Giacinto Cornacchioli was twice sent to Italy in order to engage musicians for his court. The archduke employed Valentini to teach the young Kerll, and Leopold Wilhelm was the dedicatee of Kircher's *Musurgia universalis*.

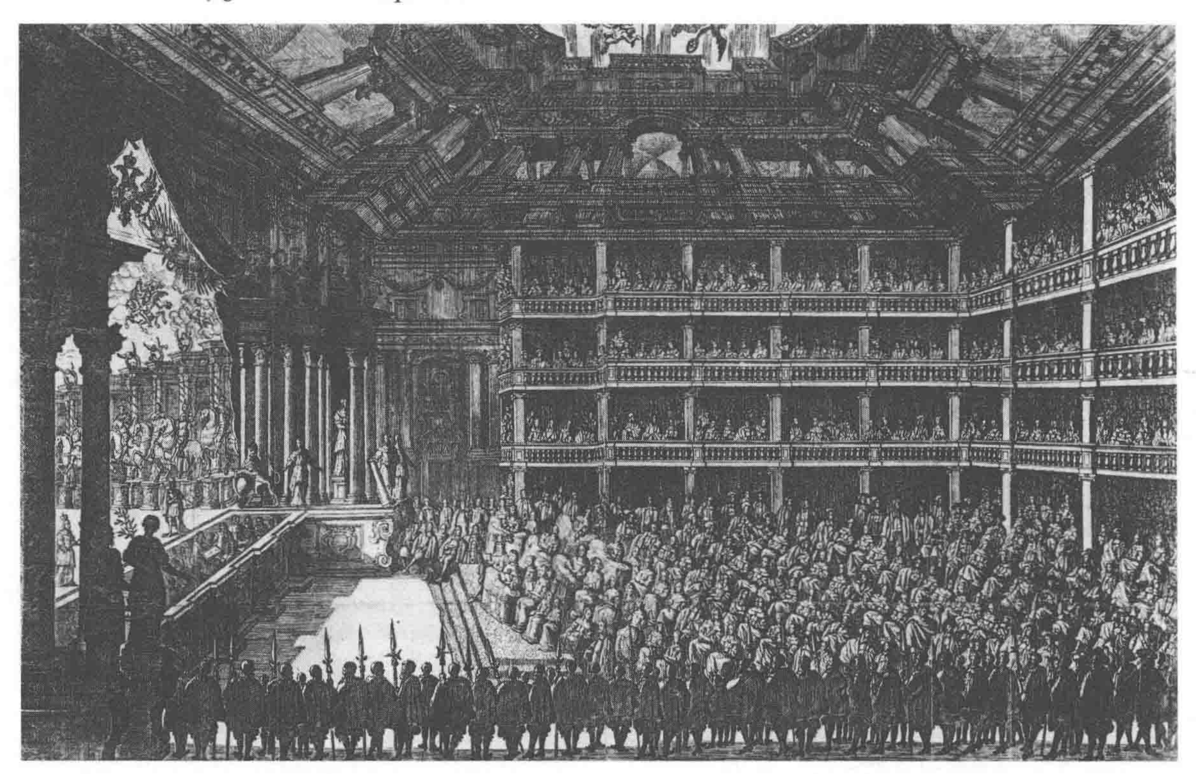
Even after Valentini's death, leading Italian musicians continued to be engaged as Kapellmeister and for other court posts. When Giovanni Rovetta declined the appointment, Antonio Bertali, who had been working in Vienna since about 1623, was appointed Valentini's successor. His opera *L'inganno d'amore* was performed by the Vienna Hofkapelle at the Regensburg Imperial Diet of 1653 and caused something of a sensation. His vice-Kapellmeister and successor was G.F. Sances, who had acquired a knowledge of opera during his years of service with the Obizzi family.

Many of the documents relating to the output and repertory of the Hofkapelle are lost, particularly those regarding operas and other dramatic genres performed during the first half of the century. It must, however, have been only slowly and with a good deal of interruption that such works could become a permanent feature of the repertory; and every performance was in any case dependent on some external event, usually family celebrations (such as birthdays) or official ceremonies. The earliest genuine operas given in Vienna were probably *La Maddalena* (1629), with a text by Giovanni Andreini and music either by Valentini or Ludovico Bartolaia, and *La caccia felice* (1631), to a libretto by Cesare Gonzaga, Prince of Guastalla. The revivals of Cavalli's *Egisto* (1642–3) and *Giasone* (1650) were outstanding among opera revivals of this period. The first oratorio performed in Vienna was probably the anonymous *Il secondo Abramo disformato nel riformare il primo*, in 1649. Complete records begin with the reign of Leopold I and show that from that time all the dramatic genres were regularly performed. The emperor's love of music was known throughout Europe, and his musical tastes are shown not only by his own compositions but also by his library, which has survived. His reign divides, musically speaking, into two parts; the first was characterized by a

large number of composers and a varied repertory, the second by the dominant though not exclusive influence of Antonio Draghi. Draghi, who at the beginning of his career in Vienna had also been a librettist (even supplying the emperor with librettos), was astonishingly prolific in all forms of vocal music. By 1674 he could list his occupations not only as conductor to the dowager empress but also as director of theatre music. His many-sided talents must have been recognized long before his appointment as Hofkapellmeister in 1682.

During the early years of his reign, Leopold I maintained close links with his uncle Leopold Wilhelm and his stepmother Eleonora Gonzaga II. The latter was responsible for a second great wave of Italian culture at the imperial court, particularly in the academies which owed their foundation to Eleonora's influence and in which music was widely taught. Eleonora maintained her own Kapelle, its members including Draghi, Pietro Ziani, Giovanni Pederzuoli and Giuseppe Tricarico. Numerous performances were given in the emperor's honour at what the librettos refer to as Eleonora's 'comando'. Oratorio and *sepolcro* were encouraged both in her Kapelle and at the imperial court. The Italian *sepolcro* tradition dates back in Vienna to Valentini's *Santi risorti* of 1643 and soon became a feature of Vienna's musical life (see Gruber, 1972); only in the late Baroque period did it become increasingly confused with the oratorio.

Oratorio and *sepolcro* were reserved for Lent, and it was opera and its related genres (such as the serenata, which stands in the same subordinate relationship to opera as the *sepolcro* does to the oratorio) which were predominant in the court's musical culture. Composers



3. Emperor Leopold I in theatrical costume (possibly as Acis in 'La Galatea'): portrait by Jan Thomas, c1667 (Kunsthistorisches Museum, Vienna)

such as Bertaili, Ziani, Sances, Antonio Cesti and others established a repertory comparable to that of Venice. Although Cesti held an appointment only briefly in Vienna, he composed a number of works there, including *Il pomo d'oro*, written for the marriage of Leopold I – the most famous opera in 17th-century Vienna (fig.4). Gualdo Priorato, Aurelio Amalteo, Nicolò Minato, Donata Cupeda and Domenico Federici were the leading librettists. Jesuit drama involved a separate repertory, which developed increasingly in the direction of opera and whose music was written by Kerll (*Pia et fortis mulier*, 1677), F.T. Richter, J.M. Zächer and J.B. Staudt, among others, until well into the 18th century. Both opera and oratorio were occasionally written to German texts (including those of Emperor Leopold). There was also vocal chamber music in the vernacular, popular ever since the Gesellschaftslied of Maximilian's day and represented in the 17th century by the collections of Nikolaus Zangius (Vienna, 1611) and of the Lutheran organist Andreas Rauch (1627). The monodic settings of vernacular texts which followed are the work of J.J. Prinner and of Andreas Knechtl (although it is not clear whether he was the poet, composer or editor of the *Ehrliche Gemueths-Erquickung* of 1677–86), together with J.H. Schmelzer and the Emperor Leopold. All these works, however, were far exceeded by the amount of vocal chamber music in Italian, to which Vienna's earliest contribution is Valentini's collection of 1621; and a vast number of other printed editions and manuscripts attests to the genre's popularity throughout the Baroque period.

It was Italian musicians who introduced instrumental music to Vienna as an independent genre. Again the way was shown by Valentini, who was followed by Bertali, G.B. Buonamente (probably more important to Austrian musical history than is generally realized), Verdina, Ziani and, finally, by such dedicatory works as Legrenzi's *Cetra* op.10 (1673). Schmelzer, who drew on both the Italian tradition and that of German-speaking countries, was the leading composer of the school of instrumental music which was developing in Vienna and its surroundings. He wrote polyphonic ensemble music as well as solo sonatas and trio sonatas, and his collection of solo sonatas was the first to be printed outside Italy (1664). During the last year of his life (1679–80), Schmelzer held the post of Hofkapellmeister between Sances and Draghi, and succeeded Wolfgang Ebner as ballet composer at the court theatre.

Dance was of considerable importance in court life generally, whether performed on its own or within the context of independently organized celebrations such as *Wirtschaften* and *Bauernhochzeiten*. Equestrian ballets were as popular as they were in Italy; the first to be given in Vienna was probably Jacomo Paradis's *Il sole, e dodici segni del zodiaco*, for Ferdinand III's wedding in 1631. The wedding festivities of 1666–7 were accompanied by spectacular performances of the equestrian ballets *La contesa dell'aria e dell'acqua* by Bertali and Schmelzer (for illustration, *see* TOURNEY) and *La Germania esultante* by Cesti. French influence in dance and in ballet was important despite political differences and the emperor's obvious aversion (see Nettl, 1929–32). But the chief influence was that of Italian ballet, represented by Santo Ventura from 1626 and then, until 1694, by his son Domenico. Ebner and Schmelzer were followed as court ballet composers by the latter's son Andreas Anton, and

by Nicola Matteis (ii) and J.J. Hoffer, who held the post well into the 18th century.

The foundations were also being laid for a long tradition of keyboard music; the establishment of a Viennese school can be traced to 1637, when both Wolfgang Ebner, who had been employed as organist at the Stephansdom since 1634, and Froberger were appointed to the Hofkapelle. The tradition was continued by F.T. Richter, F.M. Techelmann, Georg Reutter (i) and Alessandro Poglietti, and by Kerll and Pachelbel, both of whom were for a short time organists at the Stephansdom; and in the 18th century the same tradition led to Fux, Gottlieb Muffat and Wagenseil and eventually to the Viennese Classical period. Church music throughout the Baroque period was characterized by the coexistence of the old and the new. Masses 'in the style of Palestrina' were chiefly performed during Lent, but others called upon the entire musical apparatus of the Baroque, later becoming operatic in style, especially in their treatment of vocal and instrumental solos. Even as late as the reign of Charles VI, however, one finds in Matteo Palotta the appointment of a composer who was very much at home in the style of Palestrina.

Draghi's commanding position under Leopold I did not prevent the engaging of other leading composers, including the Bononcini brothers, C.A. Badia, for whom the post of Hofkomponist was revived, and Marc'Antonio Ziani, who was later promoted to Hofkapellmeister and who at the time of his Vienna engagement was one of the leading composers of the Venetian school of opera. Draghi's immediate successor, Antonio Pancotti, seems not to have distinguished himself as a composer. It was the reign of Charles VI that formed the close and culmination of the age of courtly magnificence. After the Turks had been driven from the gates of Vienna in 1683, the Habsburgs' dominions had expanded to include greater Hungary and parts of Italy and the South Netherlands. Their capital, Vienna, had been sumptuously rebuilt, and the Hofburg was extended under Charles VI by the addition of the grand imperial library. The Hofkapelle was now larger than ever before and one of its members, J.J. Fux, was to leave his mark upon the whole age. Fux took over the post of Hofkapellmeister from Ziani in 1715 and found himself in the company of two musicians whose standing was equal to his own, Antonio Caldara, the vice-Kapellmeister, and F.B. Conti, the court composer.

Opera soon came to be dominated by these three, although the works of Attilio Ariosti, Pier Francesco Tosi and Giuseppe Porsile were also performed. The librettists of the period were Silvio Stampiglia, Pietro Pariati, P.A. Bernardoni, Zeno and Metastasio. Thus the Italians and the Italian language were dominant, despite the appointment of Fux. The introduction of intermezzos in court opera dates from 1713; they were chiefly the work of Conti and performed in his own operas. Later they were taken up by the bourgeois theatre at the Kärntnertor.

Fux and Caldara also continued the tradition of instrumental music. Lute playing (Conti played the theorbo) and virtuoso performances on various other instruments were popular, and that in turn influenced the solo writing in operas and other vocal forms. The Hofkapelle was made up not only of musicians engaged on a permanent basis but also of other leading musicians, who spent shorter or longer periods in its service and who

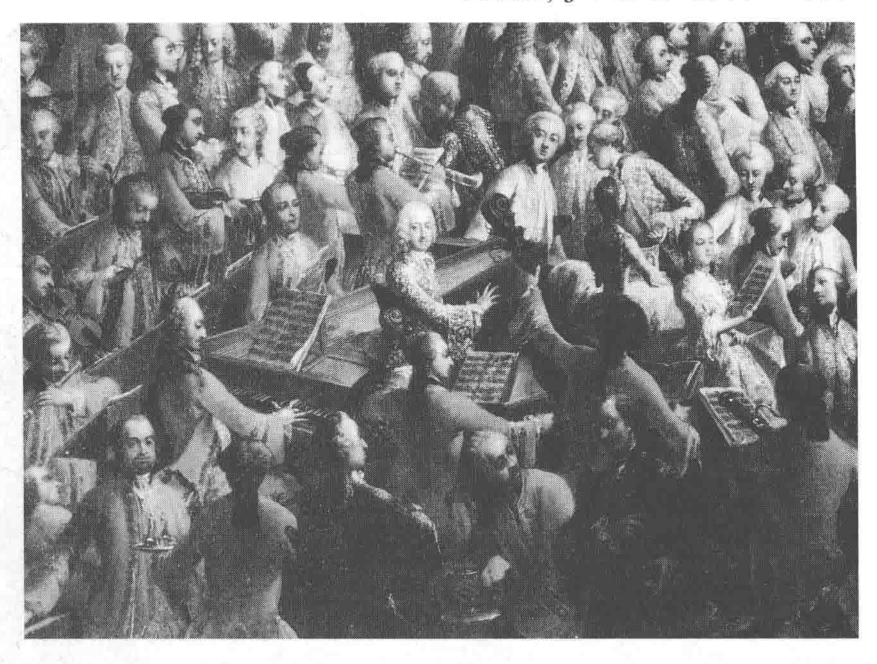
included Emanuele d'Astorga and Giuseppe Torelli, and also Antonio Vivaldi, who died in Vienna in 1741 and may have visited the city on previous occasions.

A consistent feature of the Baroque period in Vienna was a certain conservatism, in later years represented particularly by Fux, who, largely as a result of his *Gradus ad Parnassum*, became the custodian of tradition (although that work was to remain influential for many years to come). The instrumental works of Mathias Monn and Christoph Wagenseil, with their embryonic sonata forms, constitute a partial exception.

4. 1740–1806. By 1740 most of the great aristocratic palaces that still dominate the centre of Vienna had been built, the city's central churches had been totally or partially rebuilt in Baroque style and, outside the walls, Charles VI's votive Karlskirche completed. In the small area within the vast fortifications resided over 50,000 people, but already some 100,000 lived in the surrounding suburbs. Vienna was the largest German-speaking city, and growing fast: by 1806 the suburbs had almost doubled in population. The essential reason for this expansion is that since the mid-17th century Vienna had been the Residenzstadt of the Habsburg dynasty, whose territories had enormously grown in the late 17th and early 18th centuries and, in addition to Austria, Bohemia and Moravia, now included modern Hungary, Transylvania, Croatia, most of Lombardy and Belgium. Maria Theresa ruled this immense complex, known as 'the Austrian Monarchy', from 1740 to 1780, followed by her sons Joseph II (1780–90) and Leopold II (1790–92) and by Leopold's son, Francis I (1792–1835, Austrian emperor from 1804). Except for the years 1740–45 the elected Holy Roman Emperor, the senior sovereign of Christendom whose shadowy authority extended over the whole of Germany, also resided in Vienna: from 1745 to 1765 the Holy Roman Emperor was Maria Theresa's husband, Francis I or Francis Stephen, formerly Duke of Lorraine, followed by Joseph II (1765–90), Leopold II (1790–92) and Francis, as Holy Roman Emperor Francis II (1792 until the abolition of the empire in 1806).



The emperor's court, in principle and to some extent in practice distinct from that of the head of the monarchy even when they were the same person, was a cynosure for German nobles and princelings, mainly but not entirely from Catholic areas, and for the higher Catholic clergy of southern Germany. The imperial administration and system of justice, notorious for its complexity and dilatoriness, employed many hundreds of officials in Vienna and required the attendance there of numerous petitioners and litigants. The monarchy's government, in contrast to that of the decaying empire, grew even more powerful and centralized throughout the period, with only a brief relaxation after Joseph II was forced on his deathbed to rescind much of his reforming legislation. It employed about 10,000 officials based in Vienna. In partnership with the court, it was these two bureaucracies, accustomed to conducting business mainly in German, and the thousands of resident or visiting nobles, cultivating the use of French, whose affluence and diverse origins made possible the rich and varied musical life of the city. Moreover, links with Italy remained close: the city contained a sizeable Italian community; and, as well as the Italian lands that formed part of the monarchy, Tuscany was ruled by Francis Stephen from 1737 to 1765 and by Leopold II from 1765 to 1790, and children of Maria Theresa married the rulers of Parma, Modena and Naples.

At her accession Maria Theresa faced a desperate international situation with virtually no financial resources, and she was forced to economize. But, after her position improved in the War of the Austrian Succession (1740–48), the changes she made at court had at least as much to do with her and her husband's taste as with economy. She abandoned two of Charles VI's palaces: the Favorita in a suburb of Vienna and the monastery of Klosterneuburg, which he had begun to convert into a palace in 1730 but had come nowhere near completing. On the other hand, she refurbished the Hofburg and, on a truly lavish scale, Schönbrunn, 4 km out of the city, which she used as her main summer residence (fig.7).

Pious though she was, she did not fully share her father's love of elaborate religious ceremonies, though during the first half of her reign the court still formally attended grand services in various churches on 78 occasions each year. These visits commonly involved processions, notoriously frequent in Vienna, in which, as with the celebrations for dynastic landmarks like births and marriages of princes and princesses, all ranks could take pleasure and some part. Musical accompaniment (mainly wind and brass instruments) was normal. Maria Theresa, however, allowed the 100-strong imperial Hofkapelle to dwindle in numbers and standing. Even so, Fux's successors as Hofkapellmeister normally had charge of the court's theatre and concert music as well as of its church music. They were: L.A. Predieri (1741–67, but in retirement after 1751), Georg von Reutter (ii) (1751–72), F.L. Gassmann (1772–4), Giuseppe Bonno (1774–88) and Antonio Salieri (1788–1825, but effectively Hofkapellmeister from the late 1770s). These men were treated like civil servants and virtually guaranteed their positions for life at the top of the rigid musical hierarchy. Hence

7. Maria Theresa with her husband Francis I and family on the terrace at Schönbrunn: painting by Martin van Meytens II, 1750 (Schloss Schönbrunn, Vienna); Joseph, heir to the throne, stands in the centre of the star pattern

there was usually a period in their old age when the work was in fact done by a deputy, and hence too the long delay in finding any court employment for Gluck and Mozart, despite their acknowledged pre-eminence. The composition of new church music for the Hofkapelle remained important during Maria Theresa's reign, and the roughly 500 part-time musical employments as players and singers provided by the churches and religious brotherhoods of the city gave secure though usually inadequate incomes to nearly 300 musicians, which they could enhance by doubling up jobs, by teaching and by secular performance. The use of trumpets and drums in certain parts of the mass was forbidden by the archbishop's consistory in 1753, but these instruments and others continued to be widely used in church, and little if any attention was paid in Maria Theresa's reign to papal and other attempts to reduce the 'theatrical' character of much church music. Many musical performances associated with the liturgy were barely distinguishable from concerts and included instrumental sonatas and symphonies as well as elaborate choral settings.

Maria Theresa was herself a pupil of Wagenseil and a good and enthusiastic singer and dancer. Although she had the grandiose baroque Hoftheater (built by Galli-Bibiena and dating back to 1700), dismantled in 1747, she replaced it with the more intimate Rococo Burgtheater at the gates of the Hofburg, where operas of various kinds were more regularly performed than in the past (fig.9). She also built theatres at Schönbrunn and at the more distant summer palace of Laxenburg. During another time of financial difficulty, in the midst of the Seven Years War in 1759, she declared 'Spectacles must continue; without them one cannot stay here in such a great Residence'. She did not, however, as her father had done and many rulers still did, bear the entire cost. Her nominees ran the theatres, but some of the seats were put on sale – a highly significant change, that first made it possible for 'public taste' to affect what was performed there. Previously, lucky representatives of the lower orders had sometimes been allowed into royal apartments to hear *Tafelmusik*, for example, but it was quite a different matter to allow anyone who was rich enough the chance to buy a ticket for the royal opera house. Metastasio remained the court poet until his death in 1782 and continued to produce new or revised librettos for *opere serie*, which were mounted on special occasions, though in less extravagant fashion than under her father. At the inauguration of the Burgtheater the opera performed was *La Semiramide riconosciuta*, Metastasio's libretto with music by Gluck, who was making a first visiting appearance in Vienna. Francis Stephen encouraged a more general aristocratic demand for French opera and ballet, and in the years 1752–65, 1767–72 and 1775–6 the Burgtheater was the seat of a French theatre company (though not all the works they performed were in French or of French origin). The Kärntnertortheater, built by the municipality in 1709, was the home of 'German comedies', which routinely involved music. It was taken over by the court and rebuilt after it had been burnt down in 1761.

From 1752 to 1764 the court's theatre director or *Spielgraf* (or *Musikgraf*), under the nominal control of the great chamberlain Count Khevenhüller, was the Genoese Count Durazzo. He was a protégé of Count (later Prince) Kaunitz, from 1753 Maria Theresa's chief minister. Durazzo was a dedicated promoter of French opera and of the work of Gluck, whom he frequently brought to Vienna and finally had made 'court composer' in 1760. Durazzo had many contacts with Italian opera reformers, and it was important that, in order to please Austria's new ally, France, Isabella or Elizabeth of Parma, granddaughter of Louis XV, was selected as the future Joseph II's bride. The court of Parma was opera-mad, and the composers it favoured, especially Traetta, were experimenting with a less artificial and grandiose genre than *opera seria*, emulating the French *opéra-comique*. When Joseph married Isabella in 1760 the two wedding operas were Metastasio's *Alcide al bivio*, with music by Hasse, and Gluck's *Tetide*. For the princess's birthday early in 1761 a work by Traetta, *Armida*, was produced. It was against this background, and with the castrato

9. Burgtheater at the gates of the Hofburg in Michaelerplatz, Vienna: coloured etching after Karel Postl, early 19th century

Gaetano Guadagni at his disposal, that Durazzo was able to mount the most significant musical event of Maria Theresa's reign, the première of Gluck's reform opera *Orfeo ed Euridice* in the Burgtheater on 5 October 1762. It has sometimes been suggested that the initiative and the welcome for this innovation came from below and that the court did not appreciate it, but in fact the opposite is true. Most unusually, several royal comments on the opera and its emotional impact have come down to us.

Vienna had a less well developed public concert life than London. But recent research, especially on the lists made for Durazzo by Philipp Gumpenhuber of court musical performances between 1758 and 1763, has revealed that during that period many concerts (well over 50 a year) took place on a more or less regular basis in the theatres. Many more are known to have been held in the palaces of the nobility, such as Prince Hildburghausen's Palais Rofrano (later Prince Auersperg's palace). They became ever more frequent in later decades, and an important landmark was the foundation in 1771 of the Musicians' Benevolent Society, the Tonküstler-Societät, which from 1772 mounted an annual concert series.

Durazzo was forced to resign in 1764 and Francis I died in 1765. The new emperor, Joseph II, also named co-regent of the monarchy, was placed by his mother in charge of court functions. He abolished the old frigid Spanish etiquette, took to wearing plain uniform and encouraging others to do so, drastically reduced the number of religious ceremonies in the court calendar and opened the royal hunting reserves of the Prater and the Augarten to the public. As for the theatres, he tried to solve their financial difficulties by leasing them to entrepreneurs. He was a competent performer on several instruments and a passionate, opinionated follower of music. He loathed *opera seria* and ballet and disliked employing a French opera company. But it was only after bitter struggles with Kaunitz and others that in 1776 he himself took over the running of the theatres and appointed a close friend and ally, Count Rosenberg, to be Musikgraf. Joseph declared the Burgtheater a Nationaltheater where only German works would be performed by a German company and, to create a repertory for it, he offered prizes to writers of German plays and operas (known as Singspiele). The establishment of the national theatre, though perhaps chiefly intended as an economy measure and to spite the aristocracy, was taken as a symbol of literary nationalism and identified with the campaign by moralists such as Joseph von Sonnenfels to purify the crude German comedy. It was important in Mozart's career in encouraging the writing of *Die Entführung aus dem Serail*. However, although Joseph became sole ruler in 1780, he could not ensure the success of the German troupe, which proved unpopular and was disbanded in 1785. An Italian company had been brought back in 1783, and Lorenzo Da Ponte had been made its court poet. But the monarch's attitude kept *opera seria* and ballet out of the court theatres throughout the 1780s: Mozart's *Idomeneo* could be performed in Vienna only in Prince Auersperg's theatre. However, another aspect of Joseph's policy, 'theatre freedom', permitted the establishment of suburban theatres, in the Leopoldstadt (1781), in the Josefstadt (1788) and the Freihaus-Theater (1787,

10. Interior of the Freihaus-Theater, with a profile of Emmanuel Schikaneder (left): title-page from the 'Allmanach für Theaterfreunde' (Vienna, 1791); engraving by Ignaz Albrecht

also known as the Theater auf der Wieden; fig.10), for which *Die Zauberflöte* was to be written.

When Mozart decided to leave the service of the Archbishop of Salzburg, he wrote to his father on 4 April 1781 that Vienna was 'the best place in the world for his profession'. In the first place, he had high hopes of winning the patronage of the emperor. Joseph obliged, though not at first with regular employment, but it was the emperor's predilection for Mozart and his music that made possible the scale of his success in Vienna, and in particular the production of the three operas composed in collaboration with Da Ponte (fig.11). Mozart told his father that by taking a few pupils and playing in concerts he could earn vastly more money than in his home town. Since he was to appear as a soloist in at least 71 public and private concerts in the years 1781 to 1786, he was surely right in his calculation that nowhere else could he have been given so many opportunities. The numerous wealthy patrons competed for the services of performers and composers of quality and originality, as for example with the *Harmoniemusik*, or wind bands, fashionable from 1782 onwards. Though there was no hall specially set aside for concerts, they took place more or less regularly in many aristocratic palaces, in the theatres, in certain other buildings such as the Trattner apartment block, in restaurants and in the public gardens. Nearly all Mozart's piano concertos were written for this milieu. As far as we know, he performed them most often in the

Neues Singspiel.

Im kaiserl. königl. Naztional = Hoftheater
wird heute Dienstag den 26ten Jäner 1790 aufgeführt:
(zum erstenmal)

COSI FAN TUTTE,
O SIA:
LA SCOLA DEGLI AMANTI.
So machen sie's, oder: die Schule der Liebhaber.
Ein komisches Singspiel in zwey Aufzügen.

Die Poesie ist vom Hrn. Abbate da Ponte, Dichter des italiänischen Singspiels beym k. k. Hoftheater.
Die Musik ist vom Herrn Wolfgang Mozart, Kapellmeister in wirklichen Diensten Sr. Majestät des Kaisers.

Die Bücher sind bloß italiänisch beym Logenmeister für 24 kr. zu haben.

Es ist am verflossenen Sonntage in den k. k. Redoutensäälen eine goldene Frauenzimmerdose verlohren worden, wer selbe gefunden, wird höflichst gebeten, sie gegen gute Rekompens an die theatralische Kasse zu überbringen.

Der Anfang ist um 7 Uhr.

11. Playbill for the first performance of Mozart's opera 'Così fan tutte', Burgtheater, Vienna, 26 January 1790

Burgtheater, but also in the Augarten, the Kärntnertortheater, the Mehlgrube dance hall, Jahn's restaurant in the Himmelpfortgasse, and the Trattnerhof, as well as at private concerts in the houses of J.M. Auernhammer and G.I. Ployer. More specialized concerts were given in the masonic lodges, which flourished in the early 1780s, and by Baron van Swieten, head of the educational commission and director of the imperial library (where he broke new ground by putting on programmes of old music, especially works of J.S. Bach and Handel). With all these opportunities as a freelance composer and performer Mozart was able to earn (and spend) an income far above that of almost all salaried musicians. At the end of 1787, in order to prevent Mozart from leaving Vienna, the emperor created a post for him at a salary of £800 per annum. The composer turned this duty of writing dances for court balls into an opportunity to revivify the form.

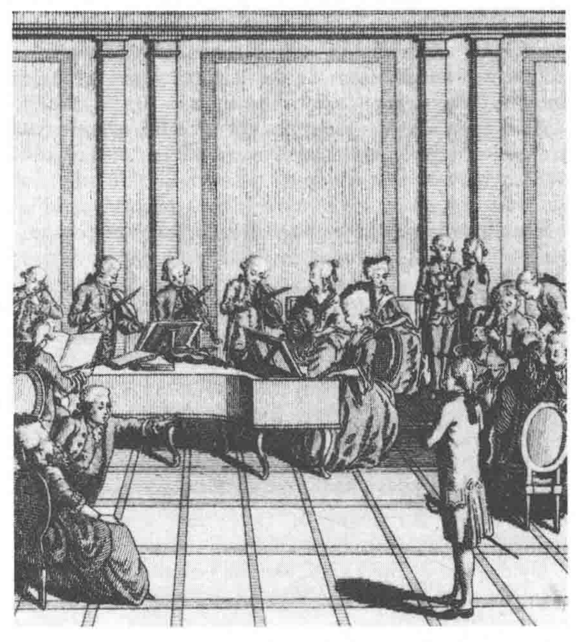
There were other purely musical advantages to be gained from living in Vienna. The first Viennese collection of German-language songs had been published in 1778, and the genre became ever more popular. Artaria began to publish music in Vienna in 1778, and the steady growth of music printing expanded opportunities for the public to acquire music, though it by no means superseded the flourishing music-copying industry. As well as high-class production of pianofortes by such makers as Stein and Graf, there was much experimentation with new or unusual instruments like the jew's harp, glass harmonica, mechanical clock, baryton, basset horn, basset clarinet and arpeggione.

When Mozart wrote his enthusiastic letter about Vienna, the emperor had scarcely embarked on the hectic programme of wide-ranging reforms which he imposed during the 1780s. The suppression of the Jesuits, an important preliminary, had been carried through in 1773 by order of the pope. With the proceeds from their lands, a fairly successful attempt was being made to increase the number of primary schools and to reorganize secondary and higher education, which the Jesuits had largely controlled. In 1781–2 Joseph introduced measures of toleration for both Protestants and Jews, and greatly relaxed the censorship regulations. These changes had an almost revolutionary effect. A flood of pamphlets poured out during the 1780s, many of them anti-clerical and some critical of Joseph's regime. In the 1770s the average number of German-language periodicals being published in Vienna was 19; during Joseph II's reign it was 44; in the following 10 years it fell to only 15. The degree of intellectual freedom enjoyed in the 1780s was to be unknown again in Austria until the late 19th century. The emperor also forbade most religious processions and pilgrimages, and dissolved all religious brotherhoods and half the monasteries of the capital. Moreover, in the monasteries that remained, as in all churches, choral and instrumental music were severely restricted. The numerous new parish churches paid for by these suppressions needed for their music only organists of very modest attainments.

These measures doubtless promoted Enlightenment, but they led to the halving of the total expenditure on church music in Vienna and to hardship for many musicians. No doubt they also account for Mozart's virtual abandonment of church music during Joseph's reign. Late in 1785 the emperor decided to restrict freemasonry; and by the end of his life, partly because of the financial crisis caused by the war against the Turks that began in 1788, his regime was looking distinctly less benevolent. The musical life of the city was certainly adversely affected, but to what extent is difficult to determine.

Leopold II brought the Turkish War to an end and pursued a subtle policy of moderate conservatism at home. But after the accession of Francis and the outbreak of war with France in 1792, which continued with short breaks until 1815, reaction set in, a strict censorship was re-established, and it became dangerous to show sympathy with any attitude that could be identified with the French Revolution.

Leopold was less hostile than his brother to *opera seria* and to traditional church music, but he did not reign long enough to bring his musical plans to fruition. Francis seems to have interfered little in musical matters. So, with the very important exception of opera performed in the royal theatres, the court was eclipsed as a source of patronage by a small number of noble connoisseurs, and it was they who maintained Vienna's pre-eminence, especially in instrumental music. Haydn, given extended leave of absence on full salary by Prince Anton Esterházy in 1790, made Vienna his home. But his last 12 symphonies were all composed for his London audiences on his two visits to England. His late masses, however, were written for the Esterházys. At one of the worst moments of the war, in 1797, when a citizens' patriotic army was being raised in Vienna, he and van Swieten worked with the government to provide Austria with a national anthem, which Haydn set to music.



The two great oratorios, *The Creation* (1798) and *The Seasons* (1801), had complex origins: they were inspired by Haydn's English experience of the choral works of Handel, and the librettos were based on English originals; but the works were commissioned by van Swieten, who also translated the texts into German; and they were first performed in the palace of Prince Schwarzenberg. They were usually given in secular buildings and were sometimes thought unsuitable for churches, but they represent a remarkable transplantation of early 18th-century English natural theology into a formerly strict Catholic milieu, where the religious policies of Joseph II were still being pursued even after most of his other aims had been abandoned. Even more than Haydn's symphonies and his chamber music (which was now becoming a common feature of public concerts instead of just a private diversion), his oratorios became enormously popular.

Beethoven was equally confident in 1792 as Mozart had been in 1781 that Vienna was the place where his genius could best flourish. Coming from the court at Bonn where Max Franz, the brother of Joseph II and Leopold II, was elector-archbishop, it is not surprising that the composer was drawn to Vienna, but it would appear from the early, unperformed works that he wrote in 1790 to lament the death of Joseph and welcome the accession of Leopold that he was then a supporter of the former's radical policies. He found in Vienna similar performing opportunities to Mozart's, though it is significant that nearly all Beethoven's dedications were to aristocrats, whereas many of Mozart's had been to commoners. So far as the sources permit conclusions about the level of musical activity, it seems to have remained much the same as under Joseph II, so far as both operas and concerts are

12. Te Deum performed in the Vienna Hofkapelle, April 1790, as part of the ceremony in which Leopold II's sovereignty over Austria was confirmed: engraving by Johann Hieronymus Loeschenkohl; note the musicians in the lower galleries

concerned. However, partly because of the careers of Mozart and especially Haydn, but also because of the growing acceptance of both the idea of artistic genius and the moral and aesthetic significance of purely instrumental music, the attitude of great aristocrats to great musicians changed. Almost from the start, Beethoven was able to assert for himself a social position which Mozart and Haydn barely achieved by the end of their lives. Emperor Francis's brother, Archduke Rudolph, was his adoring pupil. In 1804 the 'Eroica' Symphony was first performed, like many of his works, in the palace of Prince Lobkowitz. At the première of *Leonore* in 1805, the audience consisted mainly of an unenthusiastic group of Napoleon's officers, part of a French force occupying Vienna. But soon afterwards, in the house of the Russian ambassador, Prince Rasumovsky, the three string quartets dedicated to him were first performed. However disturbing and revolutionary Beethoven's music was, he now showed little sign of political radicalism; and it was the high aristocracy of Vienna who were Beethoven's principal patrons.

During the period 1740–1806 and for the next century, more music of recognized greatness was composed in Vienna than in any other city in the world. Few of the composers concerned were Viennese by origin, though the greatest of those, Schubert, was born there in 1797. All the principal names came from the catchment areas of the empire and the monarchy. In no other political entity, or overlapping pair of entities, were there nearly so many serious musical institutions, religious and secular; and all of these had links, practical as well as symbolic, with Vienna as their ruler's capital. The city itself did not spawn many of the composers who resided there, but it offered them a uniquely rich range of opportunities to practise and mature their genius.

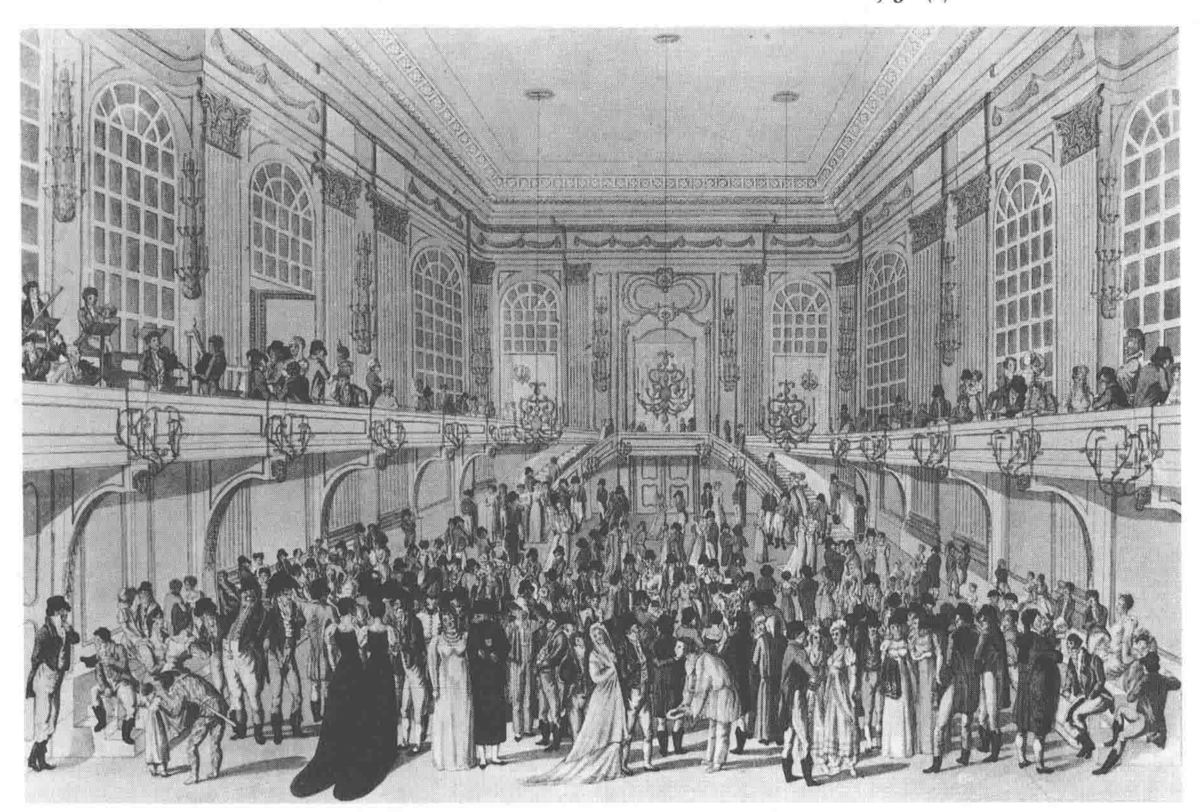
14. Playbill for the première of the first version of Beethoven's 'Fidelio', Theater an der Wien, 20 November 1805



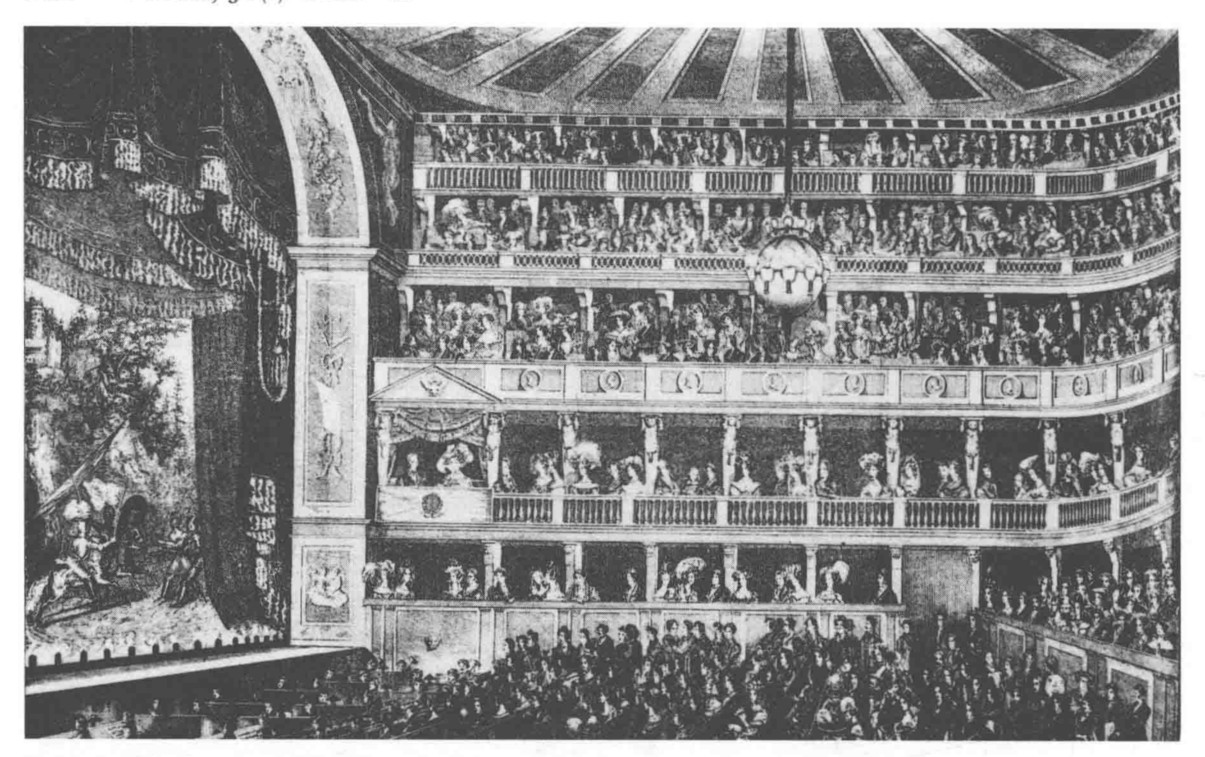
5. 1806–1945.

(i) 1806–48. During the first years of the 19th century, Vienna's self-image and international standing as a centre of musical culture, together with the prestige of Viennese Classicism, were bolstered by Haydn's presence in the city and the growing reputation of Beethoven. After 1809, the year of Haydn's death and the Napoleonic invasion, the social and economic underpinnings of the city's musical life underwent considerable change. In the arena of instrumental music, the 18th-century pattern of individual aristocratic patronage supporting ensembles and composers (as in the cases of Auersperg, Lobkowitz and Esterházy) disappeared quickly. Although Beethoven continued to depend on aristocratic subvention for the rest of his life, Schubert did not. The institution that would play the most significant role in the city, the Gesellschaft der Musikfreunde, was officially founded in 1814. It signalled the beginning of an alliance between the old aristocracy and an urban middle class representing a growing public for music, which included élite Jewish banking families. The Gesellschaft sponsored concerts, an archive, the conservatory (beginning in 1817) and a choral programme, directed initially by Salieri.

By the end of the 1820s, Vienna boasted a significant infrastructure in music publishing and instrument manufacture (including over 32 violin makers, 25 brass instrument makers and 147 keyboard manufacturers) that met the needs of a more broadly based literate public of active amateurs from whose ranks Schubert's friends and supporters came. Joseph Sonnleithner and Ignaz von Seyfried, both of whose lives intersected with Beethoven, were leaders in the creation of a new public musical culture; their interests extended to scholarship and journalism. From 1806 a series of periodicals flourished, from the short-lived *Wiener Journal für Theater, Musik und Mode* to the more durable *Wiener Theater Zeitung* (which covered music). In 1834 R.G. Kiesewetter (who headed the new conservatory) published the first popular music history connecting past and present. Kiesewetter also maintained one of the most prominent middle-class salons where large ensemble house concerts took place.

Despite the shift from aristocratic patronage to a broader civic base beginning in 1812, the Viennese tradition of aristocratic connoisseurship, active participation and financial support characteristic of the Classical era of Gluck, Mozart, Haydn and Beethoven would cast a considerable shadow on the evolution of musical culture in Vienna well into the 20th century. The prestige of music, particularly instrumental music, was associated with the aura of noble birth and cultivation. Maria Theresa and her direct descendants, as well as many prominent members of the high aristocracy living in Vienna during the winter season, were musically literate and discerning. Future generations of Viennese would link the cultivation of music with high social status and refinement long after the aristocracy abandoned, learning and the arts in the mid-19th century, for hunting and the high life in the spirit of the Jockey Club. The memory of a time when the highest segment of the social ladder could sing in oratorio performances, play sonatas and quartets and judge new music competently was invoked regularly from the mid-19th century onwards as subsequent generations of local critics lamented the debased skills and tastes displayed by the ever expanding middle- and working-class audience for music. Nonetheless, domestic music-making flourished throughout the city's population. The enthusiasm shown by the Viennese for music in the 19th century reflected in part a middle-class agenda of social ambition for self-improvement against an image of aristocratic cultivation rooted in the myth and reality of Viennese musical life before 1809.

During the first decades of the century, public concert life took place in winter in the Mehlgrube and in summer in the Augarten; in inns (until 1822 the Gesellschaft had its headquarters in a section of an elegant restaurant, Zum roten Igel, and then renovated and expanded its space there on the Tuchlauben where in 1831 it opened a 500-seat hall), and in imperial theatres (the Kärntnertortheater and the Burgtheater) during Lent and Advent; in the Redoutensaal of the Hofburg (fig.15), the great hall of the university; and in the Spanish Riding School, the space in which, until 1848, the festive, large mixed amateur and professional oratorio performances, often organized on behalf of charitable causes, took place. In 1819 F.X. Gebauer and Eduard von Lannoy founded the *concerts spirituels* with an orchestra made up of amateurs; the series continued until 1848. The quality of these regularly scheduled public performances came in for criticism, particularly in the 1830s, an era that prized virtuosity. Their presentation of Classical works by Mozart, Haydn and Beethoven was substandard. In 1833 Franz Lachner organized professional orchestral concerts using opera house players, but with little success; only four



15. Masked ball in the large hall of the Redoutensaal of the Hofburg: coloured etching after Joseph Schütz, c1812 (Kunsthistorisches Museum, Vienna)

performances, each including a Beethoven symphony, were given. In March 1842, with the support of Otto Nicolai, the chief conductor of the Opera, an association of opera musicians came into being (which later evolved into the Vienna Philharmonic), even though between 1842 and 1860 there were no regular seasons; only 14 Philharmonic concerts were given between 1842 and 1848.

Most concerts until 1848 took place in generous noble and middle-class private spaces, much in the tradition of the Schubertiads, in part for political reasons; censorship and the repressive police state in place between 1815 and 1848 (especially after 1819) helped restrict the number of large public events. Among the notable private non-aristocratic venues were those of Pettenkopfer, Dollinger and Röhrich, all either men of commerce or civil servants. The policies of the Metternich era inadvertently helped to deepen the Viennese attachment to music, particularly chamber and vocal music. Instrumental music and vocal music celebrating nature and personal emotions served as a mode of expression and communication comparatively immune from political scrutiny and therefore one in which the widest range of sentiment could be expressed without fear. Franz Grillparzer, the great dramatist and himself an avid amateur musician, ironically expressed regret, after having been censored, that he was not a composer. Nonetheless, Schubert's friend Johann Mayrhofer ended up as a police agent, and A.J. Becher, one of the city's leading critics (who had helped organize the Vienna Philharmonic in 1842 with Nicolai, Beethoven's friend Karl Holz, and the poet Nikolaus von Lenau) was executed for his role in the revolution of 1848. The reactionary authorities before 1848 understood the link between liberal ideas and the wider social acquisition of culture and learning. Yet music remained relatively privileged; in 1843 they permitted the founding of a new institution, the Wiener Männergesangverein (in large part the work of August Schmidt, the editor of the *Wiener allgemeine Musikzeitung*), at the inn Zum goldenen Löwen. By 1848 it had nearly 400 members and had held dozens of concerts in the Redoutensaal, at Schönbrunn and in dance halls, hospitals and private homes. This group, whose motto was 'free and loyal in song and deed', was both devoted to the monarchy and liberal; it was also the harbinger of a significant amateur choral movement that flourished after 1848. Among its leaders were Franz Egger, a lawyer, and Nikolaus Dumba, an industrialist who later spearheaded the campaign to build Vienna's main concert hall, the Musikverein, in 1870.

Although Beethoven's funeral in 1827 was among the largest public events in Vienna's history, by the time of his death his music had fallen considerably out of fashion. A taste for Italian opera, particularly Rossini (whose *Otello* was a sensation in 1819), developed rapidly in the 1820s; the première of Weber's *Der Freischütz* in 1821 also signalled a new direction in musical culture, as did the triumphant appearances of Paganini in 1828 and Chopin in 1829. *Euryanthe* was written in 1823 for Vienna. The 1820s also witnessed the spread of interest in dance music (the waltz, galop and quadrille) and the popularity of the comic theatre of Ferdinand Raimund (*Das Mädchen aus der Feenwelt*, 1826) and, later, J.N. Nestroy (whose farces such as *Lumpazivagabundus*, 1833, or *Der Talisman*, 1840, came with musical accompaniment). This distinctly local form of theatre

16. Interior of the Theater an der Wien: lithograph, 1830

took place at the Theater an der Wien (fig.16) and at smaller suburban houses in an annual repertory that featured light opera by such composers as Conradin Kreutzer, Joseph Drechsler, F.A. Kanne, Adolf Müller and Adrien Boieldieu. The evolution of Schubert's music in the 1820s, particularly his efforts at opera and incidental dramatic music, can be understood as reflecting these contemporary Viennese theatrical tastes. By the 1840s there was considerable concern about the relative neglect of classical traditions. The Gesellschaft, a self-governing association, positioned itself as a counterweight, presenting works of Handel, Mozart, Beethoven and Cherubini as well as more contemporary music, including Schubert's. In 1839 it performed Mendelssohn's *Paulus* with a chorus of 700 and an orchestra of 320. The repertory also included music by Joseph Eybler, Eduard von Lannoy, Ferdinando Paer, Simon Mayr, I.F. von Mosel, Adalbert Gyrowetz, Vàclav Tomášek, Louis Spohr, Maximilian Stadler, Rossini, Salieri and Hugo Worischek. Between 1812 and 1848 the Gesellschaft sponsored 131 regular concerts, 36 large-scale choral events, 8 operas and 240 salon-style evenings.

Opera (as part of a local affinity with theatre dating back to Baroque times) remained a crucial component of Vienna's musical life. The use of incidental music in productions of tragic theatre was common. The Hofoper at the Kärntnertortheater and Burgtheater flourished. Performances were also held at the Schönbrunn Palace theatre. A system of leasing the opera house to impresarios who favoured Italian repertory existed; this offered a complement to German repertory, including works by Joseph Weigl and Mosel. The Hofoper remained directly under the administrative control of the crown and high aristocracy until 1918. The repertory at the Kärntnertortheater between the mid-1820s and 1848 included Spohr, Bellini, Meyerbeer, Auber, Halévy, Marschner, von Flotow and Donizetti. Fanny Elssler's fame (and that of Marie Taglioni) in the 1830s and 40s helped spark wider interest in the ballet productions of the Hofoper. The Theater an der Wien (where *Fidelio* was first produced in 1805 and 1806 and Lortzing conducted in the late 1840s) was the location for the premières of Schubert's *Zauberharfe* in 1820 and *Rosamunde* in 1823, as well as of works by Spontini, Auber, Grétry and J.P. Pixis. Concerts took place there as well. Other important sites of opera and musical theatre were the Theater in der Leopoldstadt and the Theater in der Josefstadt, where *Die Zauberflöte* was among the most popular works in a repertory that included Weber's *Oberon* and Cherubini's *Les deux journées*. Conradin Kreutzer directed the house between 1833 and 1835.

(ii) 1848–70. The events of March 1848 forced the closing of the conservatory (which reopened in 1851) and interrupted concert life; the Gesellschaft resumed concerts in January of 1849. By the early 1850s it was clear that the public would no longer tolerate amateur participation in public performances of instrumental music. The Gesellschaft, after considerable internal debate, restructured itself in order to sponsor regular professional concerts. It also began a tradition of choosing a professional musician as a director of activities. Joseph Hellmesberger (whose father Georg was also a violinist and conducted the Philharmonic in the late 1840s), the leader of the Philharmonic, would spearhead the improvement of standards, including amateur choral preparation which led to the creation, in 1858, of the Singverein. In that same year a second civic choral group, the Singakademie, was founded; in 1863 Brahms would become its director. The enthusiasm for participation in choral music led to

the establishment in late 1863 of a second male choral society, the Schubertbund, by the schoolteacher Franz Mair. It was dedicated to propagating the work and spirit of Schubert. Its initial membership of 86 was made up exclusively of schoolteachers. By the end of the century there were dozens of new amateur choruses in Vienna – male, female and mixed choirs – organized frequently by district or occupation and profession.

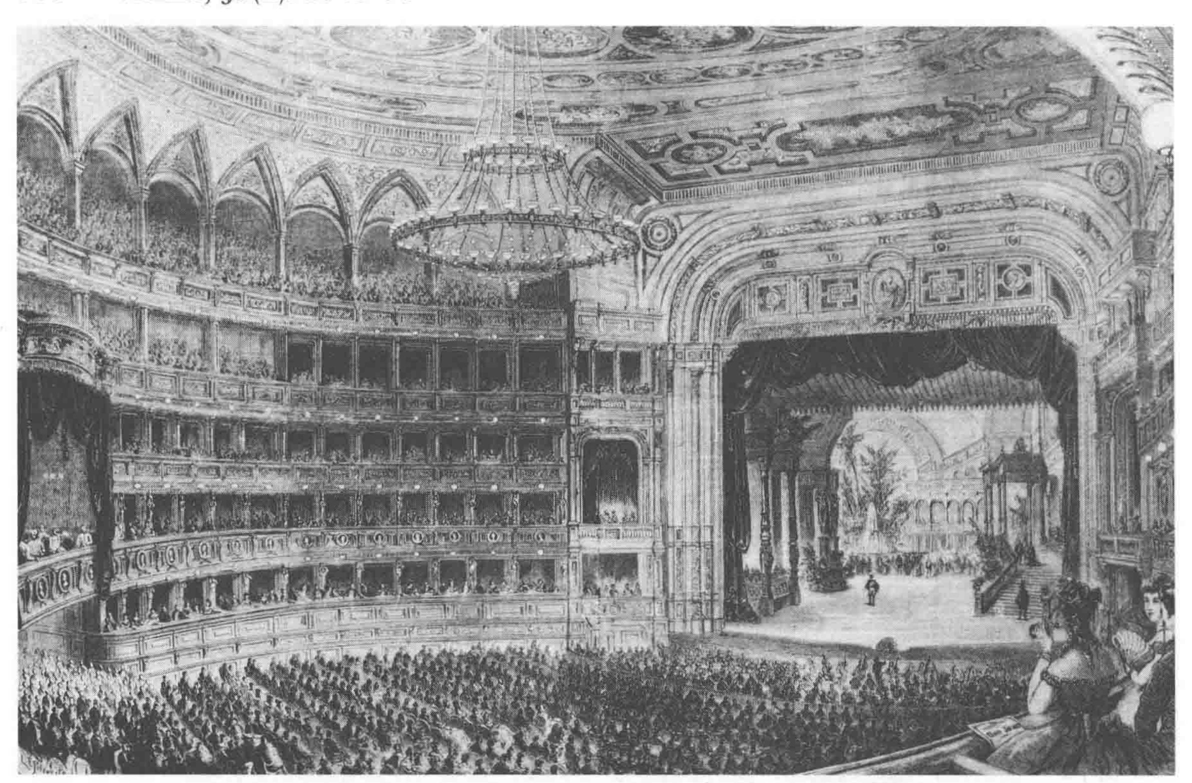
Hellmesberger (the most distinguished member of a multigenerational local dynasty of musicians, the last of whom were Joseph (ii), a violinist, conductor and operetta composer, and Ferdinand, the ballet conductor and cellist, both active at the end of the century) played a decisive role during these years in establishing a higher standard of public performance, as leader of the city's finest quartet (with which Brahms made his début in 1862), director of the conservatory, leading violin teacher, and as a conductor. His quartet was founded in 1849 and he favoured, apart from Mozart and Haydn, the late Beethoven and Schubert quartets. He directed the Gesellschaft from 1851 to 1859. The hostility to amateur instrumental playing led to a public debate that itself highlighted the significance of Viennese music journalism after 1848. L.A. Zellner, later professor of harmony and acoustics at the conservatory, led the fight against dilettantism. Eventually a separate orchestral association of amateurs, the Orchesterverein, was created within the Gesellschaft. At the same time, Zellner was concerned with guiding the tastes of the untutored public and in 1859 began a series of 'historical concerts'. This effort coincided with a growing interest in the history of music as an antidote to the temptations of modern fashion, understood as deriving from popular dance and theatre music on the one hand, and Liszt and Wagner on the other. Among the most influential figures in the musical life of the 1850s and 60s was the charismatic and handsome composer and conductor Johann Ritter von Herbeck. He 'discovered' Schubert's 'Unfinished' symphony and gave it its first performance in 1865. An early supporter of Bruckner's music, Herbeck was responsible for Bruckner's appointment as successor to Simon Sechter as teacher of counterpoint at the conservatory in 1868. Herbeck led the Männergesangverein from 1856 to 1866 and became the first conductor of the Singverein in 1858. He took over the Gesellschaft concerts in 1859 from Hellmesberger and led them until 1870. He was responsible for bringing new music, including works by Liszt, Rubinstein, Brahms, Glinka, Robert Volkmann and Berlioz, to the public in programmes that also included Bach, Handel, Schumann and Mendelssohn. Other Gesellschaft concert directors later in the century included Anton Rubinstein, Brahms, Eduard Kremser (an important figure in the city's choral life and long-time chorus master at the Männergesangverein), Wilhelm Gericke (the conductor who would later be lured to Boston) and, briefly, Hans Richter.

The raising of performance standards reflected the pressure of an ever-growing enthusiastic public for music. Operatic practice mirrored the same concern for quality. In 1854 the conductor Karl Eckert became the first musician to be placed in charge of the Hofoper. He was followed by the Italian Matteo Salvi. Eckert introduced *Lohengrin* in 1858 and *Tannhäuser* in 1859, and his colleague, the conductor Heinrich Esser, produced the first performances of *Der fliegende Holländer* in 1860. Between 1849 and 1870 several of Verdi's operas were performed (*La Traviata*, *Rigoletto*, *Un ballo in maschera*), as were works by Meyerbeer and Marschner, Gounod's *Faust* and Thomas's *Mignon*. In the 1850s the Theater in der Josefstadt also produced Meyerbeer and the first Vienna *Tannhäuser* in 1857 at its summer venue, the Thaliatheater. It was in the 1860s that Vienna's musical politics were formed for the remainder of the century. Richard Wagner arrived in Vienna in 1861, Brahms one year later. Wagner had high hopes; the three operas produced in Vienna had met with great audience success. He had many friends, including the prominent amateur and physician Josef Standhartner, who was also a member of the Gesellschaft board. Wagner hoped that *Tristan* would be given its première in Vienna, but the critical opposition of Zellner, Hanslick and Selmar Bagge took its toll. Bagge, a brilliant teacher (who had begun teaching at the conservatory in 1852), critic and organist, was concerned, like Zellner, about declining standards of musical education and taste in the city and particularly at the conservatory. Wagner's music was viewed as a corrupting force. Hanslick, who had come to Vienna in 1854 and began teaching music at the university in 1861, became the city's most influential critic. He also served as an informal advisor to the Hofoper. The encounter between Hanslick and Wagner resulted in each being the other's arch-enemy. Wagner left the city in disgust in the 1860s, only to return in 1875 in triumph, four years after the Vienna première of *Die Meistersinger*, a work in which Hanslick was parodied as Beckmesser. The comparative critical support for Brahms in the 1860s resulted in part from Brahms's status as heir to a Classical and early Romantic formalist legacy of consummate craftsmanship and exacting standards in the writing of chamber music. Brahms had little respect for Herbeck (whose 1862 performance of Handel's *Messiah* he found wanting in terms of historical performance practices and overall quality) and other local Wagner enthusiasts, despite his own deep admiration for Wagner's genius and achievement.

The clash over musical aesthetics of the 1860s was a response to the striking explosion in the local marketplace for music-making, as reflected in the demand for sheet music and instruments. By mid-century, although the technological lead once held by early 19th-century Viennese piano makers had been ceded to French, English and American rivals, the city boasted many important manufacturers, including Konrad Graff (until 1841), Ludwig Bösendorfer, Friedrich Ehrbar (who took over the Seuffert firm), Carl Dörr and Schweighofer, as well as many builders of cheaper instruments. String instruments were made by Michael Stadlmann, Martin Stoss, Georg Stauffer and Franz Geissenhof. Despite the pre-eminence of Leipzig in music publishing, Vienna continued to possess local publishers, including the houses of C.A. Spina and Tobias Haslinger.

In the arena of popular music, the post-1815 traditions of dance and comic and farcical theatre flourished after 1848. In dance, Joseph Lanner and Johann Strauss, both father and son, dominated. They not only wrote for dance halls and balls, concentrating on the waltz, polka and traditional ländler, but also branched out into longer, elaborate waltz-based compositional forms (fig.17). In 1867 Johann Strauss (ii) composed the legendary *An der schönen, blauen Donau* waltz for male chorus and orchestra, commissioned by the Männergesangverein.

17. Title-page from the piano version of Johann Strauss (ii)'s waltzes 'Geschichten aus dem Wienerwald' (Vienna: Spina, 1868)



The Strauss family also held open-air concerts. Strauss was the first to play Wagner's music and became, at the same time, a close friend of Brahms who deeply respected Strauss's achievement. The unique Viennese theatre of fantasy and farce, perfected by Nestroy (who had made his début as Sarastro in 1822) had traditionally included music. Franz von Suppé had been writing music for the Theater in der Josefstadt from 1845 onwards. His efforts at opera and incidental music for spoken drama led him to emulate and adapt the model of Offenbach using Viennese farce as alternative subject matter. The result, Viennese operetta, made its local appearance in 1860 in the Carltheater (in the Leopoldstadt) with *Das Pensionat* by Suppé which was an explicit mix of Offenbach and Viennese farce. Offenbach himself worked in Vienna in the 1860s; five of his operettas were produced in Vienna between 1859 and 1860. Suppé moved permanently to the Carltheater in 1865 and from that point on he, Johann Strauss (ii) and Carl Millöcker created a staggering output in this unique Viennese form of musical theatre. The pattern of camouflaging social and political satire beneath a surface of implausible farce and childlike fairy tales, characteristic of the 1815–48 era of censorship, flourished in a new era of radical economic and social change in Vienna. Parody, irony and bittersweet sentimentality laced with pessimism would characterize the music and texts of the great golden era of Viennese operetta which began in the mid-1860s and ended in 1900.

The background to the developments in musical culture of the post-1848 period was framed by the sweeping changes in the topography and demography of the city. In the 1860s, by an imperial decree of 1857, the old walls were torn down and the Ringstrasse created. With it came a massive development of public buildings and dwellings that linked the inner city to the outlying districts. In 1869 the first new public structure was finished, initially known as the Kaiserlich-königliches Hofoperntheater im neuen Hause (fig.19), designed by August von Sicardsburg and Eduard van der Nüll, with nearly twice as many seats as the Kärntnertortheater. It was inaugurated with a German-language production of *Don Giovanni* (fig.20). In 1870, with the assistance of private funds and a lottery, the Gesellschaft dedicated its new neo-classical home near the Ringstrasse, the Musikverein, designed by Theophilus Hansen, with over 1600 seats (fig.21), and a second smaller hall with nearly 700. The building also housed the conservatory and the archive and offices of the Gesellschaft and the Männergesangverein. In 1874 Bösendorfer opened a chamber music hall seating over 500 in the old Liechtenstein riding stables. It was to serve as a main venue for concerts until 1913 when it was torn down. Not to be outdone, Ehrbar opened his own concert hall in the fourth district in 1877; it was there that Brahms chose to introduce his new works to a close circle of friends.

The failure of the Habsburg monarchy to keep its Italian provinces after Solferino (1859) and its eventual defeat at the hands of the Prussians in 1866 led to a constitutional crisis. This resulted in the creation of the dual monarchy and the liberalization of laws, including

those governing migration and residence in 1867. At the same time, the Gründerzeit era, the economic boom of the 1860s (that ended abruptly in the crash of 1873), sparked a sustained influx of people from all over the empire to Vienna between 1867 and 1914. The city grew rapidly, with the introduction of ethnic minorities from Czech, Polish and southern Slav regions. The Jewish population in Vienna grew to over 12%. The diversification and growth of the city created a widely shared mythology of and nostalgia for a pre-modern 'old Vienna', for pre-1848 mores and culture, during the late 19th century. Music, in the home and concert hall, both popular and classical, assumed increased significance as a mark of civic identity and acculturation, particularly for new immigrants. After 1870 music came to define a distinct Viennese sensibility (tied to local history, from Gluck to the Strauss family) that was at once reflective and critical of modernity. Love of music and its local traditions became an accessible emblem of authentic membership in a civic environment in which only a small minority was native by birth and few had access to power through voting rights and political participation.

The increased demand for music was mirrored by the fortunes of the Vienna Philharmonic. After more than a decade of only occasional concerts, from 1854 its appearances became annual; from 1860 onwards it gave as many as nine concerts a season. Eckert conducted the orchestra until 1860; from 1860 to 1875 Otto Dessoff led the orchestra. By the 1870s, when the concerts moved from the Kärntnertortheater to the new Musikverein, its concerts, like those of the Gesellschaft, were fully subscribed and seats were passed down in families from one generation to the next. The repertory under Dessoff included a good deal of Beethoven, some Haydn and Mozart and a considerable amount of new music, ranging from Brahms and Wagner to Karl Goldmark, Rubinstein, Joseph Rheinberger, Franz Lachner, Robert Volkmann, O.J. Grimm, Woldemar Bargiel, Herbeck and Friedrich Gernsheim. Mendelssohn and Schumann were also generously represented. It should be noted that throughout the 19th century the Hofkapelle continued, providing sacred music for the Sunday morning mass. The Vienna Boys' Choir (Wiener Sängerknaben, an institution that would survive the fall of the monarchy in 1918) was used and the direction was given over to the leading conductors including Hellmesberger and Herbeck. Sechter and his successor Bruckner also served as Hofkapelle organists. The repertory extended to include Schubert's sacred music. Gottfried von Preyer (1807–1901), a pupil of Sechter's and director of conservatory from 1844–9, authored more than 200 sacred works and, from 1853 to the end of the century, served as director of music at the Stephansdom. Salomon Sulzer (1804–90) was the dominant figure in the reform of the musical aspect of Jewish liturgy; his role as singer, composer and teacher extended beyond the confines of the Jewish community and mirrored the growing importance of that community in Viennese musical culture.

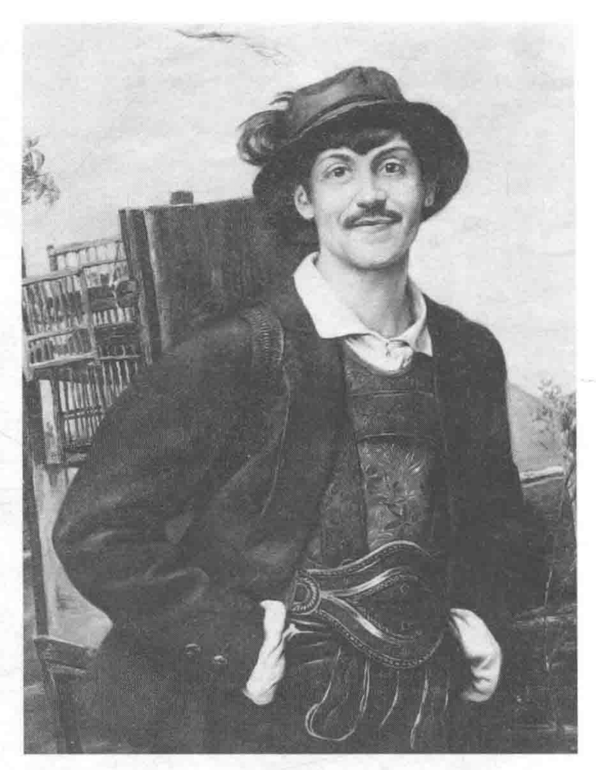
(iii) 1870–1913. Despite the severity of the economic crash of 1873, which followed the 1873 Vienna World Exposition, the 1870s witnessed a dramatic growth in the range and character of musical life. As a centre of learning, the conservatory attracted a cadre of students who would become legendary. They included Mahler and Hugo Wolf. The enrolment rose to nearly 700. During the late 19th

21. Grosser Saal of the Musikverein, designed by Theophilus Hansen, 1870: collotype by Max Jaffé

century, over 25% of the students were Jews, and over 50% of all students took the piano as their primary field of study; violin was the next largest subject of study. Music education was not limited to the conservatory; other schools flourished. By the mid-1890s, Ludwig Bösendorfer would complain of a veritable 'plague' in the demand for piano instruction. Teachers and simplified instruction systems became ubiquitous. The most prominent private teacher was Theodor Leschetizky (to whom Mark Twain brought his daughter for lessons). Prominent pianists and piano teachers in the 19th century included Julius Epstein, Anton Dorr, Emil Sauer, Alfred Grünfeld and Ignaz Brüll.

The architecture of the Ringstrasse, Vienna's grand new thoroughfare, was decidedly historicist, evoking the Classical, Baroque and Renaissance past. Likewise in the 1870s, the cult of classicism and historicist taste flourished in music, focusing particularly on the Viennese masters from Gluck to Schubert. The Musikverein opened with an extensive Beethoven centenary that would be a precursor of the evolution of Viennese taste. In the Gesellschaft concerts in the 1870s and 80s, works by Beethoven, Mozart and Haydn accounted for over 30% of the repertory. All in all, by 1878 less than a quarter of all works performed in Gesellschaft concerts were by living composers. In the early 1870s Brahms directed the Gesellschaft concerts and introduced music written before Bach and Handel, including works by Henricus Isaac, Johann Rudolf Ahle and Johannes Eccard. This signalled an increasing interest in the history of music and a greater frequency of so-called 'historical' concerts.

During the 1870s and 80s the repertory of the Vienna Philharmonic was somewhat less conservative, reflecting the absence of amateur governance, although more than a quarter of its offerings were devoted to Mozart and Beethoven. This more progressive stance was the result of the long tenure of Wagner's close associate Hans Richter who conducted the orchestra 214 times between 1875 and 1898. In his tenure not only were all the Brahms symphonies performed, but also the second, third, fourth and eighth symphonies of Bruckner alongside the works of less well-known Viennese composers such as Robert Fuchs, Ignaz Brüll and Goldmark. The Gesellschaft, in continual financial difficulties, was supported less by the high aristocracy and more by the so-called 'second society', the newer élite of the city.



The leading patrons of music included a highly educated intellectual élite ranging from the industrialist family of Karl Wittgenstein (father of Ludwig and Paul), the Fellingers, Wertheimsteins and the Gomperz family of academics, to the great surgeon Theodor Billroth, himself an amateur instrumentalist. The enthusiasm for music involved a combination of a glorification of a canonic past with a partisan enthusiasm for either Brahms and his circle or Bruckner, who became, in the 1870s, the standard bearer for a new direction in music influenced by Wagner.

The membership lists of the Männergesangverein in this period were over 50% men of commerce (including bankers and industrialists), 30% civil servants and professionals. In 1872 this organization triumphantly dedicated to the city a monument honouring Schubert, designed by Hansen and located in the Volksgarten. In the later 19th century, Schubert symbolized the uniquely Viennese synthesis of international classical greatness and distinctly Viennese traditions. In the contemporary local debate concerning Brahms and Bruckner, both sides claimed the spirit of Schubert for their cause.

The 1870s and 80s were also the highpoint of the golden era of operetta. The greatest works of Johann Strauss (ii) received their premières. C.M. Ziehrer and Carl Zeller were two important rivals in this field. Strauss composed 15 operettas, most of which were first performed at either the Theater an der Wien or the Carltheater. The local taste for Offenbach was undiminished in the 1870s. The number of local operetta composers increased and included the choral conductor of the Männergesangverein, Herbeck's successor Eduard Kremser (who also edited the most popular compendium of folk music), as well as Josef Hellmesberger (ii). The works of Arthur Sullivan were also immensely popular. The authors of texts and librettos of operetta included famous critics (notably Max Kalbeck) and specialists such as Viktor Léon and Hugo Wittmann (who wrote for Strauss and Millöcker). Theodor Herzl also wrote operetta texts. In a single decade, between 1870 and 1880, 100 operettas received their premières in Vienna, and another 180 new operettas were presented in the city before the end of the century.

The popularity of musical theatre in Vienna led to the construction of the Komische Oper am Schottentor in 1874 (later renamed the Ringtheater) as a centre for comic opera, in imitation of the Paris Opéra Comique. The fire that broke out in December 1881 during a performance of Offenbach's *Les contes d'Hoffmann*, with disastrous consequences, contributed (after a dramatic trial) to the permanent revision of standards for theatre construction. Although the Ringtheater was not rebuilt, in 1883 the increased demand for comic musical theatre was met by the opening of the Raimundtheater, designed in late historicist style. It opened with a performance of Raimund's *Die gefesselte Phantasie* with music by Wenzel Müller. With the death of Johann Strauss in 1899, the golden era ended and the so-called silver age of Viennese operetta began. Well over 250 new operetta productions were given their premières in the city between 1900 and 1913. Prominent composers in this period include Emmerich Kálmán, Edmund Eysler, Ralph Benatzky, Oscar Straus, Oskar Nedbal, Leo Fall and Richard Heuberger.

In the early 20th century the new operettas came under fire as cheap, trivial and reflective of the commercial corruption of musical taste. Despite the admiration of young modernists such as Schoenberg and Zemlinsky for Johann Strauss (ii), the output of the silver age of operetta composers was largely found wanting. After all, a striking contrast between the public taste for operetta and domestic salon music (a mixture of operatic tunes and sentimental piano music) and the rejection of new concert music was clearly visible. Following the lead of the writer and journalist Karl Kraus and his close friend, the architect Adolf Loos, the manipulative sensationalism and superficiality in modern musical theatre, celebrated by a corrupt world of newspaper criticism, was condemned. The works of Nestroy, Offenbach and Johann Strauss were held up as examples of ethical and aesthetic greatness in popular art forms. A new dimension of popular music found its expression in the success of the Schrammel ensemble, a quartet of local players who specialized in dance and song music. The Schrammels, all trained musicians, began to perform their unique amalgam of Viennese music in 1878; by the 1890s their distinct style and sound began to rival the Strauss tradition as emblematic of Viennese culture (fig.23).

22. Alexander Girardi as Adam in Zeller's 'Der Vogelhändler', a role he created at the Theater an der Wien, 10 January 1891: portrait by Rudolf Hausleithner, c1891 (Museum der Stadt Wien)

In order to celebrate the 50th anniversary of Franz Joseph's reign in 1898, a second major state theatre, the Stadttheater, was opened (later renamed the Volksoper). It was designed initially to offer the growing Viennese public increased access to spoken theatre, but early in the 20th century it was turned into an opera house devoted to popular works, in contrast to the opera house on the Ringstrasse. However, operatic life, so central to the Viennese obsession with theatre and music, remained centred on the politics and policies of the Imperial opera. Herbeck led this from 1870 to 1875, during which time he mounted the première of *Die Meistersinger*. He was succeeded by the former manager of the Carltheater, Franz Jauner, who produced the first *Carmen* and brought Verdi to conduct the première of *Aida*. Verdi's *Requiem* was performed at the opera house in 1876. Jauner hired Hans Richter as chief conductor. Richter put on the first complete *Ring* cycle in 1879.

Jauner was succeeded by Wilhelm Jahn who led the house from 1881 to 1897. Jahn worked well with Richter. By the mid-1880s the disastrous economic crisis of the late 1870s had receded somewhat, permitting the opera

23. Schrammel Quartet, 1886–93: Georg Dänzer (top), Joseph Schrammel, Johann Schrammel and Anton Strohmayer

house to flourish. In response to the demographic changes in the city and the monarchical tolerance of ethnic self-expression by non-German Habsburg populations, two of Smetana's operas were presented, *The Bartered Bride* and *Dalibor*. Goldmark's *Die Königin von Saba* and *Das Heimchen am Herd*, Ignaz Brüll's *Das goldene Kreuz*, Mascagni's *Cavalleria rusticana* and Massenet's *Manon* and *Werther* were also produced. Jahn placed *Die Fledermaus* on the imperial stage and gave the première of Strauss's failed effort at serious opera, *Ritter Pázmán*. Jahn also sought to revive some of Schubert's operas and maintained a commitment to the Romantic opera tradition of Weber, Marschner and Lortzing. Nonetheless, the centrepieces of the opera repertory in the 1890s were the operas of Wagner and Mozart. Also important were the works of Verdi and Meyerbeer. In any one season, however, Viennese operagoers could hear operas by Adolphe Adam, Auber, Cherubini, Gluck, Halévy, Wilhelm Kienzl, Viktor E. Nessler, Nicolai and Rossini. As a result of the extent and quality of local music journalism, leading opera singers became public personalities.

The self-confidence of the Viennese regarding the quality of local musical culture at the end of the century was best expressed by the international exhibition of music and theatre in 1892. Tchaikovsky was present (but was outraged by the juxtaposition of outdoor concerts and beer drinking). There were extensive presentations of opera and concert music. In the 1870s and 80s music journalism flourished not only in the daily press but through specialized journals. In addition to Hanslick, leading music critics of the last quarter of the century included Max Kalbeck (later Brahms's biographer), Ludwig Karpath, Theodor Otto Helm (a Bruckner supporter who wrote one of the first guides to the Beethoven string quartets), Richard Heuberger (a choral conductor and the composer of *Der Opernball*), Robert Hirschfeld (a student of Hanslick), Gustav Schönaich, Richard Wallaschek, Richard von Kralik (who also directed the Singakademie) and the composer Wilhelm Kienzl. The Viennese link between music and theatre permitted many of these to function as theatre critics as well. It is not surprising, therefore, that Ludwig Speidel also wrote on music. Perhaps the most notorious episode in the history of Viennese criticism was Hugo Wolf's tenure in the mid-1880s at the *Salonblatt* where he regularly pilloried the work of Brahms and called into question the standards of musical culture displayed by the Viennese audience. The most significant late 19th-century Viennese musical periodical was the *Neue musikalische Presse*, published from 1892 to 1909.

By the 1890s, however, new sources of discontent were visible in Vienna's musical life. Hans von Bülow's Meiningen orchestra made an appearance in the 1880s. The excellence of its performance standards put Richter's Vienna Philharmonic to shame. The growth in demand for concerts in the 1890s had far outdistanced supply. In the 1890s the Budapest Concert Orchestra made regular trips to Vienna. A leading impresario, Albert Gutmann, tripled the number of concerts he presented between 1890 and 1900. As the success of Gutmann's work suggests, the 1890s witnessed increased popularity not only of chamber music concerts, given by visiting artists and distinguished local musicians such as the Rosé Quartet (headed by Arnold Rosé, the long-serving leader of the Vienna Philharmonic and brother-in-law of Mahler), but also of orchestral concerts. In a quartet comprising Philharmonic colleagues, Rosé continued the tradition of the Hellmesberger Quartet. He introduced the work of Schoenberg in 1907 and 1908.

The 1892 exhibition sparked a sustained local debate about the need for a second orchestra and another major concert hall. Furthermore, in the 1890s, a younger generation of critics and scholars, trained at the university and conservatory, sought to challenge and expand the tastes of the Viennese public. Guido Adler, Mahler's boyhood friend, founded the Musikhistorisches Institut in 1898 at the university when he succeeded Hanslick. Adler established Vienna as a centre of modern scholarship and initiated a series of new critical editions of early music and the classical masters (e.g. founding the Denkmäler der Tonkunst in Österreich series), following in the tradition of the great 19th-century Bach, Handel, Mozart and Schubert editions. For Adler's generation, however, contemporary musical composition and music history were inextricably linked, as he expressed in 1885 in the first issue of the important journal *Vierteljahrsschrift für Musikwissenschaft*.

Adler's polemical writings mirrored the growing concern for standards in music education and taste. He, along with Hirschfeld, encouraged the use of the city-wide celebrations of Mozart's death (1891) and Schubert's

24. Band playing in the Volksgarten, Vienna: engraving by Karl Trill from the 'Illustrirte Zeitung' [Leipzig] (12 October 1889)

birth (1897) as occasions to deepen and broaden access to and civic identification with classical musical culture throughout the population in the rapidly growing metropolis. The enthusiasm for opera and operetta only heightened the lingering suspicion among some musicians (including Josef Labor, the first teacher of Alma Mahler and a friend of the Wittgenstein family) about debased tastes within the public first articulated in the 1860s. With Brahms's explicit support, Mahler was brought to Vienna in 1897 as a conductor at the imperial opera in an effort to raise standards; he quickly took over the institution and later replaced Richter (who went to England) at the Vienna Philharmonic. The generational conflict was evident in the debate between Hirschfeld and Hanslick over the value of Renaissance music and its appropriateness as an object of public musical performance; Hirschfeld had initiated a series of Renaissance evenings beginning in 1884 that Hanslick derided. The changes of the 1890s were also signalled by the deaths of Bruckner in 1896 and of Brahms in 1897 (who, as the Board of Directors of the Gesellschaft, had exercised considerable influence in the city's musical life). The shift in the aesthetic debate of the late 19th century – from a conflict between a Brahms axis and a Wagner and Bruckner circle – was evident in Adler's 1904 university lectures on Wagner that cast Wagner as historical: a classic master in a tradition going back to Palestrina. The new battle was between a novel post-Wagnerian Viennese modernism and an allegiance to a neo-Wagnerian late Romantic idiom.

The stirrings of the late 1890s coincided with new movements in literature (Jung Wien) and visual arts (the Vienna Secession, founded in 1897). Even more relevant to new music were rival radical modernists in literature, art and architecture (Kraus, Loos, Egon Schiele and Oskar Kokoschka). Mahler participated in the 1902 Secession exhibition, devoted to Max Klinger's statute of Beethoven, to which Gustav Klimt also contributed. Mahler's appointment at the Hofoper fuelled the debate about contemporary music that took place in a local context, in which taste had become increasingly tied to the past and the level of musical literacy was insufficient to ensure the capacity to follow new developments. Among the most controversial figures in fin-de-siècle Viennese musical life was Richard Strauss, whose orchestral music was first heard in the city in the late 1880s and throughout the 1890s, sparking both outrage and devoted partisanship. During his ten-year directorship of the opera, Mahler explicitly sought to spearhead a radical renaissance. He performed Wagner without cuts; he darkened the house during performance (to encourage concentration on the part of the audience and eliminate distracting socializing during performance); he deepened the orchestra pit; he collaborated with Alfred Roller, a painter and designer and a member of the Vienna Secession. They sought to realize the theories of Adolphe Appia, creating new productions of the works of Wagner and Mozart that used colour symbolism and departed from traditions of stage-set realism. Mahler expanded the repertory by presenting dozens of new works by Puccini, Pfitzner, Strauss, Wolf, Saint-Saëns, Tchaikovsky and Leoncavallo. Mahler attempted to improve performance standards by reining in the egos of star singers, creating an integrated musical ensemble. At the same time, despite constant newspaper criticism of his attitude towards opera stars, he introduced such luminaries as Anna Bahr-Mildenburg,

Marie Gutheil-Schoder, Leo Slezak and Richard Mayr. He became a living legend and was idolized, particularly by a younger generation of musicians, notably the circle around Alexander von Zemlinsky. This included the young Arnold Schoenberg and his students, Alban Berg and Anton von Webern.

The 19th-century tension between a carefree surface attitude and reactionary historicist cultural taste within the Viennese public and a younger generation's progressive engagement with music as the most noble of the arts (cast in the image of the era of Viennese Classicism) came to a head in the first decade of the 20th century. Mahler came under fire for his own music and the presumed arrogance evident in his reorchestrations of Beethoven and cuts in Bruckner. His effort to mount the première of Strauss's *Salome* failed when censors declared the work unfit for the imperial stage. Much to Mahler's embarrassment, the Vienna première took place in 1905 under the aegis of a travelling company from Breslau.

The opposition to Mahler in the popular press also mirrored the growing significance of the Jewish question. Although he had converted to Catholicism to assume the position at the Hofoper, he and Bruno Walter, his young assistant, remained Jews by the terms of contemporary anti-Semitic discourse. The economic difficulties of Vienna in the 1870s and 80s, the reactionary Viennese adherence to artisan and shopkeeper traditions (and therefore the city's relative economic, commercial and industrial backwardness by comparison with Berlin and London) and the consequences of rapid migration to the city had, by the late 1880s, spawned radical reactionary political attitudes, skilfully exploited by the Christian socialism of Karl Lueger (who would become the powerful mayor of the city in 1897, despite monarchical reluctance). By 1900 anti-Semitism was a vivid and constant dimension of Viennese culture and politics; the 1891 Verein zur Abwehr des Antisemitismus boasted nearly 5000 members by 1895. In these numbers were many of Brahms's closest friends (for example, Viktor Miller zu Aichholz). Wagner's local popularity helped fuel anti-Semitism. An anti-Semitic Bruckner cult, supported by the reactionary right and its allies in the local press, was already in evidence long before the composer's death. Brahms and his circle, because of the composer's close friendship with leading Jews, were castigated as philo-Semitic. The influential Akademischer Wagnerverein, founded in 1873, boasted many Jewish founders and members; Bruckner allowed himself to become the honorary president of a rival Wagner society founded in 1890 that explicitly excluded Jews.

Anti-Semitism intersected with a distaste for the style and substance of modernism, even though, ironically, many of the leading figures in the world of operetta were Jews. Mahler came under fire not only for his innovations at the opera but also for his role as symbolic protector of new music. His own compositions experienced limited success in Vienna. But he was the honorary president of Zemlinsky's 1904 Vereinigung schaffender Tonkünstler, a new organization devoted to young composers and their work that gave the first performances of Schoenberg's *Pelleas und Melisande* and Bartók's First Orchestral Suite. In 1907 and 1908 the premières of Schoenberg's chamber music resulted in disruptions and open conflict. Mahler defended Schoenberg. Critics and outraged audience members had allies among professional and accomplished amateur musicians. The new seemed to challenge their taste and judgment. Even Brahms's friend Theodor Billroth, in a posthumous collection of essays entitled *Wer ist musikalisch* and edited by Hanslick (1896), articulated the mix of social cultural criticism directed at modern musical practices and tastes characteristic of Viennese aesthetic conservatism. Mahler encountered opposition from conservative musicians in the orchestra of the Vienna Philharmonic, including the cellist, pianist and composer Franz Schmidt who resented his style and presumed favouritism. The controversy surrounding Mahler marked the beginning of a sustained 20th-century tension in Viennese music between progressive modernist cosmopolitanism and reactionary nativism. In the 1912 Wiener Musikfestwoche, for example, the Vienna Philharmonic did not play a single work by a living Viennese composer. Among the associations formed on behalf of the new were the 1903 Ansorge Verein and the older Hugo Wolf-Verein (1897–1905), as well as the 1908 student-based Akademischer Verband für Literatur und Musik that sponsored concerts. In 1907 Mahler resigned from the opera and accepted a position in New York. His departure became a public scandal and the widest range of Vienna's élite expressed its dismay and support.

Mahler's successor at the opera, Felix Weingartner suffered by comparison, despite his outstanding qualities as a conductor and composer who he brought Strauss's *Elektra* and Johann Strauss's *Zigeunerbaron* into the repertory. He was succeeded in 1911 by Hans Gregor who led the house until the end of World War I. Gregor was not a musician but a brilliant producer who brought *Der Rosenkavalier*, *Ariadne* and *Salome* into the repertory, alongside Debussy's *Pelléas et Mélisande* and Puccini's *La fanciulla del West*. During Gregor's tenure, Lotte Lehmann and Maria Jeritza made their débuts. A retrospective account of the Hofoper repertory from 1869 to 1900 reveals that the most frequently performed works were *Aida*, *L'Africaine*, *Carmen*, *Cavalleria rusticana*, *Der fliegende Holländer*, *Les Huguenots*, *Der Freischütz*, *Lohengrin*, *Faust*, *Le prophète* and *Tannhäuser*. This indicates an important distinction between the Viennese audience for instrumental music (the public at the Gesellschaft concerts, the Philharmonic and for chamber music) and for opera. The latter was far less tied to a notion of classicism. But the audience-pleasing spectacle and dramatic accessibility of early Wagner, French grand opera and *verismo* during the last decades of the century only deepened the suspicion of conservative critics such as Brahms and Billroth that a decline in musical culture had taken place. Local operatic taste fuelled the ambitions of a younger generation, particularly Mahler, to rescue the music in opera by emphasizing the total ensemble and the works of Mozart (and even Haydn, one of whose operas Mahler attempted to revive) and the later works of Wagner.

The demand for more orchestral concerts, already a matter of public debate in the 1890s, led to the founding of the Wiener Konzertverein in 1900. In 1907 the composer and conductor Oskar Nedbal formed the Wiener Tonkünstlerorchester. Unlike the Vienna Philharmonic, these orchestras were not made up of members of the opera orchestra but were the first free-standing professional orchestras in the city. These two organizations were the first orchestras exclusively created for concert performance. Ferdinand Löwe, the protégé of

Bruckner, directed the Konzertverein (he also served as director of the Gesellschaft concerts from 1900 to 1904). Löwe emerged as an important figure. He supported new music and brought all of Bruckner's symphonies to the concert stage using the Konzertverein orchestra. In 1905, along with the *Arbeiter-Zeitung* music critic Josef David Bach, Schoenberg's friend and a leading socialist, Löwe helped start the workers' symphony orchestra concerts, part of an effort (which lasted until 1934) among less conservative musicians to extend concert music to the largest segment of the city, the working classes. A notable event in those concerts was an appearance in 1913 of Furtwängler with George Szell as soloist. Eventually the Wiener Konzerthausgesellschaft, a new music society, was founded in 1900. A year later, in 1901, Emil Hertzka, who started his career with the Weinberger publishing firm, founded the Universal Edition that was to become a pioneer in the publication of 20th-century music, including that of Schoenberg, Webern, Schreker, Marx and Mahler. The creation of new orchestras and the Konzerthausgesellschaft led to the construction of Vienna's second major concert hall, the Konzerthaus, in 1913.

1913 marks the end of an era, not only on account of the creation of a new concert hall, but also because of two spectacular events which symbolized the divided character in Vienna's musical life. Franz Schreker (using an expanded Tonkünstlerorchester and the Philharmonischer Chor, founded in 1907) conducted two enormously successful performances of Schoenberg's *Gurrelieder*. Nonetheless, in March 1913 Schoenberg conducted a performance of music by himself, Berg, Webern, Zemlinsky and Mahler at which a riot took place requiring police intervention.

(iv) 1913–34. The most important new factor in musical life in the immediate postwar years was the new Konzerthausgesellschaft. It was directed until the Anschluss by Hugo Botstiber. Nedbal remained active until 1917. Owing to the post-World War I political and financial crises, the two new orchestras created at the beginning of the century merged in 1921 into the Wiener Sinfonie Orchester and ultimately, in 1933, into the Wiener Symphoniker (the Vienna SO). Löwe led the combined orchestra until 1924. This orchestra provided the concerts at the new Konzerthaus; its repertory was less conservative than that of the Gesellschaft or Philharmonic. The new orchestras of Vienna that ultimately merged were responsible for the first performances of works by Dohnányi, Elgar, Franck, Pfitzner, Sibelius, Debussy, Bartók, Busoni, Reger, Szymanowski and Skryabin. The aesthetic agenda was not only progressive, it challenged a distinct local provincial prejudice on behalf of German and Austrian composers. The new society also sought to offer popular concerts at low prices (continuing in a more serious vein a tradition begun in the late 19th century by Eduard Strauss at the Musikverein and later by Löwe before the war with the Konzertverein orchestra), including Tuesday events in the Volksgarten. Eventually, beginning in 1933, the new orchestra also spun off a group to broadcast lighter music on the state radio and consented to have its regular concerts broadcast. In the absence of imperial patronage and with the creation of a republic with a city government controlled by socialists, the economic support for musical life was in disarray after 1918. The pre-war populist agenda of the Konzerthausgesellschaft and the new orchestras and the fact that some concert life continued uninterrupted through the war years gave some glimmer of optimism despite the evident difficulties. Furtwängler became a primary conductor in 1919; the orchestra gave a complete Mahler cycle under Oskar Fried in 1921. Between 1921 and 1933 conductors included Leopold Reichwein, Clemens Krauss, Paul von Klenau, Knappertsbusch and Walter. Oswald Kabasta took over as music director in 1933.

The Gesellschaft's economic situation had become precarious before 1914. In 1909 the conservatory was turned into a state institution; the viability of private support had run its course. Löwe was the conservatory's director after the war. However, the leading figures in conservatory education in the 1920s and early 1930s were the composers Joseph Marx and Franz Schmidt. The open conflicts surrounding Mahler and Schoenberg before 1914 had created a division between modernism and neoromanticism; that division ran parallel with implicit and explicit anti-Semitism. The protagonists of the new, notably Schoenberg, Berg, Webern, Wellesz and Eduard Steuermann, were either Jews or allied with Jews; the defenders of tradition, Marx and Schmidt, were Catholic and thoroughly Austrian. The postwar era heightened the old debate. Austrian identity, cultural and political, in a post-monarchical era was now at issue. The new republic was for the first time linguistically homogeneous; the Jews became the leading minority. Arguments for unification with Germany recurred between 1918 and 1938. At the same time, in the construction of a new Austrian cultural ideal, Marx and Schmidt served as foils against a seemingly rootless and lawless 'foreign' modernism. Ultimately, by 1926, Schoenberg and Schreker had abandoned Vienna, having taken up posts teaching in Berlin. Berlin replaced Vienna as the centre of modernism, even though Wellesz, Webern and Berg remained tied to Vienna.

However, immediately after the war the eventual victory of the conservative musical and critical community and audience was still uncertain. Modernists rallied to the socialist cause. In 1918 Schoenberg and Berg organized a utopian rival notion of concert life through the Verein für Musikalische Privataufführungen. This evoked the exclusive traditions of intimate connoisseurship and enthusiasm for new music characteristic of the era of Haydn and Beethoven. Initially its concerts were closed to all but members. No critics were permitted and no applause allowed. Ultimately the society gave some public concerts. It performed a staggering number of new works, many in reduced arrangements for small ensemble and multiple keyboards. Even music by J.M. Hauer was presented, who later developed his own 12-note system and, like Schoenberg, conceived of music as closely allied to painting (notably that of Johannes Itten). Transcriptions of music by Johann Strauss and Mahler (including a Zemlinsky arrangement of the Sixth Symphony for two pianos) were included. The society was unable to continue beyond 1921.

The brief enthusiasm for modernism in the immediate postwar years dissipated throughout the 1920s; as early as 1921 Paul Stefan observed, 'new music in Vienna has beaten a long retreat'. It gradually gave way to the triumph of reactionary aesthetics and politics. This can be observed despite the quality and reach of the key pro-modernist periodicals, *Der Merker* (1909–22; founded by Ludwig Hevesi, the advocate of the Secession whose music editor was Richard Specht, the author of

monographs on Mahler and Strauss), the *Musikblätter des Anbruchs* (1919–37), and *Pult und Taktstock* (1924–30; edited by Erwin Stein, a Schoenberg pupil). In 1932 Willi Reich, who studied with Berg, founded *23 – Eine Wiener Musikzeitschrift*, designed to combat the smug conservative journalistic critical discourse on music of the day. The modernist movement was given impetus by two chamber music ensembles, the Kolisch Quartet, led by Rudolf Kolisch, and the younger Galimir Quartet. The Kolisch Quartet gave premières of works by Berg, Webern, Bartók and Schoenberg (playing from memory), as did the Galimir ensemble (led by Felix Galimir with his sisters), a group that also championed the music of younger composers.

In the area of music history, Adler continued to dominate the scene, producing several generations of scholars and scholar composers, including Hans Gál. The fine archival and editorial standard set by Eusebius Mandyczewski, the long-time archivist of the Gesellschaft and friend of Brahms, remained intact even after Mandyczewski's death in 1929. It was in the postwar era that Heinrich Schenker produced and published his seminal work in music theory. He had been a teacher, editor, critic and composer before the war. But his major contributions to analysis date from a postwar environment in which the defence of tonality and its formal consequences was at the centre of the debate over 20th-century music. Schoenberg and Schenker had both written harmony treatises before the war. They both celebrated the significance of Brahms and both were critical of contemporary habits of listening. But they diverged fundamentally with regard to the possibilities for the future. Schenker edited the periodical *Der Tonwille* between 1921 and 1924.

The role of the Gesellschaft as guardian of tradition in the postwar era was mirrored in its programmes which included a German Bach festival in 1914, a Schubert festival in 1923, a Johann Strauss centenary in 1925, the Beethoven centenary in 1927, a second Schubert festival in 1929 and a Brahms celebration in 1933. With respect to contemporary music, its tastes in the 1920s were limited to Reger and Richard Strauss. The pivotal figure in the first postwar years was Franz Schalk, who led the Gesellschaft concerts until 1921; he was succeeded by Furtwängler, who stayed until 1934. Other conductors included Robert Heger and Reichwein. Criticism in Vienna after 1918 sustained the more conservative direction of the pre-war era. Julius Korngold, Hanslick's successor at the *Neue Freie Presse*, had little use for Schoenberg and focused on the fortunes of his son, the prodigy Erich Wolfgang, whose brilliant operatic music made him a rival to Richard Strauss in a new generation. Other notable critics of the era included Max Graf, Paul Stefan, Heinrich von Kralik and Elsa Bienefeld.

During the postwar era the Vienna PO worked under Weingartner until 1927; his long tenure was followed briefly by Furtwängler and then by Krauss. Richard Strauss toured with the orchestra and was a frequent guest. The orchestra, organized as a self-governing body, provided the appropriate patriotic service during the war and continued to give concerts. Despite its historicist leanings, in the 1920s works by Stravinsky and Ravel were programmed. Not surprisingly, however, most of the new music presented was of conservative or local character: works by Marx, Julius Bittner, Richard Strauss, Reger, Respighi, Gustav Holst, Korngold, Bloch and Pfitzner. During the postwar period the Vienna PO began to exploit an international aura as an authentic link to the Viennese classical past, through tours and its service at the Salzburg Festival from 1925 on. It cultivated a well-rehearsed conceit about its sound, instruments and interpretative traditions. This self-appointed role as guardian of an authentic Viennese sound world and legacy, which led to the rewriting of its actual historical relationship to Brahms, Bruckner and Mahler, would dovetail all too neatly in the 1930s with Austrian fascism and Nazism.

Of all Vienna's musical institutions, the opera was the most directly affected by the fall of the monarchy in 1918. The Hofoper became a state institution, the Staatsoper. It now had a rival, the Volksoper, which Zemlinsky directed until 1911. In 1919 Weingartner, once director of the Hofoper, took charge at the Volksoper and Franz Schalk (who, together with his brother Josef and Ferdinand Löwe, had been a loyal advocate and disciple of Bruckner) assumed control with Richard Strauss (who signed a five-year contract) at the Staatsoper on the Ring. Schalk and Strauss brought new works to the stage. During the war, in 1917, *Jenůfa* had been produced. But from 1919 to 1924 the public encountered works that were either new or had never been performed in Vienna, by Pfitzner, Schreker, Weingartner, Puccini, Korngold, Bittner, Zemlinsky, Richard Strauss (including his ballet *Schlagobers* and his reworking of Beethoven's *Die Ruinen von Athen*), Kienzl and Walter Braunfels. The arrangement with Strauss was inherently unstable and Schalk assumed sole control until 1929. Schalk continued his innovative policies, bringing several Strauss operas and works by Krenek, Hindemith, Ravel and Korngold to the stage. He also produced the first Viennese *Boris Godunov*, *Andrea Chénier* (in a translation by Kalbeck) and *La forza del destino* in a German version written by Franz Werfel. Alfred Roller continued to design productions and the standard of singing and sets remained extraordinarily high. Some productions took place in the Redoutensaal in the Hofburg. Clemens Krauss succeeded Schalk and remained until 1934. Krauss brought in more light opera, including works by Lehár, Suppé, Jaromír Weinberger and Heuberger. *Wozzeck* was first heard in 1930, and Mozart's *Idomeneo* in 1931. Noted for his collaboration with Lothar Wallenstein, Krauss understood the forces of aesthetic and political reaction on the rise in German-speaking Europe after the financial crises of the later 1920s and readily catered to them. In 1927, when Krenek's *Jonny spielt auf* was produced, a public protest was staged, organized by the Nazi movement, accusing the opera house, 'the pride of all Viennese' and 'the pre-eminent cultural institution of the world', of 'succumbing' to a 'vulgar Jewish-Negro defilement'. With Schalk, the last great era of using the leading Viennese opera house to present new works passed.

The Vienna of the late 1920s and early 30s continued its romance with operetta and new forms of dance music. In response to this widespread local craze for the traditions of Viennese operetta, Korngold created, with Julius Bittner, a pastiche of music by Johann Strauss and turned it into the Singspiel *Walzer aus Wien*, which opened in 1930. Korngold added a tango and other contemporary touches in harmonizations evocative of the commercial popular music of the day. Korngold and Bittner offered

an explicit sympathetic expression of the unique Viennese lightheartedness and, in its natural affinity with song and dance, musicality. Over 150 new operetta productions opened in Vienna between 1919 and 1934. During the war years alone nearly 100 new operetta productions opened. Yet beneath this alluring surface of carefree spirit and love of music and nature was a bitterness and resentment within Vienna concerning the direction of musical culture and the identity of its protagonists that would bring disastrous consequences between 1934 and 1945.

(v) 1934–45. Since 1922 tension had existed between the Christian socialists and the Socialist party. A general strike took place in 1927, and in 1931, as a result of the failure of a customs union project with Germany, the leading bank of Austria collapsed. Christian socialism triumphed throughout the country, bolstered by nationalism and by a domestic fascist movement. Yet throughout the interwar period Vienna was the centre of Austrian socialism, despite the strength of local Christian socialism and pan-German sentiment. Dollfuss formed a new government in 1932, based on an anti-socialist coalition. In 1933 he dissolved parliament and curtailed civil liberties. The Austrian attempt to compete with the growing popularity of the Nazis failed as Hitler and the domestic Nazi party became openly defiant of what had clearly emerged as Austro-fascism. By the end of 1934, both the Nazi party and the socialist party were banned. The self-governing autonomy of Vienna (a legacy of its unique status as an imperial city during the monarchy), which had sustained cultural life during the interwar period, was taken away. A Nazi coup failed after Dollfuss's assassination in July 1934. In its wake, from 1934 to 1938, a semi-fascist, single-party state existed, with both Nazis and socialists relegated to underground status. However, the Vienna PO, whose membership had become more rabidly nationalistic, quickly became heavily nazified, as did many other Austrian cultural institutions. Anti-Semitism, long a festering problem, exploded. As the late 19th century had made clear, despite the relative success of the socialist movement in Vienna, the lure of a non-internationalist mix of nativism and socialism was far more powerful. Between 1934 and 1938 the Gesellschaft concerts gave an inkling of what would dominate during the Nazi period: a thoroughly anti-modern repertory. During this period the leading composer of international stature in Vienna was undoubtedly Berg. Webern was the other major figure who represented the new traditions of Viennese modernism. Neither were Jews. Berg died in 1935. However, in the one performance of his Violin Concerto in Vienna, the entire Philharmonic staged a protest, not only against the Jewish soloist Krasner and conductor Klemperer, but against Berg's music as representative of the sort of insidious Jewish cultural bolshevism derided by the Nazis. The only other work by Berg to be performed after 1934 were excerpts from *Lulu* in December 1935. Representative of modern music was Franz Schmidt, whose *Das Buch mit sieben Siegeln* was enthusiastically received at its première in June 1938, shortly after the Anschluss. No modernist music was heard at the opera. The conservative tradition was represented by the music of Richard Strauss, Wolf-Ferrari, Kienzl, Franz Salmhofer, Respighi and Weinberger. Certainly, Austria became a refuge for many musicians fleeing Nazi Germany after 1933, including Walter, who briefly worked at the opera between 1936 and 1938, and Klemperer. Walter also conducted during this period at the Vienna PO. But the longer term outlook was grim. The one modernist figure without connection to the Schoenberg circle, Hauer, worked in the 1930s in obscurity. Webern, was eventually cut off from all work, despite considerable acclaim as a conductor, and his music was left unperformed.

The Anschluss of March 1938, therefore, reflects not a radical change, but a logical conclusion to interwar politics. Jews were removed from musical life and fled if they could. Nothing symbolized the ironies inherent in the myth of Vienna's musical culture and its relationship to modern politics better than the embarrassing necessity faced by the Nazis with respect to the music of Johann Strauss. The baptismal records in the Stephansdom had to be falsified in order to prevent the operettas and waltzes of Strauss, the epitome of local greatness, from being banned.

Among the émigrés were the aged orchestra leader Arnold Rosé; the operetta composer Benatzky; the pianists Serkin, Steuermann, and Paul Wittgenstein; the composers Marcel Rubin (to Mexico), Ernst Toch, Karl Weigl, Paul A. Pisk, Wellesz, Korngold, Zemlinsky and Emmerich Kálmán; the scholars and critics D.J. Bach, Hugo Botstiber, O.E. Deutsch, Karl Geiringer, Hans Gál, Paul Stefan, Eric Werner and Hans F. Redlich; and a staggering number of performers and writers, ranging from Mosco Carner to Rudolf Kolisch, the librettist Alfred Grünwald, Lotte Lehmann, Bernhard Paumgartner, Marcel Prawy, Josef Reitler, Robert Starer and Elisabeth Schumann.

The journalist Hugo Bettauer, who was assassinated in 1925, had published a satirical book in 1922 entitled *Eine Stadt ohne Juden: ein Roman für übermorgen* ('A city without Jews: a novel for the day after tomorrow'). That 'day after tomorrow' became an immediate reality after 1938. The Gesellschaft was nazified and even the aged Guido Adler was informed that he had been stripped of his honorary membership. The Austrian association of composers was disbanded and replaced by a new organization of 'German composers from Austria'. The opera house was also purged and nazified as was the Konzerthausgesellschaft. Furtwängler took over the Philharmonic and Kabasta the Gesellschaft concerts along with the Vienna SO concerts at the Konzerthaus. The breach was filled by an embarrassingly large number of distinguished non-Jews, including Karl Böhm, Elisabeth Schwarzkopf, Sena Jurinac, Rudolf Moralt, Wolfgang Schneiderhan, Wilhelm Backhaus, Clemens Krauss, Eugen Jochum, Franz Konwitschny, Josef Kleiberth, Leopold Reichwein, Joseph Marx and Hans Knappertsbusch. Krauss served during the Nazi era as the Hofmusikkapelldirektor. Böhm directed the opera from 1943 to 1945.

During the war years the opera produced music by composers sympathetic to the regime, including Carl Orff, Werner Egk and Franz Lehár. The wartime Gauleiter of Vienna, Baldur von Schirach, fancied himself a patron of the arts. Strauss moved to Vienna and participated in the massive 1941 Mozart festival, designed as a propaganda event. He also celebrated his 80th birthday in the city. Despite his commitment to aesthetic modernism, Webern became an enthusiastic proponent of the Nazis. He was not the first or only modernist to attempt an accommodation. Krenek had been an enthusiastic supporter of Dollfuss and his successor Schuschnigg, openly declaring

his allegiance to Austro-fascism. However, by 1936 Krenek, a non-Jew, was, unlike Webern, clearheaded enough to choose emigration.

The late 19th-century nostalgia for a pre-industrial Vienna, local ambivalence to modernity and virulent anti-Semitism all found expression in the Viennese enthusiasm for the Anschluss and the arrival of Nazism. The repertory favoured during the war years focused on Bruckner and Schubert; a special emphasis was placed on the music of Reger, Schmidt and Wolf. In the arena of musical scholarship, matters were no better. Nazification extended to musicology and criticism; key representatives were Max Morold, Erich Schenk (who took over the music section at the university), Alfred Orel, Robert Lach (who had joined the Nazi party illegally in 1933) and, above all, Robert Haas, the Nazi who was responsible for the now suspect critical edition of Bruckner. Vienna suffered severley in the final years of the war, during which the opera house was destroyed.

6. Since 1945.

(i) Opera. The Staatsoper entered a period of great achievement after the war despite the fact that its building had been destroyed. Productions were staged in the Theater an der Wien and the Volksoper, with Egon Hilbert overseeing the combined administration and guiding the artistic development of both houses. The Viennese Mozart style became famous throughout the world, represented by the conductors Josef Krips and Karl Böhm, the director Oscar Fritz Schuh, and singers such as Sena Jurinac, Hilde Konetzni, Wilma Lipp, Emmy Loose, Irmgard Seefried, Elisabeth Schwarzkopf, Ljuba Welitsch, Anton Dermota, Hans Hotter, Erich Kunz, Julius Patzak, Paul Schöffler and Ludwig Weber. Mozart's Italian operas, as well as most foreign works, were sung in German.

The rebuilding of the house on the Ring was undertaken by the architect Erich Boltenstern, the renovated auditorium having a balcony, gallery and three tiers of boxes, with seating for 1642 and standing room for 567. Böhm conducted *Fidelio* at the reopening on 5 November 1955 and became the new director. The following year Ernst Ansermet conducted one of the Staatsoper's rare premières, of Frank Martin's *Der Sturm*. He resigned the same year after being reproached for excessive absences, and Herbert von Karajan was appointed to replace him. In the six years of Karajan's single-handed direction, an exceptional number of 20th-century operas (Egk's *Der Revisor*, Hindemith's *Mathis der Maler*, Orff's *Trionfi* and *Oedipus der Tyrann*, Pizzetti's *Assassinio nella cattedrale*, Poulenc's *Dialogues des Carmélites*, Stravinsky's *Oedipus rex*) and ballets were performed. A feature of Karajan's years as director was the exchange of productions with La Scala, whereby Italian casts performed some of the Verdi and Puccini operas in Vienna, and Viennese casts took Mozart and Wagner works, and *Pelléas et Mélisande*, to Milan. From 1962 Karajan was assisted by an associate director, which left him more time for purely artistic concerns: he directed more operas himself (*Tristan und Isolde*, *Tannhäuser*, *Die Frau ohne Schatten*), introduced the singing of works in their original language and conducted some remarkable performances, including the *Ring*, Monteverdi's *L'incoronazione di Poppea* and operas by Verdi and Puccini. In 1963 Hilbert was appointed his associate, but personal tensions resulted in Karajan's resignation the following year. Until his retirement in 1967 Hilbert attempted to fill the gap by engaging leading directors: in the last years of his life Wieland Wagner staged memorable performances of *Lohengrin*, *Salome* and *Elektra*. Singers of worldwide reputation contributed to the Staatsoper's success in the era of Karajan and Hilbert, among them Mimi Coertse, Leontyne Price, Birgit Nilsson, Leonie Rysanek, Gundula Janowitz, Lucia Popp, James King, Fritz Wunderlich, Walter Berry, Eberhard Wächter, Peter Schreier, Nicolai Ghiaurov and some of the most famous Italian singers of the time, including Mirella Freni, Giulietta Simionato, Renata Tebaldi and Giuseppe di Stefano.

In the years that followed, the Staatsoper was placed in the charge of administrative directors, Heinrich Reif-Gintl and Rudolf Gamsjäger, who were unable to prevent a gradual deterioration in artistic standards. This was reflected in the steadily falling number of premières, increasingly rare performances of modern operas (not forgetting, however, the revival of Berg's *Lulu* and the successful première of Gottfried von Einem's *Der Besuch der alten Dame* as well as the first inclusion of Schoenberg's *Moses und Aron* in the repertory of the Staatsoper) and a growing number of productions of limited artistic value. After 1966 the occasional appearance of Leonard Bernstein conducting *Falstaff*, *Rosenkavalier* and *Fidelio* was an attraction. In autumn 1976 the directorship of the Staatsoper was taken over by Egon Seefehlner and in 1979 Lorin Maazel's appointment as conductor was announced with effect from 1982.

Maazel resigned after only two years and Seefehlner continued the directorship temporarily until 1986. From then until 1991 the director was Claus Helmut Drese, who brought with him from Zürich Claudio Abbado as music director. During these years Abbado secured excellent performances of the Italian repertory, including *Simon Boccanegra* with Giorgio Strehler as stage director, followed by works such as *Wozzeck*, *Pelléas et Mélisande* and *Khovanshchina*. The repertory was extended with more unusual operas by Dvořák, Massenet, Bartók, Schreker (*Der ferne Klang*) and others. Some elaborate performances have been rehearsed in collaboration with the Salzburg Festival and presented in Vienna immediately after their summer premières in Salzburg. There thus appeared in the 1981 programme Cerha's *Baal*, in 1984 Berio's *Un re in ascolto* and in 1986 Penderecki's *Die schwarze Maske*. After the success of Jean-Pierre Ponnelle's Monteverdi cycle in Zürich with Nikolaus Harnoncourt conducting, Drese engaged Harnoncourt for a Mozart cycle, but this was far less successful.

Beginning in the 1991–2 season a new team assumed the management of the Staatsoper: Eberhard Wächter, who also continued as director of the Volksoper, and Joan Holender. The new team declined for the time being to mount new productions, dropped repeated stagings of several recent productions and employed a number of young, less well-known singers. In October 1991 Claudio Abbado laid down his musical directorship of the Staatsoper, apparently in connection with this development; and Wächter died in 1992.

Joan Holender then became director of the Staatsoper and Volksoper, and after the appointment of Klaus Bachler as director of the Volksoper in 1996, he was appointed director of the Staatsoper until the turn of the century. Holender, previously a successful manager of opera singers, brought many well-qualified but hitherto

25. Vienna Staatsoper after restoration, reopened 1955

unknown singers to the Staatsoper, in a change to the system of using mainly star casts. He was not so successful with his constant practice of engaging relatively inexperienced conductors. Performances with Riccardo Muti or Christoph von Dohnányi as guest conductors became rare, and even experienced house conductors such as Horst Stein, Peter Schneider and Leopold Hager appeared infrequently. Highlights of this period included the world première of Alfred Schnittke's *Gesualdo* and the first performance in Vienna of Britten's *Peter Grimes*.

The Volksoper, Vienna's second resident opera company, like the Staatsoper is open ten months of the year. Although for the first ten years after the war the theatre was used by the Staatsoper for half its productions, from 1955, expensively redecorated, it housed a largely successful attempt to revive the Viennese operetta and, to a lesser extent, to re-create the American musical in spectacular style. When the great popularity of these subsided, the Volksoper concentrated on offering competition to the Staatsoper with standard repertory works in German and presenting musical comedy and operetta. The reforms of the mid-1970s entailed, for both the Volksoper and the Staatsoper, far-reaching autonomy and independence from the state, which, as the assign of the former court government, controlled the allotment of the budget.

The Theater an der Wien, used from 1945 to 1955 for Staatsoper productions, was closed as unsafe in 1955, but was rescued and reopened in 1962 by Hilbert, then director of the Vienna Festival. Since then it has been financed by the city and used for stage productions during the festival (May and June; begun in 1951) and for musicals and operetta during the rest of the year. The Raimundtheater remains true to its traditional fare of Viennese operetta. The Schönbrunn Schlosstheater is used as a rehearsal stage for chamber operas performed by students of the Hochschule für Musik und Darstellende Kunst. The Etablissement Ronacher, opened in 1881 and restored in the 1990s, is a variety theatre which sometimes puts on musical events. Since its foundation in 1952 the Wiener Kammeroper, under the artistic direction of Hans Gabor, followed by Rudolf Berger (from 1995) and Josef Hussek (1997), has played an important part in reviving older works, especially Viennese operas and Singspiele of the 18th and 19th centuries, performing in its own attractive house in the Fleischmarkt, and also in the Schlosstheater at Schönbrunn. Since the 1990s the Kammeroper has performed a number of contemporary works. Contemporary works are also performed in the Jugendstiltheater by the Wiener Operntheater and in the Odeon by Neue Oper Wien and other smaller companies, while the Wiener Taschenoper mounts operas on a small scale in various venues.

The enormous budget of the Staatsoper, unequalled by any comparable institution in the world and borne by means of taxes levied on the whole Austrian nation, is justified by its reputation and international influence. The high standard of performances owes much to the employment of Vienna PO players for the orchestra. The repertory comprises some 45 to 50 standard operas, and except for July and August the company plays daily for the entire year. The number of new productions each season has

varied between five and eight, of which one or two are first performances of ballets. *Die lustige Witwe* (Lehár) was the first operetta to be performed there, in August 1999.

(ii) Concert life. The Vienna PO has remained a private institution into which only members of the orchestra of the Staatsoper are admitted; in the early 1970s it was enlarged to 140 members and in 1997 the orchestra finally voted to admit women. It produces its own concerts and hires the orchestra out for recordings, television and film performances. The orchestra, which has retained its reputation as one of the finest in the world, gives an annual series of concerts in the Grosser Musikvereinssaal normally comprising nine subscription concerts and the annual 'Nicolai concert', a benefit performance for the orchestra's pension fund, in memory of the Philharmonic's co-founder. Because of the players' commitments at the Staatsoper in the evenings, the concerts are given on Saturday afternoons (the 'general rehearsal', since 1921 open to the public) and on Sunday Mornings. The popularity of the mainly conservative programmes and the excellent performances under prominent conductors have meant that a subscription must virtually be inherited and that other tickets are almost unobtainable. During the period 1945–80 the subscription concerts were directed by various guest conductors, including Walter, Furtwängler, Mitropoulos, Schuricht, Cluytens, Knappertsbusch, Böhm, Karajan, Bernstein and Abbado. The Vienna PO's tradition of international tours has continued. Also traditional are the orchestra's concert and opera performances at the Salzburg Festival, and the New Year's Day concert of waltzes and other dances of the Strauss family, conducted from 1955 by Willi Boskovsky (for many years the orchestra's leader) and later by such conductors as Karajan, Carlos Kleiber, Muti and Maazel. The concert is broadcast by radio and television throughout most of the world. Since the 1970s contemporary music has been given a higher profile in Vienna PO programmes. Conductors who worked frequently with the orchestra in the 1980s and 1990s included Karajan, Bernstein, Maazel, Muti, Ozawa, Kleiber, Boulez and Solti.

The Vienna SO (126 members), second only to the Philharmonic in reputation, devotes itself exclusively to concerts and is the city's real concert orchestra. It is engaged by various promoters such as the Gesellschaft der Musikfreunde, the Austrian Broadcasting Company (ORF) and particularly the Konzerthausgesellschaft, who are also responsible for choosing the conductor, though they must bear in mind the chief conductor, a position which since 1960 has been held by Sawallisch, Krips, Giulini, Rozhdestvensky, Prêtre, Frühbeck de Burgos and Vladimir Fedosejev. The orchestra, now largely subsidized by the city, has earned distinction for its performances of a wide-ranging repertory, including many modern works.

The Niederösterreichisches Tonkünstlerorchester (94 members), founded in 1947, is committed to the cultural interests of the province of Lower Austria, but it appears in Vienna, giving 12 Sunday afternoon concerts in the Grosser Musikvereinssaal, and makes occasional foreign tours. The orchestra includes works primarily from the Classical and Romantic repertory in its programmes, which aim to reach as wide an audience as possible; the second performances of most of its Vienna concerts are subscribed by the Austrian Trade Union Congress. Fabio Luisi was appointed chief conductor in 1995, followed by Carlos Kalmar in 2000.

The ORF SO (the Austrian RSO, 100 members) was founded in 1969 and primarily serves the radio network. In recent years, however, it has gradually assumed the role of Vienna's third concert orchestra, also performing in the Austrian provinces and abroad. It is the only Viennese orchestra to specialize intensively in contemporary music and was the first to admit women. Among its principal conductors have been Milan Horvat, Leif Segerstam, Pinchas Steinberg, Luthar Zagrosek and, from 1996, Dennis Russell Davies. The excellent ORF Chorus was dissolved for financial reasons in 1995. The Arnold Schönberg Choir (conductor Erwin Ortner) became a leading ensemble in the 1980s, particularly in Classical and contemporary repertory.

The choir of the Vienna Staatsoper chorus, also professional, has 100 members. The Konzertvereinigung Wiener Staatsopernchor, made up of members of the opera chorus, formerly arranged several concerts of its own each season, but in the 1970s this activity diminished. It appears at the Salzburg Festival as well as in Vienna with the Vienna PO.

The Singverein der Gesellschaft der Musikfreunde, active in the headquarters of that organization and used in the performance of oratorios, is an autonomous body of 250 amateur members. Karajan undertook extensive concert tours with the choir (and with the Vienna SO) in the years immediately after World War II. Recently its role in the city's concert life, like that of other choral societies, has decreased, but it still performs with the Vienna PO at the Salzburg Festival and occasionally makes recordings and appears in concerts abroad.

The Wiener Singakademie, which comprises 160 amateur singers and until 1974 was affiliated with the Wiener Konzerthausgesellschaft, has since World War II been especially active in the performance of 20th-century music. The choir has several times sung at the Perugia festival. The Arnold Schönberg Choir and the Chor der Musikalischen Jugend have become prominent in recent years, while other smaller choirs active after the war, such as the Akademie-Kammerchor and the Wiener Kammerchor, have mostly disappeared.

The Wiener Sängerknaben (Vienna Boys' Choir), although it has always been part of the Hofmusikkapelle, is run as a private institution. The choirboys are trained at a boarding-school, since 1948 in the 16th-century Augarten-Palais, formerly the Palais Leeb. Four choirs are formed from around 100 pupils aged between ten and 14; each choir goes on concert tours for about three months of the year, mostly in Germany and the USA, giving about 300 concerts in total each year. The boys pay for their upkeep out of the fees obtained from their work on tours, with the Staatsoper, from recordings, and from television and radio appearances. Their widely varied repertory is supplemented by comic operas (performed in costume) and folksongs. Norbert Balatsch was appointed musical director of the Vienna Boys' Choir in 1999.

The Hofmusikkapelle remains the chief institution for sacred music in the city. It consists of the Vienna Boys' Choir, the men of the Staatsoper chorus and the Vienna PO. The ensemble, which appears under this name only in the Hofburgkapelle (the chapel in the Hofburg) and on its rare tours abroad, is considered to be the legitimate successor of the historic Hofmusikkapelle and is thus the

city's oldest existing musical institution. It performs at High Mass each Sunday; the works of the Viennese Classics (Mozart, Haydn and Beethoven) and Romantics (Schubert and Bruckner) predominate. It falls under the jurisdiction of the Federal Ministry for Education and Art. Church music is regularly performed in several churches, particularly the Stephansdom and the Augustinerkirche.

Shortly after World War II a number of pianists who now enjoy international reputations began to appear from the Vienna Akademie für Musik; the earliest was Friedrich Gulda, who was followed by Alfred Brendel, Jörg Demus, Alexander Jenner, Paul Badura-Skoda, Rudolf Buchbinder, Stefan Vladar, Till Fellner and others. The long tradition of Viennese string quartets has been carried on since the war by the Schneiderhan, Vienna Konzerthaus, Barylli, Vienna Philharmonic and Weller quartets, most of whose players also belonged to the Vienna PO. Only the Alban Berg Quartet, founded in 1970 and supported by the Alban Berg Foundation, has been able to devote itself entirely to quartet playing. The members of the Küchl Quartet and the Wiener Streichquartett also belong to the Vienna PO. Outstanding among younger Viennese string quartets is the Artis Quartet, formed in 1988. The Wiener Streichtrio and the Wiener Streichsextett are also internationally renowned.

In the early 1950s Vienna became the centre of a movement for the authentic performance of early music on the proper instruments of its period and in a historically faithful style. The movement began at the Akademie für Musik, where Professor Josef Mertin worked as a specialist in the practical and theoretical aspects of performing early music. Some of his pupils have achieved international recognition: Nikolaus Harnoncourt, who in 1953 founded the Concentus Musicus, best known for their recordings of Bach and Monteverdi; Eduard Melkus, a distinguished violinist who in 1965 founded the Capella Academica, which he led in Classical and pre-Classical instrumental music; René Clemencic, a virtuoso recorder player, who performed early instrumental and vocal music with his Clemencic Consort, founded in 1968; and Bernhard Klebel, who was similarly active with Ensemble Musica Antiqua, founded (by Clemencic) in 1959 as Musica Antiqua. In 1985 Martin Haselböck founded a period-instrument chamber orchestra, the Wiener Akademie. Important soloists involved in early music have included the harpsichordists Isolde Ahlgrimm and Vera Schwarz and the organists Anton Heiller and Hans Haselböck.

Until the early 1960s there was also an enormous interest in contemporary music, which was met principally with concerts organized by the Konzerthausgesellschaft directed by Egon Seefehlner. Since then financial difficulties and diminishing demand have considerably reduced the opportunities for hearing the works of young Austrian and foreign composers. Still important, however, is the group die reihe, founded by the composer Friedrich Cerha in 1958, which has performed mainly abroad. This group, like Kontrapunkte founded by Peter Keuschnig in 1967, concentrates largely on 20th-century music. Klangforum Wien, founded in 1985, specializes in the performance of new works. The ensemble Wiener Collage, whose members are mostly members of the PO, performs contemporary music. The chief vehicle for contemporary music is the ORF, which sponsors contemporary music concerts, many of them public, without having to rely on a paying audience. Smaller associations, such as the Internationale Gesellschaft für Neue Musik and the Österreichische Gesellschaft für Zeitgenössische Musik also give valuable support to 20th-century music, as does the Österreichische Gesellschaft für Musik, with its lectures and congresses. MICA, a state subsidised documentation centre primarily for new music in Austria, who founded in 1995. Other music societies include the Gesellschaft der Autoren, Komponisten und Musikverleger (AKM), which looks after the payment of royalties, the Österreichischer Musikrat, a governmental advisory body, and societies that promote performances of works by specific composers (Mozart-Gemeinde, Beethoven-Gesellschaft, Bruckner-Gesellschaft etc.)

The Gesellschaft der Musikfreunde (also known simply as the Musikverein, as is the building which houses its halls and offices) continues to organize several series of concerts each season; normally two of these series are performed twice, one of choral-orchestral works and one of symphonic works, and employ the Vienna SO or, less frequently, the Vienna PO, the ORF SO or visiting orchestras. In addition to a further cycle of orchestral works, the society organizes a series of concerts using the organ of the Grosser Saal, and several cycles of chamber music (including lieder recitals) in the Brahmssaal.

Like the Gesellschaft der Musikfreunde, the Konzerthausgesellschaft organizes concerts and gives some six or eight cycles each year; at least one of these is of orchestral works, most often involving the Vienna SO, and others include piano and lieder recitals, chamber music and organ recitals. Since 1945 the Konzerthausgesellschaft has effectively served the Viennese public's desire to 'catch up' by its presentation of international contemporary music, by bringing about a Mahler renaissance and by its intensive support for the music of the Second Viennese School as well as for both the Austrian and the international avant garde. Correspondingly, the number of first performances sponsored by the society is far higher than that of the Gesellschaft der Musikfreunde. The Musikalische Jugend Österreichs gives some 400 performances in Vienna every season, including many orchestral concerts.

Since the recent reorganization of its orchestra, the ORF has played an increasing role in the city's musical life. Its concerts, which are open to the public, take place partly in the studio (250 seats) and partly in the halls of the Musikverein or the Konzerthaus. Because of its financial independence the ORF has the resources to support modern music and to promote the works of Austrian composers, and even its programmes aimed at a wider audience emphasize 20th-century music. The ORF is also valuable for its intensive collaboration with the other concert organizers, some of whose concerts it broadcasts and supports financially. Vienna puts on several hundred musical events each summer in palaces, museums, halls and in the park of Schönbrunn palace.

The Vienna Festival (Wiener Festwochen), which has taken place annually in May and June since 1951, was previously held between 1927 and 1937, when it was unable to compete with the better-established Salzburg Festival. The Vienna Festival of the postwar years, a registered association subsidized chiefly by the city, attempts at the end of each concert season (the peak time for tourism) to present a concentrated sampling of

Vienna's outstanding cultural activities. This involves, apart from theatre, music in particular and recently has included an increasing amount of ballet. Since 1963 the Theater an der Wien has been used for opera and ballet performances by visiting companies and occasionally for independent local productions of opera. The first postwar Viennese production of Berg's *Lulu* was given during the directorship of Hilbert (1962–3). Generally the management largely relies for attractions on the city's permanent concert organizers, like the Gesellschaft der Musikfreunde and the Konzerthausgesellschaft, who in alternate years make their own music festivals coincide with the larger Vienna Festival. In 1998 a large-scale Arnold Schoenberg centre was set up in Vienna. The centre administers Schoenberg's estate and contains a library, an archive and performance rooms. Its president is Nuria Schönberg-Nono. An autumn festival of contemporary music, Wien Modern, was established in 1988, with Abbado as music director. Each festival provides a comprehensive survey of the music of four or five composers. In 1995 a Herbert von Karajan centre was set up in the city; it provides an archival record of the conductor's work and organizes informal conferences and events for young people.

(iii) Education. The Universität für Musik und darstellende Kunst (until 1998 the Hochschule für Musik und Darstellende Kunst), now housed in several buildings in the city, was raised to the status of a Hochschule in 1970 and confers university-level degrees. There are approximately 3000 students and 320 instructors; apart from vocal, instrumental and conducting tuition, there are classes for drama (Max-Reinhardt-Seminar), film and television studies, the sociology of music and 12-note technique. The department of composition, music theory and conducting has been affiliated to the Institut für Elektroakustik und experimentelle Musik. The most prestigious Viennese competition is the Beethoven Piano Competition, held in the Hochschule every four years.

The Konservatorium der Stadt Wien, taken over by the city in 1938, offers professional training in all branches of music. It maintains 16 local music schools and a children's singing school.

The Musikwissenschaftliches Institut of the university, which has a strong philological and historical bias, offers the PhD degree; in 1996 Gernot Gruber succeeded Ottmar Wessely as the institute's director. A chair of ethnomusicology, founded at the institute in 1908, was re-established in 1963. The institute has a comprehensive library. Other exceptionally endowed music libraries in the city belong to the Österreichische Nationalbibliothek (recent librarians have included Leopold Nowak and Franz Grasberger), the Wiener Stadtbibliothek, the Universität für Musik and the Gesellschaft der Musikfreunde. The Österreichische Nationalbibliothek houses the Photogramm-Archiv assembled by Antony van Hoboken, of whose extensive private collection the eminent scholar Otto Erich Deutsch was librarian. The music collection of the Österreichische Nationalbibliothek, among the most important in the world, contains some 50,000 manuscripts, 115,000 items of printed music and 50,000 music books.

A grove of honour was created in Vienna's central cemetery in the 19th century. It contains the graves of about 60 composers, including those of Beethoven, Schubert, Brahms, Wolf and Schoenberg.

Vienna Boys' Choir. *See* VIENNA, §6.

Vienna Capella Academica. Austrian ensemble founded by EDUARD MELKUS.

Vienna flute. A type of wooden organ pipe used in the *Flötenuhr* type of MUSICAL CLOCK.

Vienna Konzerthaus Quartet. Austrian string ensemble, founded in 1934 by members of the Vienna SO: Anton Kamper, Karl Maria Titze, Erich Weis and Franz Kvarda. It made its début in March that year as the Kamper-Kvarda Quartet and was immediately contracted to give the première and first broadcast of Franz Schmidt's A major Quartet. From 1937 it was officially attached to the Konzerthaus and Kamper, Titze and Weis were taken into the Vienna PO, Kvarda following in 1938. The group became known internationally in the 1950s through European tours and its commercial discs and radio recordings, including an outstanding Schubert cycle and a large number of Haydn quartets. It played in a typical Viennese style, with a most cultured tone, leisurely tempos and graceful phrasing. Joseph Marx and Hans Pfitzner wrote works for it. In the 1960s the second violinist was Walter Weller (later Werner Hink), the viola player Fritz Händschke (later Ferdinand Stangler) and the cellist Ludwig Beinl (later Werner Resel). The quartet was dissolved in 1967.

TULLY POTTER

Viera, Julio (Martín) (*b* Buenos Aires, 1943). Argentine composer. He studied at the Argentina Catholic University and with Francisco Kroepfl. He had his training in electro-acoustic music at the Centre for Research into Mass

Communication (now the Laboratory for Musical Research and Production) and later became the head of this organization. A professor at La Plata University, he is also secretary of the Argentine Federation of Electro-Acoustic Music and the Agrupación Nueva Música. His honours include commendations from both the National Fund for the Arts and the Bourges International Competition of Electro-Acoustic Music, the Buenos Aires Municipal Prize, a Guggenheim Foundation grant (1989) and the National Prize (1992). In 1997 he received commissions from the Groupe de Recherches Musicales and the Koussevitzky Foundation. He was awarded the chair of composition at the Argentina Catholic University in 1998.

VALDEMAR AXEL ROLDAN

Vierdanck [Virdanck, Fierdanck], **Johann** [Johannes, Hans] (*b* *c*1605; *d* Stralsund, bur. 1 April 1646). German composer, organist and instrumentalist. He probably came of a musical family from Saxony or Thuringia. By 1616 he was a choirboy in the Dresden Hofkapelle, for in a letter of 23 September that year Heinrich Schütz, who was prominent there, described him as such and declared that he was 'a fine, modest person and making a very good, solid beginning in composition'. He also studied the violin and cornett. In 1630–31 he was an instrumentalist in the Hofkapelle. He was a violinist at the Güstrow court from at least autumn 1631 to 24 June 1632, after which he travelled to Lübeck and Copenhagen. At this period he must have got to know Gabriel Voigtländer, whose song *Als ich einmal Lust bekam* he incorporated into no.31 of his *Capricci* (1641), and Johann Schop (i), Nicolaus Bleyer and Friedrich Hoyoul, to all three of whom he dedicated the same collection. From early in 1635 until his death he was organist of the Marienkirche, Stralsund.

The pieces in Vierdanck's first publication, *Erster Theil newer Pavanen* (1637), are in effect suites for two violins and continuo arranged systematically by key; they are significant in the early history of the suite, not least for their trio-sonata textures. There was a second edition in 1641, which was also when his *Ander Theil . . . Capricci* appeared. The first 14 pieces in this collection are early examples of duets without continuo; they were conceived for violins. The last piece in the volume – the one based on Voigtländer's song – is scored for two cornetts and three trombones and is interesting for its tutti–solo contrasts. The concerto-like textures are paralleled in other pieces here: no.28, for example, for one cornett and three trombones, has been called the earliest German solo concerto. No.25, 'auff quotlibethische Art', is the most striking of the capriccios; with its double stopping and tremolos, it was probably one of the first pieces to be inspired by Farina's famous *Capriccio stravagante* (1627). The book also contains variations, not mentioned on the title-page, including a set of nine on the passamezzo.

Vierdanck's two sets of *Geistlicher Concerten* (1641–3) contain 45 works for two to nine voices and continuo, many with two violins as well. He appears to have taken such pieces by his former teacher Schütz as his models, even to the extent in one piece of using material from Monteverdi's duet *Zefiro torna*, as Schütz did in *Es steh Gott auf* (published in 1647 but no doubt written earlier). There are sinfonias to begin a work and sometimes in the course of one, and their motifs are often related to those in the following vocal section. There is a good deal of word-painting. Like Schütz, Vierdanck rarely used chorales. The first volume was popular enough to go into a second edition a year later and there was a third in 1656 when the second volume also reappeared.

WORKS

VOCAL

Erster Theil geistlicher Concerten, 2–4vv, bc, some with 2 vn (Greifswald, 1641); 2, ed. H. Engel, Denkmäler der Musik in Pommern, iii, iv (Kassel, 1932–3)

Ander Theil geistlicher Concerten, 3–9vv, bc, some with 2 vn (Rostock, 1643)

HORACE FISHBACK/GREGORY S. JOHNSTON

Vierhebigkeit (Ger.). The property of musical and poetic rhythm, as seen by certain theorists since Koch (*Versuch einer Einleitung zur Composition*, i, 1782), that makes most phrases and verses divide naturally into four equal or equivalent parts, or, more precisely, contain 'four stresses'. In music it is best illustrated by short pieces made up of two equal parts (*see* ANTECEDENT AND CONSEQUENT), each of which can be further divided and subdivided until it is broken down into one-bar units; such pieces necessarily contain a number of bars equal to a power of 2 (i.e. 2, 4, 8, 16, etc.). Some writers have applied the theory of *Vierhebigkeit* to virtually all music, barred, measured but unbarred, and unmeasured alike. For barred music, they have viewed an eight-bar unit (often called a 'period') comprising either four two-bar segments or two four-bar segments as the normal metrical length; an irregular period of, say, seven or nine bars as a contraction or expansion of the normal length; and a longer unit as the sum of a number of eight-bar periods.

Based on its verified applicability to traditional German verse, in particular to old poetic forms, *Vierhebigkeit* has been used as a basis for rhythmic interpretations of early monophonic German song. Its extension, by Riemann, to the interpretation of troubadour and trouvère melodies and even Gregorian chant is as yet without similar foundation, and this has been used by opponents of the theory of *Vierhebigkeit* to discredit it.

WILLIAM DRABKIN

Vierk, Lois V. (*b* Lansing, IL, 4 Aug 1951). American composer. Originally interested in ethnomusicology, she attended UCLA (BA 1974), where she studied bugaku dance and fell in love with gagaku, the ancient Japanese music that accompanies it. She studied composition with Leonard Stein and Dean Drummond, and later with Mel Powell and Morton Subotnick at the California Institute of the Arts (MFA 1978). A member of UCLA's gagaku ensemble until 1982, she accompanied the group to Japan in 1980. There she met ryuteki player Sukeyasu Shiba, whom she returned to study with from 1982 to 1984.

Partly through the influence of minimalism (particularly Niblock's music) and partly through the heterophonic melody of gagaku, Vierk began to write music for multiples of the same instrument. Her first work to receive public attention, *Go Guitars* (1981, 'Go' meaning 'five' in Japanese), is structured around a continuum of small glissandos that gradually expand in length and tempo. She followed this with *Manhattan Cascade* for four accordians (1985), *Simoom* for eight cellos (1986) and *Cirrus* for six trumpets (1987), works usually performed by a single performer and tape. One of her recurring formal ideas is the gradual, almost imperceptible transformation from a still, quiescent texture to a rousingly active one, often following an exponential curve. Later works, such as *Timberline* (1991), are for multi-timbral ensembles. She has also collaborated with dancer Anita Feldman on a number of compositions for tap dancer and musicians.

KYLE GANN

Vierling, Johann Gottfried (*b* Metzels, nr Meiningen, 25 Jan 1750; *d* Schmalkalden, 22 Nov 1813). German composer. After studying the keyboard with M. Sittig in Metzels he entered the Lutheran Gymnasium in Schmalkalden, where he studied with (and from 1768 deputized for) the organist of the Stadtkirche, J.N. Tischer. In 1770 he studied with Kirnberger in Berlin and is alleged to have met C.P.E. Bach in Hamburg; on his return to Schmalkalden he visited J.A. Hiller in Leipzig. In 1773 he succeeded to Tischer's post, which he held until his death, refusing appointments in Dresden and Mainz. He was succeeded in this post by his son Johann Vierling (1777–1822).

Vierling composed in a rigorous, somewhat outdated style, primarily to fill the demands of his church post. His 160 or so cantatas show a surprisingly late survival of the practice of composing these works to weekly or (as in Schmalkalden) twice-weekly assignment; these light, often songlike works were performed in many other Thuringian churches, and Goethe even recorded a performance in Frankfurt. Vierling's other works, frequently prefaced with didactic introductions, include a number of liturgical organ pieces which appeared in many anthologies of the next century, and a keyboard hymnbook of strict four-part settings following Kirnberger's precepts (the prefaces to this work give an important account of the status of sacred hymnody before 1800). The correspondence with his pupil Henkel records a number of concerts directed by him in Schmalkalden and his aversion to the theoretical complexities of Vogler.

WORKS

Sacred: 114 cants., 6 motets, listed in Paulke (1922); 35 cants., incl. Der Herr ist mein Hirt, *D-F*, at least 5 in *MGs*, 2 formerly in *DS*; ps, *LEt*; Mag, formerly Berlin, Sing-Akademie

Other vocal: Empfindung und Empfindelei oder Die Verwechslung der Geliebten (Spl), see Paulke (1922); Hessische Kadetten-Lieder (C.S. Wigand) (Kassel, 1788); 3 lieder in K.W. Justis: *Gedichte* (Marburg, 1808, enlarged 2/1810 with 5 lieder by Vierling); occasional music

Org: Choralbuch auf vier Stimmen … nebst einer Vorrede und kurzem Vorbericht (Kassel, 1789, enlarged 2/1795); 22 leichte Orgelstücke (Leipzig, 1790); Sammlung leichter Orgelstücke nebst einer Anleitung zu Zwischenspielen beym Choral (Leipzig, 1790); Sammlung dreistimmiger Orgelstücke (Fuldam n.d.); Sammlung vermischter Orgelstücke (Kassel, n.d.); 48 leichte Choralvorspiele (Leipzig, n.d., enlarged 2/n.d.); 48 leichte Orgelstücke (Bonn, n.d.); 100 Versetti (Offenbach, n.d.); chorale preludes, fugue, formerly *Bsb*

Other inst: 6 Sonaten, pf (Leipzig, 1781); 24 variations on F.W. Rust: Blühe liebes Veilchen, pf (Dessau, 1782); 2 Sonaten, pf (Leipzig, 1784); Qt, hpd/pf, 2 vn, b, op.4 (Frankfurt, n.d.); 2 Sonates, kbd acc. vn, b, op.1 (Mainz, n.d.); 2 syms., formerly *Bsb*

THEORETICAL WORKS

Versuch einer Anleitung zum Präludiren für Ungeübtere mit Beispielen (Leipzig, 1794)

Allgemeiner fasslicher Unterricht im Generalbass mit Rücksicht auf den jetzt herrschenden Geschmack in der Composition durch treffende Beispiele erläutert (Leipzig, 1805–7)

RONALD DÜRRE

Vierne, Louis(-Victor-Jules) (*b* Poitiers, 8 Oct 1870; *d* Paris, 2 June 1937). French organist and composer.

1. LIFE. Born blind with a congenital cataract condition, Vierne's sight was partially restored at the age of six and he was able to recognize people, see objects at a short

distance and read large type at close range. At the age of six he began the study of solfège and piano. In 1880 the family moved to Paris from Lille (where they had lived because of his father's work as a journalist) and the following year the young Vierne was enrolled as a boarding student in the Institution Nationale des Jeunes Aveugles. There he pursued a plan of general studies that also included solfège, harmony, piano and violin. César Franck, who often served on juries at the school, advised him to study the organ and in the autumn of 1886 Vierne began lessons with Louis Lebel. From 1888 Vierne studied harmony privately with Franck and attended his organ class at the Paris Conservatoire. He entered the organ class as a full-time student either in October 1890 (as Vierne states in his memoirs) or in January 1891 (according to Widor's class notes). Franck died in November of that year and was succeeded by Widor. Within a year Vierne was serving as Widor's assistant at the Conservatoire, teaching the auditors, and from 1892 was Widor's substitute at St Sulpice. After four years in the organ class he won a first prize in July 1894.

Vierne remained as Widor's assistant in the organ class, continuing from 1896 with Widor's successor, Guilmant. In that position he taught succeeding generations of France's leading organists, including Joseph Bonnet, Henri Mulet, Marcel Dupré and Nadia Boulanger. On 21 May 1900, in competition with four other organists, Vierne won the post of titular organist at Notre Dame, the first to be worthy of such a title since the death in 1772 of Louis-Claude Daquin.

Having worked unpaid for 19 years at the Conservatoire, and holding the most prestigious organ post in the French capital, Vierne expected to be named professor of organ there. But, on Guilmant's death in 1911, Eugène Gigout was appointed, partly because he was the senior organist in Paris and eminently qualified, and partly because he was one of the director Fauré's oldest friends. Vierne never overcame the bitterness of this disappointment which was repeated when he was passed over for the post yet again in 1926, in favour of his former student Dupré. From 1912 Vierne taught organ at the Schola Cantorum and, upon its reorganization after d'Indy's death in 1931, at the Ecole César Franck.

The professional frustrations he experienced, along with the problems in his personal relationships, which were fraught with betrayal, caused Vierne to suffer depression alongside his near-blindness, ill health, bereavement (he lost his son and brother in World War I) and perpetual financial difficulties. Nevertheless, he was not without benefactors, and numerous wealthy and titled patrons effectively subsidized his work for years at a time.

Vierne was a fine player, equipped with a brilliant technique (though susceptible to stagefright), and an ingenious improviser, but, by all accounts, his technical abilities were greatly diminished by the early 1920s under the weight of personal tragedies and illness. His recordings of Bach and of his own works (on rolls for the Aeolian Duo-Art organ and on records for the Odéon company made on the Notre Dame organ shortly before its rebuild and in an all-but-unplayable condition) evince little of the brilliance of his contemporaries, but provide the only glimpse of his art as an improviser. Reviews of his two brief visits to England in 1924 and 1925, and his three-month tour of North America in 1927 are kind rather than enthusiastic.

Vierne suffered a fatal heart attack at the organ in the middle of a recital at Notre Dame. Throughout his long tenure there he had brought worldwide acclaim to the cathedral and restored its reputation for great organ music. Unfortunately, as Vierne had foreseen, immediately upon his death, his *suppléant*, a titled amateur with no musical credentials, was appointed as his successor. A petition, signed by the leading organists of Paris, requesting that the post be open to competition was ignored, and for a time the musical eminence of Notre Dame fell into obscurity.

2. WORKS. Vierne wrote his music in pencil in enlarged notation on sheets of paper set up on an artist's easel. The scores were then copied by his brother, René (1878–1918), and later by Madeleine Richepin (1898–1961), his constant companion after 1920. Although the organ works account for only 17 of 62 opus numbers, it is as Franck's and Widor's successor as the organ's great symphonist that he is principally remembered. More than that of any of his contemporaries, his music has remained in the repertory of organists throughout the world. His six symphonies stand at the pinnacle of the 20th-century literature for the instrument: the six-movement First Symphony with its fugue and justly celebrated Final ('my Marseillaise', as he referred to it); the Second, his masterpiece, with its scintillating scherzo; the Third, the shortest and most concise; the Fourth, whose tortured outer movements are in sharp contrast to the buoyant Menuet and sumptuous Romance; the Fifth, the longest, and in many respects the most elevated; his Sixth and last, the most harmonically advanced and psychologically complex, rising from the depths of despair to ebullience in its rampant Final.

In developing beyond Franck and Widor the genre of the symphony for solo organ, Vierne was inspired by the orchestrally conceived instruments of Aristide Cavaillé-Coll. He used both sonata-allegro form (in 14 of the six symphonies' 31 movements) and cyclic form (employed first in the Second Symphony and then, in varying degrees, in the last three). His highly chromatic style functions within a harmonic framework: tonal centres are sustained by pedal points, inverted pedal points and ostinatos. In Vierne's later works increased tonal ambiguity almost suggests bitonality. Themes usually contain modal elements and employ syncopated rhythmic patterns. Often derived from small melodic units, Vierne's themes became increasingly chromatic throughout his life, to the extent that one of the themes in each of the first two movements of his Sixth Symphony employed all 12 notes of the chromatic scale.

Second in importance to the symphonies for organ are Vierne's four volumes of *Pièces de fantaisie* published in 1926–7. Each book contains six major works, several of which can be counted among his most popular: *Naïades* and *Impromptu*, scherzos that deftly blend the fluidity of pianistic technique with an elegance perfectly suited to the organ; and two pieces dedicated to organ builders: *Clair de lune* (for Ernest M. Skinner) and what is perhaps Vierne's most popular work, *Carillon de Westminster* (for Henry Willis III).

Vierne was also a master of smaller forms. His *24 pièces en style libre* (published for organ or harmonium, but probably never intended for the latter instrument), are songs without words in which simple themes are developed with a striking economy of means that makes

them ideal teaching pieces. More than 60 songs attest to Vierne's understanding of the voice and his skill in painting brief, but highly-charged, emotional scenes. His music for piano solo, from the elementary *Silhouettes d'enfants* to the *Préludes* and the tortured *Solitude*, composed in memory of his brother René, who was killed in World War I, continues the impressionistic tone painting of Debussy.

During his last years, Vierne wrote *Mes souvenirs*, reminiscences of his early life as a student, his many pupils, his travels and his 37 years as organist of Notre Dame. Vierne's journal has also survived. However, owing to the sensitive nature of its contents, which detail his often volatile associations with prominent colleagues, only excerpts have been published.

WORKS

Org: Allegretto, b, op.1 (1894); Verset fugué sur 'In exitu Israël', 1894; Prélude funèbre, op.4 (1986); Communion, op.8, 1896–7; Sym. no.1, op.14, 1898–9; Sym. no.2, op.20, 1902–3; Sym. no.3, op.28, 1911; Messe basse, op.30, 1912; 24 pièces en style libre, op.31 (1914); Prélude, f♯ (1914); Sym. no.4, op.32, 1914; Sym. no.5, op.47, 1923–4; 24 pièces de fantaisie, op.51, 1926, op.53, 1926, opp.54–5, 1927; 3 improvisations, rec. 1928 (1954) [reconstructed M. Duruflé]; Triptyque, op.58, 1929–31; Sym. no.6, op.59, 1930; Messe basse pour les défunts, op.62, 1934

Transcrs. (org): J.S. Bach: Sicilienne, BWV1031 (1894); C. Franck: 5 pièces pour harmonium (1901); S. Rachmaninoff: Prelude, c♯, op.3 no.2 (1932)

Choral: Tantum ergo, op.2, 1v, org, 1886; Ave Maria, op.3, 1v, org, 1886; Messe solennelle, op.16, 1900; Praxinoé (A. Colin), op.22, solo vv, chorus, orch, 1903–5; Cantique à Saint-Louis de Gonzague (1926)

Inst: 2 pièces, op.5, va, pf, 1894–5; Largo et canzonetta, op.6, ob, pf, 1896; Str Qt, op.12, 1894; Sonata, op.23, vn, pf, 1905–6; Sym., op.24, 1907–8; Rhapsodie, op.25, hp, 1909; Sonata, op.27, vc, pf, 1910; Adagio, op.28, org, orch, 1926 [from Sym. no.3]; Pf Qnt, op.42, 1917–18; Marche triomphal centenaire de Napoléon I, op.46, org, brass, timp, 1921; Poème, op.50, pf, orch, 1925; Ballade, op.52, vn, orch, 1926; Soirs étrangers, op.56, vc, pf, 1928

Solo vocal: Ave verum, op.15, 1899; Les Djinns (V. Hugo), op.35, S/T, orch, 1912; Psyché (Hugo), op.33, 1v, orch, 1914; Éros (A. de Noailles), op.37, S, orch, 1916; Dal vertice (G. d'Annunzio), op.41, T, orch, 1917; Les Angélus (Jehan la pauvre moyne), op.57, S, org, 1929; La ballade du désespéré (H. Murger), op.61, S, orch, 1931

Songs (1v, pf): 2 mélodies (P. Gobillard, M. Léna), op.10, 1895, 1896; 3 mélodies (T. Gautier, P. Verlaine), op.11, 1896; 3 mélodies (Verlaine, C. Timun, V. Hugo), op.13, 1899; 3 mélodies (Verlaine, L. de Lisle), op.18, 1897; Dors, chère Prunelle (C. Mendès), op.19, 1898; 3 mélodies (Verlaine, de Lisle, Villiers de l'Isle-Adam), op.26, 1903; Vocalise-étude (1907); Stances d'amour et de rêve (Sully-Prudhomme), op.29, 1912; Spleens et détresses (Verlaine), op.38, 1917; 5 poèmes de Baudelaire, op.45, 1919; Poèmes de l'amour (J. Richepin), op.48, 1924; Vocalise-étude, op.51 (1925–6); 4 poèmes grecs (A. de Noailles), op.60, 1930; Les roses blanches de la lune

Pf: 2 pièces, op.7; Feuillets d'album, op.9, 1893; Suite bourguignonne, op.17, 1899; 3 nocturnes, op.34, 1915–16; 12 préludes, op.36, 1914–15; Poème des cloches funèbres, op.39, 1916; Silhouettes d'enfants, op.43, 1918; Solitude, op.44, 1918; Ainsi parlait Zarathoustra, op.49, 1922

Viertelton (Ger.). *See* QUARTER-TONE.

Vieru, Anatol (*b* Iaşi, 8 June 1926; *d* Bucharest, 9 Oct 1998). Romanian composer and musicologist. After attending the Bucharest Conservatory (1946–51), where his teachers included Constantinescu, Rogalski, Silvestri and Klepper, he entered the Moscow Conservatory as a pupil of Khachaturian. While living in Moscow he developed a strong affinity for Russian music. Though he resumed his studies in 1958, it was not until 1978 that he took the doctorate from the Dima Conservatory, Cluj-Napoca, with the dissertation *De la moduri, spre un model al gândirii muzicale intervalice* ('From modes to a model of musical intervallic thought'). This model, in effect a system of composition, was published in *Cartea modurilor*. It was later formulated mathematically by the theorist Dan Vuza.

Vieru was active in a number of capacities. He was conductor at the Bucharest National Theatre (1947–50) and then chief editor (until 51) of *Muzica*, the journal of the Romanian Composers' Union. In 1955 he was appointed to teach orchestration at the Bucharest Conservatory, teaching composition there intermittently until 1998. His activities as a lecturer, between 1970 and 1997, also took him to Sarah Lawrence College, Bronxville, the Juilliard School and the Moscow and Jerusalem conservatories. In 1973 he stayed in West Berlin under the aegis of the Deutscher akademischer Austauschdienst. As an adjudicator or examiner he worked in Canada, the United States and at various centres in Europe, including the Darmstadt summer course. In 1970, at the Bucharest Philharmonic hall, he inaugurated and conducted the concert series Parallel Musics, an exploration of the relationship between contemporary music and older styles, especially pre-Classical.

Vieru received a number of awards and distinctions. In Romania these included the State Prize (1949), the Enescu Prize (1967), four times the award of the Romanian Composers' Union, and the Grand Prize (1996) for a lifetime achievement. He was also a recipient of the Queen Marie-José prize of Geneva (1962), the Koussevitzky prize of New York (1966) and the Herder prize of Vienna (1986). By the late 1990s Vieru was perhaps the best-known Romanian composer on the international stage.

His music underwent a remarkable course of development during his career: following the patriotic songs and large-scale mass choruses of the Stalinist years, 1950–55, he embraced avant-garde elements in the 1960s and 70s and displayed a tendency towards neo-classicism after about 1980. As early as *Mioriţa* (1957) he devised an individual method that involved working with modes – taking as his example the music of Enescu and Messiaen – and serial technique; with the influence also of Russian music, this gave rise to a polystylistic effect. An important place in Vieru's output is reserved for opera. Here, his feel for instrumental colour, the grotesque and, at times, parody finds a perfect form of expression, especially since there are strong parallels between Luca Caragiale's ironic representation of corrupt 19th-century Romania and Romanian society during the years 1975–90. Vieru's last works suggest a self-contented musical personality, one that is deliberately distanced from an avant-garde, confrontational form of expression.

WORKS
(*selective list*)

DRAMATIC

Iona (op, 1, after M. Sorescu and sketches by M.C. Escher), 1972–5, concert perf. Bucharest, 31 Oct 1976; Praznicul calicilor [The Feast of the Beggars] (op, after M. Sorbul), 1978–80, Berlin, 1991; Telegrame (mini-op, after I.L. Caragiale), 1983; Temă cu variaţiuni [Theme and Variations] (mini-op, after Caragiale), 1983; Ultimele zile, ultimele ore [The Last Days, the Last Hours] (op, 3, after A.S. Pushkin: *Motsart i Sal'yeri* and M.A. Bulgakov: *Poslednie dni* [The Last Days]), 1990–95

Film scores (names of dirs. in parentheses): Când primăvara e fierbinte [When Spring is Hot] (M. Săucan), 1960; Ciucurencu (E. Nussbaum), 1964; Procesul alb [The White Trial] (I. Vietnam, Socialist Republic of (Cộng Hòa Xã Hội Chủ Nghĩa Việt Nam). Country on the east coast of the indo-Chinese peninsula.

1. BACKGROUND. Vietnam is the most culturally diverse country in mainland South-east Asia, comprising 54 ethnic groups. The largest of these is the Việt or Kinh, living in the lowland areas along the Pacific coast and in the deltas of the Sông Hồng (Red River) and the Cửu Long (Mekong). The rest of the ethnic groups live mainly in the highlands and mountains that separate Vietnam from China, Laos and Cambodia.

Over four millennia of legends and recorded history are in evidence at about 300 prehistoric sites, as well as in numerous historical folk tales (Phan, Hà and Hoàng, 35). All traditional folk tales preceding recorded history originated in the original land of the Việt, comprising the valley of the Sông Hồng where the Biển Đông (Eastern Sea) and the mountains meet. As the Việt moved from the mountains to the river areas, water joined mountains as the main topic of narratives and songs.

Traditional festivals honouring nature and the ancestors are believed to have been practised for over 2000 years of recorded history. Such festivals were made up of ritual ceremonies, music, songs and dance, often including a series of games and entertainments. In the first few centuries CE these prehistoric events and customs in the highlands of Phong Châu were gradually transmitted to the lowland areas of Bắc Ninh (now Hà Bắc province), where native beliefs became associated with Buddhism. Many of the traditional festivals are still celebrated in northern provinces, taking place at village temples called *đình* in accordance with the seasonal cycle of the agricultural year. These temples also served as common houses or town halls for public meetings in traditional society.

In contrast to the Việt, the ethnic minorities live in upland areas that include the mountains and highlands of the north and central regions. While a great number of the northern groups (mainly the Nùng, Yao, Hmông and Thái peoples) came from southern China and Laos, the larger central groups are related to the Mon-Khmer and Malayo-Polynesian cultures and date back about 4000 years. They live along the Trường Sơn mountain range and in the highlands that stretch, at some points, from the Lao and Cambodian borders to the sea. Their music and dance are associated with traditional customs and beliefs and differ from culture to culture.

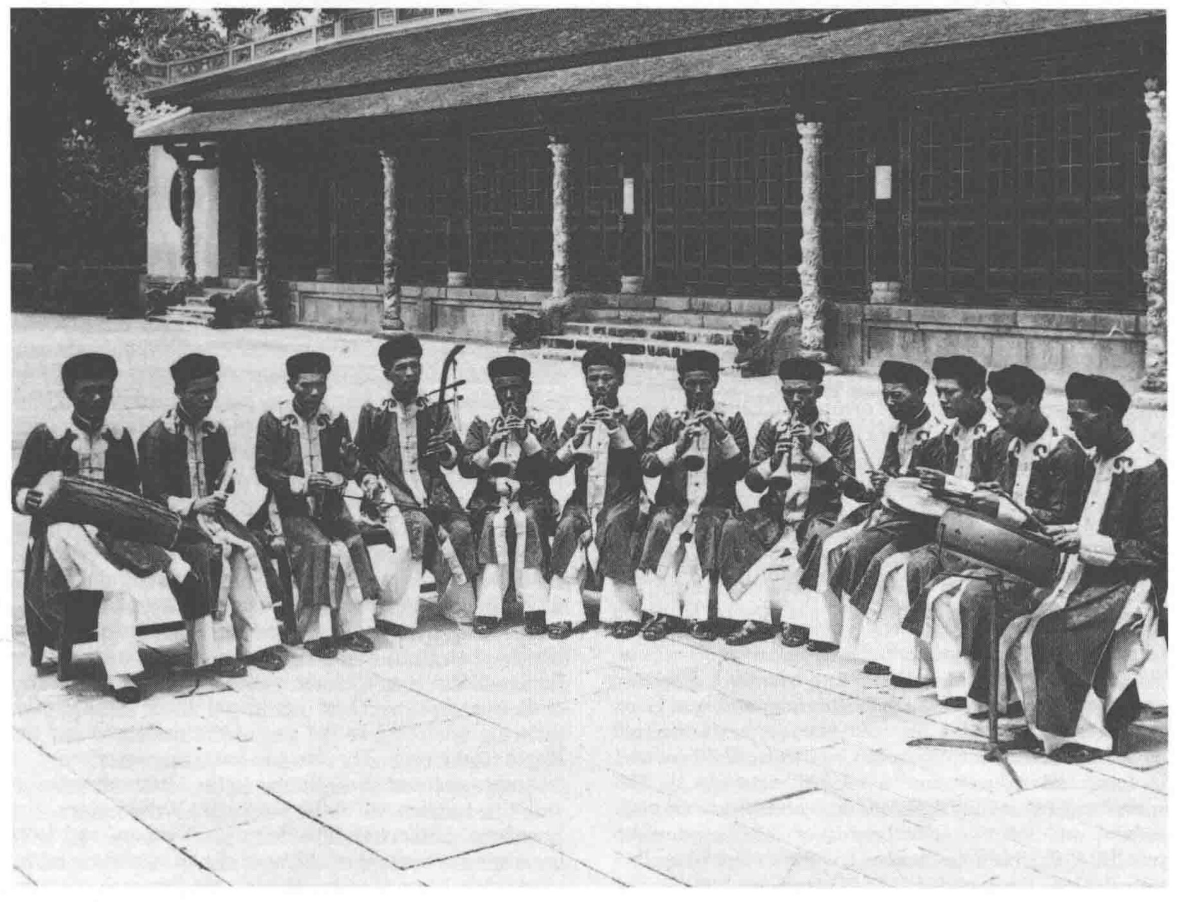
Because of this multicultural status, it is impossible to define a uniquely Vietnamese music. Even the music of the majority group, the Việt, shows strong regional differences, which also exist on linguistic and conceptual levels. While research on minority music is still in progress, the Việt musical traditions have been studied in depth and will be the focus of this entry.

The musical practice and theory of the Việt people are featured in the professional training schools in the four main regions: north, central, south-central and south. Although historically related to each other, each region has its own system of folk, chamber, theatrical and religious music. The uplanders seem to have remained in their own communities with little outside contact for about a 1000 years, until perhaps the time of the Lý dynasty (11th–13th centuries). The Việt in the lowland areas, however, have been in contact with foreign cultures for many centuries. A number of Central Asian, Chinese, Indian and Western instruments have been adopted and adapted to the performing traditions of the Việt. For centuries, Chinese literature was translated and used in Vietnamese songs. Indian Buddhism also brought with it a plethora of folk poetry, traditional songs and musical theatre; the land of Nirvana is featured in many *chèo* theatrical songs and folk performances. All foreign influences have, however, been adapted to the basic concepts of the Việt, the process of selection of instruments, stories and ideas taking several centuries.

Historical and archaeological evidence shows that the bronze drum, the mouth organ and various dances have existed since the period of the Hùng kings (3rd–1st centuries BCE). Many existing songs and dances are associated with ancient agricultural customs and the praising of village protector-deities, heroes and heroines.

Buddhism was introduced in Vietnam in the 2nd century CE and may have mixed with other local beliefs in the development of one of the great chanting traditions in the East and South-east Asian *Mahāyāna* school of Buddhism. Some folksongs may be related to the period of the sisters Trưng in the 1st century CE or King An Dương a century earlier. Many folkdances also found their way to the imperial court of the Đinh (10th century CE), while chamber and theatre music emerged strongly during the Lý dynasty (11th–13th centuries). Both the Đinh and Lý imperial courts favoured music and dance. Water puppetry was created in 985. In 1025, King Lý Thái Tổ created the position of music director (*quản giáp*), whose function was to oversee all music and dance activities at the court. The *đàn đáy*, a long lute with three strings and a trapezoidal soundbox, is believed to have been invented during this period along with dances. Its invention was related to the development of the northern chamber genre *ca trù*, which promoted the role of female singers, particularly in the Lê dynasty (15th–18th centuries). An impressive national art of sung poetry has survived from this singing tradition.

The *chèo* and *tuồng* (also called *hát bội*), two major forms of Vietnamese theatre, had their origins in the Lý dynasty. In this same period, after victories over the



Chinese and the Chàm, performers and dancers were brought to the imperial palace for entertainment purposes. The dance music of the Chàm inspired King Lý Thánh Tông (1052–72) to compose his own music. Traditional music, folksong and folkdance were blended into Buddhist feasts and ceremonies. Buddhism became a leading national religion and expanded to every part of the country, leading to the absorption of, and favourable interactions with, other local beliefs. Hundreds of traditional musicians and dancers performed at the grand inauguration ceremony of the Diên Hưu temple in the 11th century, as recorded in *Đại Việt sử ký toàn thư* (Complete history of Đại Việt).

In the 15th century imperial court music was reorganized into *đồng văn* (choral music) and *nhả nhạc* (instrumental music). The court instruments were also remodelled on those of the Chinese Ming dynasty, regardless of the negative reaction of court dignitaries. New instrumental pieces and songs were composed for various court ceremonies and rituals that were maintained through the Nguyễn dynasty (1802–1945). In the meantime, the non-court genres such as *chèo*, *ca trù*, religious chant and folksong persisted independently. A masking dance called *xuân phả* is believed to have been created in the 15th century, during the Lê period. This rare dance survives in Thanh Hóa Province, about 170 km south of Hanoi.

The form closest to today's *tuồng* musical theatre was created in the 16th century. Credit for its invention is given to Đào Duy Từ, who joined the southern lords Nguyễn when the country was divided into north-south political divisions. He founded a school of theatre that was supported by the Nguyễn dynasty as a national theatre. Đào Tấn, a court dignitary and instructor at this school, composed the most extensive *tuồng* plays. The chamber music and songs of Huế (called *ca Huế*) were developed in the southern part of the country; their influence later spread to the delta of the Mekong river. Here, in the early 20th century, a new form of chamber music was born, called *đờn ca tài tử* or *nhạc tài tử*, which became the basic repertory of *cải lương* theatre.

Contacts with European cultures, beginning in the 16th century with missionaries and French colonialists, became particularly accelerated in the early 20th century. Western instruments were introduced, some adapted for traditional ensembles; others remained unchanged, with Western repertory that was learned by the Vietnamese. Western music was introduced into the national education system, designed by the French, in the first quarter of the 20th century.

2. INSTRUMENTS. Many archaic instruments are Chinese in origin and name. As in China they were classified into eight categories: stone, metal, silk, bamboo, wood, skin, gourd and clay. About 300 instruments are still in use, including those used by ethnic minority groups; the most important are mentioned here.

1. Đại nhạc ensemble with (from left to right) trống cơm (barrel-shaped 'rice-drum'), sinh tiền (clappers), bồng (hourglass drum), đàn nhị (two-string fiddle), four kèn (oboes), mõ sừng trâu (slit-drum), chập chỏa (cymbals), gong, and tam âm la (double-headed flat drum)

2. *Nguyễn Hu Ba playing the monochord đàn bầu (đàn độc huyền)*

(i) Aerophones. The *sáo* or *địch* (from the Chinese *di*) is a transverse bamboo flute with six finger-holes and an additional hole covered with a thin membrane, which acts as a mirliton. The cylindrical end-blown flute *tiêu* (from the Chinese *xiao*) is made of bamboo or bronze. It has five finger-holes at the front and one at the back.

The *kèn* (fig.1), a wooden oboe with seven finger-holes at the front and one at the back, is similar to the Chinese *suona*. The bell is made of brass or wood. There are several types of *kèn*, e.g. the *kèn tiểu* (small oboe), *kèn trung* (middle-sized oboe) and *kèn đại* (large oboe).

The *khèn*, a raft mouth organ featured in the engravings of the prehistoric bronze drums, is now only played by the Thái and the Triêng. The Êđê and Mnông living in the mountain areas have a similar instrument called *đing năm* or *m'buốt*, with bamboo tubes fixed in a windchest made of a dried gourd. The *sinh*, a mouth organ used for court music, was adapted from the Chinese *sheng*; this instrument is now obsolete.

There are a few side-blown horns used by ethnic minorities, such as the *pí mo* of the Thái and the *ki pá* of the Jarai. The *tù và*, an end-blown buffalo horn, and the *hải loa*, an end-blown conch shell, are now no longer in use.

(ii) Chordophones. According to a Vietnamese legend, the ĐÀN BẦU or *đàn độc huyền* (monochord) was given to man by an immortal. The instrument consists of a kind of box formed by three wooden boards from 80 cm to 1 m long and from 9 cm to 12 cm wide (fig.2). The soundboard is made of *ngô đồng* wood (*firmiana platanifolia*) and the two side boards of *trắc* wood (tulip wood). A flexible stem made of wood or bent bamboo goes through the soundboard 5 cm from one end, serving as a neck. It carries a gourd-shaped wooden resonator or a small coconut shell. The single steel string is attached at one end to the flexible stem at the point where the resonator is attached, passes obliquely through a small hole pierced in the soundboard, and is then wound round a wooden peg which runs through the two sides of the body. In his right hand the musician holds a sharpened bamboo stem about 15 cm long, with the sharp point held at the base of the little finger. He touches the string with the edge of his right hand at precise points, dividing it in the ratios 1 : 1, 1 : 2, 1 : 3 or 1 : 4, and plucks the string with the bamboo stem. By exerting pressure on the flexible neck with his left hand, the musician changes the tension of the string and thus the fundamental pitch. Any note of the scale can be obtained on this instrument, which has a compass of more than two octaves. It differs from the Chinese monochord *yixian qin*, the Japanese *ichigen-kin*, the Indian *gopī-yantra* and the Cambodian *saadiev*, although it has sometimes been likened to all of these instruments.

Similar to the Chinese *zheng*, the Japanese *koto* and the Korean *kayakeum*, the ĐÀN TRANH (a board zither; fig.3) has 16 steel strings stretched across movable bridges. The people of north Vietnam use a ground zither known as *trống quân* to accompany a folksong of the same name. A bamboo tube zither (*roding, ding goong, ding put*) is played by minority peoples of the central highlands. The strings, consisting of wire or strips of skin, vary in number from one to 13. The sound of the instrument imitates that of a gong ensemble.

The *đàn nguyệt* or *đàn kìm*, a moon-shaped, long-necked lute with two silk strings (see fig.4 below), differs from the Chinese *yueqin*, which has a very short neck. The *yueqin* is known in Vietnam under the name of *đàn đoản* ('short-necked lute') or *đàn tầu* ('Chinese lute'). The *đàn nguyệt* is similar to the Cambodian *caapey*, but its fingerboard is a little shorter than that of the *caapey*, with 8 frets instead of 12.

The *đàn tam* or *tam huyền* is a three-string lute with a round soundbox covered on both sides with snakeskin; it resembles the Chinese *sanxian*. The *đàn đáy* (singer's lute; fig.4) is peculiar to north Vietnam and was used to accompany the *ca trù* singer. It has a very long neck, three silk strings and a trapeziform body. Like the *đàn độc huyền*, it was, according to legend, a bewitching instrument given to man by the immortals.

The *đàn tỳ bà*, a four-string, pear-shaped, fretted lute, is similar to the Chinese *pipa* (*tỳ bà* being the phonetic transcription of *pipa* in Vietnamese pronunciation). It is played with a small plectrum or with the fingernails (fig.5).

The Thái and Nùng peoples of north Vietnam use a long-necked lute called *tính tẩu* or *đàn tính*, which has a soundbox made from a gourd and a round soundboard 15 cm in diameter; the fingerboard has no frets.

The more notable bowed stringed instruments are the *đàn nhị* (see figs.1 and 3 below) or *đàn cò*, a two-string fiddle similar to the Chinese *erxian*, and the *đàn gáo*, also with two strings. There are many kinds of *đàn nhị*, differing according to the size of the resonator and the length of the neck. The *đàn gáo* has a resonator made of an empty coconut shell, similar to the Cambodian *tror u* and the Laotian *so u*. In the early 20th century, the European guitar was introduced to Vietnam and later became a favourite instrument of the *tài tử* and *cải lương* ensembles. Known as *lục huyền cam* ('six-string instrument') or *ghi-ta*, it was modified by having the wood between the frets hollowed out to facilitate deep pressing

3. Ngũ tuyệt ensemble with (from left to right) đàn tỳ bà and đàn tam (lutes), đàn tranh (zither), đàn nguyệt (lute) and đàn nhị (fiddle)

on the metal strings, which were adapted to be softer and more flexible. At the same time the violin, called *vĩ cầm* or *viô-lông*, was adopted into the same ensembles.

(iii) Membranophones. There is a great variety of drums in Vietnam. The *bồng* is a single-headed drum shaped like an hourglass and beaten with the hands, while the *trống cái*, also with one skin, is beaten with one stick in the court music of Huế and in southern Vietnam.

Some drums with two heads are the *đại cổ* ('big drum'), a barrel-shaped drum beaten with one or two sticks and similar to the Chinese *dăgu*; *tiểu cổ*, the generic name for a small, double-headed drum; the *trống chiến* ('battle drum'), a barrel-shaped drum used in the traditional theatre; the *trống nhạc*, a pair of shallow cylindrical drums used in ceremonial music, and the *trống cơm* ('rice-drum'; see fig.1 above), a barrel-shaped drum similar to the south Indian *mṛdaṅgam*. This drum may be Indian in origin, since it was introduced into Vietnam through the former kingdom of Champa.

The Chàm people use the *baranưng*, a large, single-headed frame drum, to accompany their long songs. It can also be played in an ensemble for ceremonial music. The *ganang*, a pair of double-headed cylindrical drums, is also of Chàm origin; one skin is beaten with the hand, the other with a stick. The *ngor*, *song gor*, *hogro* or *hogoi* is a large, barrel-shaped drum used by the ethnic minority groups in the high plateaux of central Vietnam.

(iv) Idiophones. Of the many idiophones to be found in Vietnam, the *sinh tiền* (clappers; see fig.1 above) is probably the most unusual. This instrument consists of three small planks: the longest (30 cm long, 3 cm wide and 1 cm thick) carries a head provided with two or three *sapeke* (Chinese coins); underneath it is serrated. A second plank, shorter than the first (20 cm long), carries two brass heads, each provided with two or three *sapeke*. The third plank (15 cm long) has teeth cut into it. The *sinh tiền* combines the characteristics of clappers, sistra and scrapers.

Other Vietnamese idiophones are the *sanh*, a pair of wooden clappers; the *song lang*, a small woodblock beaten with a small wooden ball connected to the block by a flexible curved slat made of horn; the *mõ gia trì*, similar to the Chinese *muyu*, a fish-shaped woodblock used in Buddhist religious ceremonies; the *mõ*, a slit-drum made of hollowed-out wood or pieces of bamboo and used in ceremonial music; the *mõ sừng trâu*, a part of a hollowed buffalo horn (see fig.1 above); the *chung* or *chuông*, bells used in Confucian or Buddhist music; the *chiêng*, a gong with a central boss; the *la*, a flat gong; the *bạt*, small cymbals; and the *chập chõa*, large cymbals of different sizes.

Sets of 7, 9 or 13 gongs are used by the Êđê, M'nông gar and M'nông ma of the high plateaux. They are struck in the same way as the gongs from Sagada in the Philippines.

4. Hát ả đào singer accompanying herself on the phách (clappers), with đàn đáy (lute) and trống chầu ('praising drum')

3. INSTRUMENTAL ENSEMBLES. Vietnamese music is essentially vocal. Chamber music and theatre ensembles only play preludes and interludes in performances featuring songs and chanted poetry. Instrumental music is played for religious ceremonies in the lowlands; formerly it was also played at the imperial court. In the highlands, gong ensembles are widely used.

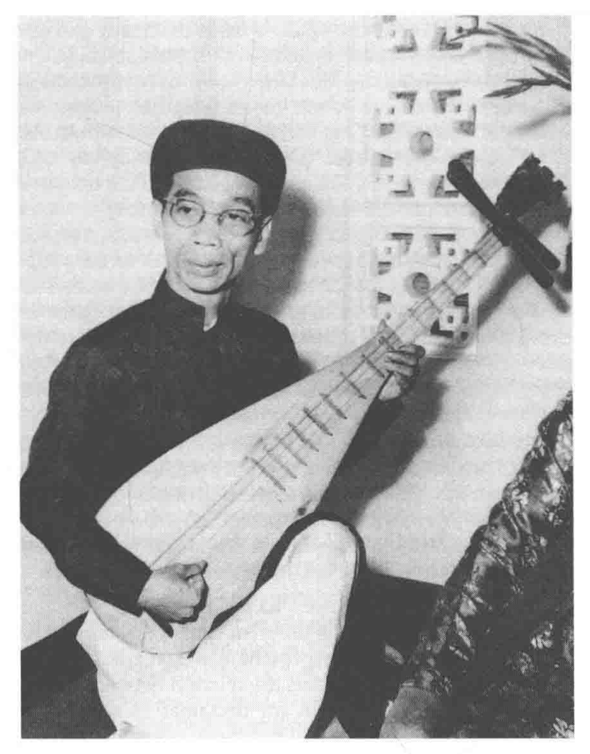
The court orchestra comprises three kinds of instrumental ensembles: the ĐẠI NHẠC (large ensemble), which uses drums, gongs and wind instruments (oboes and conches), the *nhạc huyền* (ensemble of bronze and stone chimes) and the *tiểu nhạc* or *nhã nhạc* (small ensemble), which features mainly strings (lutes, fiddles and flutes). A typical *đại nhạc* ensemble in the early 20th century consisted of 20 large drums, eight oboes, four large gongs, four medium gongs, four conches and four water-buffalo horns. This ensemble and the *nhạc huyền* only performed on important occasions. The *nhã nhạc* consisted of two transverse flutes, one two-string fiddle, a moon-shaped lute, a pear-shaped lute, a three-string lute, a small single-headed drum, *sinh tiền*, and a set of three small gongs. Today, visitors to the Huế Imperial City only see performances of the *nhã nhạc* ensemble.

The ceremonial music ensemble of south Vietnam, called *nhạc lễ*, is composed of instruments which can be grouped into *văn* (strings) and *võ* (percussion). A complete *nhạc lễ* ensemble includes four two-string fiddles, a lute, a pair of double-headed drums, a single-headed drum, a large gong, a small gong, a pair of large cymbals, a pair of small cymbals, a single-headed hourglass drum, a water-buffalo horn drum and an oboe.

There are various kinds of ensemble for the traditional theatre, folk theatre and modernized theatre. Entertainment (chamber) music is performed by an ensemble of three instruments: 16-string zither, two-string fiddle and moon-shaped lute (which can be replaced by the pear-shaped lute). A group of five instruments is called *ngũ tuyệt* (the five 'perfect' instruments; see fig.3 above): it consists of the four above-mentioned instruments and one three-string lute or the monochord. Sometimes a group of six, the latter group plus a transverse flute, is used to perform entertainment music.

In the central highlands of Vietnam, gong ensembles are prominent features of minority cultures. The number of gongs (flat and bossed) in an ensemble varies from two to 22 depending on the ethnic group or specific occasion. Three typical types of gong ensembles are those of the Brâu, the Êđê and the Jarai peoples. Brâu musicians play a set of two gongs, suspended from the ceiling inside their stilt houses, with a pair of short beaters and a pair of long beaters that rest on a musician's shoulders. Êđê musicians play complex, four-part polyphonic compositions sitting on a *kpan* (long bench made of a tree trunk).The gongs, which hang from the ceiling, rest on their laps. Unlike with most gong techniques, five players strike their flat gongs with beaters on the back, while three players beat

their larger bossed gongs on the front. All use their left hands to regulate the sound of the gongs. Large-scale performances often take place at the water-buffalo feasts of the Jarai and Bahnar peoples, in which up to 23 gongs are used. Like the majority Việt people, many minority groups in the highlands use a drum as a leading instrument to signal the beginning and end of a performance. The highland Chàm, however, play a pair of gongs and a hand-beaten drum in a call-and-response manner while dancing.



4. MUSICAL LANGUAGE.

(i) Scales. Defining musical scales in Vietnamese music is a difficult task; a folksong may consist of only two pitches, while an instrumental piece of the art tradition could employ the entire available pitch range. The fretting of string instruments is based on either pentatonic (e.g. the *đàn nguyệt* moon lute) or heptatonic (e.g. the *đàn đáy* long lute) scales. Emphasis is given to a five-tone scale that is peculiar to the Vietnamese tradition.

Table 1 shows the type of pentatonic scale employed in Vietnam. As can be seen, the notes *hò*, *xang*, *xê* and *líu* are strong and relatively stable, while the notes *xự* and *cống* are weak or mobile. The notes *líu* and *ú*, which are an octave higher than *hò* and *xự*, do not have the same names because their musical function in many melodies is different. Most of the scales are anhemitonic except for the scale *vọng cổ*, which uses the semitone e′–f′.

Other types of scale are used by the various ethnic minorities, and two-, three-, and four-note scales occur in folk music.

(ii) Modes. The *điệu* or *giọng* (modes) and the *hơi* (modal nuances) are important in chamber (entertainment), theatre and Buddhist music. There are two principal modes or modal systems, the *bac* and *nam*. They are called either *giọng*, a rather vague term meaning voice or intonation, or *điệu*, a Sino-Vietnamese word which corresponds to the Chinese *diao* (*chō* in Japanese and *jo* in Korean). Despite this linguistic relationship, the Vietnamese concept of mode is distinct from that of other East Asian cultures.

5. *Đàn tỳ bà (lute)*

The *bắc* is a regular pentatonic scale with two auxiliary notes as passing notes or ornaments (see Table 1, scale *bắc*). Any note of the pentatonic scale may serve as the opening, final or cadential note, but the *hò* (*c′*) nevertheless remains the fundamental note. Next in importance are the notes *xang* (*f′*) and *xê* (*g′*). Specific ornaments should be used. The tempo ranges from moderate to very fast; slow pace is exceptional. The *điệu bắc* expresses gaiety or solemnity but includes several *hơi* (modal nuances): the *bắc* itself, expressing gaiety; the *quảng* (fancy and in the

○ – strong degrees; ● – weak degrees; (●) – auxiliary degrees

Cantonese manner); the *nhạc* or *hạ* in the south and the *thiền* in central Vietnam (solemn, ceremonial music).

Scales belonging to the *điệu nam* have four main degrees, a tritonic structure or an irregular pentatonic structure. The *xang* (*f'*) is a little higher in pitch than the *xang* of the *bắc* mode. *Xự* ranges from *d♭'* to *d♯'*, sometimes even as high as an *e'*. The *cống* falls between *a♭'* and *a♯'*. Only the notes *hò*, *xang* or *xê* may serve as the opening, final or cadential note. As in *bắc*, the *hò*, *xang* and *xê* are the most important degrees of the scale. Specific ornaments for the *điệu nam* should be used. The tempo ranges from moderate to slow; quick pace is exceptional. The modal nuances of the *điệu nam* are the *xuân* (expressing serenity or tranquillity), the *ai* (melancholy or sadness) and the *oán* (deep sorrow); there is one exception, the *đảo* in the south, which expresses solemnity.

The idea of mode is highly developed in Vietnamese music, the *điệu* bringing to the melody a characteristic colour. In the *tuồng* and *hát chèo* (traditional theatre music) and in *hátả đào* (the repertory of professional singers) the melody unfolds from a given mode; the *điệu* nonetheless differs from the Indian rāga.

(iii) Melody. Vietnamese, like Chinese, is a tonal language. There may be six different tones for one syllable and the meaning of the word changes according to the particular tone. In folk music, the relation between music and speech is very close. In the declamation of poetry, prayers or songs of the *ả đào* repertory, words are set to music, and the singers or the priest must take the particular tones of the words into consideration in order to find a proper melody.

In the chamber music of central and south Vietnam, the melodic line of a specific tune varies according to the school, region, the musical instruments, the musician and the period. A melodic line provides merely the theme from which a good musician can create a more elaborate melody with more ornamentation.

(iv) Metabole. In this context, a metabole is an alternation or succession of two or more five-note scales (with or without a periodic and final return to the point of departure) in the course of a pentatonic melody. Derived from the Greek word meaning 'change', the term was used and defined by the musicologist Constantin Brăiloiu and characterizes a musical phenomenon that is often found in Vietnamese folk music, especially in north and central Vietnam, in folk theatre music and in the *chầu văn* repertory (medium's songs). There are several types of metabole. If in the first part of a melody the pentatonic scale *g*, *a*, *c'*, *d'*, *e'* is used and in another part of the scale *c'*, *d'*, *f'*, *g'*, *a'*, one cannot say that the scale used for that melody is therefore hexatonic, consisting of the notes *g*, *a*, *c'*, *d'*, *e'*, *f'*, *g'*, because when the *f'* is present the *e'* is absent and vice versa. These are, on the contrary, two distinct pentatonic scales whose juxtaposition constitutes a metabole.

(v) Rhythm. The term *phách* in Vietnamese designates a piece of wood or bamboo used to mark time units. *Phách* also refers to the time units (e.g. a tune of 60 *phách*) or the tempo (*phách dồn* meaning quick tempo). In south Vietnam, *nhịp* means 'to beat time' or refers to the strong beat of each time unit; a weak beat is called *láy*. In folk and art music duple time is used almost exclusively; triple time is scarce. There are many cyclic rhythmic patterns with 8 or 16 beats in ceremonial and theatre music. The last note of a piece is emphasized by a stroke of clappers, a woodblock or the *mõ sừng trâu*; the manner of playing these instruments varies according to the region and the musical genre. Syncopation is often used, and free rhythm is found in the chanting of poetry, in theatrical declamation and in improvised vocal or instrumental preludes.

The rhythmic patterns in theatre and ceremonial music are numerous. They are determined by the placing and number of specific drumstrokes and are taught by onomatopoeic syllables, e.g. *toong*, *táng*, *cắc*, *trắc*, *tà-rắc*, *rụp*. Very few rhythmic patterns are fixed; most of them can or must be used with rhythmic variation. To perform the basic pattern is known as *đánh chân phương* ('to strike in a true and square way') when there is no variation and *đánh hoa lá* ('to strike, adding flowers and leaves') when there is. Polyrhythms can be found in traditional theatre music and ritual music. Formerly, all kinds of music were rhythmically accompanied, but entertainment music in central and south Vietnam now has no special rhythmic accompaniment.

(vi) Heterophony. Vietnamese music is not exclusively monodic. The Thái and Hmông perform some folksongs in several parts, and Buddhist prayers are never chanted in unison. In instrumental music many different melodic lines, derived from the same melodic pattern, are performed simultaneously by several instruments, although the last note of a musical phrase and musical section must be played in unison or in octaves. On the main beats all the instruments play either a unison or a consonance. On the weak beats they are free to use any note of the modal scale. Heterophony can be found in the instrumental accompaniment of a song as well as in instrumental music performed by ensembles.

(vii) Ornamentation and improvisation. An important feature of Vietnamese musical tradition, ornamentation is usually reserved for certain instruments or certain modes. For example, arpeggiation is used only on the *tranh*. On the same instrument vibrato is used for the notes *xự* and *cống* in the *điệu bắc* and for the notes *hò*, *xạng* and *oán* in the *điệu nam*, *hơi ai*. The scale is the same for the *hơi xuân* and the *hơi ai*, but the ornaments for the note *xang* are different in the two cases. Besides these prescribed ornaments, there are improvised ones in both vocal and instrumental music. A singer or musician is appreciated much more for his ability to ornament than for the number of pieces in his repertory.

In the Vietnamese folk music tradition, improvisation can be either poetic or musical, especially in the *trống quân* and *quan họ*, sung by two groups in competition. In art music, before playing a melody, musicians used to improvise in the prelude called *rao* in south Vietnam and *dạo* in central or north Vietnam. Nowadays the *dạo* in the *Huế* tradition (central Vietnam) consists of a few stereotyped musical phrases. While the *rao* is still elaborate, improvisation is no longer as developed as it used to be in either the *dạo* or the *rao*.

(viii) Notation. The notes of the scale, as in Chinese tradition, are represented by Chinese characters written from top to bottom and from right to left. For the notes of a lower octave a dot is put under each character. The notes of the upper octave are represented by the same characters with an additional symbol on the left side. Illustrations of the notation system can be found in Trần Văn Khê (1962) and Nguyễn Thuyết Phong (1989).

Nowadays, however, the names of the notes are written in modern script with Roman letters. A circle or a dot in red ink beside a character shows that the note is on a strong or a weak beat respectively. This system of notation has no indication for the manner of performance. There were tablatures for the *đàn tranh* and the *ty bà*, but they were not as accurate as the tablature for the Chinese *qin*. Many new systems of notation, invented by a few traditional masters, are being used concurrently with Western music notation.

5. MUSICAL GENRES. Art music, with its definite rules and its varied repertory, is performed by professional or semi-professional musicians. In the time of the monarchy, this music was played to accompany court ceremonies or to enliven banquets. Nowadays it serves merely as entertainment or to accompany ceremonies or theatrical performances.

(i) Court music. In the 15th century, in the reign of King Lê Thái Tông (1434–42), a court high official was commissioned to study the music of the Ming dynasty, then reigning in China, in order to create a Đại Việt (Vietnam's former name) court music. He distinguished eight kinds of music; *giao nhạc* ('music of heaven's terrace') for the sacrifice to heaven and earth; *miếu nhạc* ('music of the temples') performed in the imperial and Confucian temples; *ngũ tử nhạc* ('music of the five sacrifices'); *đại triều nhạc* ('music of the great audiences'); *thường triều nhạc* ('music of the simple audiences'); *yến nhạc* ('banquet music'); *cung trung chi nhạc* ('palace music'), and *cứu nhật nguyệt giao trùng nhạc* ('music for assistance to the sun or the moon in case of an eclipse').

Several instrumental ensembles were used to perform royal music: the *đông văn* and the *nhã nhạc*, which were replaced by the *giao phường*. In the 19th century and even in the 20th, shortly before the fall of the monarchy in 1945, court orchestras were as follows: the *nhạc huyền*, consisting of archaic instruments, mostly used as a parade orchestra, the *nhã nhạc* ('elegant music'), and *đại nhạc* ('great music'). The repertory included a series of nine hymns (*cửu tấu*) or six hymns (*lục tấu*) sung by a choir in unison.

Court dances were performed by two groups of dancers, the *văn vũ* ('civil dance') and *võ vũ* ('military dance'). A great number of musical pieces for the *đại nhạc* and *nhã nhạc* ensembles are no longer performed except at national festivities, or in special circumstances such as the reception of foreign ambassadors or at international festivals.

(ii) Chamber music. Music for entertainment is not 'light music' but rather art music performed by a small number of instrumentalists for a limited audience, somewhat like chamber music in the West. There are three regional types.

In north Vietnam, *hát ả đào* or *ca trù* chamber music is performed by professional or semi-professional singers accompanied by only one musician playing on the *đàn đáy*, or by an instrumental ensemble when the singers dance at the same time. From a historical point of view, it is very likely that the *hát ả đào* was created in the 15th century, reached its peak of development in the 19th century and began to decline in the 20th. It is now disappearing, and singers who know the whole repertory can no longer be found.

The music of the *hát ả đào* has altered considerably owing to the decreasing number of accompanying instruments, the scarcity and even suppression of the dances and the disappearance of the teaching centres of vocal music. The genre once displayed skilled vocal technique, instrumental accompaniment, the combination of melodic and rhythmic elements and audience participation. The singer had to have a refined vocal technique and a deep knowledge of rhythm. She would accompany herself rhythmically on the *phách* (clappers), a small bamboo plank or a piece of hard wood that she beat with two wooden sticks (see fig.4 above). As a rule, only one musician accompanied the song on the *đàn đáy*. One of the listeners would hold the *trống chầu* ('praising drum'), which is a small, double-headed drum that was beaten with a wooden stick and gave stereotyped rhythmic patterns. The old repertory included entertainment songs, songs in honour of tutelary genii as well as competition songs.

(iii) Huế music. The period from which the *ca Huế* (Huế songs) and the *đàn Huế* (Huế music) date is not known. This genre could have existed for a long time and may have had a different name in the past; its present name derives from Huế, the site chosen as the capital of the southern part of Đại Việt by Nguyễn Phúc Trần in 1687. The Huế tradition is kept alive by musicians who continue to hand down their art to younger musicians.

Some of the best-known pieces in the Huế repertory are *Lưu thủy* ('Flowing water'), *Cổ bổn* ('Old piece'), *Lộng điệp* ('Butterflies courting') and *Mười bài ngự* ('Ten royal pieces'), also called *Mười bài tầu* ('Ten Chinese pieces'), in the *bắc* mode; and *Nam ai* ('Lament of the south'), *Nam bình* ('Peace in the south') and *Tứ đại cảnh* ('Landscape of four generations') in the *nam* mode. Huế music can be played as a solo, a duet, a trio or a quintet (*ngũ tuyệt*, see §3 above). It can also be performed by the court *nhã nhạc* ensemble.

(iv) Đờn ca tài tử or tài tử ('music of skilled amateurs'). This music, found in the south, belongs to the same tradition as Huế music, though the repertory and the instrumental technique are slightly different. Pieces in the *bắc* mode such as *Lưu thủy* ('Flowing water') or *Kim tiền* ('golden coin') recur here, but apart from the six *bắc* pieces, there are seven great pieces (*bảy bài lớn*) belonging to the *nhạc* type expressing solemnity, and several short tunes of the *quảng* type expressing fancy.

Nam xuân ('Spring in the south') and *Nam ai* ('Lament of the south') differ from the pieces of the same name in the Huế tradition. The most popular piece in the southern tradition is *Vọng cổ* ('Nostalgia for the past'), composed in 1917 by Cao Văn Lâu (also known as Sáu Lầu), a native of Bạc Liêu in south Vietnam. Since then, this piece of 20 phrases of 2 bars has become a piece of 6 phrases of 32 bars. Its melodic line, with fixed notes on certain beats, can be infinitely varied according to the musicians and the instruments.

The instruments of *tài tử* music are basically the same as those of the Hue tradition. In addition, the modified European guitar (*ghi-ta*), violin (*viô-lông*) and steel guitar (*ghi-ta ha-oai-en*) are used in all *tài tử* and *cai lương* repertories. Recently, the *đàn bầu* monochord has been reintroduced into southern music after a long period of absence. The most favoured *tài tử* piece is *vọng cô* ('Remembering the past').

(v) Ceremonial and religious music. In several regions funerals still proceed according to Confucian, Buddhist, Caodaist or Christian rites. In south Vietnam, funeral music is performed by a group of five instruments called

quân nhạc ('military music'), and the pagodas and temples still resound with Buddhist or Caodaist prayers.

There is nothing comparable to the Japanese *shōmyō* (Buddhist chant), but a great number of prayer texts are similar to those found in Chinese or Japanese Buddhism. There are two main genres: *tụng*, cantillation without instrumental accompaniment, and *tán*, Buddhist chanting with instrumental accompaniment in big ceremonies. Some of the *tán* are sung in the *thien* nuance of the *bắc* mode, others in the *nam* mode. The mediums' songs *chầu văn* in north Vietnam, *hầu văn* in central Vietnam and *rôi bóng* in south Vietnam are dying out.

(vi) Folk music. Vietnam has 54 different ethnic groups. Nearly all the peoples sing *hát ru* (lullabies), *đong dao* (children's songs) and *hò* (peasant work songs). The Thái have songs with dancing, whereas several ethnic groups of north Vietnam sing special funeral or ceremonial songs. In north Vietnam, antiphonal songs are sung by boys and girls, especially the *trong quân* (accompanied by the *trong quân*, a ground zither) and the *quan họ*, a song peculiar to the province of Bắc Ninh. These are both love songs with collective and competitive features. For the *trõng quân* only poetic improvisation is required, but musical improvisation is also part of *quan họ*. Blind musicians (*xẩm xoan*) go from one village to another singing historical, humorous, epic and sometimes erotic songs for the villagers. More than 6000 folksongs have been recorded for the archives of the various research institutes of Vietnam. It still remains for them to be studied and analysed in order to present a more accurate picture of Vietnamese folk music.

(vii) Theatre. All the traditional theatres of Vietnam are musical theatres, of which the script and the acting are the most important elements, though given coherence by singing, dancing and instrumental accompaniment. *Tuong* or *hát bội*, a court theatre, is considered the 'classical' theatre of Vietnam. It is very similar to Chinese theatre, with the same simplicity of stage setting and almost the same conventions concerning the characters, costumes, make-up and gesture. However, stories (*tuong*) are taken from the history and mythology of Vietnam and China. These are categorized according to their sources: the *tuong thầy* (masters' plays) were composed by prominent Vietnamese playwrights; the *tuong pho* (long plays) were derived from long Chinese stories; and the *tuong đo* (varied plays) derived from Vietnamese folk stories. Although many stories are adapted from Chinese sources, vocal techniques and instrumentation are quite distinctive. Voices (*giọng*) are classified according to the style of the vocal production used by the singer: *giọng óc* (falsetto), *giọng gan* ('liver' voice), *giọng ruột* ('intestine' voice), *giọng hờm* ('jaw' voice) etc. The *kèn bóp* (oboe) and the *trong chien* ('battle' drum) feature prominently in the accompanying instrumental ensemble.

Tuong requires specific training in the most substantial repertory of songs and music among traditional theatrical forms. The repertory consists of *nói loi* (declamations), *xướng*, *bạch* and *thán* (recitatives), *hát khách* (songs of the 'guest' category), *hát nam* (songs of the 'native' category and in the *nam* mode), *hát bài* (songs for a particular character) and *hát noi niêu* (varied songs).

Hát chèo or *chèo*, which emerged from folk traditions, became an important form of theatre in northern Vietnam in the Lý dynasty (11th–13th centuries). Many older plays are anonymous, and the texts are in the common language of the people; texts and melodies are orally transmitted. Unlike the court theatre, there is no scenery, no gorgeous costumes and no sophisticated make-up. The repertory includes various types of *nói sử* (declamation of verse in a serious style): *sử chúc* for the prologue; *sử xuân*, of a happy nature; *sử rầu*, of a sad nature, and *sử vãn*, of a mournful nature. *Nói lửng* is declamation of verse in a light style. There are also songs such as the *sắp*, which are for lively scenes, the *ba than* and *hát vãn* for sad scenes, the *sa lệch* for love scenes, the *cam giá* for courting scenes, the *he moi* for buffoonery and the *chuon chuon* for mad women to sing. The instrumental ensemble used to consist of a fiddle player, a flautist and a drummer. Nowadays more instruments are used.

Cai lương (reformed theatre) was created in 1918 and is popular in southern Vietnam. The plays are different in essence and in form from traditional theatre, the themes being chosen from Vietnamese history as well as from foreign sources (Chinese, Indian, Arabic, European), from novels, from the various religions or from everyday life. They are written in the language of the people. The stage is adorned with a curtain and scenery, and more theatrical properties are used than in the other types of theatre so far described. It attempts a more natural style of acting; conventional gestures and stylized attitudes are now to be found only in historical plays.

The music of *Cai lương* is based mainly on the repertory of *tài tử* chamber music. Compositions in the *bắc* mode are for light scenes and in the *nam* mode for sadder scenes. Chinese and European songs have been adapted for inclusion; new short songs have been added for particular roles.

(viii) Dances. For centuries, many folkdances have been integrated into ritual ceremonies, musical theatre and court music. One example is the stick dance, which had originally been a folkdance and was performed by King Đinh and King Trần from the 10th century to the 13th. Folk martial arts were adapted as the basic rules for *hát bội tuong*, which was once the court musical theatre. Village temple courtyards have long been performance sites for folk and traditional dances that depict historical stories of, and offerings to, local deities. Dances are rarely performed simply for entertainment purposes, with the exception of those performed for the former court banquets.

Folkdances are associated with local festivities and portray agricultural activities, local customs and stories of famous persons. Stories of the Hùng kings are enacted in the ancient site of the pre-historic kingdom of Văn Lang in Vĩnh Phù province on the annual commemoration day (*giỗ tổ Hùng Vơng*). The dances depict the life of this legendary time with bronze drum playing and scenes of tribute offerings from neighbouring countries. The cycle of the 12 agricultural months is elaborated in the 12 dance suites called *mùa đèn* ('light dance') in Đông Ankh district, Thanh Hóa province. Along the south-central coast, an annual ceremony in honour of the sacred whale features the *bá trạo* (oar dance) and other related dances, such as the 'flower offering' dance and the 'long swords' dance.

Dance is included in Buddhist ceremonies, *chầu văn* possession rituals, ceremonies of the *Cao Đài* religious sect and the Catholic Mass. The most prominent of these are Buddhist dances: *lục cúng* ('six offerings'), *kinh đàn*

(sutra chanting ritual), *du địa phu* ('salvation from hell') and others which were probably created in the Lý dynasty.

Imperial court dances continued as a richly elaborate art for nearly 1000 years, from the time of the Lý dynasty. In the 17th century, Đào Duy Từ created the *thanh hòa thụ* (royal dance mansion), where three teams of 120 dancers, musicians and singers were trained for court performances of a repertory of 11 major dances, performed for specific occasions in the palace.

Among minority peoples, well-known dances are performed during harvest and other festivities. These include the Thai *xoe*, the Khmer *lăm thôn*, the Chàm *cà choong* and the Êđê *xoang*; other dances are performed for courtship, celebrations and rituals.

(ix) Popular and Western music. A new style of Vietnamese music has arisen as the result of contact with Western music. At first, songs were composed in a Western idiom to be taught in schools and universities, to boy scouts and to revolutionaries. Now, popular songs with romantic, folk and historical themes are widely sung on commercial recordings, radio, television and modern stages. Young musicians trained in the West have endeavoured to write compositions for the piano or violin before attempting other Western genres such as the symphonic poem, concerto, symphony or opera. Some use only Western techniques; others try to combine elements of traditional music with Western forms and idiom. Such composers are not yet well known outside Vietnam.

Traditional Vietnamese music, in spite of its originality and diversity of styles, no longer corresponds to the needs of the media or urban Vietnamese people. Many original folkdances have consequently become obsolete or have changed extensively.

TRẦN VĂN KHÊ/NGUYỄN THUYET PHONG

Vieu, Jane [Jeanne Elisabeth Marie; Valette, Pierre] (*b* 1871; *d* Paris, 8 April 1955). French composer. Little is known about Vieu's life. She composed about 100 works – orchestral, operatic, chamber, piano and vocal – some of which were published under the pseudonym Pierre Valette. Her musical idiom is decidedly 19th-century in its formal and harmonic character, despite the fact that she lived well into the 20th century. Her operetta *Arlette* received its première in Brussels, at the Théâtre Royal des Galeries St Hubert, on 28 October 1904.

From 1907 onwards, Vieu's compositions were published by Maurice Vieu, presumably her husband, with whom she later formed a publishing house (Maurice Vieu and Jane Vieu) in Paris. She wrote a solfège manual, *Dix leçons de solfège manuscrites à changement clès* (Paris, 1913), designed for use at the Paris Conservatoire and dedicated to its director Gabriel Fauré.

WORKS
(*selective list; complete list in SACEM*)

DRAMATIC
all published in Paris

Madame Tallien, ou Thérésa Cabarrus (pièce historique, 5 [8 tableaux], P. Berthelot and C. Roland), 1901; La belle au bois dormant (féerie illustrée, L. Métivet), 1902; Au bal de Flore (ballet-pantomime, 1, G. de Dubor), 1902; Aladin (féerie chantée, 15 tableaux, L. Métivet), 1904; Arlette (operetta, 3, Roland and L. Bouvot), Brussels, Théâtre Royal des Galeries St Hubert, 28 Oct 1904; Piège d'amour (fantaisie-lyrique, 1, de la Vaudère), 1905; Sur le pont d'Avignon (fantaisie-opérette, 1, L. de Lahitte), 1937

OTHER WORKS

Orch, chbr and solo inst: Amoroso, intermezzo, vn, pf/mand, pf; Au coin du feu, vn/vc, pf; Au pays parfumé, 1v/vn, pf; Castillane, waltz, pf/pf, mand; Chanson du soir, pf or vn/vc, pf/hp; Colombine, air de ballet, pf/pf, orch; Griserie de caresses, pf/pf, orch [also vocal arr.]; Lyresse et parfums, pf/pf, orch; Lever de l'aurore, vn, pf; Marche des alguazils, pf, mand; Marquise bergers (Chanson Louis XV), pf/pf, orch; Minuetto, str qt/pf qnt; Morceaux détachés, pf, orch; Nymphes et papillons, pf/pf, orch; Séduction, pf/vn, pf; Sérénade d'Aladin, pf/vn, pf; Tarantelle, pf, orch/pf/hp; Valse des merveilleuses, pf/orch; Valse des rousses, pf/vn, pf; pieces for solo pf

Vocal: Choeur du printemps, women's chorus; Ave Maria, 1v, pf/hp, vc, org ad lib; Chant des faneurs, 1v, pf, mand/vn ad lib; Griserie de caresses, 1v [also inst arrs.]; O salutaris!, 1v, vc/vn, org/pf; Sous la brume, 1v, gui, mand; songs, 1v, pf

JUDY TSOU

Vieux, Maurice (Edgard) (*b* Savy-Berlette, 14 April 1884; *d* Paris, 28 April 1951). French viola player. He studied first with his father, a railwayman who was a violinist and a poet. Entering the Paris Conservatoire in 1899 as a

pupil of Laforge and Leport, he took a unanimous *premier prix* in 1902 and was soon making an impact in Parisian musical life, for instance in the Double Quintet of the Société de Musique de Chambre. In 1907 he joined the Opéra orchestra, becoming solo viola player the next year and staying until 1949; he was concurrently solo viola player with the Société des Concerts du Conservatoire and played at various times in the Concerts Pasdeloup, Orchestre Colonne, Orchestre Walther Straram and French National Radio Orchestra. As a soloist he gave the premières of a number of works, including Bruch's Romance, Schmitt's *Légende* and Jongen's *Suite pour orchestre et alto principal* (all dedicated to him). Pieces for viola and piano were written for him by Bournonville, Gaubert, Grovlez, Hahn, Jongen and others. For years Vieux was a member of the Quatuor Firmin Touche, and he took part in the premières of chamber works by Saint-Saëns, Fauré (the C minor Piano Quintet and the String Quartet), Debussy, Milhaud, Samazeuilh, Golestan and Françaix. He played on equal terms with Ysaÿe, Sarasate, Kreisler, Enescu, Thibaud and Casals and fulfilled the same role in the advance of the viola in France that Tertis did in Britain. When Théophile Laforge died in 1918, Vieux took his place as professor of viola at the Conservatoire and over the next 30 years every French viola player of note studied with him. His best-known pedagogical works were 20 *Etudes* (dedicated to favourite students); ten *Etudes sur des traits d'orchestre*; ten *Etudes sur les intervalles* and six *Etudes de concert* for viola and piano (dedicated to other pupils). Vieux made few records but they are enough to show the pliant, supple quality of his tone, the delicacy of his vibrato and his exceptional musicianship; Fauré's G minor Piano Quartet (with Marguerite Long, Jacques Thibaud and Pierre Fournier) has rarely been out of the catalogue since it was recorded in 1940.

TULLY POTTER

Vieuxtemps. Belgian family of musicians.

(1) Henry Vieuxtemps (*b* Verviers, 17 Feb 1820; *d* Mustapha, Algeria, 6 June 1881). Violinist and composer. The most celebrated member of the family, he studied the violin from the age of four with his father, an amateur musician, and later with M. Lecloux-Dejonc. He made his first public appearance at the age of six at a concert in his home town; this was followed by a successful performance on 29 November 1827 at the Société Grétry in Liège. Early in 1828 he performed several times in Brussels, where he attracted the attention of his next teacher, Bériot. In May 1829 Bériot took Vieuxtemps to Paris, where he made his début with Rode's Seventh Concerto; reviewing the concert, Fétis proclaimed him 'a born musician'. His lessons with Bériot came to an end in 1831 when Bériot departed for Italy, but he obtained a royal Belgian stipend for his pupil. In 1833 Henry went with his father, a rather strict taskmaster, on a concert tour through Germany to broaden his musical horizon. He met and heard several of his famous contemporaries, including Spohr, Molique and Mayseder, and finally settled for the winter of 1833–4 in Vienna, where he studied counterpoint with Sechter and entered a circle of musicians who had been close to Beethoven. He undertook to learn Beethoven's Violin Concerto, at that time virtually forgotten, and after only two weeks of preparation performed it with immense success (16 March 1834). The conductor, Eduard von Lannoy, director of the Vienna Conservatory, praised his performance as 'original, novel, and yet classical'. Travelling north, Vieuxtemps played in Leipzig, earning a review by Robert Schumann that compared him to Paganini. Although his début in London at the Philharmonic Society (2 June 1834) did not arouse much interest, he met Paganini, at that time the rage of London, whose playing impressed him deeply; it was reported that Paganini heard young Vieuxtemps and predicted a great future for him.

Vieuxtemps spent the winter of 1835–6 in Paris, studying composition with Reicha. He set himself the goal of 'combining the grand form of the Viotti concerto with the technical demands of modern times'. The result of his efforts was his F♯ minor Violin Concerto (later published as the Concerto no.2 op.19), which clearly shows the influence of Paganini. His apprentice years completed, Vieuxtemps resumed his travels throughout Europe in 1837 and was particularly successful in Russia. At a concert in St Petersburg on 16 March 1840, he gave the première of two recently composed works, the *Fantaisie-caprice* op.11 and the First Concerto. The success of the concerto was repeated in Brussels, where his old master Bériot embraced him in public, and in Paris on 12 January 1841, of which occasion Berlioz wrote: 'To Vieuxtemps' merits as an eminent virtuoso, he now adds no less a reputation as a composer'.

On 19 April 1841 Vieuxtemps again appeared in London and was received with enthusiasm. From then on his world career was assured. He became a frequent visitor to London and participated in the first season of the Beethoven Quartet Society in 1845; he undertook three American tours, with increasing success, in 1843–4, 1857–8 (with Thalberg) and 1870–71. He was idolized in

Henry Vieuxtemps: lithograph by Charles Baugniet, 1845

Russia, where he spent five years (1846–51) as soloist to the tsar and professor of the violin, contributing significantly to the development of violin playing in Russia. There he also composed his Concerto no.4 in D minor, possibly his most original work, which he played in Paris in December 1851; Berlioz called it 'a magnificent symphony for orchestra with principal violin'. His Fifth Concerto in A minor, completed in 1861 as a 'pièce de concours' for the Brussels Conservatory, became one of Wieniawski's favourite pieces.

In 1855 Vieuxtemps and his wife, the Viennese pianist Josephine Eder, whom he had married in 1844, settled near Frankfurt, but they moved to Paris in 1866 because of the political tension. Following the unexpected death of his wife two years later, he resumed his international travels, enjoying undiminished success. After his return from America in 1871, he was urged to accept a professorship at the Brussels Conservatory; he devoted all his energies to this new task which he regarded as a 'sacred mission', and contributed decisively to the growing success of the Belgian violin school in which he took great pride; among his pupils was Ysaÿe. A paralytic stroke forced Vieuxtemps in 1873 to interrupt his activities, and Wieniawski was called to replace him temporarily. A slight improvement in 1877–8 enabled him to resume some limited teaching, but in 1879 he was forced to resign. Two years later he died in a sanatorium in Algeria.

The praise which Berlioz and other serious critics lavished on Vieuxtemps as a composer appears somewhat exaggerated today, yet it must be understood in the context of its time. When Vieuxtemps wrote his First Concerto in 1840 he filled a void. The concertos of Spohr, never popular in France, were fading fast, while those of Bériot were intended as no more than elegant entertainment. The repertory of Viotti, Rode and Kreutzer was too Classical, while Paganini's concertos (then unpublished) overstressed virtuosity. Vieuxtemps rejuvenated the concept of the grand French violin concerto by enriching the solo part and setting it in a full, modern symphonic framework. He fused technical elements of Bériot and Paganini in his own inimitable way and created an original violinistic vocabulary that remained valid for the entire 19th century. There is none of Paganini's 'sorcery' in Vieuxtemps' technique, which is solidly based on musical concepts. His Fourth Concerto is pioneering in terms of form: a four-movement structure comprising an improvisational introduction (with cadenza), a slow movement, a scherzo and a finale. The Fifth Concerto uses an integrated one-movement form with a cadenza towards the end.

As a reformer of the concerto Vieuxtemps can be compared to Liszt. However, he did not always succeed in filling his novel forms with adequate musical content: at times his heroism is too theatrical, his passion too declamatory, his melodies too sugary. At his best, he has nobility, charm and elegance. His shorter compositions for the violin are more brilliant than profound, but the best among them are far above the shallow solo repertory of the day. As a performing virtuoso, Vieuxtemps was one of many great figures of the 19th century.

Vieuxtemps was also a fine violist and an accomplished quartet player. He was involved in the organization of recitals whose programmes included the works of Mozart, Haydn and Beethoven, together with Bach, Cherubini and more modern composers. His contemporaries saw him as the master of the quartet tradition following his performance in Vienna with two of Beethoven's contemporaries, Hultz and Linke (see Fauquet). He contributed much to a broader appreciation of chamber music.

6 études de concert, op.16 (Leipzig, *c*1845); Cadenzas to Beethoven's Vn Conc. (Offenbach, 1855); 36 études, ded. Paris Conservatoire, op.48 (Paris, 1882); 6 morceaux, suivis d'un capriccio, op.61 (Paris, 1883) [capriccio for va solo]

Opp.1–5 not known

(2) (Jean-Joseph-)Lucien Vieuxtemps (*b* Verviers, 5 July 1828; *d* Brussels, Jan 1901). Pianist and teacher, brother of (1) Henry Vieuxtemps. He studied in Paris with Edouard Wolff and made his début in Brussels on 19 March 1845 at a concert given by his elder brother. He lived in Brussels as a respected piano teacher and

composed some short pieces for the piano. In 1855 he assisted his elder brother at a concert in London.

(3) **(Jules-Joseph-)Ernest Vieuxtemps** (*b* Brussels, 18 March 1832; *d* Belfast, 20 March 1896). Cellist, brother of (1) Henry Vieuxtemps. He played with his eldest brother in London in 1855; that same year the three brothers gave a joint concert in Liège. Ernest was solo cellist of the Royal Italian Opera in London, and subsequently became principal cellist of the Hallé Orchestra in Manchester (1858).

Viganò [Braglia], **Onorato (Rinaldo Giuseppe Maria)** (*b* Milan, 6 Sept 1739; *d* ?Venice, 1811). Italian choreographer, dancer and impresario. From the 1750s he danced mostly in Rome, Vienna, Venice and Naples, becoming active as a choreographer from at least 1773 and as an impresario from at least 1783. Viganò was famous in his youth as a dancer in the comic (*grottesco*) style. Burney, who saw him in Naples in 1770, wrote that he 'has great force and neatness, and seems to equal Slingsby in his à plomb, or neatness of keeping time'. Later he seems to have appeared only in serious parts, dancing regularly until 1792 and once thereafter, in 1797. He was one of the best-known choreographers in Italy, often working in collaboration with the composer Marescalchi, but he never approached the celebrity achieved by his son Salvatore. His career as an impresario, notably at the Teatro Argentina in Rome (1783–8), the Teatro S Benedetto in Venice (from 1786) and the Teatro Nuovo, Padua (1809), was chequered, being plagued by financial difficulties.

Many members of the Viganò family were dancers and musicians in the period between the mid-18th and mid-19th centuries, notably SALVATORE VIGANÒ. Onorato's daughter Vincenza danced from at least 1782, mostly in serious parts, and married the tenor Domenico Mombelli. She is remembered for having written the libretto of Rossini's first opera, *Demetrio e Polibio*, in which her husband and their two famous daughters, Ester and Anna, sang.

□

Viganò, Salvatore (*b* Naples, 25 March 1769; *d* Milan, 10 Aug 1821). Italian choreographer, dancer and composer. He was the son of Onorato Viganò and Maria Ester Viganò (née Boccherini), who were both dancers; as early as Carnival 1783 he was dancing female roles with great success at the Teatro Argentina, Rome, where his father was impresario and ballet-master. He also studied composition with Boccherini (his uncle) and provided music for some of his father's ballets (the earliest known is *Cefalo e Procri*, Carnival 1786) and later for some of his own. In summer 1786 he had a *farsetta*, *La credula vedova*, performed in Rome. He had moved with his family to Venice by 1788 and danced with them at the S Samuele theatre. In 1789 he went to Spain with an uncle, Giovanni Viganò, to perform in the coronation festivities of Charles IV. There he met the dancer Maria Medina, whom he married, and the French dancer and choreographer Dauberval, who took him as a pupil to Bordeaux and, early in 1791, to London. By autumn 1791 he was back in Venice, where he and his wife achieved great success as a team, and where he choreographed his first ballet, *Raoul de Créqui*; in 1792 the family moved to the new theatre, La Fenice. On 13 May 1793 Viganò and his wife made a highly successful début in Vienna, where on 15 June Salvatore produced *Raoul de Créqui* and on 15 October a Semiramis ballet, *Die Tochter der Luft*, using a scenario by his father Onorato (after Carlo Gozzi). His work there was the subject of highly partisan support and condemnation. After extensive tours the couple returned to Vienna in 1795, and Salvatore produced, among other works, *Richard Löwenherz*, based on the famous *opéra comique* by Sedaine and Grétry, which caused more controversies. Critics such as Ayrenhoff and Richter accused Viganò of ignoring the rules of dramatic ballet pantomime and so destroying the new art of dancing established by Noverre and Angiolini. However, Viganò was part of a new movement espousing virtuosity and more formal composition in choreography. This new tendency, which was represented by dancer-choreographers like Viganò and Auguste Vestris, was to free ballet from the bounds of Aristotelian poetics, and from too close an imitation of nature, which reduced dance to mere pantomimical action.

Between 1795 and 1798 Viganò and his wife toured Germany and the Austrian territories. From spring 1798 to Carnival 1799 Salvatore appeared at his father's theatre in Venice, S Benedetto, at first with his wife, but during this period they separated. He was ballet-master in Vienna from 1799 to 1803. His *Die Geschöpfe des Prometheus* (for which Beethoven wrote the music) was performed in early 1801 and seemed to represent the new autonomical dance. The ballet was not a great success because the critics and public were too irritated by the absence of dramatic situations and the obvious preference for pure dance. In 1804 he returned to Italy and produced ballets in many Italian cities, making a short visit to Vienna in 1806–7.

The most important period of Viganò's career began in 1811 with his engagement at La Scala, Milan, where he mostly remained until his death. There he found the resources and the opportunity to bring his ideas to complete fruition. He was an intuitive artist and often worked out his grandiose conceptions during rehearsals which frequently stretched over many months. Even in Milan he experienced opposition and occasional artistic and popular failures, but *Prometeo* (1813) established his reputation as a choreographer of genius. Viganò's dramatic ballets (or 'choreodramas', as they were called by Ritorni) were considered unique in style and in their

overwhelming effect. According to Ritorni and other contemporary writers, they represented a departure both from the ballet pantomime, which was limited by an attempt to translate spoken dialogue too literally into gesture, and from the French ballet, which put greater emphasis on formal dance. Viganò attempted to create an immediately comprehensible gestural language that would exist in its own right rather than as a translation of spoken dialogue and that would require no programme. He was drawn to mythological and allegorical treatment of contemporary themes (*Prometeo*; *I titani*, 1819), partly because their message could be conveyed more effectively through the subtle language of movement than through the precision of speech. Although he took subjects from tragedies, both spoken (V. Alfieri's *Mirra*, 1817; Shakespeare's *Othello*, 1818) and operatic (*La vestale*, 1818), he largely reworked them to reflect his view of ballet as a genuine visual and theatrical art form. The dramaturgical disposition of Viganò's ballets (as some years later in *grand opéra*) was based on tableaux instead of narrative structures; it was this imaginative synthesis of scene, music and choreography which caused Stendhal to describe Viganò's 'choreodramas' as representing 'the Romantic spirit' in its highest degree.

FRIDERICA DERRA DE MORODA/MONIKA WOITAS

Vigarani, Carlo (*b* Reggio nell'Emilia, *c*1623; *d* ?Paris, 17 Feb 1713). Italian theatre architect and scene designer, son of Gaspare Vigarani. With his brother Lodovico, he accompanied his father to Paris in 1659, and in 1662 was invited back by Louis XIV to design court entertainments. As part of a triumvirate with Lully and Molière, he was responsible for a series of festivities mostly at Versailles in 1664, 1668 and 1674. These stand among the most exquisite and sumptuous entertainments of the period. Each consisted of several divertissements, comedy-ballets or operas commissioned for the occasion, including *La Princesse d'Elide*, *George Dandin*, *Les fêtes de l'Amour et de Bacchus*, *Alceste* (Quinault–Lully), and *Le malade imaginaire* (Molière-Charpentier). In 1673 he received French citizenship and in 1679 was appointed 'inventor of machines for theatres, ballets and royal festivities'. With Lully, he directed the Académie Royale de Musique (the Paris Opéra) according to the 'Act de Société' of 1672. Although he broke with Lully in 1680, Vigarani continued to provide at court the sets and machinery for the composer's operas until 1685. He also designed the first theatre used by the Opéra, the Salle Jeu de Paume de Béquet, and renovated the Théâtre du Palais Royal. His designs reveal the Italian tradition with models derived from the Florentine Giulio and Alfonso Parigi. His influence apparently waned after 1680.

PAUL SHEREN/JÉRÔME DE LA GORCE

Vigarani, Gaspare (*b* Reggio nell'Emilia, 20 Feb 1588; *d* Modena, 9 Sept 1663). Italian theatre architect and scene designer. He was active as a designer of machinery for festivities at Reggio nell'Emilia by 1618. From the 1630s, if not before, he was employed by the Duke of Modena, and in 1635 was promoted to 'engineer and general superintendent of buildings'. In 1640 and 1651 he took part in the design of theatres at Capri Modena and Mantua. In 1659 Cardinal Mazarin invited him to Paris to supervise the entertainments planned for the marriage of Louis XIV; for this occasion he constructed the Salle des Machines in the Palais des Tuileries and designed the inaugural production there, Cavalli's *Ercole amante* (with additional ballets by Lully), performed, after considerable delay, in 1662. This production, with its spectacular stage machinery and scenic effects, was a major factor in the prominence enjoyed by Italian theatrical art in France for the next century. The theatre itself marked the transition from the pre-Baroque amphitheatre auditorium, which then prevailed in Paris, to the Italian opera house with perspective wing-stage and horseshoe auditorium. G.L. Bernini criticized it (1665) as disproportionately long and inconvenient in its seating arrangement. It and the production were not widely acclaimed, and Vigarani returned disillusioned to Italy in 1662.

Vignal, Marc (*b* Nogent-sur-Marne, Val-de-Marne, 21 Dec 1933). French musicologist and critic. After studying the

piano and music history (1941–59), he was a student in Paris at the Institut d'Etudes Politiques (1952–5) and at the Sorbonne (1952–7). In addition to the freelance work that he has pursued for much of his career, he has worked for Radio France, becoming a producer and editor for the French Musique channel in 1974. From 1979 to 1989 he was chairman of the Association Peuple et Culture and, after its foundation in 1987, was appointed the first chairman of the Association Proquartet, an organization that is playing an important part in the revival of the string quartet in France.

Vignal's main field of study is the music of the Classical period, particularly the Viennese classicism of Haydn, Mozart, Beethoven and their contemporaries. He is regarded as the foremost modern French specialist on Haydn; his work *Joseph Haydn* (Paris, 1988) is a standard authority, giving the French reader access for the first time to a number of documents, particularly letters and contemporary accounts, concerning Haydn. He has also made a great contribution to knowledge of the classical period in France through his translation of Rosen's *The Classical Style* (London and New York, 1971, enlarged 3/1997). His other research interests are Mahler and Viennese music from the 1880s, Sibelius and Finnish music, 20th-century music in general, music and society, and music and politics. He has contributed articles for a number of journals, including the *Haydn Yearbook* and *L'avant-scène opéra* and has provided translations for a variety of musicological texts.

JEAN GRIBENSKI

Vignali, Francesco (i) (*b* Rivarolo; *fl* 1640). Italian composer, probably a relation (perhaps father) of Francesco Vignali (ii). He may have lived for some time in Venice. The Rivarolo whence he came is probably the place of that name near Mantua. The name is given on the title-page of his only known volume of music, *Madrigali: il primo libro a due, tre, e quattro*, with continuo, op.1 (Venice, 1640). (J. Whenham: *Duet and Dialogue in the Age of Monteverdi*, Ann Arbor, 1982)

□

Vignali, Francesco (ii) (*b* Venice; *fl* 1671). Italian composer, probably a relation (perhaps son) of Francesco Vignali (i). He may well have lived in south Germany. He published *Sacri concentus ... ad ecclesiae militantis statum stylo selectiore applicari* (Überlingen, 1671) for two to four and eight voices, with continuo. The *Sacri ribombi di pace e di guerra* mentioned by Walther may be identical with this volume since the same vocal forces are cited and because the 1671 volume ends with a 'battaglia spirituale', the eight-part *Venite, fideles*, which is certainly a piece 'di guerra'. Three manuscript mass movements by Vignali (Kyrie, Gloria and Credo) for four voices and instruments also survive (in *D-MÜs*).

□

Vignati, Giuseppe (*b* ? Bologna, ? end of the 17th century; *d* Milan, 1768). Italian composer. Recent scholarship has not confirmed his Bolognese origin; it has been conjectured that he died shortly before G.B. Sammartini succeeded him as *maestro* of the ducal chapel on 8 November 1768. The earliest substantiated references to him date from 1713 when he was *maestro di cappella* of the Accademia dei Faticosi, Milan, and wrote a cantata for the canonization of Andrea Avellino. Between 1719 and 1727 he wrote a series of operas for the ducal theatre. The libretto for the first of these, *Ambleto*, names him as *maestro di cappella* of S Gottardo, the ducal chapel. Documents of the state archive disclose, however, that he was merely Paolo Magni's assistant there from 1718 until 4 March 1737 (Magni died on 21 February 1737). Serving in the court chapel without pay until 12 July 1735, Vignati concurrently drew a salary as *maestro di cappella* of S Nazaro Maggiore (from 1726) and as harpsichordist at the ducal theatre. Although he played the second harpsichord in 1748 and 1749 to allow the composers of operas to direct from the first, he is listed as the *maestro di cappella* and first harpsichordist for the entire 1720, 1738, 1739 and 1743 seasons. His opera scores are lost but their quality is suggested by the renown of his singers: Faustina Bordoni, Francesca Cuzzoni, Antonio Bernacchi and others. The large size of his orchestra – 30 players in 1720, including many wind instrumentalists – implies rich orchestrations.

WORKS

OPERAS

first performed in Milan, Regio Ducal, unless otherwise stated; all lost

Ambleto [Act 1] (3, A. Zeno and P. Pariati), 28 Aug 1719, [Act 2 by C. Baliani, Act 3 by G. Cozzi]
Porsena (3, A. Piovene), 26 Dec 1719
Aquilio in Siracusa (2), 28 Aug 1720
Nerone (3, Piovene), 26 Dec 1724
I rivali generosi (3, Zeno), Venice, S Samuele, Ascension Fair 1726
Girita (3, C.N. Stampa), Jan 1727
Doubtful: Amor per virtù (3, D. Cupeda), Turin, Regio, carn. 1702, cited in *EitnerQ*

OTHER WORKS

Cants.: Auguri di pace nella canonizzazione del B. Andrea Avellino, Milan, 1713; Da quest'amico, 1v, orch, *I-Nc*; Mirar dal lido la navicella, 1v, bc, *Nc*; Nel bel volto d'Eurilla, 1v, bc, *Nc*; Nelle guancie, 1v, orch, *Nc*; Sciolta dal lido, Milan, carn. 1720, *US-Wcf* M1500 S28 G5; Se m'affligge il tuo rigore, S, bc, *D-Mbs*; untitled cant., 1v, bc, *SHs*
Serenata a 3 per il compleanno del principe Massimiliano, governatore di Milano, Milan, 1717
Arias: Affetti del mio sposo, S, 2 vn, va, vc, *ROu*; Si respira in calma, S, 2 vn, bc, *GB-Lcm*
Sacred vocal: Ave Maria, S, str, *I-Bc*; Flammae fulmina, S, 2 vn, bc, *GB-Lbl*, *Lcm*; Graduale per la BVM, S, orch, *I-Bc*; Graduale per S Giovanni Battista a 3, *Bc*; Maria gustum sentio, S, 2 vn, va, org, Státní Archív, Žitenice; Marian ant, S, ob, org, Státní Archív, Žitenice; Salve regina, S, ob, 2 vn, va, org, *D-Dl*; Tantum ergo, S, A, A, T, B, 2 vn, 2 va, vc, db, 20 May 1729, Státní Archív, Žitenice

SVEN HANSELL

Vigne, Antonius de. *See* DE VINEA, ANTONIUS.

Vigné, Louis (*b* Angers, *c*1660; *d* Angers, 29 March 1731). French composer. He studied music at the choir school in Angers and in 1684, as a clerk in minor orders, he was appointed *maître de musique* by the cathedral chapter. In 1697 he became master of the choir school at Vannes Cathedral and remained there until Christmas Eve 1710, when he returned to Angers. In view of his advanced age, on 14 November 1724 the chapter appointed Louis Bachelier as his deputy (and eventually his successor).

Vigné's only extant works are four motets, *Animae fideles*, *Laetatus sum*, *Quis rumpet catenas* and *Venite fideles*, for two voices and continuo. They exist in a manuscript (*F-Pn* Rés 1474) copied in Vannes, which also contains, among other works, motets by Daniélis, Campra and Brossard.

JEAN-CHARLES LÉON

Vigneault, Gilles (*b* Natashquan, Quebec, 27 Oct 1928). Canadian songwriter, singer, poet and publisher. He wrote poems and songs while teaching French and mathematics in Quebec City. He first sang publicly in 1960 and his success led to a first recording in 1962. Two years later, his song *Jack Monoloy* won second prize at an international competition in Sopot, Poland. His best-known song is *Mon pays*, also sung at Sopot in 1965. He has toured extensively in Canada and French-speaking countries of Europe. He was awarded a Grand Prix du Disque by the Académie Charles Cros in 1970 and 1984. Vigneault's songs are about the people of Quebec, specifically those who live on his native north shore of the St Lawrence. Some of his songs contain social protest, some are simple love stories, some are whimsical and humorous.

GILLES POTVIN

Vigneron, Joseph Arthur (*b* Mirecourt, 1851; *d* Paris, 1905). French bowmaker. He served his apprenticeship in Mirecourt with Charles Claude Husson and then went to Paris to work for Gand & Bernardel. Around 1888 he opened his own shop. Vigneron developed a strongly individual style which remained constant throughout his career. While he cannot qualify as a consistently great maker, his best bows can be ranked with the finest of his day, showing elegant craftsmanship and made of superb quality pernambuco. However, a large part of his output, while solidly made, lacks grace. Most of the bows are silver mounted; gold mountings are much less frequent and gold and tortoiseshell very rare. The sticks are usually round and the heads have pronounced chamfers at the throat. Vuillaume-type frogs are occasionally seen but otherwise the frogs are regular with either rounded or square heels. His bows are branded A. VIGNERON À PARIS.

On J.A. Vigneron's death, his shop was taken over by his son André Vigneron (1881–1924). Although a good and able maker he was not the equal of his father, of whom he had been a pupil. Nevertheless his early work, which bears his father's brand, is difficult to identify. The style he developed was derived from his father's, although differing particularly in the heads, where the slight widening at both top and bottom make the middle seem constricted. He was a prolific maker who supplied unstamped bows to various Parisian luthiers including Charles Enel and Marcel Vatelot. He used the brands VIGNERON PARIS and ANDRE VIGNERON PARIS as well as his father's.

JAAK LIIVOJA-LORIUS

Vignola, Giuseppe (*b* Naples, 5 Feb 1662; *d* Naples, Nov 1712). Italian composer. He received his musical training at the Conservatorio di S Maria della Pietà dei Turchini, Naples, when Francesco Provenzale was its *maestro ordinario*. In 1688 he married Antonia Falcone and established himself in Naples as a composer of church music and semi-dramatic sacred works, later also of operatic music. In 1706 he was engaged by Andrea del Pò, the impresario of the Teatro di S Bartolomeo, to compose substitute arias for the Naples performance of Giuseppe Aldrovandini's opera *Mitridate*. Between 1706 and 1712 Vignola played an important role by providing arias and *buffo* scenes in the Neapolitan manner for operas by other composers, especially Francesco Gasparini, and composing three *opere serie* of his own. His first opera, *Tullo Ostilio*, dates from 1707. In that year he was made a member as organist of the royal chapel in Naples, and proudly referred to his position as organist on the title-page of the libretto of his *Teodora Augusta* (1709); he remained in that post until his death. On 26 November 1712 he was succeeded by Pietro Filippo Scarlatti, the eldest son of the *primo maestro* of the chapel, Alessandro Scarlatti.

WORKS

all performed in Naples; music lost unless otherwise stated

STAGE

Il Tullo Ostilio (dramma per musica, C. de Petris, after A. Morselli), S Bartolomeo, carn. 1707, *I-Mc*, arias *Nc*

La Rosmene, ovvero L'infedeltà fedele (dramma, N. Pagano, ? after G.D. de Totis), Fiorentini, 26 Jan 1709

Teodora Augusta (dramma, Morselli), Fiorentini, 27 April 1709

Arias and scenes in: G. Aldrovandini: Mitridate, 1706; F. Gasparini: La fede tradita e vendicata, 1707; Gasparini: Le regine di Macedonia, 1708; A. Lotti: L'inganno vinto dalla ragione, Fiorentini, 1708; A. Scarlatti, L'humanità nelle fiere, 1708; Gasparini: Ambleto, 1711; Lotti: La forza del sangue, 1712

SACRED

Orats, sacred melodramas: La Giuditta trionfante (scherzo drammatico, G. Badiale), 1690, lib *I-Fc*; La regina Ester (Badiale), 28 Oct 1691, lib *Nn*; La nave della Redenzione (S. Giacco), 1696, lib *Fc*, *Nc*, *Nn*; L'alba oscurata, 1696, lib *Fc*, *Fm*; Il Gedeone

geroglifico (A. Peruccio), 1701, lib *Nc*; La fionda di David, Florence, 1707, lib *Rv*; Il giudizio universale, 1710, *Nf*; La Debbora profetessa guerriera, 1711; Dialogo, 2vv, *Nf*

HANNS-BERTOLD DIETZ

Vignoles, Roger (*b* Cheltenham, 12 July 1945). English pianist. He studied at Magdalene College, Cambridge, at the RCM (1966–8) and privately with Paul Hamburger. He made his début as an accompanist at the Purcell Room, London, in 1967 after which he became a coach at Covent Garden (1969–71). By the mid-1970s he had established himself as a partner for many of the leading singers of the day, working in particular with Sarah Walker and Thomas Allen (the three of them performed and recorded a noted recital programme called *The Sea*). Vignoles has since organized and taken part in various series of recitals at both the Queen Elizabeth Hall and Wigmore Hall, and he has appeared at most of the major festivals. He is a versatile artist, equally at home in lieder, *mélodies* and English songs, especially those of Britten. His style, while carefully adapted to the artist with whom he is performing, benefits from his own individual insights into the repertory in hand, as confirmed by his many recordings, notably *Winterreise* with Allen and Britten's five canticles with Michael Chance and Anthony Rolfe Johnson. He was professor of accompaniment at the RCM from 1974 to 1981.

ALAN BLYTH

Vignon, Jérôme (*b* ?1590s; *d* after 1653). French lutenist and composer. He is presumably the 'Mr. Vignon' listed as first among the lutenists of Duke Charles IV of Lorraine in 1631. In 1636 Mersenne included 'le Vignon' among the best lutenists then living. He is mentioned in documents of 1640 and 1646 as master lutenist, living in Paris. Two contracts dated 31 December 1653 associate Jérôme and his son Nicolas-François to teach the *angélique* to pupils in Paris, using instruments by the Parisian lute maker Guillaume Jacquesson. The terms of the contract imply that Jérôme was elderly by that stage; it is nonetheless unlikely that he was responsible for the very popular type of courante known as *La Vignonne* which appears in many lute and other sources from 1614. One courante by him is in the manuscript *D-DS* Mus 1655. A courante and two sarabandes for *angélique*, probably by Nicolas, are in *F-Pn* Cons. Rés.169 (MS Béthune, *c*1661; facs. Geneva, 1978).

DAVID LEDBETTER

Vigoni [Vigone]. Italian firm of publishers. Francesco Vigoni (*b* Milan, *c*1624; *d* Milan, 1699) founded the firm in Milan in 1660. He lived first at San Sebastiano and from 1682 in Pescheria Vecchia; he printed books of various kinds (many on religious subjects) including the *Ateneo dei letterati milanesi* by Abbé Filippo Picinelli (1670), an important biographical source book for Milanese writers and artists. His music publications include sacred vocal and instrumental chamber music by such composers as C.G. San Romano, M.S. Perucona, Giacinto Pestalozza, Tomaso Motta, Bartolomeo Trabattone, G.M. Angeleri and Gerolamo Zanetti. He also published many oratorio and opera librettos. Of Francesco's five sons, Carlo Federico Vigoni (1658–*c*1693) shared the management of the firm with his father. He was a musician and the editor of *Nuova Raccolta de Motetti Sacri a voce sola* (1679, 1681) and *Sacre Armonie a voce sola de diversi celebri autori* (1692), published by Francesco Vigone. Their successors, including Carlo Federico's son Giuseppe (until 1730), published many librettos but apparently no music. The firm continued until *c*1750.

MARIANGELA DONÀ

Vigri, Girolamo di [de]. *See* VIRCHI, GIROLAMO DI.

Viguerie, Bernard (*b* Carcassonne, *c*1761; *d* Paris, March 1819). French teacher, composer and music dealer. According to Gerber, he was a pupil of Laguna at the age of 18. When he was 22 he went to Paris with a letter to Jean-Jacques Beauvarlet-Charpentier, with whom he completed his studies. In 1795 he opened a music shop. He was known for many years as the author of a piano method (*c*1795), which was revised and reissued again and again by such lights as Adolphe Adam and Louise Farrenc, and translated into Spanish, continuing to appear as late as 1875. Fétis said of it: 'There are few works that are more mediocre or of more questionable utility than this so-called method; there are few, however, which have been more successful or run to so many editions'.

After the piano method, Viguerie's most famous works were his battle pieces, Marengo, which was imitated as late as 1867, and Prague. Similarly, some movements of his sonatines (op.12) found their way into anthologies in the same period. Both his serious works and those for young pupils make considerable use of pianistic effects, such as the sustaining pedal and *sforzandi*. His *Caprices* are long, multi-sectional, modulating fantasias in the 'brilliant style'.

WORKS
published in Paris

op.	
1	3 sonates, pf (1795)
1[bis]	6 Sonates, pf 4 hands (*c*1800)
2	3 sonates aux jeunes élèves, pf, vn (1794)

DAVID FULLER/BRUCE GUSTAFSON

Vihuela (Sp.). A plucked chordophone of the viol family on which the strings, made of gut, were generally arranged in six or seven courses, each probably paired in unison. Closely related to the lute, it flourished mainly in Spain and in areas under Spanish influence in the 15th and 16th centuries. It was also known in Italy and Portugal under the name *viola*. Originally the word was applied to various string instruments distinguished according to the method of playing them: medieval sources mention the *vihuela de pendola* (or *peñola*: played with a quill) and *vihuela de arco* (played with a bow); *vihuela de pendola* also appears in Renaissance sources, which also mention the *vihuela de mano* (plucked with the fingers). By the 16th century, however, the unqualified term 'vihuela' usually referred to the finger-plucked instrument.

1. Structure and history. 2. Technique and performing practice. 3. Repertory.

1. STRUCTURE AND HISTORY. The structure and early history of the vihuela are very closely linked with those of the guitar and viol. Woodfield (1984) has shown that the vihuela was probably developed in the 15th century as a plucked alternative to the *viola de arco*. Outside the Spanish sphere of influence, vihuelas were designated with guitar-related terms during the 16th century (see Corona-Alcalde, 1990). Only two vihuelas are known to have survived: one in the Musée Jacquemart-André of the Institut de France, Paris, and the other in the church of the Compañía de Jésus in Quito, Ecuador. The former (fig.1) is a large instrument with a body length of 58·4 cm. There is comparatively little inward curve at the waist and the body is shallow in relation to the surface area. The neck is long and narrow and the head is flat and set back at a slight angle. Multiple roses set into the soundboard and the unique construction of the body and neck, which is made up of a large number of small pieces of contrasting woods (more than 200 for the back alone), add to the distinctive appearance of the instrument. Its size and long string-length (about 80 cm) suggest that it was tuned at a fairly low pitch (see Prynne, 1963), although it is also possible that it may have been made as an apprentice's examination piece, an hypothesis that is consistent with its elaborate construction.

The Quito vihuela, probably dating from the early 17th century, is slightly smaller, with a body length of about 55 cm, a deeper body and more pronounced curves at the waist. This instrument was the property of Santa Mariana de Jesús who, according to contemporary witnesses, used to accompany herself singing the praises of the Christ the Bridegroom (*d* 1645; see Bermudez, 1991 and 1993). Nassarre (1723–4) gave a set of proportions to which a vihuela should be constructed, though his interest may have been mainly antiquarian. His proportions would give a body of greater depth than the Jacquemart-André or the Quito examples (see Ward, 1953, and Corona-Alcalde, 'The Viola da Mano', 1984).

The many pictorial representations of vihuelas show three basic outlines: in the late 15th and early 16th centuries vihuelas are depicted with C-shaped bouts similar to those of a modern violin; later in the 16th

1. Vihuela, c1500, stamped with the mark of the monastery of Guadalupe, Estremadura (Musée Jacquemart-André, Institut de France, Paris)

century two basic shapes are common, one narrow in relation to its length, the other broader and rounder (fig.2). There is usually a single elaborately carved rose, and in some instances surface decorations are set into the soundboard.

Bermudo gave diagrams of vihuelas nominally tuned at *Gamma ut*, C *fa ut*, D *sol re*, A *re*, D *sol re*, B *mi* and E *la mi*; but these, he made clear, were only to facilitate the transposition of compositions in staff notation into tablature for the vihuela (see Ward, 1982, and Corona-Alcalde, 'Fray Juan Bermudo', 1984). Nevertheless he mentioned instruments of different sizes, and it is clear that they were tuned at several different pitches, since a number of 16th-century duos demand tunings a minor 3rd, a 4th and a 5th apart. Milán, by the placing of modal finals on certain frets, implied a variety of nominal tunings for his instrument, including E, G, F♯ and A (see Corona Alcalde, 1991), but in practice he suggested that the pitch should be taken from the first (highest) course, which should be tuned as high as it would go without breaking. Among other writers, opinion was divided as to whether the first or fourth course was the better one from which to begin.

The intervals of tuning for which almost all surviving music was written are identical with those of the lute, that is (from the sixth – i.e. lowest – course upwards): 4th–4th–major 3rd–4th–4th. Bermudo, however, proposed several other schemes. For a certain 'small new vihuela' he named the notes as *G–B–d–g–b–d'*. Music given by Fuenllana for a vihuela of five courses requires the same intervals of tuning as the six-course instrument but with the top course removed. For vihuelas of seven courses Bermudo gave three tunings. The first of these, 5th–4th–5th–4th–5th–4th, provides a range of 22 notes

2. *Orpheus with a vihuela: woodcut from Milán's 'Libro de música de vihuela de mano ... intitulado El maestro' (1536)*

on the open strings. The second, *G'–C–F–G–c–f–g*, he described as new and perfect (he also gave an accompaniment in this tuning for the *romance Mira Nero de Tarpeya*). His third tuning, 5th–4th–major 3rd–5th–4th–minor 3rd, could, he stated, be distributed 'by a clever musician' between a guitar and a bandurria by tuning the four courses of the guitar the same as the four lower courses of the vihuela, and the three of the bandurria the same as the three highest.

The usual number of gut frets on the neck of the vihuela was ten, and considerable attention was given by Bermudo to devising methods of placing these to obtain an exact intonation. He expressed great concern about the difference in pitch of certain notes according to whether they have to serve as *mi* or *fa* (i.e. sharp or flat) in the mode of a particular composition. Suggestions for overcoming this difficulty include the use of a double fret composed of two thicknesses, either of which could be selected at will; the control of pitch by the amount of pressure exerted by the finger in stopping the note; and the actual moving of the fret to suit the mode. The last method was advocated by Milán, who prefaced a fantasia and a *romance* with this instruction: 'raise the fourth fret a little [towards the fret nut] so that the note of the said fret will be strong [*mi*] and not feeble [*fa*]'; and by Valderrábano, who said: 'lower the fourth fret a little towards the rose', which meant tuning it to a *fa* fret. Seeking the required note on another course and fret was also mentioned by Bermudo.

Literary references indicate that the word 'vihuela' was used in Spain from the 13th century onwards. It appears in the *Libro de Apolonio* (*c*1250), the *Poema de Oncero* (14th-century), and the famous *Libro de buen amor* of the Arcipreste de Hita (*c*1283–*c*1350), who distinguished between the *vihuela de arco* and the *vihuela de peñola*. Tinctoris described the vihuela as an instrument invented by the Spaniards and called by them and the Italians *viola* (or *viola sine arculo*). It was, he said, smaller than the lute and flat-backed, and in most cases had incurved sides. During the 15th century the guitar – which during that period was sometimes lute-shaped (see Wright, 1977, and Corona-Alcalde, 1990; *see also* GITTERN) – and the vihuela appear to have evolved side by side; in the following century the guitar with its four courses was generally known as a popular instrument, largely used for accompanying songs, while the vihuela was favoured by virtuoso players. Some virtuosos were employed in households of the nobility, but the finest achieved great fame as royal musicians at the Spanish court, where music was highly esteemed. The children of Ferdinand and Isabella were trained in music, especially the young prince Juan who possessed, among other chamber instruments, vihuelas and viols which it is said he could play. Although there is abundant evidence for the use of the vihuela in royal and noble establishments at this period, the first printed music appeared in Milán's book (1536; *see* TABLATURE, fig.6).

During the reign of Emperor Charles V the vihuela reached the height of its development as the instrument of the musical élite. The emperor boasted of two chapels, one Flemish and one Spanish. Although he employed mostly Flemish musicians and singers for the performance of sacred polyphony, he entrusted the secular musical activities to native players, and in private music-making the vihuela had a prominent role. It continued to be held in high regard at the court of Philip II, where in 1566 the

celebrated blind composer and player Miguel de Fuenllana was listed as *musico de camera* to Isabel de Valois, the king's third wife. Towards the end of the century its position seems to have been undermined by the increasing popularity of the guitar, and a few years later Sebastián de Covarrubias Horozco wrote (in his *Tesoro de la lengua castellana o española*, Madrid, 1611) that

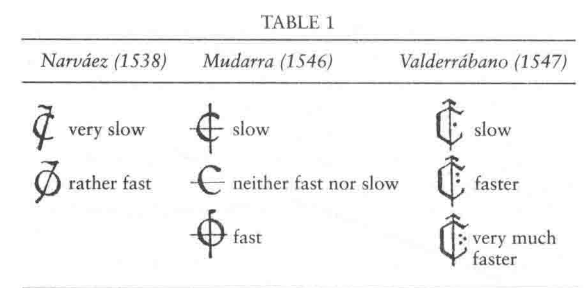
> This instrument [the vihuela] has been held in great esteem until our own times, and there have been excellent players; but since the invention of the guitars there are very few who apply themselves to the study of the vihuela. This is a great loss, because every kind of notated music can be put on to it, and now the guitar is nothing but a cow-bell, so easy to play, especially when strummed, that there is not a stable-boy who is not a musician of the guitar.

Apart from the composer-players whose names have survived through their books, a few other famous players are mentioned in publications of the time. Bermudo named not only Narváez but also Luis de Guzmán, Martin de Jaén and Hernando de Jaén ('citizens of Granada'), and López ('musician to the Duke of Arcos'). Francisco Pacheco in his *Libro de descripción de verdarderos retratos* (1599) included a portrait of the blind player Pedro de Madrid with a seven-course vihuela and commented, 'Seville is honoured by such a son', and also one of Manuel Rodríguez, 'player of the harp and viguela'. Vicente Espinel, in his *Relaciones de la vida del escudero Marcos de Obregón* (Madrid, 1618), described how he heard Lucas de Matos play on a seven-course instrument together with Bernardo Clavijo on the keyboard and the latter's daughter on the harp, adding that their music 'is the best I have heard in my life'.

The preference for the vihuela over the lute in Spain has been explained (Chase) by a theory that the lute was repudiated because of its Moorish origin. This theory, however, overlooks the fact that many aspects of Islamic culture remained firmly established in the Spanish way of life long after the final expulsion in 1492, and still remain so. Among musical instruments, the rebec continued in use into the 16th century; and many Moorish themes frequently appear in the words of 16th-century songs. Moreover, a growing body of evidence suggests that the lute was more commonly used than has been generally supposed (Poulton, 1977).

Tinctoris stated that an instrument identical with the vihuela was played in Italy, and indeed pictures and a few musical sources and literary references confirm its presence there in the 16th century. Francesco da Milano is known to have performed on the vihuela as well as on the lute, and the title of his two-volume book of 1536, *Intavolatura di viola o vero lauto*, indicates that the pieces there contained are intended for either of the two instruments with the words. Other known Italian players of the vihuela, including the composer Giulio Severino, are mentioned by Scipione Cerreto in his *Della prattica musica vocale et strumentale* (Naples, 1601). Some documentary and pictorial evidence of the use of the *viola* in Portugal can be traced, and the names of a few famous players, such as Peixoto da Peña, Domingos Madeira and Alexandre de Aguiar are known.

Although the evidence is at present scanty, there can be little doubt that the vihuela, together with other European instruments, was taken to Latin America during its colonization. For example, in his *Historia verdadera de la conquista de la Nueva-España* (written *c*1568) the chronicler Bernal Díaz de Castillo described a certain Ortiz, a soldier in the company of Hernán Cortés during the conquest of Mexico, as a 'great player of the vihuela'. Renato Almeida, in his *História da música brasileira* (1926), quoted from a letter of about 1583 from the Jesuit priest Fernão Cardim in which he said that schools of singing and playing were early established in the Christianized villages and the natives taught to play the *viola*, among other instruments.



Four instruments in the Museo Nacional de Antropología and the Museo Nacional de Historia (Castillo de Chapultepec), Mexico, are claimed by Cook (1976) to be descendants of the vihuela, constructed by native craftsmen. These are less well authenticated than the Quito instrument, but, together with other members of the plucked-string family, such as the *cuatro* in Venezuela, they strongly suggest a common ancestry in the 16th-century vihuela and guitar.

2. Technique and performing practice. Though there is little written evidence about the technique of the left hand in vihuela playing, this can hardly have differed in any significant way from that used on the lute. There is a brief mention by Venegas de Henestrosa, and Fuenllana explained how a finger of the left hand may divide a course in two by stopping only one string, thus obtaining an additional voice in the counterpoint.

Right-hand technique was dealt with in some detail, especially for the playing of rapid passages known as *redobles*. Three methods are given. *Dedillo* (marked *dedi* in some sources) consists of a rapid movement inwards and outwards with the index finger; it was considered unsatisfactory by Fuenllana since the string is touched by the flesh of the finger on the inward stroke but by the nail on the outward. *Dos dedos* (marked *dosde* in some sources) consists of the alternating movement of the thumb and the first finger, as used in the rest of Europe at this time. According to Venegas de Henestrosa, *dos dedos* had two variants: *figueta castellana* ('Castilian'), with the thumb held outside the fingers, and *figueta estranjera* ('foreign'), with the thumb held inside the fingers, as in 16th-century lute technique. The third method involves alternating the index and second fingers; Fuenllana and Venegas de Henestrosa praised this as being the most perfect way of playing, and Fuenllana added, 'as I have said to you, to strike with a stroke without the intrusion of the nail or any other kind of contrivance has great excellence, because only in the finger, as a living thing, the spirit lies'.

Several vihuelists' books contain valuable directions concerning tempo. It is clear that the *tactus*, or *compás*, had no absolute speed, but in several cases, both verbally and by the use of signs, relative speeds are indicated. Both Milán and Valderrábano stressed that the intention of the composer should be followed in this respect or the composition would not sound well. At the beginning of almost every fantasia Milán gave directions for playing it: very fast, rather fast, slowly, or with a well-marked beat. In certain other cases he said that the chordal passages must be played slowly and the *redobles* fast, with a pause on the cadence points (*coronada*). 'This music', he said, 'in order to give it its natural beauty ... must not have much respect for the *compás*'. For the accompaniment of *romances* he repeated his instruction to play chordal passages slowly and *redobles* fast. Certain other composers specified that in their music particular mensural signs implied particular tempos, as shown in Table 1.

TABLE 1

Narváez (1538)	*Mudarra (1546)*	*Valderrábano (1547)*
very slow	slow	slow
rather fast	neither fast nor slow	faster
	fast	very much faster

Santa María gave valuable information about good style in performance, including three suggestions for the rhythmic alteration of passages notated in equal quavers: to pause on the first of each pair and hurry the second; to hurry the first and pause on the second; or to hurry the first three notes and pause on the fourth. The first method was also appropriate, he said, for playing crotchets. Among the graces described by Santa María, some are more appropriate to the keyboard, but the trill, mordent and appoggiatura suit the vihuela. Venegas de Henestrosa also described a mordent and upper appoggiatura.

3. REPERTORY. The music of the vihuelists, both sacred and secular, has survived mainly in printed sources, except for two important manuscripts (*E-Mn* 6001, dated 1593, and *PL-Kj* Mus.ms.40032, formerly held in *D-Bsb*; see Rey, 1975, and Griffiths, 1985), as well as some fragmentary sources (see Corona-Alcalde, 'A Vihuela Manuscript in the Archivo de Simancas', 1986, and 1992). Four types of tablature were used: Italian (used by most of the vihuelists); a six-line tablature with figures in which the highest line represents the string highest in pitch (used by Milán, *see* TABLATURE, fig.6); another six-line tablature with figures (used in the second volume of the 1536 publication of Francesco da Milano), similar in disposition to that of Milán, but representing the open course with the number 1, the first fret with the number 2, and so on; and Spanish keyboard tablature, the *cifra nueva* (used by Venegas de Henestrosa and Cabezón, *see* TABLATURE, fig.3). In some books the vocal line is shown in red numbers in the tablature, in others the numbers indicating the vocal line are followed by a small tick or comma, or else staff notation is used.

Charles V's predilection for music by Flemish composers in his private chapel is reflected in some of the books where intabulations of Mass parts by Josquin and other Flemish composers, as well as of motets by Josquin and Gombert form a large portion of the contents; native composers (Cristóbal de Morales and Francisco Guerrero) are also represented by intabulations of their sacred works. In secular vihuela music the fantasia, ranging from simple pieces for beginners to elaborate contrapuntal structures, outnumber all other forms. Little dance music appears in the works of the vihuelists, except for the *pavana*, which Milán, however, likens to the fantasia. *Differencias* (variations) were most commonly based on *romance* tunes or, more frequently, on their associated repeating harmonic patterns, which were rarely more than a few bars long. In some the melody appears in the cantus line, in others in the tenor. Sometimes its treatment is very free, with ingenious and elaborate breaking of the chords or rapid *redobles* over the bass. The style suggests that the form may have originated in improvised accompaniments to the singing of *romances*, long narrative poems some of which have as many as 160 verses. Tientos, *sonetos*, *fabordones* and intabulations of a few chansons form most of the rest of the solo repertory.

The main forms in secular vocal music with vihuela accompaniment were the *romance* and the villancico. The *romances*, in which the first stanza only is generally given, were in many cases of ancient origin, often based on incidents in the war against the Moors or the exploits of the knights of the court of Charlemagne. (Subsequent stanzas of these *romances viejos* are to be found in the great 16th- and 17th-century collections known as *romanceros*, and in 19th-century collections edited by Agustín Durán and others.) Since no more than the melody line and the associated harmonic pattern existed, the accompaniments were composed by the vihuelists themselves.

The villancico, often a love poem of great intensity, was derived from a precise poetic form consisting of a single stanza; its two sections were known as the *estribillo* and the *vuelta*, performed in the order *ABBA*. Milán appears to have composed the melody as well as the accompaniment (and probably some of the stanzas) in his villancicos. Many other villancicos existed in a polyphonic form by well-known composers such as Guerrero or Juan Vasquez; the vihuelists' arrangements for solo voice and vihuela consisted of intabulations for vihuela of one of the vocal lines.

Among the many other forms that make up the rich and varied repertory of solo song with vihuela accompaniment are arrangements of *madrigales*, Italian *sonetos*, chansons (by Verdelot and others), settings of *coplas* by Boscán and Garcilaso and of poems by Petrarch, and *ensaladas* (long compositions made up of small musical sections taken from popular songs).

DIANA POULTON/ANTONIO CORONA ALCALDE

Vihuela de arco (Sp.). *See* FIDDLE.

Vikár, Béla (*b* Hetes, nr Kaposvár, 1 April 1859; *d* Dunavecse, nr Dunaújváros, 22 Sept 1945). Hungarian folklorist. After graduating in literature and linguistics from Budapest University (1877–84), he worked as employee and subsequently director of the stenography department of the Hungarian parliament, 1889–1921. He was a founding member and the first secretary of the Hungarian Ethnographic Society (1896). In the course of his extensive fieldwork he used his shorthand skills to transcribe and fit the folksong texts to the melodies which at that time were recorded on an Edison phonograph. His new method, which he demonstrated at the international music congress held at the Paris World Exposition in 1900 (*Congrès international de musique: Paris 1900*), gained him wider recognition. Most of the melodies from his phonograph cylinders were transcribed by Bartók who, along with Kodály, greatly appreciated his work.

MARIA DOMOKOS

Vikár, László (*b* Szombathely, Hungary, 8 June 1929). Hungarian ethnomusicologist. He studied music education and choral conducting (1947–51) and musicology and ethnomusicology (1952–6) at the Liszt Academy of Music, Budapest, where his teachers included Kodály, Bárdos, Bartha and Szabolcsi. After further study with Kodály (1956–9) he became a research collaborator of the folk music research group (from 1974 the musicological institute) of the Hungarian Academy of Sciences. In 1961 he took the CSc degree with a dissertation on Cheremis folk music in the Volga region, and in 1970 he was appointed to a lectureship at the Liszt Academy of Music, later becoming professor of ethnomusicology. His research chiefly concerns traditional music of the Finno-Ugrian and Turkic peoples. Between 1952 and 1979 he

collected more than 8000 folksongs in Hungarian-speaking areas of Hungary, Czechoslovakia and Romania, in the central Volga region of the USSR and in Bulgaria, Turkey, Finland, China, Mongolia and North Korea. He has been the secretary of the Hungarian national committee of the ICTM (1975–9), vice-president of the International Kodály Society (1985–93) and has lectured extensively in America, Canada and Australia. He was awarded the Erkel prize in 1977, and the Széchényi prize in 1995.

His wife, Katalin Forrai (*b* Debrecen, 25 Sept 1926), studied music education and choral conducting at the Liszt Academy (1947–51) and under Kodály evolved a system of music education from birth to school age. Her publications include books on the methodology of music teaching in kindergartens and on European children's songs.

IMRE OLSVAI/R

Vila. Extended family of Catalan organists from Vich, active from the late 15th century to the early 17th in the cathedrals of Barcelona, Lleida, Vich and Valencia. The most famous member of the family was PERE ALBERCH I FERRAMENT ALIAS VILA.

Vilanova (y Barrera), Ramón (*b* Barcelona, 21 Jan 1801; *d* Barcelona, 14 May 1870). Spanish composer. He began his musical studies with José Ferres in Barcelona and Jaime Domenech in Berga, where his family had fled after the French invasion in 1808. After returning to Barcelona in 1814 he studied composition with Francisco Queralt, *maestro de capilla* of the cathedral, and Mateo Ferrer. The performance of his *Misa pastoril* on Christmas Day 1828 in Barcelona Cathedral established his reputation as a composer of sacred music; besides performances in other Spanish churches and as far away as Rome, the mass was repeated annually at Barcelona Cathedral for 76 years.

Attracted to Italian opera, Vilanova went to Milan in 1829, studying with Piantanida at the Milan Conservatory and conducting in several opera houses. He returned to Barcelona the following year and was made *maestro de capilla* of Barcelona Cathedral. He inaugurated his position with the *Misa del arpa*, for chorus and orchestra, and during the three years of his stay there composed much music for use in the services, including another orchestral mass, litanies and responsories. In 1833 he resigned to become director of the Teatro Cómico, Valencia, but his stay was short-lived, as the theatre was closed after the death of Fernando VII on 29 September 1833. On his return to Barcelona he devoted himself to teaching and composition, writing three *misas de gloria*, two requiems ('de Bilbao', 1838, performed in Barcelona Cathedral for victims of the civil war of 1833–9; 1845), and later a *Tantum ergo*, *Salutaris*, mass and motets dedicated to the Brotherhood of the Poor. He also composed a *Capricho* for orchestra, two sinfonias in the style of Rossini, and many songs and piano pieces which were published in New York, Paris and Leipzig. At his

death his will directed that his modest fortune be used to establish a fund for the children and widows of needy musicians and provide annual subsidies to the Brotherhood of the Poor.

SHIRLEY WARREN

Vilar, Francisco (*d* Barcelona, 1770). Spanish organist and composer. A priest, he was organist from 1726 at S Pedro de las Doncellas in Barcelona. On 24 July 1742 he was given a temporary appointment as organist at SS Justo y Pastor, which was made permanent on 29 July 1745; he remained there until his death. His numerous organ pieces are widely scattered in Spanish musical archives; nine manuscripts are at Montserrat, five at Barcelona (*E-Bc*, *Boc*) and one at Astorga Cathedral. The collections at Montserrat and Astorga include a few larger pieces (tientos, toccatas, *pastorellas*, an *obra*, a sonata), but the majority of his works are short versets for the Ordinary of the Mass or on the psalm tones, as well as a few *Pange lingua* settings. J.M. Alvarez published a tiento, *obra* and five sets of versets by Vilar in a *Colección de obras de órgano de organistas españoles del siglo XVII: manuscrito encontrado en la catedral de Astorga* (Madrid, 1970; the composer is referred to as 'Vila' in this collection). Vilar's style is primitive, alternating between simple chordal progressions, running passages against sustained notes and brief points of imitation. It is sometimes difficult to separate his compositions from those of his slightly earlier contemporary Joan Vila, organist at Nuestra Señora del Pilar in Barcelona from 1738.

ALMONTE HOWELL

Vilar, José Teodor (*b* Barcelona, 10 Aug 1836; *d* Barcelona, 21 Oct 1905). Spanish pianist, conductor and composer of Catalan descent. He studied with the organist and composer Vilanova at Barcelona, then continued his education in Paris with Herz (piano), and Bazin and Halévy (composition). After returning to Barcelona he gave concerts and wrote a history of music, *Apuntes de historia musical, o Resumen de historia de la música* (Barcelona, 1863). He was a pioneer in composing Catalan zarzuelas, and his first such work to be staged, *L'ultim rey de Magnolia*, to a libretto by Frederic Soler (pseud. Serafí Pitarra), was performed in Barcelona in December 1868. It was followed in June 1869 by another Catalan zarzuela to a libretto by Soler, *Els pescadors de San Pol*. Both were well received. He continued to compose for the stage and served as assistant conductor at a secondary theatre in Barcelona. He later became chorus master and finally conductor at the Teatro Principal. Eventually he confined himself to teaching and composition. Despite their settings, dialogue and costumes, his Catalan zarzuelas evince the influence of Italian opera so pervasive in Spain during that epoch. He was a gifted orchestrator and made effective use of colour to project dramatic situations.

WORKS

all zarzuelas; first performed in Barcelona unless otherwise stated

La romería de Recasens (2), 1867; L'ultim rey de Magnolia (1, S. Pitarra), Romeo, Dec 1868; Els pescadors de San Pol (2, Pitarra), Tivoli, June 1869; Una prometensa, 1870; La Rambla de las Flores (J. Feliú y Codina), 1870; Pot més que pinta, 1870; La lluna en un cove, 1870/71; L'esca del pecat, 1871; La torre del amor, Santa Cruz, 1871; Un joes de cartas, Madrid, Oct 1881; La jupa blanca (Riera and Bertran), Dec 1881

WALTER AARON CLARK

Vilback, (Alfonse Charles) Renaud de (*b* Montpelier, Hérault, 3 June 1829; *d* Paris, 19 March 1884). French organist and composer. A pupil of Lemoine (piano), Benoist (organ) and Halévy (composition) at the Paris Conservatoire from 1842, he won the Prix de Rome two years later with the cantata *Le renégat de Tanger*. His period of study and travel in Europe over, he settled in Paris as a piano and composition teacher. His large-scale works, the operas *Au clair de la lune* (Paris, Bouffes-Parisiens, 4 September 1857) and *Don Almanzor* (Paris, Théâtre Lyrique, 16 April 1858), and a *Messe solennelle* (1847) were less successful than his smaller orchestral works (*Chanson cypriote*, *Marche serbe* etc.), a piano method, and the many well-written but ephemeral salon pieces (e.g. *Deux morceaux characteristiques* op.8, *Grande valse brillante* op.10) and transcriptions of opera (*Fantaisie brillante sur La sonnambula* op.6, etc.) for piano solo and duet. As organist of St Eugène-Ste Cécile, Paris (1856–71), he was famous for his improvisations and technically the equal of Saint-Säens and Lefébure-Wély, sharing many of the latter's points of style. He died blind and in poverty.

ROBIN LANGLEY

Vilers [Villa], **Antoine de.** *See* VILLERS, ANTOINE DE.

Vilins'ky, Mykola Mykolayovych (*b* Holta, Mykolaivs'ka region, 2/14 May 1888; *d* Kiev, 7 Sept 1956). Ukrainian composer and teacher. In 1912 he graduated in law from Odessa University and in 1919 from the conservatory there in Maliszewski's class. He began to teach at the Odessa Conservatory in 1920 (as professor from 1926), then in Tashkent (1941–4), and from 1944 at the Kiev Conservatory, where he headed the composition faculty from 1948. Among his many students were Bilash, Dan'kevych and Femilidi. In 1951 he became an Honoured Artist of the Ukrainian SSR and received the Order of Lenin in 1953. In addition to writing articles on Ukrainian and Moldovan music, he worked as reviewer, music critic, and editor (he supervised the publication of the complete works of Lysenko). Vilinsky belongs to the first generation of Ukrainian professional composers who, in the period between 1910 and 1932, participated in the rebirth of Ukrainian political and cultural identity. Written with great skill and formal clarity, his music was essentially post-Romantic in style with a few modernist characteristics; much of it is deeply influenced by folk culture. He discovered a method by which he translated the essentially vocal tradition of Ukrainian music into an instrumental fabric. He was particularly partial to variation form, which he employed in heterogeneous ways.

WORKS
(*selective list*)

Kharakterystychni tantsi [Characteristic Dances], sym.-cant., 1910; Rosiys'ki variatsii v ėpichnomu styliu na orhinal'nu temu [Russ. Variations in Epic Style on an Original Theme], op.3, pf, 1913–14; Elehichna Suita [Elegiac Suite], op.8, pf, 1914–25; Ballad, op.4, pf, 1917–25 [variations on a Ukr. folk theme]; Dytyachyi al'bom [Children's Album], op.11, pf 4 hands, 1925; 2 Pieces, op.7, pf, 1925: Mrii [Dreams], Rosdumy [Thoughts]; Sonata, vn, pf, 1925; Suite on Moldovan Themes [no.1], sym.-cant., 1932; Suite on Moldovan Themes [no.2], sym.-cant., 1933; Moldavia (cant., A. Kornyanu), 1939; Suite on Moldovan Themes [no.3], sym.-cant., 1944; Variations no.1 and no.2, op.33, pf, 1949; 4 Miniatures in Memory of A. Lyadov, op.40, pf, 1956

Film scores, romances (A.S. Pushkin and others), 1v, pf; folksong arrs. (Moldovan, Russ., Ukr. and Uzbek)

VIRKO BALEY

Villa, Petro. *See* ALBERCH I FERRAMENT ALIAS VILA, PERE.

Villabella, Miguel (*b* Bilbao, 20 Dec 1892; *d* Paris, 28 June 1954). Spanish tenor. His voice was discovered by the French bass-baritone Lucien Fugère, who encouraged him to study in Paris. After making his concert début in 1917 in San Sebastián and his operatic début in 1918 as Cavaradossi in Poitiers, he was engaged by the Opéra-Comique in Paris, in 1920, beginning with minor roles, then graduating to Massenet's Des Grieux, Gérald (*Lakmé*), Don José, Hoffmann, Nadir, Wilhelm Meister (*Mignon*), George Brown (Boieldieu's *La dame blanche*) and Alfredo (*La traviata*) among others. His successful début at the Paris Opéra, as Pinkerton, came in 1928, and in a career there that lasted until 1935 his roles included the Duke of Mantua, Faust, Roméo, Rossini's Count Almaviva and Don Ottavio. Apart from appearances in Brussels and Monte Carlo, Villabella's career was confined to France, mainly because he was so much in demand there on account of the shining clarity and power of his voice. His numerous recordings, testimony to his popularity, include examples of many of his successful roles. His readings compensate in sheer fervour for what they lack in subtlety. He retired in 1940 and taught in Paris.

ALAN BLYTH

Villaflor, Manuel de (*b* Valencia; *d* Madrid, before 12 Sept 1707). Spanish composer. He worked as a musician and composer for the Madrid theatres in the last decade of the 17th century and the early years of the 18th. He married the actress Sabina Pascual. Of their two sons and one daughter, Ramón and Rita became professional actors, and Ramón was in addition a singer and violinist.

In 1690 Manuel de Villaflor was working in Madrid. In 1699 he was listed principal musician in the company of Carlos Vallejo, and composed music for that year's revival of Calderón's *auto sacramental* for Corpus Christi, *El laberinto del mundo*. His music included several solo songs, a chorus, a duet, and a *recitado* for the figure Mentira. In 1699 he also performed in the 'fiesta de zarzuela' *Júpiter y Yoo, o Los cielos premian desdenes* (text by M. de Lanuza), produced for carnival at court. In 1700 he worked with the company of Juan de Cárdenas, and composed for revivals of two *autos* by Calderón. In 1701–2 he and his wife formed their own company, and he performed in this troupe during the 1705 and 1706 seasons. The fact that he formed his own troupe testifies to his administrative and practical abilities and to the esteem in which he was held by his colleagues, as does the fact that he was chief administrator of the Cofradía de Nuestra Señora de la Novena, the actors' guild, in 1692, 1701, 1702, 1704 and 1705. In all, it is likely that Villaflor composed for and performed in numerous zarzuelas and *comedias* for both the court and the public stages during his more than 15 years as a theatre musician in Madrid.

Theatre songs by Villaflor are extant in several manuscripts (in *E-Bc*, *Mn*, *PAc*, Mexico City, Biblioteca Nacional, and *US-SFs*).

LOUISE K. STEIN

Villafranca, Luis de (*fl* 1545–79). Spanish theorist. He served for most of his career at Seville Cathedral as instructor in plainchant and master of the *mozos de coro* (i.e. the altar boys, who studied only plainchant, in contrast to the *seises* or choirboys, who studied polyphony). He retired on 26 October 1579. His concise manual of plainchant – *Breve instrucción de canto llano, asi para aprender brevemente el artificio del canto, como para cantar epístolas, lecciones, profecías y evangelios, y otras cosas que se cantan conforme al estilo de la sancta iglesia de Sevilla* (Seville, 1565) – consists of 51 folios in black and red Gothic letters. It is his only known work, although in it he promised a larger volume to include also discussion of mensural music, counterpoint and proportions. He shows familiarity with both Spanish and foreign authorities, citing (among others) Despuig, Bizcargui, Espinosa, Ornithoparchus and Gaffurius; Bermudo is also cited, but, perhaps surprisingly, his work did not have a major influence on Villafranca's writing. Topics covered in the book's ten chapters include the gamut, solmization, mutations, rhythm, the modes, intervals, semitonal alterations (apparently liberally used in the chants at Seville, according to his examples) and the Sevillian method of intoning particular chants. He was of the school of thought which held that the 'singable' or diatonic semitone was smaller than the 'unsingable' or chromatic. The work contains approbations by two of his more famous colleagues at Seville, Pedro Fernández and Francisco Guerrero. It seems to have been little known to later theorists, though Cerone (*El melopeo y maestro*, 1613) included it in his list of authorities.

Villalar (de Herrero), Andrés de (*b* Zamora, *c*1530; *d* after 1593). Spanish composer. In a competition held on 5 July 1563 he won the post of *maestro de capilla* at Córdoba Cathedral over Villalar Diego Ximénez, provisional *maestro de capilla* since 15 October 1561, and Gerónimo de Barrion. On 30 October 1566 he left Córdoba and, after visiting his sick mother at Zamora, went to Burgos, where he was *maestro de capilla* until 1572. From 1576 he worked at Valladolid. By 1579 he had married, and from 23 June of that year until 1582–3 he served as *maestro de capilla* at Santiago de Compostela, where the chapter complained that he was lazy. He resigned or was

dismissed at the end of 1580, and returned to Zamora. Other establishments continued to seek his advice until at least 1593.

ROBERT STEVENSON

Villalba Muñoz, Luis (*b* Valladolid, 22 Sept 1872; *d* Madrid, 8 Jan 1921). Spanish musicologist and composer. He learnt music at home (he came from a musical family), but was largely self-taught. At the age of 14 he joined the Augustinians at the Escorial, making his profession in 1899, and served there as *maestro de capilla* (1898–1916); he also edited the journals *La Ciudad de Dios* (1908–16) and *Biblioteca sacro musical*, founding the latter in 1911. He then moved to Madrid, where he was organist of S Sebastian and edited the journal *Ilustración española y americana*. At the time of his death he was engaged in the public competition for the chair of aesthetics and music history at the Madrid Conservatory. As a musicologist Villalba greatly influenced the revival of sacred music in Spain, with many articles in the journals he edited and elsewhere (*Música sacro-hispana*). An erudite scholar, he produced important biographies of Spanish musicians, in the form of books and as obituaries in *La Ciudad de Dios*. His editions of early music display a critical acumen notable for the period; his *Antología de organistas clásicos españoles* in particular has not been superseded. His historical writings have also remained valuable.

JOSÉ LÓPEZ-CALO

Villa-Lobos, Heitor (*b* Rio de Janeiro, 5 March 1887; *d* Rio de Janeiro, 17 Nov 1959). Brazilian composer. Heitor Villa-Lobos stands as the single most significant creative figure in 20th-century Brazilian art music. This significance stems not only from his international recognition, but from his achievement in creating unique compositional styles in which contemporary European techniques and reinterpreted elements of national music are combined. His highly successful career stood as a model for subsequent generations of Brazilian composers.

1. YOUTH AND EARLY CAREER. He was raised in a middle-class family; his father, Raúl Villa-Lobos, was an employee of the National Library and an amateur musician. Although he rejected early on many values and conventions of the period, particularly formal schooling, he later recognized the severe discipline imposed by his father on his music education as beneficial. Villa-Lobos recalled in a 1957 interview

> With him I always attended rehearsals, concerts and operas ... I also learned how to play the clarinet, and I was required to identify the genre, style, character and origin of compositions, in addition to recognizing quickly the name of a note, of sounds or noises... Watch out, when I didn't get it right.

He also learnt the cello from his father and it became a favourite instrument. However, despite being exposed to classical music, it was his native city's popular idioms of the turn of the century that captivated him and exerted a lasting influence on his work. Indeed, he learnt to play the guitar – the epitome of popular culture and subject to disapproval by polite society – on his own and away from home.

Only after the premature death of his father in 1899 was Villa-Lobos able to immerse himself fully, at first as a guitarist, in the life of Rio's street musicians. The music of the *chorões* especially fascinated him, and the impressions of this vigorous experience were of such importance that he later gave the generic designation of *choros* to his portrayal, in the 1920s, of a variety of Brazilian musical styles. Villa-Lobos completed his schooling at the monastery of S Bento in Rio, following which, to please his mother, he enrolled in a preparatory course for the entrance examination to the School of Medicine. However, in 1903, unable to maintain any interest in the classes, he left his mother's house and went to live with his aunt Zizinha (Leopoldina do Amaral). In his later teenage years he earned a living mainly by playing the cello in the Teatro Recreio, in hotels, and in the Odeon cinema, where he met some of the most celebrated personalities of popular music of the time, including Ernesto Nazareth, Eduardo das Neves and Anacleto de Medeiros.

Heitor Villa-Lobos

Villa-Lobos's early years remain poorly documented and contemporary reports are not always reliable. In particular, his various trips between 1905 and 1913 to the northern and north-eastern states, the Amazon, and central and southern Brazil have been subject to varying theories as to whether or not they constituted field research into Brazil's folk and traditional music. He himself never discussed the specific motivation behind these travels, though he did later emphasize his yearning for freedom, his fondness for new discoveries, and a search for his own musical identity as a Brazilian. The music itself, perhaps, provides the best clues to this period, once Villa-Lobos's reworking of his sources is taken into account. He undoubtedly learnt dozens of popular tunes and songs, which he brought into play in many of his works; but if he truly collected more than 1000 themes 'of value', as suggested by Mariz (1949), nowhere did he record this collection systematically or publish it. This further corresponds to his dislike of formality or method. Villa-Lobos certainly assembled, arranged and adapted 137 folksong melodies in his didactic *Guia prático* of 1932, but most are commonly known and not of the regional, 'exotic' variety that his accounts suggest he heard.

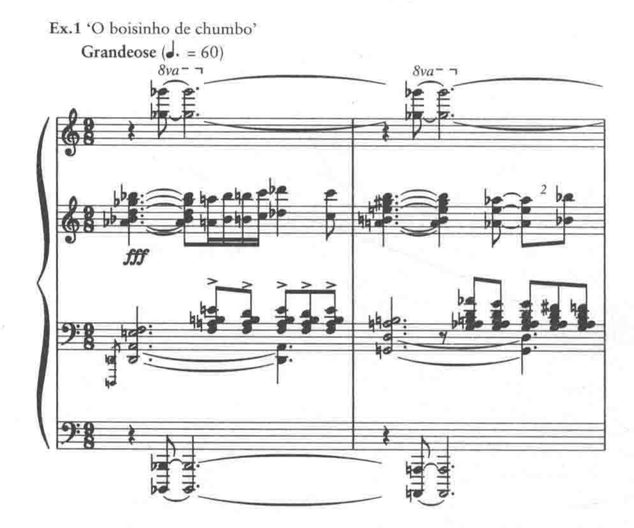
Back in Rio, he met the pianist Lucília Guimarães whom he married in 1913. Throughout the 1910s and 20s she gave the premières of several of his piano pieces, playing a significant role in the first public concerts of his music in 1915 and during the 'Week of Modern Art' in 1922. They separated in 1936 but she remained loyal to him throughout her life. Compositionally, the period 1912–17 was one of intense activity and marked the maturation of Villa-Lobos's creative personality. By 1917 he had produced some 100 works, including his first guitar pieces (e.g. the *Suite popular brasileira*), four string quartets and other chamber music, two symphonies, and the ballets *Amazonas* and *Uirapuru*. The first official concert fully dedicated to his work took place on 13 November 1915 and established him at once as an *enfant terrible* of new Brazilian art music, thanks to the strongly negative reactions from the critics, in particular Vicenzo Cernicchiaro and the fearful Oscar Guanabarino, who was a ferocious detractor of Villa-Lobos and modern music in general. The works performed at the concert (such as the First Piano Trio, op.25, and the *Sonata fantasia no.*2, op.29) while still far from the truly modern idiom of his music of the late 1910s and 20s, challenged in no uncertain terms the then current state of composition in Brazil. Between 1917 and 1919 additional major concerts of his music were organized, presenting some of his main orchestral works of the period. These concerts helped to establish Villa-Lobos in a very short time as the controversial, anti-establishment figure *par excellence*. Such recognition probably gained him an invitation to participate in the 'Week of Modern Art.'

Essentially a self-taught composer and an eager and curious listener, Villa-Lobos assimilated spontaneously, if at times reluctantly, a number of important influences, especially at first some of the techniques of Impressionism concerning harmonic practices and orchestration. His friendship with Milhaud (who lived in Rio from 1917 to 1918) and Artur Rubinstein (whom he met in 1918) probably also resulted in his acquaintance with the latest French music and Stravinsky. However, by 1918 Villa-Lobos was already well advanced in his own innovative experiments in rhythm and harmony. During the next few years Rubinstein promoted Villa-Lobos and his music throughout the world.

2. The 'Week of Modern Art' and Paris. The development of Modernism in Brazil took place in the 1920s, and to mark the centenary of independence a number of literary figures, artists and intellectuals organized the 'Week of Modern Art' in São Paulo during 11–18 February 1922. Villa-Lobos was invited as the representative of modern music in Brazil, and several of his chamber works were performed, most notably the *Danças características africanas* in a special version for five strings, flute, clarinet and piano. For Villa-Lobos the Modernist aesthetic called for a break with European

Romantic tonality and a strong determination to renew and legitimize a distinctly Brazilian musical vocabulary. The event aroused polemic and discussion and brought further attention to Villa-Lobos. The progressive literary figures of the time in their praise of the composer's creativity contributed to the construction of Villa-Lobos as a quasi-mythical character, whose music appeared as a potential source of synthesis in a newly confident country. Most reactions were subsequently summed up in *Ensaio sôbre a música brasileira* (1928), a manifesto of musical nationalism by Mário de Andrade.

Subsidized by several wealthy friends and a government stipend, Villa-Lobos left for Europe in 1923, where he travelled to a number of cities and settled in Paris. His main reason for going was self-publicity, not study, and in Paris he met with enormous success with concerts of major works in 1924, 1927 and 1930, and won the support of such figures as Rubinstein, Florent Schmitt and the music critics Prunières, Le Flem and Klingsor. He met, too, many other composers, including Ravel, d'Indy, de Falla, Stravinsky, Prokofiev and Varèse, and his music began to be published by Max Eschig. By 1930, when he returned home for good (he had been back to conduct several concerts in Brazil and Argentina), he had attained recognition in Paris unequalled by any other Latin American composer. His European experience also contributed to furthering his belief in the freedom to innovate.



3. The Estado Novo and the campaign for music education. In 1930 Villa-Lobos was in São Paulo for concert engagements. While there he presented to the State Secretariat for Education a plan to address the precarious condition of musical education in schools. In the same year a new government under Gétulio Vargas came to power, and its strong backing of Villa-Lobos's project led him to dedicate many of his following years to a nationwide campaign, as well as, from 1931, to taking specific charge of the Superintendency of Musical and Artistic Education for Rio. He was subsequently extolled as the patriach of musical learning, but also, after the inception of the 'Estado Novo' (1937–45), decried as the supporter of a dictatorship whose nationalist ideology was often connected to the contemporaneous fascist regimes in Europe. Villa-Lobos's programme included not only initial music instruction in primary and technical schools but also education on a mass popular scale through choral, or 'Orpheonic' (originally *a cappella*) singing, of Brazilian music in particular. Such 'civic exhortations' involved on one occasion in 1935 some 30,000 voices and 1000 band musicians, and in 1940, and again in 1943, nearer 40,000 singers. The regime's patriotism undoubtedly boosted Villa-Lobos's own, but whether he truly shared its far-right leanings has been a matter of considerable debate. That he was initially concerned more with his individual career is undisputed. But at the same time his music and education policy was intentionally taken up as instruments of ideology, and he himself saw the mass gatherings as a powerful tool for inculcating a nationalist fervour. In 1942 the government founded a National Conservatory of Orpheonic Singing, with Villa-Lobos its director. By the time of his retirement in 1957, the impact of the institition had been extensive.

Politics notwithstanding, Villa-Lobos's work in music education only enhanced his reputation as a composer in Brazil, where his own compositions had not had as much exposure as in Europe. He became an 'official' composer, and though this change in status in no way affected his prolific creativity, nor an essentially free approach, his manner became less experimental than in the 1920s. During this period he also began to conduct in earnest, not only in Brazil but also in Argentina, Uruguay and Chile. On the occasion of his participation in the 1936 Music Education Congress in Prague, he conducted several of his own pieces for a Berlin radio station. In the same year he separated from his wife and began his life with Arminda Neves d'Almeida, who not only devoted herself to him for the next 23 years, but continued to work assiduously until her death in 1985 to promote his works in her capacity as director of the Villa-Lobos Museum, founded in 1960.

4. International acclaim. From the time of his first visit to the USA, Villa-Lobos's career took an upward turn internationally. During 1944–5 he conducted his works with the Janssen SO in Los Angeles, the Boston SO and, at the request of Stokowski, the New York SO. He also organized a concert of his chamber music in New York, in which city he met, among others, Toscanini, Copland, Ormandy, Menuhin, Duke Ellington and Benny Goodman. His music came to be held in very high regard. Back in Brazil in 1945, he had time to help found the Brazilian Academy of Music, which was to be so important in the development of musical professionalism in the country. Two years later he was away again, this time conducting in Rome, Lisbon and Paris, and then going on to New York, where he gave the première of his *Bachianas brasileiras* no.3 with the pianist José Viera Brandão and the Columbia SO; it was broadcast across the CBS network. In mid-1948 he returned once more to New York, but this time for treatment of cancer of the bladder at Memorial Hospital.
